

Chelmsford Policy Board

16 January 2025

Chelmsford Local Plan – Regulation 19 Pre-Submission Consultation Documents

Report by:

Director of Sustainable Communities

Officer Contacts:

Jeremy Potter, Spatial Planning Services Manager – jeremy.potter@chelmsford.gov.uk
01245 606821

Claire Stuckey, Principal Planning Officer – claire.stuckey@chelmsford.gov.uk
01245 606475

Purpose

The purpose of this report is to present the Chelmsford Local Plan Pre-Submission (Regulation 19) Document and the Pre-Submission Integrated Impact Assessment and to seek the Board's approval to publish them for public consultation for six weeks starting in early February 2025.

Recommendations

1. That the Board agrees that the review of the Chelmsford Local Plan proceeds to Regulation 19 publication as set out in The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) and its subsequent submission for Independent Examination is made under the transitional arrangements identified for plan-making in the National Planning Policy Framework (NPPF) December 2024.
2. That the Board approves the publication of the Chelmsford Local Plan Pre-Submission (Regulation 19) Document, and the Pre-Submission Integrated Impact Assessment attached at Appendices 2 and 3 of this report for public consultation in accordance with Regulation 19 of The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended).
3. That the Board notes the contents of the Preferred Options 'You Said, We Did' Feedback Report attached at Appendix 1 and approves it for publication.

4. That the Board gives delegated authority to the Director of Sustainable Communities in consultation with the Cabinet Member for a Greener Chelmsford to: (i) make any necessary minor amendments to the Chelmsford Local Plan Pre-Submission (Regulation 19) Document, the Pre-Submission Integrated Impact Assessment and the Preferred Options 'You Said, We Did' Feedback Report before publication; and (ii) prepare all necessary documentation to support the planned programme of public consultation.
5. That the Board endorses the proposed approach to the Local Plan Pre-Submission (Regulation 19) Document consultation arrangements set out in Appendix 4.

1. Introduction

- 1.1. This report sets out the third formal stage in the preparation of the review of the adopted Chelmsford Local Plan and seeks the Board's approval to publish for public consultation the Chelmsford Local Plan Pre-Submission (Regulation 19) Document and accompanying Integrated Impact Assessment. This consultation is carried out in line with Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) and is often referred to as the 'Regulation 19 Plan' or 'Regulation 19 stage'.
- 1.2. The Chelmsford Local Plan Pre-Submission (Regulation 19) Document (shortened to 'Pre-Submission Local Plan' throughout the rest of this covering report) is the version of the Plan that the Council proposes to submit to the Secretary of State for Independent Examination by a Planning Inspector. It contains an updated Local Plan vision, priorities, principles and policies to meet development needs in the period to 2041 and beyond. It also contains the Council's updated strategy and planning policies to help address climate change and the conservation and enhancement of the natural, historic and built environment.
- 1.3. The Local Plan is an important tool in supporting delivery of the Council's strategic priorities and for continuing to deliver an effective planning service in Chelmsford. In addition, The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended), requires local planning authorities to prepare and keep an up-to-date Local Plan. Local plans are required to be reviewed and updated within five years of their adoption.
- 1.4. Good progress is being made with implementing the current Local Plan adopted in May 2020. Most strategic growth sites allocated in the plan have a masterplan approved by the Council or underway and these are guiding the preparation and consideration of subsequent planning applications for development, many of which are currently under consideration by the Council including resolutions to grant planning permission.
- 1.5. The Pre-Submission Local Plan has been prepared following ongoing work over the past six months including consideration of comments raised to the Preferred Options consultation, engagement with key stakeholders, service providers and Duty to Cooperate bodies, and further evidence base gathering, data and research.
- 1.6. The Pre-Submission Local Plan also reflects the Council's corporate priorities including tackling the climate and ecological emergency, addressing the local housing crisis, strengthening our economy and job creation, and improving health and wellbeing of residents.

- 1.7. National planning policy and guidance has also been used to inform the Pre-Submission Local Plan. After consultation in the summer of 2024, the Government published the updated version of the National Planning Policy Framework (NPPF) on 12 December 2024. Among other matters it sets out a new plan-making process. It also provides transitional arrangements for Councils that are well advanced with plan preparation under the previous system. The content and timetable of the Pre-Submission Local Plan can comply with these transitional arrangements. Therefore, Officers recommend that the review of Chelmsford's Local Plan proceeds using the transitional arrangements. This means that it will be examined under the December 2023 NPPF. Further detail of the implications of using the transitional arrangements are set out within section 3 of this report.
- 1.8. A large number of changes have been made from the Preferred Options Local Plan to the Pre-Submission Local Plan. Some of the plan changes relate to suggestions arising in the preferred options consultation responses. Others address recent evidence base work, respond to new information or have been made for clarification and consistency. Most changes made are considered relatively minor in nature and do not go to the heart of the plan.
- 1.9. The ongoing work shows that overall, the Pre-Submission Local Plan is in line with local and national policy and supported by a comprehensive and up-to-date evidence base and therefore is considered sound overall and ready for public consultation and submission for Independent Examination. This is demonstrated by the assessment of the Pre-Submission Local Plan against the NPPF 2023 (Local Plan Form and Content Checklist) and the process requirements for plan preparation set out in legislation and the NPPF (Local Plan Process Requirements Checklist) which are available via [Local Plan Review](#). Any outstanding matters will also continue to be worked on up to the Independent Examination.
- 1.10. Consultation on the Pre-Submission Local Plan is anticipated to run between 4th February and 18th March 2025 in line with the Council's current adopted Local Development Scheme (LDS). This will be a final technical public consultation on the draft Local Plan before it is submitted for Independent Examination. At this stage representations will be invited on whether the plan complies with all relevant legislation, the Duty to Co-operate, and meets the tests of soundness set out in national planning policy. The responses received will be submitted with the Local Plan and plan evidence base to the Planning Inspector who following the Independent Examination will make recommendations to the Council on whether the plan can be adopted.

2. Previous Consultations

- 2.1 The Council has been working on the review of the Local Plan since Winter 2021. Consultation on the Pre-Submission Local Plan follows on from two earlier consultations – an Issues and Options consultation in Summer/Autumn 2022 which in turn informed a Preferred Options consultation in Spring/Summer 2024. Representations made in respect of these earlier consultations have been considered alongside the wider plan evidence base and national planning policy and guidance in preparing the Pre-Submission Local Plan.
- 2.2 The Preferred Options 'You Said, We Did' Feedback Report given in Appendix 1 presents a summary of the main issues raised in the Preferred Options consultation responses and how they have taken into consideration in the Pre-Submission Local Plan.

3. National Planning Policy Framework (NPPF) December 2024

- 3.1 Following a consultation in July to September 2024, the Government published the revised NPPF on 12 December 2024. This replaces all previous updates and revisions to the NPPF and must be used for all decision making on planning applications from its publication date. With regards to plan-making it contains transitional arrangements related to the stage of preparation of a local plan.
- 3.2 As part of the changes to the NPPF, the Government has amended the standard method formula for determining local housing need and made its use mandatory for Councils. This has increased Chelmsford's housing need from around 950 net new dwellings per annum (dpa) which was the average of previous standard method calculations to 1,454 dpa.
- 3.3 The transitional arrangements for plan-making in the revised NPPF states that for local plans to proceed under the previous plan-making process, they need to have reached Regulation 19 (pre-submission stage) on or before 12 March 2025 and the draft housing requirement contained in their proposed plan meets at least 80% of the revised standard method housing need. The Council consulted on a Preferred Options Local Plan in the summer of 2024 which was based on a housing requirement of 1,000 dpa but contained site allocations that accommodated nearly 20% more.
- 3.4 If the recommendations of this report are agreed by the Board, the review of Chelmsford's Local Plan will have reached Regulation 19 stage before 12 March 2025 and when the supply buffer and other changes to proposed site allocations are taken into account, the Pre-Submission Local Plan will have a housing requirement of 83% (1,210 dpa) of the revised standard method housing number and also maintain a five year housing land supply. Therefore, it is the officers' recommendation that the Council proceeds using the transitional arrangements contained within the revised NPPF (December 2024).
- 3.5 Using the transitional arrangements means that when submitted the Pre-Submission Local Plan will be examined by the Planning Inspectorate using the previous version of the NPPF (December 2023).
- 3.6 The alternative option for the Council would be to cease preparation of the current Local Plan and to start a review using the revised NPPF. This would mean planning for the full new standard method housing number of 1,454 dpa requiring going back at least one stage of plan preparation to identify additional site allocations to meet this increased housing need. It could also mean that all the sites currently allocated in the Pre-Submission Local Plan would remain alongside the identification of extra sites. This would create a significant delay, cost and would result in the adopted Local Plan potentially being considered out-of-date in May 2025, when it becomes five years old, and the Council not being able to demonstrate a five-year housing land supply using the new full housing need number.
- 3.7 Although the revised NPPF changes national Green Belt policy, exceptional circumstances will still need to be evidenced for amending Green Belt Boundaries. Councils will need to exhaust all other sustainable options for new development outside the Green Belt before considering changing Green Belt boundaries.

4. Pre-Submission Local Plan

- 4.1 Using the transitional arrangements contained within the revised NPPF, the Council is now in a position where the Pre-Submission Local Plan can be published for formal

public consultation under Regulation 19 of the Development Plan Regulations. This will be the final public consultation before the Local Plan is submitted to the Planning Inspectorate for Independent Examination.

- 4.2 The Pre-Submission Local Plan sets out the Council's final policies and proposals to address future growth requirements up to 2041, and to achieve that growth in a planned and sustainable way which meets the needs of a growing population, the business community and delivery partners.

Pre-Submission Local Plan

- 4.3 The Pre-Submission Local Plan has been formulated considering the latest development requirements, the evidence base including newly completed and updated studies, national planning policy and guidance, discussions with service providers, Duty to Co-operate bodies and Development Management Officers, and an analysis of the feedback from the preferred option plan consultation.
- 4.4 The Pre-Submission Local Plan is attached at Appendix 2. This is an edited and updated version of the Preferred Options Consultation Document, which itself was an edited and updated version of the adopted Local Plan 2020.
- 4.5 Following the Preferred Options consultation, the whole plan has been reviewed. Numerous changes have been made including the addition of a new housing site allocation and the deletion of some site allocations. Other changes include amendments to the wording of policies and plan text to help address issues raised in the previous consultation comments and to improve the clarity, accuracy, consistency and effectiveness of the plan. Although a significant number of changes have been made overall these are considered relatively minor in nature. Therefore, the Pre-Submission Local Plan essentially remains substantially the same in principle to the Preferred Options Consultation Document.
- 4.6 Policies are shown in the order they appear logically in the plan and will be renumbered in the final version. The key proposals in the Pre-Submission Local Plan and changes made are described in more detail below.

Strategic Priorities, Vision and Spatial Principles

- 4.7 Chapter 3 sets out the Strategic Priorities that will be addressed through the Local Plan. There are nine Strategic Priorities which set the overall policy direction for all the strategic policies, site allocations and development management policies in the Local Plan. These include priorities for climate, growth and place.
- 4.8 Minor changes have been made to the Strategic Priorities since the Preferred Options stage primarily to address the previous consultation responses. This includes new references to supporting climate resilience and to the emerging Essex Local Nature Recovery Strategy.
- 4.9 Chapter 4 sets out the long-term Vision for the kind of place we want Chelmsford to be in 2041, as follows:
- 'Guiding Chelmsford's growth towards a greener, fairer and more connected community.'*
- 4.10 Limited changes have been made to the Vision in the Pre-Submission Local Plan. These mainly address the preferred options consultation responses including

expanding the types of infrastructure and facilities that will be provided alongside new residential development.

- 4.11 Chapter 4 also contains the Spatial Principles, which guide how the Strategic Priorities and Vision will be achieved. The Spatial Principles are contained in Strategic Policy S1 and form a framework to ensure the Local Plan focuses growth in the most sustainable locations. They include considerations for location of development considering land use, climate and infrastructure. There have only been minor updates to these in the Pre-Submission Local Plan largely for clarification.

Strategic Policies

- 4.12 Chapters 4 to 6 contain the plan's Strategic Policies which set out the Council's approach to delivering the updated Vision and Strategic Priorities discussed above. Together, the Strategic Policies comprise the overarching plan and provide the core principles which new developments are expected to meet. Four new Strategic Policies were identified in the Preferred Options Consultation Document - Strategic Policy S14 Health and Wellbeing, Strategic Policy S15 Creating Successful Places, Strategic Policy S16 Connectivity and Travel and Strategic Policy S17 Future of Chelmsford City Centre. Together these strengthen the plan in line with the new and updated Strategic Priorities, address gaps in the adopted plan and respond to local and national changes since the current plan was adopted. These have been subject to minor changes in the Pre-Submission Local Plan.
- 4.13 Overall, only minor changes have been made to the other Strategic Policies in the Pre-Submission Local Plan primarily to respond to the preferred options consultation responses and recommendations in plan evidence base reports. Changes have also been made to improve consistency and clarity. Policies which have been subject to more substantive changes are Policies S4, S9, S17, S6 and S7 and described further below.
- 4.14 Strategic Policy S4 Conserving and Enhancing the Natural Environment incorporates new requirements for development to maximise opportunities for the preservation, restoration, enhancement, and connection of natural habitats. Development contributions towards recreational mitigation measures at Hatfield Forest Site of Special Scientific Interest (SSSI) and National Nature Reserve (NNR) have been deleted following confirmation from Natural England that these are no longer required.
- 4.15 Strategic Policy S9 sets out the new or improved infrastructure provision required to support the plan. These have been updated in the Pre-Submission Local Plan to reflect the preferred options consultation responses and updated evidence base requirements including an updated Infrastructure Delivery Plan. Additional requirements since the Preferred Options consultation include contributions towards addressing the cumulative recreational pressures on SSSIs, cemetery space and crematorium provision, new lock and replacement weir gates at Chelmer Waterside and the provision of serviced moorings along the River Chelmer. Minor amendments for clarification have also been made to other existing infrastructure requirements. These requirements changes have also been updated within or added to relevant Strategic Policies and Site Allocation policies.
- 4.16 Strategic Policy S17 focuses on opportunities for the future of Chelmsford City Centre in terms of encouraging leisure, entertainment, cultural, community, business and residential uses. The section containing site specific principles for Shire Hall, Chelmer Waterside, and The Meadows has been refined and provide cross references to site allocation policies rather than including detail in this policy. Figure 15 shows

opportunity corridors where a flexible approach to changes of use will be taken to achieve positive activity, innovation and investment. This has been updated to include the allocation of Andrews Place (Site 1cc) in the Pre-Submission Local Plan.

Development Requirements (Strategic Policy S6) and Spatial Strategy (Strategic Policy S7)

4.17 Strategic Policy S6 Housing and Employment Requirements includes updated housing and Gypsy and Traveller and Travelling Showpeople development requirements over the plan period 2022-2041.

Housing

4.18 Strategic Policy S6 makes provision for an increased number of overall new homes of 22,990 equating to 1,210 net new dwellings per annum (dpa). This compares with 19,000 net new homes and 1,000 dpa planned for in the Preferred Options Consultation Document although the site allocation capacity provided around a 20% additional buffer. The increase of the housing requirement to 1,210 dpa accords with the Government's transitional arrangements for use of the new standard method for calculating housing needs set out in the revised NPPF (December 2024). In order for Local Plans to use the proposed NPPF transitional arrangements, an emerging local plan minimum housing requirement needs to be at least 80% of the revised standard method which is 1,454 dpa - i.e. 80% of 1,454 = 1,163 dpa.

4.19 The Preferred Options Consultation Document identified a need for around 3,860 additional new homes, over and above those allocated in the adopted local plan. To meet the new housing requirement of 22,990 net new homes and when considering the most recent housing supply monitoring data from April 2024, the residual new Local Plan housing allocation requirement has increased to 4,233 new homes. The Pre-Submission Local Plan will meet this new target through the following changes to the Spatial Strategy (Strategic Policy S7):

- **Increasing the windfall allowance** from 100 dpa to 175 dpa as an analysis of past trends demonstrates that there is a strong track record of this amount of windfall sites being delivered (an average of 196 windfall homes built per year over the past 12 years)
- **Allocating a new site** at Andrews Place, Land West of Rainsford Lane (Site 1cc) which is being actively promoted by Chelmer Housing Partnership for redevelopment and is deliverable in the plan period
- **Increasing the capacity** of Meadows Shopping Centre allocation (Site 1w) in line with the recent submitted planning application and the assessment of representations submitted by the applicant to the Preferred Options Consultation Document
- **Reducing the supply buffer** from around 20% proposed in the Preferred Options Consultation Document to around 1.5% by using all the plan allocations to meet the revised minimum housing requirement (except for sites that are now built out or no longer available or suitable).

4.20 Strategic Policy S7 contains an updated Spatial Strategy which sets out the amount and location of new development, and how places will change and be shaped throughout the Plan period and beyond. It also confirms the Settlement Hierarchy and presents the sites/locations for growth identified indicatively on the Key Diagram, both of which are unchanged from the Preferred Options stage.

4.21 As set out above, one new site (1cc – Andrews Place, Land west of Rainsford Lane) is included within the previously developed sites in the Chelmsford Urban Area since the Preferred Options consultation, and the sites listed below have been removed for the following reasons:

- 1o – Church Hall Site, Woodhall Road – site is now built out
- 1u – Rivermead, Bishop Hall Lane – site is now built out
- 1x – Former Kay Metzeler Premises, Brook Street – site is no longer promoted for residential development and therefore not deliverable
- 14a – Land west of Back Lane, Ford End – site has multiple constraints including heritage and access and is no longer considered suitable for development
- 11a – South of Bicknacre – site is now built out.

Gypsy and Traveller and Travelling Showpeople (GTAA)

4.22 The GTAA 2024 identifies a need for 40 permanent Gypsy and Traveller pitches and 38 Travelling Showpeople plots using the definitions identified in national planning policy (December 2023). An updated Planning Policy Traveller Sites (PPTS) was published alongside the revised NPPF on 12 December 2024 which amends the definitions of Gypsies and Travellers. Officers are awaiting further guidance from the Ministry of Housing, Communities and Local Government (MHCLG) on which version is applicable to local plans using the NPPF transitional arrangements. Updated Strategic Policy S6 sets out how most of the need will be met through allocations on all suitable large strategic development allocations (accommodating 30 Gypsy and Traveller pitches and 28 Traveller Showpeople plots), with the remainder of need to be met through windfall applications using the criteria of Policy DM3 (Gypsy, Traveller and Travelling Showpeople Sites). The baseline date for the GTAA is October 2023 and since then, x2 Gypsy and Traveller pitches have been granted permanent planning permission and x11 Travelling Showpeople plots have been granted temporary planning permission.

Employment

4.23 Strategic Policy S6 also continues to make provision for 162,646sqm of net additional employment floorspace to help accommodate economic growth and employment requirements up to 2041. This is informed by forecasts in the Employment Land Review (ELR) 2023 and partial update carried out in 2024 via a Focused Update.

4.24 The Focused Update reviewed the most up-to-date assumptions and data regarding future economic growth prospects for Chelmsford between 2022 and 2041. As a result, the Pre-Submission Local Plan exceeds the recommended minimum employment space requirements over the period to 2041. It under-allocates the need for employment space requirements associated with the July NPPF proposed revised Standard Method for assessing housing needs of 1,206 dwellings per annum compared with 945 dwellings per annum previously (in the 2023 ELR). However, based on the analysis of the demand and supply position (including sites with extant planning permission for employment), the Council has sufficient consented supply to meet job growth forecasts in overall terms throughout the plan period. The use of ‘around’ employment floorspace figures in specific site allocation policies also allows for an appropriate degree of flexibility in provision and for a higher or lower density development to be brought forward in conformity with other policies in the Plan as a whole. Strategic Policy S6 has also been amended to require a ‘minimum’ of 162,646sqm of new employment floorspace. Hence, the Council considers that through the Pre-Submission Local Plan and its future reviews, it will accommodate its employment needs going forward.

- 4.25 The development requirements (numbers of new homes, amount of employment floorspace etc) have been amended for some sites/locations. This is described further in the Growth Area text below.

Growth Area 1 – Central and Urban Chelmsford

- 4.26 The Pre-Submission Spatial Strategy is set out in Strategic Policy S7. Although this policy has been updated since the Preferred Options Consultation Document, as described above, it continues to focus development growth to the most sustainable locations in the three Growth Areas: 1) Central and Urban Chelmsford; 2) North Chelmsford and 3) South and East Chelmsford. This approach allows development growth to be linked to future infrastructure delivery across each area and provides a framework for growth beyond 2041.
- 4.27 Overall, Growth Area 1 will deliver around 4,450 new homes, 9,000sqm of new employment floorspace and five Travelling Showpeople plots. This new development will regenerate previously developed sites in Urban Chelmsford and help to meet Council objectives for strengthening and expanding the City as a major residential, employment and retail centre to build upon its past success.
- 4.28 Over 3,000 new homes will be provided on brownfield sites within Chelmsford Urban Area (Location 1) alongside 4,000sqm of new employment floorspace. Around 1,400 new homes and 5,000sqm of new employment floorspace carried over from the adopted plan will be provided on sustainable new neighbourhoods on the edge of Urban Chelmsford. These sites at West of Chelmsford (Location 2) and East of Chelmsford (Location 3) will maximise opportunities for active travel (cycling and walking) into the City Centre through the Green Wedge. Development will also deliver benefits including green infrastructure and city greening, enhanced bus services, unlock access into the Sandford Mill Special Policy Area, improved Park and Ride to serve eastern road corridors into the City and improvements to the Army and Navy junction. Both the West and East of Chelmsford sites have approved masterplans with planning applications currently under consideration.
- 4.29 The main changes to the sites/locations in Growth Area 1 in the Pre-Submission Spatial Strategy are:
- Allocation of a new housing site at Andrews Place, West of Rainsford Lane (Site 1cc) which is being activity promoted for redevelopment in the plan period
 - Deletion of Woodhall Road (Site 1o) and Rivermead (Site 1u) housing sites which are now built out
 - Deletion of Kay Metzeler site (Site 1x) which is longer available for redevelopment
 - Increased housing capacity for Meadows Shopping Centre and Surface Car Park (Site 1w) and Granary Car Park, Victoria Road (Site 1z) to reflect new information and further assessment.

Further information on changes to site allocation policies in Pre-Submission Local Plan is given in paragraphs 4.49-4.53.

Growth Area 2 – North Chelmsford

- 4.30 The North Chelmsford Growth Area will continue to deliver a considerable amount of new development over the plan period including over 7,200 new homes, 5 Travelling Showpeople plots, 10 Gypsy & Travellers pitches and 66,400sqm of new employment floorspace. Most of this growth, around 5,569 homes, will come forward at North East

Chelmsford - Chelmsford Garden Community (Location 6) in the plan period with the site allocated capable of a further 700 homes in the period beyond 2041. This site has been rolled forward from the adopted plan, has an approved masterplan (Development Framework Document) and outline planning applications currently under consideration. The timing and delivery of this further development will be considered as part of the next Local Plan although the total extent of the site allocated to accommodate 6,250 new homes is shown on plan 4 of the Draft Policies Map.

- 4.31 The development will be landscape-led utilising the Town and Country Planning Association (TCPA) Garden City principles, centred around open space/leisure facilities, new employment sites and will be underpinned by a comprehensive package of new infrastructure including new schools and early years nurseries (co-located and stand-alone), green infrastructure, a large country park and neighbourhood centres. The site will also expand on the attractive well-designed communities at Beaulieu and Channels and be well-connected by improved road, pedestrian, cycle and public transport infrastructure including to the new railway station currently under construction and Chelmsford North East Bypass which is being delivered in phases. There will be a requirement for a 20% biodiversity net gain over the site unless site constraints indicate otherwise.
- 4.32 Growth Area 2 also includes residential allocations for a combined number of around 1,600 new homes carried forward from the adopted plan at Great Leighs (Location 7) and North of Broomfield (Location 8). These will provide opportunities to contribute towards and enhance existing facilities in these villages. The allocations at Chelmsford Garden Community and North of Broomfield will also maximise opportunities for enjoyment of the Green Wedge and use for active and sustainable travel into the City Centre (cycling and walking).
- 4.33 An additional allocation to the adopted Local Plan is identified for a small development on a site of around 1 hectare at Ford End (Location 14b). This will help to support and sustain existing village services such as the primary school and to maintain a diverse housing supply. New employment development will also be provided through extensions to the existing Little Boyton Hall Farm, Roxwell (Location 15) and Waltham Road Employment Area, Boreham (Location 9a). Expansion of these well-established employment sites will provide further rural inward investment opportunities and reflect the aspirations of national policy to support the sustainable growth and expansion of business in rural areas.
- 4.34 The main changes to the sites/locations in Growth Area 2 in the Pre-Submission Spatial Strategy are:
- Deletion of Land west of 20 Back Lane, Ford End (Site 14a) as due to heritage and access constraints it is no longer considered suitable
 - Decreased housing capacity at North East Chelmsford - Chelmsford Garden Community (Site 6) within plan period, with some new homes to be delivered post 2041 in line with current outline planning applications
 - Deletion of 10 Travelling Showpeople plots at North East Chelmsford - Chelmsford Garden Community (Site 6)
 - Increased capacity of Great Leighs - Land East of London Road (Site 7b) from around 190 to around 250 homes for older persons as the site can accommodate more units.

Further information of changes to site allocation policies in the Pre-Submission Local Plan is given in paragraphs 4.49-4.53.

Growth Area 3 – South and East Chelmsford

- 4.35 This area will see significant new growth of around 4,400 new homes, 20 new Gypsy and Traveller pitches, 18 new Travelling Showpeople plots, and 87,200sqm of new employment floorspace over the plan period and beyond. This includes a sustainable new development for the existing town of South Woodham Ferrers (Location 10) which is rolled forward from the adopted plan. The proposals at South Woodham Ferrers have an approved masterplan and a resolution to grant planning permission.
- 4.36 Around 3,000 new homes, 20 Gypsy and Traveller pitches, 13 Travelling Showpeople plots, and 43,000sqm of new employment floorspace is allocated on a new garden community at East Chelmsford (Hammonds Farm – Location 16 - Site 16a) in the plan period with the site allocated capable of a further 1,500 homes in the period beyond 2041. The timing and delivery of this further development will be considered as part of the site masterplan and next review of the Local Plan although the total extent of the site allocated to accommodate 4,500 new homes is shown on plan 4 of the Draft Policies Map.
- 4.37 This garden community will create a new sustainable, comprehensively planned, landscape-led development based on Town and Country Planning Association (TCPA) Garden City Principles. Its location and proximity to Chelmsford's urban area using the Green Wedge will allow opportunities for active and sustainable travel. It will deliver new and improved infrastructure to significantly increase connectivity over and under the A12 through active and sustainable travel links to key destinations including Chelmsford City Centre, Sandon (including the Park & Ride) the new Beaulieu Park Rail Station and connections to Danbury to the east. The new and improved links will help address the severance issues created by the A12. The site will have primary highway access from the A414 at the south of the site and directly from Junction 19 of the A12 to the north. Capacity improvements to the A414 and Junctions 18 and 19 of the A12 will be required. A wide range of new community services and facilities are identified on the site including a new co-located primary and secondary school and new primary schools, early years and childcare nurseries (co-located and stand-alone), open spaces, recreation, sport and play facilities, community facilities and mixed use neighbourhood centres. The site policy requirements include a large country park providing significantly improved public access and recreational opportunities along the Chelmer Valley river corridor and to provide connections to the country park and active travel routes proposed as part of the existing development allocations at East of Chelmsford (Location 3). There is a requirement for a 20% biodiversity net gain over the site unless site constraints indicate otherwise and to reinstate lost historic landscape features. The development will further support Chelmsford's economic growth by providing significant new employment floorspace and jobs.
- 4.38 The Council's evidence base does highlight that the East Chelmsford Garden Community (Hammonds Farm) site has a moderate landscape value rating, a low to medium landscape capacity rating and overall high landscape sensitivity rating. The site has no formal landscape designation apart from the Conservation Area along the river corridor allocated to form the country park. On the eastern portion of the site, the A12 and 440kw National Grid powerlines have a significant impact upon the existing landscape. The allocation of a large country park along the river valley and protection of land to the east of Sandon Brook alongside policy requirements to reinstate historic landscape features will help mitigate the impact of the development.
- 4.39 Following representations to the Preferred Options consultation a further landscape notation is included to ensure heritage assets are protected on site and to respond to

new archaeological evidence. In addition, a parcel of development land to the north of the site close to Junction 19 of the A12, previously included in the Preferred Options consultation, has also been removed. This is due to heritage impacts, its detachment from the rest of the site for example to the north of the country park, and the fact the land is no longer required for development. The overall development area for this site has also been amended to exclude from the development area any areas of high flood risk to the east along Sandon Brook.

- 4.40 The Pre-Submission Local Plan site policy also sees the addition of new requirements for Site of Special Scientific Interest (SSSI) mitigation in relation to increased use of the nearby SSSIs in the area, as well as the requirements for semi-natural greenspaces to meet Natural England requirements. These have been added in response to representations received from the public and Natural England. As set out above, considering Historic England's response some land within the site boundary has been included as further landscape notations and the requirement for a detailed Heritage Impact Assessment is included in the policy. Acoustic screening to the A12 is also a new policy requirement in response to representations received to the preferred options consultation.
- 4.41 Landscape sensitivity and character is one of many factors to weigh-up when making a balanced decision on the location of new development. In this case, the locational and sustainability benefits due to the site's close proximity to the urban area of Chelmsford, permitted expansion to Sandon Park and Ride, linkages to the new Beaulieu Park rail station and strategic road network together with opportunities that the site provides for active and sustainable travel, reinstatement of historic landscape features and biodiversity and the ability to create a comprehensively planned new community has informed the site's continued retention in the plan.
- 4.42 A new stand-alone strategic employment site for around 43,000sqm is allocated at Land adjacent A12 Junction 18 (Location 16 - Site 16b), south of the new East Chelmsford Garden Community. This will provide for a mix of employment uses including office, light industrial, general industrial and distribution uses in a sustainable location close to the strategic road network, expanded Sandon Park and Ride with proposed links to the new Beaulieu Park rail station. The development will make an important contribution to the delivery of employment and jobs in the City Council's area over the plan-period. A new junction will be required on the A414 to access the site and active travel connectivity across Junction 18 of the A12 to the east. Capacity improvements to Junction 18 of the A12 and the A414 will be aligned with those needed for the East Chelmsford Garden Community (Hammonds Farm).
- 4.43 Following feedback to the Preferred Options consultation additional site policy requirements have been added to ensure important views into and through the site from Danbury Ridge are also considered, and that the development considers lighting of the site when seeking to mitigate the visual impact of the development.
- 4.44 In addition to the above new sites, sustainable new development on four small sites of no more than 1 hectare each are identified in Bicknacre and East Hanningfield villages, and around 100 new homes within Danbury through the Danbury Neighbourhood Plan. These villages have primary schools with capacity, employment sites and community facilities making them suitable for more limited scale development. New housing will help to support existing village services and to maintain a diverse housing supply.
- 4.45 The main changes to the sites/locations in Growth Area 3 in the Pre-Submission Spatial Strategy are:

- Deletion of site 11a – South of Bicknacre as it has been built out
- Decreased number of homes from 15 to 11 at Site 17a – Land north of Abbey Fields, East Hanningfield due to site constraints
- Addition of 13 Travelling Showpeople plots on site 16a – East Chelmsford Garden Community (Hammonds Farm) to meet identified need over the plan period.

Further information of changes to site allocation policies in the Pre-Submission Local Plan is given in paragraphs 4.49-4.53.

Summary of the Pre-Submission Spatial Strategy

- 4.46 Overall, growth identified in the Pre-Submission Spatial Strategy (Strategic Policy S7) will be accommodated on unbuilt allocated sites rolled forward from the adopted Local Plan and new site allocations. All rolled forward sites are considered to represent sustainable and sound development allocations which have been previously subject to Independent Examination. New site allocations are considered suitable locations for such development and will help to meet identified needs in a sustainable way.
- 4.47 The Council acknowledge that significant levels of opposition to Hammonds Farm (SGS16a) and Junction 18 A12 Employment Area (SGS16b) were raised in consultation responses to the Preferred Options Local Plan. Multiple reasons were cited including traffic, landscape, biodiversity, healthcare, flood risk and heritage impacts, with most calling for their removal from the plan. For similar reasons, a high level of objection was also received and calls for their deletion from the plan to some other preferred site allocations in particular Waltham Road Employment Area (GS9a), Land at Kingsgate, Bicknacre (GS11b) and Land West of Barbrook Way, Bicknacre (GS11c).
- 4.48 It is important to note that further work and additional evidence base work has been undertaken to assess the impacts, test their suitability for development and to help identify ways to mitigate any adverse impacts of the new site allocations including Hammonds Farm (SGS16a) and Junction 18 A12 Employment Area (SGS16b). This includes further traffic modelling, a new Archaeological Assessment and testing of alternative options through the Pre-Submission Integrated Impact Assessment. This has demonstrated that the sites are considered suitable and sustainable and as such have been retained in the Pre-Submission Local Plan. However, site allocation policies have been refined and strengthened, where appropriate, to help address community and stakeholder concerns raised and any suggestions made for their improvement. More information is set out in the Preferred Options 'You Said We Did Feedback Report' in Appendix 1. It is also important to note that the Council makes decisions on evidence and sound planning judgments, rather than solely basing them on consultation responses or the number of objections made, and that the above sites also received some support.

Site Allocations Policies

- 4.49 Chapter 7 of the Pre-Submission Local Plan contains updated and new site allocation policies for housing and employment development. These policies set out a range of site criteria that the developments will need to adhere to including the amount and type of development and site-specific infrastructure requirements. They also indicate when the developments are likely to come forward over the plan period.
- 4.50 The site allocations have been updated in the Pre-Submission Local Plan to make them more effective in decision-making, to provide greater clarification and

consistency, to respond to comments made to the Preferred Options Local Plan and to reflect the outputs of new evidence studies including an updated Infrastructure Delivery Plan, updated Strategic Housing Needs Assessment, Archaeology Assessment, Open Space Study and Local Wildlife Sites Review.

4.51 New requirements which have been added to site allocation policies where relevant include:

- Following guidance in relation to the overhead transmission lines present within sites at East Chelmsford, North of South Woodham Ferrers and East of Chelmsford Garden Community (SGSs 3, 10 and 16a) – in response to comments from National Grid Electricity Transmission
- Safeguarding access for maintaining foul and surface water drainage infrastructure on some sites – in response to comments from Anglian Water
- Providing financial contributions towards police facilities on housing sites – in response to comments from Essex Police
- Providing necessary mitigation to address cumulative recreational impacts on SSSIs in proximity to East Chelmsford, North of South Woodham Ferrers and East of Chelmsford Garden Community (SGSs 3, 10 and 16a) – in response to comments from Natural England
- Assessing, and where appropriate mitigating, the potential cumulative effect on the designated features of Thriftwood SSSI for Bicknacre sites – in response to comments from Natural England
- Rewording the requirement for providing new education facilities – in response to comments from Essex County Council.

4.52 Deleted requirements which have been removed from site allocation policies where relevant include:

- Contributing towards the Chelmsford North East Bypass (Section 1b/dualling) for East of Chelmsford Garden Community, Land adjacent to Junction 18 of the A12, Great Leighs and North of Broomfield (SGSs 16a, 16b, 7 and 8) – as these developments are not dependent on the delivery of the bypass to mitigate their traffic impacts
- Requiring a new early years and childcare nursery and a Minerals Resource Assessment for Land Adjacent to Junction 18 of the A12 (SGS 16b) – in response to comments from Essex County Council who have confirmed that these will not be required.

4.53 It is important to note that the site policy requirements are in addition to more generic requirements in other relevant plan policies. This includes several new and updated policy requirements including infrastructure requirements (in Strategic Policy S9), Health Impact Assessments (in Strategic Policy S14), contributions towards the Essex Recreational disturbance Avoidance and Mitigation Strategy (in DM16) and net zero carbon development (in DM31), with some minor changes and additions made to these policies since the Preferred Options and as set out above and below.

Development Management Policies

4.54 Chapters 8 and 9 of the Pre-Submission Local Plan contain non-strategic policies, known as 'Development Management Policies'. These cover the following topic areas/themes:

- Securing the right type of Homes
- Securing Economic Growth

- Protecting the Countryside
- Protecting the Historic Environment
- Protecting the Natural Environment
- Delivering and Protecting Community Facilities, and
- Making High Quality Places.

- 4.55 In addition to the Strategic Policies, these policies apply where relevant to all site allocations and any future planning applications submitted for all forms of development. They provide detailed requirements that development proposals will be assessed against at the planning application stage.
- 4.56 Most of the changes to Development Management policies in the Preferred Options Local Plan Consultation Document were made to address national policy changes. Policies proposed for more substantive changes at that stage included DM5 - Designated Centres, DM16 – Protection and Promotion of Ecology, Nature and Biodiversity and Policy DM31 - Net zero carbon development (in operation). These have been subject to minor changes in the Pre-Submission Local Plan.
- 4.57 Other changes made to the Development Management policies in the Pre-Submission Local Plan to note are set out below. These changes primarily respond to the preferred options consultation responses, more recent discussions with statutory bodies and more recent plan evidence base.
- 4.58 The policy changes in Policy DM1 - Size and Type of Housing revert to the 50% M4(2) requirement as in the adopted Plan as the higher percentage (proposed in the Preferred Options Consultation Document) cannot be justified at this point in time. In addition, if mandated in Building Regulations they will not need to be in planning policy in any case. Furthermore, the updated policy amends the market mix on greenfield sites of more than 500 dwellings, with 10% of market housing to be required to meet the housing needs of older people in line with the Strategic Housing Needs Assessment (SHNA) 2023 and 2024 Addendum Report.
- 4.59 Policy DM2 - Affordable Housing and Rural Exception Sites remains unchanged in the Pre-Submission Local Plan, but additional text is included in the Reasoned Justification to clarify how affordable houses should be incorporated and designed into schemes. This has been taken from the Draft Planning Obligation Supplementary Planning Document (SPD), January 2025. The Reasoned Justification has also been updated to reflect the findings of the latest 2024 SHNA Addendum Report which assessed the implications of moving from housing delivery using a Standard Method output of 955 dwellings per year up to a figure of 1,206 dpa (which has been rounded to 1,210 dpa in the Pre-Submission Local Plan). Notably, the 2024 SHNA Addendum Report identifies a total affordable housing need in Chelmsford of 966 affordable dwellings for rent per-annum (as opposed to 642 previously) and concluded that provision of around 70% of rented housing at social rent could be justified, albeit this will need to be considered alongside viability evidence. It also concludes that 25% of affordable housing should not be provided as First Homes given the price caps mean any First Homes are unlikely to come forward other than as one-bedroom homes and therefore a reasonable mix of this tenure would not be possible. The report does not evidence a need for First Homes or discounted market housing more generally but states that shared ownership is likely to be suitable for households with more marginal affordability as it has the advantage of a lower deposit and subsidised rent. The Policy and Reasoned Justification text have been further updated to reflect that where a viability assessment satisfies the Council that a development proposal cannot be fully compliant and remain financially viable, a review mechanism will be applied to

schemes that do not meet, in full, the requirements of Policy DM2 (A) to ensure that affordable housing contributions are improved if viability improves over time.

- 4.60 Policy DM25 - Sustainable Buildings now includes a new lower water efficiency target of 90 litres/person/day (compared with 110 litres/person/day in the Preferred Options Local Plan), a new requirement to provide integrated water management techniques, and new requirements to promote water efficiency in non-residential buildings and to optimise rainwater harvesting. These will reduce water stress and respond to recommendations in the Water Cycle Study and Preferred Options Integrated Impact Assessment and to the preferred options consultation responses from Essex County Council, Anglian Water and the Environment Agency. The policy also includes new requirements for shared or visitor spaces for residential development to provide 1 active EV charging point for every 5 spaces. Additional minor changes have been made to the policy and Reasoned Justification to provide better clarity and reflect the latest position on EV charging requirements.

Monitoring Framework

- 4.61 Chapter 10 contains the Monitoring Framework for the Pre-Submission Local Plan. The Framework sets out in detail how the Council will monitor the Local Plan's success in meeting the challenges and opportunities set out in the Strategic Priorities (Chapter 3) to ensure that it is effective in delivering its objectives. Minor changes have been made to the Pre-Submission Local Plan Monitoring Framework to ensure that it reflects the new policy changes.
- 4.62 Monitoring of the indicators set out in the table will be done on an annual basis and published through the Authority's Monitoring Report (AMR). The AMR is used by the Council to report on the performance of its adopted plans.

Alternative Options

- 4.63 The review plan preparation process has considered a range of other alternative strategies and options, as part of the Integrated Impact Assessment process and through technical evidence base testing, before deciding on the policies and sites in the Pre-Submission Local Plan. The has included the assessment of different Spatial Strategies options, higher and lower growth requirements and different housing and employment development sites including:
- Lower housing growth of 955 dwellings per year based on the Strategic Housing Needs Assessment 2023
 - Higher housing growth of 1,406 dwellings per year based on the proposed revised Standard Method in the July 2024 NPPF consultation document
 - Not having a Spatial Strategy
 - Development growth in the Green Belt
 - Development growth in the Green Wedge
 - Alternative Spatial Strategies including:
 - Expanding the existing development allocations within the adopted Spatial Strategy with further expansion of North East Chelmsford (Chelmsford Garden Community)
 - Growth along transport corridors at Chatham Green, Boreham, Howe Green and Rettendon
 - Employment development at Howe Green (Junction 17 of the A12)
 - Other Key Service and Service Settlements outside the Green Belt.

- 4.64 In view of the approach taken to assess reasonable alternatives, the Pre-Submission Local Plan is considered justified. The Preferred Options Local Plan Consultation Document included more details of the alternative considered above alongside the preferred policies. Given that the Pre-Submission Local Plan represents the final version of the plan which the Council intends to adopt, these have been removed.
- 4.65 More information on the reasonable alternatives assessed and the reasons for rejecting them is set out in the Pre-Submission Integrated Impact Assessment report described in Section 5 below and in the Local Plan Topic Papers available via [Local Plan Review](#).

Policies Map

- 4.66 Chapter 11 presents the Draft Policies Map for the Pre-Submission Local Plan. This covers the whole of the Chelmsford area, and its purpose is to illustrate sites allocated for development or protection within the Pre-Submission Local Plan.
- 4.67 Most notations on the Policies Map are defined by the Council including open spaces, Employment Areas and Settlement Boundaries. A number of evidence base studies have been used to update notations on the Pre-Submission Draft Policies Map including a Review of Local Wildlife Sites 2024. Other amendments have been made in response to the preferred options consultation responses, to reflect new/updated policies in the Pre-Submission Local Plan and more recently published information. These include:

- Updated housing and employment site allocations including the deletion of built out sites, the addition of new housing site (Andrews Place – Site 1cc) and the addition of site boundaries for small-scale residential development allocations in Bicknacre (Sites GS11b and c), Ford End (Site GS14b) and East Hanningfield (Sites GS17a and b), which were shown as a symbol on the Preferred Options Draft Policies Map
- Updated open space notations to reflect information in the new Open Space Study 2024
- Updated Local Wildlife Sites notations to reflect information in the new Review of Local Wildlife Sites 2024
- Replacing retail frontages of Local Neighbourhood Centres with centre boundaries for greater clarity
- Expansion of the Special Policy Area boundaries of the ARU Writtle Titchmarsh Campus and Rural Education and Training Centre, Cow Watering Lane to reflect the new and improved facilities and development that will be required to support the University over the plan period
- Amended notations on East Chelmsford Garden Community (Site 16a) including a reduced main development site boundary to exclude flood zones 2 and 3 adjacent to Sandon Brook, deletion of the separate development parcel to the north and the addition of a new Area for Conservation/Strategic Landscape Enhancement (for the reasons described under Growth Area 3 – South and East Chelmsford above).

- 4.68 Due to the size of the Chelmsford administrative area the Draft Policies Map is set out on a number of insets. The Draft Policies Map is embedded within the Pre-Submission Local Plan attached at Appendix 2 of this report.

Other Plan Content

- 4.69 In addition to the plan content set out above, the Pre-Submission Local Plan includes:

- An updated foreword to reflect the Pre-Submission Local Plan
- Details on the Pre-Submission consultation process
- Updated statistics and information in the 'About Chelmsford' section including clarification on the remit of the South East (Inshore) Marine Plan in response to comments from the Marine Management Organisation
- Updated housing and Gypsy and Traveller accommodation trajectories to reflect the April 2024 Housing Site Schedule and updated site-specific allocations
- Updated Development Standards in Appendix 1 to reflect changes to the strategic and development management policies in the Pre-Submission Local Plan and updated standards in the Open Space Study 2024
- An updated glossary.

Danbury Neighbourhood Plan

4.70 Following the successful referendum in December 2024, the Danbury Neighbourhood Plan is in the process of being 'made' (adopted) by Chelmsford City Council. The Pre-Submission Local Plan and Policies Map will be updated to reflect the adoption of the Danbury Neighbourhood Plan before it is finalised for consultation.

5. Preferred Options Integrated Impact Assessment

- 5.1 There is a legal requirement to carry out a Sustainability Appraisal and Strategic Environmental Assessment of Local Plan proposals, and a Habitats Regulations Assessment of impacts from proposed development on protected sites. Following good practice, the Council has commissioned an integrated approach to these assessments due to the similar nature of the information being assessed. The Integrated Impact Assessment brings together four strands of assessment - the Sustainability Appraisal and Strategic Environmental Assessment, Habitats Regulations Assessment, an Equality Impact Assessment and Health Impact Assessment. The Integrated Impact Assessment is attached to this report at Appendix 3.
- 5.2 The Integrated Impact Assessment is a detailed technical document, which assesses the Pre-Submission Local Plan proposals and policies against a set of Integrated Impact Assessment objectives to identify any significant effects and recommend measures to mitigate these effects and enhance the positive effects. The document will form part of the Pre-Submission consultation and will be accompanied for consultation by a non-technical summary of the key findings. The Integrated Impact Assessment will be finalised in light of the consultation responses received, and a further iteration of the report will be prepared to accompany the Submission Integrated Impact Assessment document.

Sustainability Appraisal/Strategic Environmental Assessment

- 5.3 The Vision, Strategic Priorities and Spatial Strategy in the Pre-Submission Local Plan have been found to be broadly compatible with the Integrated Impact Assessment objectives.
- 5.4 The Spatial Strategy is anticipated to have significant positive effects across a number of the Integrated Impact Assessment objectives, including:
- Meeting the housing needs of the City both now and in the future through the delivery of a minimum of 22,990 homes (1,210 per year) to 2041, including

housing for older people and other specialist needs and demand-led affordability targets

- Expanding and creating sustainable neighbourhoods creating well-connected communities with access to services
- Expanding and strengthening the City's successful economy through the provision of a flexible rolling employment land supply across the plan period to 2041 to accommodate a minimum of 162,646 sqm of new employment business floorspace
- Protecting and enhancing local centres
- Achieving high quality design
- Providing social, health and education facilities which will support progression towards sustainable communities
- Protecting and enhancing Green and Blue Infrastructure resources, including biodiversity resources, recreational amenity, air and water quality
- Responding to the challenge of climate change through mitigation measures such as energy efficiency in buildings and on-site energy generation.

5.5 It is recognised that the Spatial Strategy will, understandably, have some environmental impacts due to the necessary use of greenfield land to accommodate development requirements. Where these impacts cannot be avoided, they require mitigation to reduce them to the lowest practicable extent.

5.6 Strategic Policies are anticipated to have positive effects across the Integrated Impact Assessment objectives, reflecting the detail of the policies which seek to anticipate and mitigate negative effects whilst promoting good practice and site-specific requirements in matters such as site location and design, and make positive enhancements to site and wider area function such as through multifunctional green infrastructure, sustainable and active travel initiatives, service provision and improvement of the existing built environment through brownfield land recycling.

5.7 Development Management Policies are predicted to have cumulatively positive and significant positive effects, reflecting the requirements for securing high quality developments.

5.8 Recommendations are made in relation to the content and application of policies. These relate mainly to monitoring and review, both of plan implementation and the meeting of sustainability goals, to provide a guide on the degree of success and address uncertainties associated with the interaction between development and sustainability aspirations.

Habitats Regulations Assessment

5.9 There is no statutory requirement for a Habitats Regulations Assessment to be undertaken at early consultation stages, but it must be completed for the final Local Plan. However, it is best practice to run the Habitats Regulations Assessment process alongside each stage of Local Plan development to highlight any potential impacts on European sites such as Special Protection Areas and Special Areas of Conservation.

5.10 The Habitats Regulations Assessment has concluded that, overall, that most aspects of the plan will have no significant effects on any European sites due to the absence of effect pathways. These pathways include a combination of water quality, air quality and visitor pressure effects, and effects on species away from the sites. Where such pathways may be present, additional analysis has been undertaken, reinforcing the conclusion that the Pre-Submission Local Plan will have no adverse effects on the integrity of any European sites, either alone or in combination.

Equality Impact Assessment

- 5.11 The Equality Act 2010 places a duty on local planning authorities to ensure that a policy, project or scheme does not discriminate against any particular group on the basis of certain characteristics.
- 5.12 The Strategic Policies do not directly affect a number of the protected characteristics considered under the Equality Impact Assessment, reflecting the intention and scope of the plan as a land use document. All of the Strategic Policies and Site Allocations are assessed as having either a positive, mixed or neutral outcome in respect of the protected characteristics. Consequently, the Pre-Submission Local Plan document is considered to be generally compatible with the duties of the Equality Act 2010.

Health Impact Assessment

- 5.13 The Pre-Submission Local Plan has been subject to a Health Impact Assessment to evaluate the potential health impacts of the Local Plan to maximise the positive impacts and minimise any negative impacts to the physical and mental health of the local community.
- 5.14 The Health Impact Assessment concludes that the strategic policies in conjunction with other Local Plan policies provide sufficient mitigation to ensure that there are no residual significant negative effects on the Health Impact Assessment objectives. The delivery of strategic scale infrastructure will significantly progress the Health Impact Assessment objectives through improved access to good quality homes (including affordable homes), employment opportunities, community facilities (including education and health services) and greater opportunities for active and sustainable travel.

6. Other Key Evidence Base

- 6.1. An up-to-date and comprehensive evidence base has been produced to support the review of the plan. More recently completed evidence base used to inform the Pre-Submission Local Plan include:
- Updated Viability Assessment
 - Updated Infrastructure Delivery Plan
 - Updated Heritage Impact Assessment
 - New Strategic Housing and Employment Land Availability Assessment (SHELAA)
 - Strategic Housing Needs Assessment Addendum Report
 - Employment Land Availability Assessment Focused Review
 - New Open Space Assessment
 - New Archaeology Assessment
 - New Air Quality Assessment
 - Level 2 Strategic Flood Risk Assessment – updated and new site summary tables and maps
 - Sequential and Exception Testing Focused Update, and
 - Local Neighbourhood Centre Technical Note.
- 6.2. In view of the approach taken to assemble a wide range of new and updated evidence, the Pre-Submission Local Plan is considered justified. All evidence base reports have been published online at [Local Plan Review](#). The ‘You Said We Did’ report attached at

Appendix 1 of this covering report includes information on recent plan evidence base studies and how they have been used to inform the Pre-Submission Local Plan.

7. Duty to Co-operate

- 7.1 The Council has a legal duty to cooperate with other national and local bodies, such as neighbouring planning authorities, Essex County Council and Historic England. The purpose of the duty is to discuss and address strategic cross-boundary issues. These discussions have helped to formulate the Pre-Submission Local Plan. The Pre-Submission Duty to Co-operate Position Statement provides evidence of this ongoing engagement and where agreement has been reached. This Statement is also supported by Statements of Common Ground which are being agreed with organisations. These will be available on the Council's website via [Local Plan Review](#) as they are agreed. In view of this, the Pre-Submission Local Plan is considered effective.

8. Pre-Submission Consultation

- 8.1. The Council is now in a position where it can publish a Pre-Submission Local Plan and Pre-Submission Local Plan Integrated Impact Assessment for formal public consultation under Regulation 19 of the Development Plan Regulations 2012 (as amended). This represents the final statutory public consultation stage in the preparation of a review of the adopted Local Plan before its submission, and although at this stage it will be of limited weight in decision making on planning applications, it indicates the Council's intent to address future growth requirements in Chelmsford in the period to 2041 and beyond in a planned and sustainable way.
- 8.2. In line with national planning legislation, the consultation will focus solely on whether the plan complies with all relevant legislation, complies with the Duty to Co-operate and meets the tests of soundness set out in national planning policy. These will test whether the plan is:
- **Positively prepared** – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development
 - **Justified** – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence
 - **Effective** – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common grounds that will be published alongside the public consultation on the Local Plan; and
 - **Consistent with national policy** – enabling the delivery of sustainable development in accordance with the policies in this Framework.

The consultation will ask questions around these requirements and be based on the model representation form for local plan consultations at this stage produced by the Planning Inspectorate.

- 8.3. It is important to note that the Pre-Submission Local Plan has been informed by a significant amount of earlier consultation and engagement with the local community and key stakeholders in accordance with the Council's Statement of Community Involvement (SCI). This is detailed in the Issues and Options (Regulation 18) You Said, We Did Feedback Report and Preferred Options (Regulation 18) You Said, We

Did Feedback Report (given in Appendix 1). It should also be noted that under the current regulations there is only the legal requirement to consult on the Local Plan at two stages (Regulation 18 and Regulation 19) which means that the Council gave an additional opportunity for people to comment on the review of the Local Plan at regulation 18 stage.

- 8.4. These two earlier stages of consultation enabled the public and stakeholders to input on a wide range of issues facing the City and the proposed approaches and preferred policies to address them. The Local Plan's progress to Pre-Submission (or Regulation 19) stage means that the Local Plan is the version of the plan that the Council intends to submit to the Government for Independent Examination, and ultimately adopt as the City's statutory Development Plan.
- 8.5. It is proposed to consult on the Pre-Submission Local Plan and Pre-Submission Integrated Impact Assessment for the statutory six-week period which is anticipated to commence on the 4th February 2025. Given the publication of the revised NPPF, it is recommended that the Council makes use of the transitional arrangements for the progression of Local Plans that are at an advanced stage of preparation. This means that the Pre-Submission Local Plan will be assessed against the previous 2023 NPPF at Independent Examination.
- 8.6. The consultation will go beyond the minimum requirements of legislation and the Council's adopted Statement of Community Involvement (SCI). A range of effective communication tools and channels are proposed to ensure that there are opportunities for Parish and Town Councils, residents, stakeholders and businesses to learn more about the Plan and how to make comments. Promotional activities will include email/letter notifications to over 6,300 consultees registered on the Council's Local Plan database, providing information on the Council's website, press releases, adverts in local publications, site notices and social media. Consultation activities will include placing the Pre-Submission Local Plan and Pre-Submission Integrated Impact Assessment on deposit at the Council's Customer Service Centre, organised stakeholder presentations, Duty to Co-operate meetings and staffed physical exhibitions. Officers are working closely with the Council's Communications Team on its engagement approach and activities.
- 8.7. The Council will also publish several documents to support the consultation including non-technical summary leaflets, Frequently Asked Questions (FAQs) and Topic Papers. Further detail on the planned programme of consultation is set out in the Pre-Submission Consultation Plan at Appendix 4 to this report.
- 8.8. Following the close of the public consultation period, the responses (representations) will be processed and reviewed. The Council will produce a summary of the main issues raised in the consultation responses for the Inspector and publish this online. It will then seek approval from Full Council to submit the Pre-Submission Local Plan along with its evidence base and all the representations made on the Pre-Submission Local Plan to the Secretary of State for Independent Examination. It is currently anticipated that this will be in Summer 2025.
- 8.9. The Government will appoint an Inspector to undertake an Independent Examination of the Local Plan. The Inspector, following Independent Examination, will make recommendations to the Council on what happens next for the Local Plan including whether it requires any changes and can be adopted.
- 8.10. It is important to note that all comments made on previous iterations of the Local Plan, in 2022 and 2024, have been considered in producing the Pre-Submission Local Plan

and are not considered by the Inspector. A new representation must be submitted if individuals and organisations still have relevant comments to make. The Local Plan examination will also be based around matters raised by representations made on the Pre-Submission Local Plan rather than previous versions.

- 8.11. It should also be noted that when the Council submits the plan for Independent Examination, it gains limited 'planning weight' and will become a material planning consideration that can be referred to in the assessment and determination of planning applications. However, it will not have full Development Plan status until it has been adopted by the Council. At this point the new Plan would also replace the current adopted plan.

9. Local Plan Planning Inspectorate (PINS) Advisory Visit

- 9.1 Whilst not compulsory, PINS will, if requested by a Local Planning Authority, hold Local Plan advisory meetings with a Council before they submit their local plan for examination. The aim of these is to provide advice on the examination so that the authority can prepare effectively for it. An advisory visit has been arranged with PINS in early 2025.

10. Conclusion

- 10.1. Work on the preparation of the review of the Chelmsford Local Plan to cover the period up to 2041 has reached the stage where the Council can embark on the final technical public consultation. The consultation will ask whether the Pre-Submission Local Plan complies with the necessary legislation, the Duty to Cooperate and national planning policy (known as the soundness of the Plan).
- 10.2. Consultation on the Pre-Submission Local Plan and its accompanying Pre-Submission Integrated Impact Assessment will be carried out in accordance with Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) and is programmed to take place in early 2025 in accordance with the current timetable and the transitional arrangements for plan-making set out in the revised NPPF (December 2024).

Corporate Implications:

Legal/Constitutional:

There is a need to ensure the Review of the Local Plan accords with the latest legislative requirements.

Financial:

There are no cost implications arising directly from this report. The Local Plan is being prepared using the existing agreed budget.

Potential Impact on Climate Change and the Environment:

The review of the adopted Local Plan will seek to ensure new development within the administration area will contribute towards meeting the Council's Climate Change agenda.

Contribution toward Achieving a Net Zero Carbon Position by 2030:

The review of the adopted Local Plan will seek to ensure new development within the administration area will contribute towards achieving a net zero carbon position by 2030.

Personnel:

There are no personnel issues arising directly from this report.

Risk Management:

There are several risk considerations associated with local plan production. These are set out in the report and in the Local Development Scheme 2023 with contingency measures.

Equality and Diversity:

The Public Sector Equality Duty applies to the council when it makes decisions. An Equalities and Diversity Impact Assessment forms part of the Integrated Impact Assessment for the review of the Local Plan and concludes that it will not have a disproportionate adverse impact on any people with a particular characteristic and in general will have positive or neutral impacts across a wide range of people and will be compatible with the duties of the Equality Act 2010.

Health and Safety:

There are no Health & Safety issues arising directly from this report.

Digital:

There are no digital issues arising directly from this report.

Other:

The Review of the Local Plan will seek to contribute to priorities in the Council's Our Chelmsford, Our Plan 2020: A Fairer and Inclusive Chelmsford, A Safer and Greener Place, Healthy, Enjoyable and Active Lives and A Better Connected Chelmsford.

Consultees:

CCC – Development Management
CCC – Economic Development and Implementation
CCC – Legal Services
CCC – Communications
CCC – Spatial Planning
ECC – Spatial Planning

Relevant Policies and Strategies:

The report takes account of the following policies and strategies of the City Council:

Adopted Local Plan 2013-2036 and supporting Supplementary Planning Documents and Planning Advice Notes
Our Chelmsford, Our Plan (2024)
Statement of Community Involvement (2020)
Health and Wellbeing Plan (2019)
Public Open Spaces Policy (2022)
Climate and Ecological Emergency Action Plan (2020)
Housing Strategy 2022-27 (2022)
Homelessness and Rough Sleeping Strategy 2020-24 (2020)
Cultural Strategy (2023)
Plan for Improving Rivers and Waterways (2022)
Chelmsford Green Infrastructure Strategic Plan 2018-2036
Essex Coast Recreational disturbance Avoidance and Mitigation Strategy 2018-2038
Climate and Ecological Emergency Action Plan (2020)
Duty to Co-operate Strategy (2022)

Our Chelmsford, Our Plan

The above report relates to the following priorities in the Corporate Plan:

Promoting sustainable and environmentally responsible growth to stimulate a vibrant, balanced economy, a fairer society and provide more homes of all types.

Creating a distinctive sense of place, making the area more attractive, promoting its green credentials, ensuring that people and communities are safe.

Bringing people together and working in partnership to encourage healthy, active lives, building stronger, more resilient communities so that people feel proud to live, work and study in the area.

Executive Summary

This report sets out:

- Summary of the Preferred Options consultation (Section 1)
- Summary of representations received (Section 2)
- Summary of how the Chelmsford Local Plan Pre-Submission (Regulation 19) Document (shortened to 'Pre-Submission Local Plan' throughout the rest of this document) has been informed by more recent evidence base studies (Section 3)
- The main issues raised in the representations received and a high-level summary of CCC's response to the comments made and how they have informed the Pre-Submission Local Plan (Section 4).

It supersedes the Preferred Options Feedback Report published in October 2024.

The Preferred Options Consultation Document set out the preferred spatial strategy for new homes and jobs for the future growth and development of the city up to 2041. It also contained updated and new policies which would be used to determine planning applications.

About the Consultation

A comprehensive six-week programme of consultation took place during the formal consultation period from 10am on Wednesday 8th May 2024 to 4pm on Wednesday 19th June 2024. The consultation was promoted through a range of activities including email/letter notifications to more than 2,800 contacts registered on the Council's Consultation Portal, on the Council's website, press releases, adverts in local publications and social media. Consultation activities included placing consultation documents on deposit at the Council's Customer Service Centre, organised stakeholder presentations, Duty to Co-operate meetings, a virtual exhibition and staffed physical exhibitions.

Summary of responses to the Preferred Options Local Plan

A total of 10,418 comments were received to the consultation from 3,678 respondents. The respondents are from a wide variety of groups and individuals including residents, developers, landowners and their agents, businesses and statutory bodies such as other local authorities and Parish/Town Councils. All the comments received can be viewed on the Council's Consultation Portal.

An overview of the key issues raised to the draft plan is provided below.

Overall:

- A wide range of feedback was received ranging from general comments to technical observations on detailed policy wording
- New policies, policies proposed for more substantive changes, and some new land allocations for development attracted the greatest level of comments
- Some policies of the plan did not attract any comments

- Most Government or national bodies either support the plan outright or offer qualified support subject to some proposed amendments
- Mix of support and opposition from Town/Parish Councils, with many suggesting changes from minor amendments to the deletion of site allocations
- Most public comments were objecting to one or more aspects of the plan, though there was limited support
- Hammonds Farm and Junction 18 of the A12 (SGS16a-b) received very large numbers of public objections, with an organised campaign established by Little Baddow, Danbury, Boreham Parish Councils coordinating responses
- Many developers/landowners support development proposed on their sites, with some seeking changes to the allocations policies and boundaries
- Many developers/landowners object where the plan did not allocate specific land or sites for development and call for Green Belt and Green Wedge reviews.

Strategic Priorities:

- Support for the preferred Strategic Priorities including new Strategic Priorities 1 and 2
- Some detailed wording amendments proposed including strengthening the emphasis on addressing climate change and on meeting housing needs in full
- References to some other strategies and plans are proposed including the Essex Local Nature Recovery Strategy and the Council's Plan for Improving Rivers and Waterways
- Some call for a review of the Green Belt to identify sites which may be more suitable for development and to provide a more balanced/sustainable Spatial Strategy.

Vision:

- Overall support for the Vision
- Requests for more explanation on how the Vision bullet points relate to the Vision and will be used in future decision making
- Some detailed wording amendments proposed to the Vision bullet points including adding references to multifunctional green/blue infrastructure and Biodiversity Net Gain
- Additional bullet points proposed including around supporting rural areas and rural tranquillity
- Some comments suggesting that Hammonds Farm is contrary to the Vision.

Spatial Principles:

- Good level of general support
- Some developers consider there should be a Green Belt review to identify sustainable development opportunities in this area
- Some developers call for more development to be focused on lower order settlements
- Some detailed wording amendments, and an additional principle proposed around integrating strategic green infrastructure with ecological networks and the wider landscape.

Strategic Policies for creating sustainable development:

- Overall support for the Strategic Policies including new policies S14 (Health and Wellbeing) and S16 (Connectivity and Travel)
- Many objections from the development industry to policy requirements which exceed national planning policy including net zero homes (Policy S2) and 20% biodiversity net gain (Policy S4)
- Concerns over the evidence base for some new policy requirements, including net zero homes (Policy S2) and Health Impact Assessments (Policy S14)
- Some detailed wording changes proposed to expand, amend, clarify and update policies
- Some additional policy requirements proposed including to assist with the delivery of biodiversity net gain and ecosystems restoration (Policy S2)
- References to some other strategies and guidance are proposed including the Chelmsford Health and Wellbeing Plan (Policy S14)
- Support for promoting sustainable travel methods but concerns are raised about how feasible and deliverable these will be in some areas
- Support for the investment and improvements to key infrastructure, although some concerns about the funding and timing of infrastructure.

Strategic Policies for how future development growth will be accommodated:

- Mix of support and opposition to Development Requirements (Policy S6) and the Spatial Strategy (Policy S7)
- Requests from Castle Point and Southend-on-Sea City Councils as to whether Chelmsford City Council can accommodate any of their unmet housing need
- Adjustments requested to the Settlement Hierarchy
- Some developers are calling for higher housing and employment requirements
- Some developers request a specific requirement around meeting the housing needs of older people
- Objections to some site allocations in particular, Hammonds Farm (SGS16a) and Junction 18 A12 Employment Area (SGS16b) and calls for their removal/replacement. There is also limited support for these development proposals
- Concerns that the Spatial Strategy is too reliant on larger strategic sites and that a sufficient range of reasonable alternatives approaches, and site options have not considered or appraised
- Concerns over lack of evidence for and delivery of the Gypsy and Travellers and Travelling Showpeople requirements
- Broad support from the promoters of allocated sites with some requesting higher development capacities and larger site areas
- Many developers propose alternative development land and sites including within the Green Belt and Green Wedge
- Calls for the expansion of the North-East Chelmsford Garden Community site and clarity sought over why this option is rejected
- Broad support for other Strategic Policies including Delivering Economic Growth (Policy 8) and Connectivity and Travel (Policy S16)

- Concerns over existing infrastructure capacity constraints and the delivery of new infrastructure including transport, education and healthcare
- Some detailed wording changes proposed to expand, amend, clarify and update policies
- Some additional policy requirements proposed including supporting regional growth sector priorities (Policy S8)
- References to some other strategies, guidance and projects proposed including Thames Freeport (in Policy S9).

Site allocation policies for new development growth:

- Support expressed for many proposed site allocation policies
- Support for site allocations and development on brownfield land, but public opposition to removal of car parks to allow for development in Chelmsford Urban Area
- Significant levels of opposition to Hammonds Farm (SGS16a) and Junction 18 A12 Employment Area (SGS16b) for multiple reasons including traffic, landscape, flood risk and heritage impacts, with calls for their removal. There is also some limited support for these development proposals
- High level of objections to some other site allocations in particular Waltham Road Employment Area (GS9a), Land at Kingsgate, Bicknacre (GS11b) and Land West of Barbrook Way, Bicknacre (GS11c) for multiple reasons including traffic, landscape and flood risk impacts and calls for their removal
- Some detailed wording changes proposed to expand, amend, clarify and update site policies including in relation to active travel, green infrastructure, waste water, heritage and flood risk
- Broad support from the promoters of allocated sites with some requesting higher development capacities and larger site areas
- Many developers propose alternative development land and sites including within the Green Belt and Green Wedge
- Concerns over existing infrastructure capacity constraints and the delivery of new infrastructure including transport, education and healthcare
- Calls for changes to masterplans requirements for strategic sites and Special Policy Areas
- Requests for policy and boundary changes to some Special Policy Areas including ARU Writtle.

Development Management Policies:

- Broad support for many policies including biodiversity net gain (in Policy DM16) and net zero homes (in Policy DM31)
- Opposition from the development industry to some new policies and/or requirements including housing policies DM1 and DM2, sustainable buildings DM25 and DM16 and DM31
- Requests for clarifications, more detail, greater justification for and wording changes to many policies
- Essex County Council and Anglian Water Services recommend a more ambitious water efficiency standard in sustainable buildings (DM25)
- Some developers are seeking a more flexible approach to development within the Green Belt and Green Wedge

- Concerns over the evidence base to justify some new policy requirements, and how they will affect development viability and delivery including net zero homes (Policy DM31)
- Three new plan policies suggested – one from Natural England to address the cumulative increased recreational pressure on SSSIs and two from Essex County Council to mitigate overheating risk in new development, and to address embodied carbon emissions from new development.

Monitoring Framework:

- Some suggested additional monitoring indicators relating to Health Impact Assessments.

Policies Map:

- Suggested changes to some notations and designations including settlement boundaries, the Green Wedge and the Hammonds Farm site (SGS16a).

Consultation:

- Some criticism regarding the length of the consultation period and the process for making comments using the online portal.

How the comments have been used

The 'CCC response to the comments made' tables provide a high-level response to the main issues raised within the comments, explaining how they have been considered. A high-level overview of the main changes made to the plan in response to the preferred options consultation responses is provided below:

- Minor changes have been made to the Strategic Priorities, Vision and Spatial Principles
- Most Strategic Policies have been subject to limited changes – policies which have been subject to more substantive changes include S4, S9, S6 and S7
- Site allocation changes including the deletion of Kay Metzeler site, Brook Street (Site 1x) which is longer available for housing development, the deletion of Land west of 20 Back Lane, Ford End (Site 14a) as it is no longer considered suitable, the allocation of a new housing site at Andrews Place, West of Rainsford Lane (Site 1cc) which is being activity promoted for redevelopment in the plan period, and increasing the capacity of Meadows Shopping Centre allocation (Site 1w) in line with the recent submitted planning application and the assessment of representations submitted by the applicant
- Updated site allocation policies including new requirements, amended requirements and some deleted requirements
- Most Development Management Policies have been subject to limited changes – policies which have been subject to more substantive changes include DM1, DM2 and DM25
- Limited changes to the Draft Policies Map
- An updated and expanded glossary.

In addition to the preferred options comments, the Pre-Submission Local Plan has also been updated to:

- Provide greater clarification and consistency
- Respond to more recent discussions with Duty to Cooperate bodies about their Preferred Options responses and any changes sought
- Respond to more recent discussions with infrastructure providers about their services, such as education and healthcare
- Reflect the outputs of new evidence studies including an updated Infrastructure Delivery Plan, Strategic Housing Needs Assessment Addendum Report, Archaeology Assessment, Open Space Study Local Wildlife Sites Review
- Reflect more recent information and updates including the 2024 Annual Monitoring Report, April 2024 housing land supply data and the latest planning status of allocated sites
- Respond to more recent discussions with promoters about their sites identified in the Preferred Options Consultation Document
- Improve its effectiveness for decision making following feedback from Development Management colleagues, and
- Have regard to the housing numbers and transitional arrangements for the progression of Local Plans at an advanced stage of preparation set out in the revised NPPF December 2024.

Introduction

The Preferred Options consultation represented the second formal stage in the preparation of the Review of the Adopted Chelmsford Local Plan. The consultation document set out the preferred spatial strategy for new homes and jobs for the future growth and development of the city up to 2041. It also contained updated and new policies which would be used to determine planning applications. The consultation was undertaken in accordance with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012.

This consultation was preceded by an Issues and Options consultation carried out in 2022 and also undertaken in accordance with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012.

Purpose of this ‘You Said We Did’ Report

This report sets out the consultation feedback received on the Preferred Options Consultation Document from a wide variety groups and individuals including residents, developers, landowners and their agents, businesses and statutory bodies such as other local authorities and Parish/Town Councils.

This report is constructed in four parts:

- Section 1 provides a summary of the public and stakeholder consultation undertaken
- Section 2 gives a summary of the representations received
- Section 3 provides a summary of how the Chelmsford Local Plan Pre-Submission (Regulation 19) Document (shortened to ‘Pre-Submission Local Plan’ throughout the rest of this document) has been informed by more recent evidence base studies (Section 3)
- Section 4 provides a summary of the main issues raised in the responses received and summary of how the Pre-Submission Local Plan has been informed by the responses. The report is set out in document order and therefore the policy numbers may not be in sequence.

This report supersedes the Preferred Options Feedback Report published in October 2024.

Section 1: Summary of Consultation Undertaken

A comprehensive six-week programme of consultation took place during the formal consultation period from 10am on Wednesday 8th May 2024 to 4pm on Wednesday 19th June 2024.

This programme of consultation followed (and exceeded) the requirements set out in legislation, and the commitments in the Council's adopted Statement of Community Involvement (September 2020).

The package of documents published on 8 May comprised:

- Preferred Options Local Plan Consultation Document; and
- Preferred Options Integrated Impact Assessment (subject of a separate Feedback Report); and
- Consultation Statement outlining full details about the consultation process.

This package of documents was placed on deposit at CCC Customer Service Centre, with electronic versions available to view at most Parish/Town Council offices and local libraries across Chelmsford.

The Council notified more than 2,800 contacts registered on its Consultation Portal. These included public, statutory agencies such as Essex County Council and Town/Parish Councils, utility companies, businesses, interest groups, and voluntary and community bodies. Council Members and staff were also notified.

A number of consultation events were arranged:

- Six staffed exhibitions, visited by 111 attendees
- 14 days of unstaffed exhibitions
- Four pop-up displays for the whole consultation period
- A bespoke Local Plan video, attracting 885 views
- An online virtual exhibition, visited by more than 455 views
- Officers also held targeted engagement including a Parish/Town Council Forum, Agent/Developers Forum and Local Authority Duty to Co-operate meeting.

Printed/online materials and advertisements were produced as follows:

- Web page with links to key materials including a Preferred Options Local Plan Tracked Changes May 2024 and the exhibition panels
- Advertisements in a local newspaper (Essex Chronicle)
- Six articles in City Life (CCC's online news website) and two in South Woodham Focus (independent community magazine)
- 24 social media posts
- Posters distributed to Parish/Town Councils, CCC offices and leisure facilities, post offices, doctors' surgeries, churches and local shops
- Summary newsletters widely available, in addition to being handed out at South Woodham Ferrers railway station
- 89 site notices placed around new potential site allocations
- Three GovDelivery mailshots to 12,000 recipients.

A list of organisations consulted, and copies of key consultation materials are given in Appendix 1.

Integrated Impact Assessment of the review of the Adopted Local Plan: Preferred Options Consultation

The Local Plan Integrated Impact Assessment (IIA) was also subject to consultation at the same time. The IIA brings various strands of assessment together, consisting of the Sustainability Appraisal, Strategic Environmental Assessment, Habitats Regulations Assessment, Health Impact Assessment, and Equalities Impact Assessment. Feedback on this document is summarised in a separate report prepared by the Council's IIA Consultants.

Call for Sites and SHELAA

In addition to the Local Plan and IIA consultations, the Council undertook a Call for Sites to identify available land for consideration for future development. Nine new submissions and nine amendments to existing sites were submitted through this process. All the sites have been assessed in the Strategy Housing and Employment Land Availability Assessment (SHELAA) Autumn 2024 Report.

Section 2: Summary of Representations

For this report, people and organisations who made a comment to the consultation are called 'respondents'.

Methodology

Respondents had a choice of ways to make their comments, by:

- Answering questions included in a complete version of the consultation document published on the consultation portal
- Answering questions using a stand-alone online questionnaire published on the consultation portal
- Sending written comments in an e-mail
- Sending written comments by post.

The questionnaire mostly consisted of a main question with related questions seeking views and any information the Council may have missed, plus two monitoring questions.

Whichever method respondents used, all comments have been entered into the Council's Consultation Portal. Where respondents did not state which paragraph/section/policy or site they were commenting on, officers have assigned responses to the most relevant part of the Local Plan, with miscellaneous responses being recorded against the Foreword.

Where a Yes/No preference was invited to a question (for example, 'Do you agree with this section/policy/paragraph/table/figure?' and 'Are you a resident within the Chelmsford City Council area?'), these have been recorded only where the respondent stated their preference.

The questions for both online methods of response were identical and have been combined for this report.

A small number of representations were received after the consultation closed, by prior agreement with officers, these have been analysed and included in the figures in this report. In addition, a small number of representations were 'inadmissible' due to their content. In these cases, as far as possible, the main point of the representation has been recorded minus the offending remarks.

To ensure proper consideration of issues, respondents have been divided into types depending on their interface with the Council. Some fall into more than one category, so totals may exceed the overall number of respondents.

Similarly, some respondents made their comments via more than one method so the totals for how comments were made is greater than the total number of comments received.

The assessment of responses is high level and focuses on the main issues raised, rather than the number of representations to any individual question.

Overview of responses

A total of 10,418 comments were received to the consultation from 3,678 respondents.

These respondents are from a wide variety groups and individuals including residents, developers, landowners and their agents, businesses and statutory bodies such as other local authorities and Parish/Town Councils.

It should be noted that the numbers included under the 'Key statistics' sections in this feedback report, and the number of responses received to each question will not amount to the totals set out above as people did not have to answer every question.

Comments by respondent type:

Type of Respondent	Explanation	Number of Respondents
Duty to Co-operate (DTC) bodies	Key bodies consulted on strategic matters, including Essex County Council, adjoining local authorities, Historic England, Natural England, Environment Agency	17
Specific bodies/groups	Parish/Town Councils, utility bodies, health and transport consultees etc	40
General and Other bodies/groups	Voluntary groups, religious groups, housing providers, businesses etc	27
Developers/landowners	Landowners, promoters of land and their agents	99
Public	Individual members of the public	3495

How people made their comments:

Method of making comments	Number of Comments	Percentage
Online Consultation Portal	410	3.9%
E-mail	9877	94.8%
Letter	131	1.3%

A large number of representations were received by email from 'Say no to Hammonds Farm' - a coalition of Councillors from Boreham, Sandon, Danbury and Little Baddow Parish Councils, expressing opposition to new development at Strategic Growth Sites 16a Chelmsford East Garden Community and 16b Land Adjacent to A12 Junction 18 Employment Area.

All the comments received can be viewed in full on the Council's [planning policy consultation portal](#).

When viewing the portal, you will see the list of recent consultation events. Events which are open for consultation show a green timeline and the word 'open'. Those which are closed show a red timeline and the word 'closed'.

To view comments, you need to:

- Choose the event you would like to view comments for
- Select 'learn more' to open the event page
- Click on the 'what people say' tab to display a list of all the comments.

You can read all comments, or sort by name or date we received them. Where additional information such as reports or maps were submitted with a comment, these are listed at the end of the comment in PDF format and can be viewed or downloaded.

Responses to Preferred Options consultation included in the complete version of the full document are prefixed PO24. Responses to the stand-alone questionnaire are prefixed POQ24. You can find out more about using the consultation portal in our [guidance notes](#).

Monitoring Questions

Two optional monitoring questions were included in the consultation. This was to help us understand the reach of the consultation and inform future engagement activities.

Optional Monitoring Question	Number of Responses	Yes	No
OM1. Are you a resident within the Chelmsford City Council area?	193	104	89

If you answered yes, please select the settlement which you live in or near to:	Number of Reps
Bicknacre	23
Boreham	0
Broomfield	1
Chatham Green	0
Chelmsford Urban Area	7
Danbury	8
Downham	0
East Hanningfield	20
Edney Common	0

West Hanningfield	0
Woodham Ferrers	0
Writtle	0
Other	12

Optional Monitoring Question OM2 How did you hear about the consultation?	Percentage
Direct notifications email/letter	59.3%
Chelmsford City Council website	27.1%
Social media	10.9%
Local Plan newsletter	4.5%
Parish Council website/newsletter	9.5%
Newspaper advert	0.5%
Poster	9.5%
Attended a Local Plan exhibition	1.8%
Word of mouth	8.6%
Other	1.4%

Note: The percentage total exceeds 100% as respondents were able to select more than one answer.

Section 3: How the evidence base has informed the Pre-Submission Local Plan

As well as comments to the previous rounds of consultation in 2022 and 2024, the Pre-Submission takes account of recently completed evidence base documents across a wide range of issues. These documents are summarised in the table below:

Document	Purpose	How it has informed the Pre-Submission Local Plan
Updated Viability Assessment 2024	Considers the cost and value changes since the 2023 Viability Update was conducted, proposed changes to the NPPF and Pre-Submission policy amendments, as well as the Preferred Options Infrastructure Delivery Plan costs to developers for strategic sites on viability, and whether it is necessary to fully update the viability evidence before submitting the Local Plan for examination.	The impact of changes in costs and values on the preferred set of policies in the Pre-Submission Local Plan documents, including sensitivity testing, are broadly like those presented in the 2023 Local Plan Viability Update. Review mechanism text included in Policy DM2 to take account of sensitivities to changes in costs and values over the plan period.
Strategic Housing Needs Assessment Addendum Report 2024	Partially updates the 2023 Strategic Housing Needs Assessment (SHNA) to review the implications of moving from housing delivery up to a figure of 1,206 dwellings per annum over the plan period. Whilst updating the analysis for a new housing number, the report also updates other aspects of the SHNA where new data exists.	Increased affordable housing need has been reported in Policy DM2 and resultant clarification on the requirements for affordable private rent dwellings added. Findings on the demand for discounted market housing updated in the Reasoned Justification for Policy DM2. Updated demand for Specialist Residential Accommodation for older people supporting new requirement for older persons market housing on greenfield sites of more than 500 dwellings in Policy DM1.
Preferred Options Infrastructure Delivery Plan 2024	Sets out the infrastructure requirements of the Spatial Strategy incorporating findings from the Stage 1 baseline infrastructure	Estimate costs have been incorporated in the Updated Viability Assessment where appropriate. Infrastructure requirements have been aligned with sites specific policy requirements.

Document	Purpose	How it has informed the Pre-Submission Local Plan
	capacity analysis and providing further analysis showing planned projects across the administrative area of the Council. Appendix A and B record all identified project requirements, including the infrastructure type, location, delivery mechanism, cost, and funding gap based on the Preferred Spatial Strategy.	
Strategic Housing and Employment Land Availability Assessment (SHELAA) Autumn 2024	Provides a high-level assessment of promoted sites using criteria developed from National and Local Plan policy.	The assessment enables Officers to identify site characteristics, highlight site strengths and potential constraints, and establish likeliness of developability or deliverability of promoted sites. It does not allocate sites for development but is a starting point for reviewing sites against the promoted Spatial Strategy alongside other evidence base documents/considerations.
Gypsy and Traveller Accommodation Assessment (GTAA) 2024	Provides an assessment of current and future need for Gypsy, Traveller and Travelling Showpeople accommodation in Chelmsford City Council area.	The assessment, together with other evidence base documents, informs the allocation of Pitches and Plots for Gypsy and Travellers that meet the definition of Gypsies and Travellers used in the Planning Policy for Travellers Sites in Strategic Policy S6. It also informs the criteria-based considerations in Policy DM3 and well as the approach to Specialist Residential Accommodation in Policy DM1Cii.
Employment Land Review – Focused Update 2024	A provide updated economic evidence specifically to inform the approach to economic growth and employment	The updated employment floorspace requirement forecasts have informed Strategic Policy S6.

Document	Purpose	How it has informed the Pre-Submission Local Plan
	land policies within the Pre-Submission Local Plan. It draws on the most up-to-date assumptions and data regarding future economic growth prospects for Chelmsford between 2022 and 2041.	
Addendum to Heritage Assessment 2024	A report providing a brief assessment of the setting of designated and non-designated heritage assets within or in the vicinity of a new development site under consideration for the Pre-Submission Local Plan, i.e. Andrews Place to the west of the City Centre.	The report identifies any designated and non-designated heritage assets within or in the vicinity of new housing site allocation Andrews Place (Growth Site Policy 1cc) and has been used to inform the site policy in the plan.
Updated Indoor and Outdoor Sports Assessment and Strategy 2024	Assesses the indoor and outdoor sports provision within the City Council's area and provides a framework for the prioritisation, provision and development of sports facilities across the public, private and independent sectors. It covers all formal playing pitch and outdoor sport facilities across the authority area to strategically plan for the future.	Has been used to inform requirements relating to on and off-site sports provision in the IDP.
Open Space Assessment 2024	Audit of Open Space within the City Council's area to inform the provision of accessible, high quality, sustainable provision for open spaces.	Has been used to inform and update Open Space notations on the Policies Map, as well as setting standards for Open Space requirements for new development.
Air Quality Assessment 2024	This provides an assessment of the air quality impact of the draft Local Plan.	Overall, the assessment concludes that the impact of the Local Plan in 2041 can be considered negligible for all pollutants.

Document	Purpose	How it has informed the Pre-Submission Local Plan
Archaeology Assessment 2024	A high-level assessment of archaeological impact of the proposed new site allocations. The report defines the heritage significance of (archaeological) designated and non-designated heritage assets which may be impacted by development proposals.	The report identifies where specific archaeological work is required for future planning applications and where archaeological work may be required pre or post determination. The conclusions of the report have informed relevant Local Plan policies including Policy S3 and Policy DM15. In addition, where mitigation measures are identified this has informed relevant site allocation policies such as Growth Site Policy 9a, Strategic Growth Site Policy 16a and Strategic Growth Site 16b.
Local Wildlife Sites Review 2024	A review of designated Local Wildlife Sites (LOWS) in the vicinity of proposed new site allocations forming part of the Local Plan Review.	The study supports LOWS defined on the Draft Policies. The changes include some new LOWS, deleted LOWS and amendments to LOWS boundaries.
Strategic Flood Risk Assessment (SFRA) Level 2 – new and updated Site Summary Tables and mapping	The SFRA provides a comprehensive and robust evidence based on flood risk issues to support the plan review. It assesses land promoted for potential development, changes to the proposed development sites within the city, and changes in national planning policy and guidance. It also builds on identified risks from the Level 1 assessment for proposed development sites, to provide a greater understanding of fluvial, surface water, groundwater, and reservoir related flooding	The new and updated information has been used to inform decisions on the location of future development and flood risk policies, reflecting the implications of the August 2022 changes to the Planning Practice Guidance. They have also informed site allocation boundaries on the Policies Map for the Pre-Submission Local Plan and the Sequential and Exception Test Focused Update (see below).

Document	Purpose	How it has informed the Pre-Submission Local Plan
	risks for sites most at risk.	
Sequential and Exception Test Focused Update, 2024	The report provides updates to the Flood Sequential and Exception tests undertaken to inform the Pre-Submission Local Plan. It should be read alongside the report CC012: Sequential and Exception Tests of Preferred Options Site Allocations, May 2024.	The focused update has been used to inform decisions on the location of future development and flood risk implications which may need to be considered during development of the site. These updates reflect the updates made through the Level 2 SFRA and includes updates to the site allocations for Growth Sites 17a, SGS1cc and SGS16a.
Small Sites Planning Briefs/Concept Frameworks, 2024	This document details the constraints and opportunities of the five new small housing sites allocated in Ford End, Bicknacre and East Hanningfield.	The report supports and informs the site allocation policies (Growth Sites 11b, 11c, 14b, 17a and 17b) and identifies suitable site boundaries shown on the Draft Policies Map.
Preferred Options IIA, 2024	The IIA is a detailed technical document, which assessed the Preferred Options Local Plan proposals and policies against a set of assessment objectives to	The Preferred Options IIA includes recommendations which have been considered as part of the Pre-Submission plan. This includes amendments to policies S2, S4 and DM15.

Document	Purpose	How it has informed the Pre-Submission Local Plan
	identify any significant effects and recommend measures to mitigate these effects and enhance the positive effects.	
Pre-Submission IIA, 2024	The IIA is an iterative process, which has assessed the Pre-Submission Local Plan proposals and policies against the same assessment objectives as the Preferred Options version, to identify any further significant effects and recommend measures to mitigate these effects and enhance the positive effects.	The Pre-Submission IIA includes recommendations which have been considered as part of the Pre-Submission plan. This includes amendments to policies S2, S4 and DM15.
Transport impact appraisal Of Local Plan Review Pre-Submission (2024)	Assesses the impact the development proposed in the Pre-Submission Local Plan will have on the road network. This is a strategic assessment appropriate for a Local Plan.	Concludes that by maximising the potential for sustainable accessibility to and from the sites along the A12 corridor, the impact on the strategic highway network should not be considered severe.
Local Neighbourhood Centres 2024	Describes the approach to defining the Local Neighbourhood Centres boundaries on the Pre-Submission Local Plan Draft Policies Map.	Retail frontages for Local Neighbourhood Centres are currently identified on the adopted Local Plan Policies Map. There has since been a shift in national policy away from defining retail frontages. The report supports the Local Neighbourhood Centres boundaries on the Draft Policies Map.
Essex Open Legal Advice – Energy Policy and Building Regulations (February 2024)	Considers the ability of local planning authorities to set local plan policies that require development to achieve energy efficient standards above Building Regulations.	Supports Local Authorities having statutory powers to set planning policies which require energy efficiency standards that are better than Building Regulations as long as these are evidenced and justified, and policies can be expressed using energy

Document	Purpose	How it has informed the Pre-Submission Local Plan
		metrics if they are supported by an evidence base that justifies their viability. This supports the approach taken in Policy DM31.
Essex Net Zero Policy – Technical Evidence Base (July 2023)	Provides the technical evidence to support the specific policy requirements identified to ensure that new development in Essex is built to net zero carbon in operation.	This evidence advances the high-level Essex Net Zero Carbon Viability and Toolkit Study (August 2022) and has informed the CCC Viability testing and demonstrates that the requirements of Policy DM31 are viable for developments within CCC. This supports the approach taken in Policy DM31.
Essex Net Zero Specification Guidance (July 2024)	Provides technical information to support the delivery of Essex Net Zero development with consistent planning policy approach towards reducing carbon emissions from new development in Essex.	Supports the requirements in Policy DM31.

All the plan evidence base is available online via [Local Plan Review](#).

Section 4: Main Issues Raised in Consultation Responses and high-level summary of how they have informed the Pre-Submission Local Plan

A brief overview of the content of each section of the consultation document is set out below. This is followed by a summary of the feedback received by section. After that, a table is provided which provides a high-level summary of CCC's response to the consultation comments made and how they have been used to inform the Pre-Submission Local Plan.

We have specified who has made comments from public sector bodies, infrastructure or service providers and developers/landowners in brackets at the end of relevant bullet points in the feedback received text. This is because it is useful to understand the nature of respondents, particularly where a stakeholder has a legal duty or responsibility over a matter that they are making comments about. We have not specified who has made comments from members of the public as to do so would result in a very long report, so bullet points from the public do not have brackets. It should be noted that in some cases, members of the public raised similar points to stakeholders. This is especially the case in relation to comments made by Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group to Strategic Growth Sites 16a (Hammonds Farm) and 16b (Junction 18 of the A12) which have been replicated and amplified by many individuals. To avoid duplication, these comments have not been repeated in the public comments. However, this does not affect the consultation process as this report focuses on the main issues received rather than the number of representations to any individual section of the plan.

The 'CCC response to the comments made' table provide a high-level summary on how the main issues raised in the responses have been used to inform the Pre-Submission Local Plan. This includes details of the key changes made and suggestions not taken forward and why.

A high-level overview of the main changes made to the plan in response to the preferred options consultation responses is provided below:

- Minor changes have been made to the Strategic Priorities, Vision and Spatial Principles
- Most Strategic Policies have been subject to limited changes – policies which have been subject to more substantive changes include S4, S9, S6 and S7
- Site allocation changes including the deletion of Kay Metzeler site, Brook Street (Site 1x) which is longer available for housing development, the deletion of Land west of 20 Back Lane, Ford End (Site 14a) as it is no longer considered suitable, the allocation of a new housing site at Andrews Place, West of Rainsford Lane (Site 1cc) which is being activity promoted for redevelopment in the plan period, and increasing the capacity of Meadows Shopping Centre allocation (Site 1w) in line with the recent submitted planning application and the assessment of representations submitted by the applicant
- Updated site allocation policies including new requirements, amended requirements and some deleted requirements

- Most Development Management Policies have been subject to limited changes – policies which have been subject to more substantive changes include DM1, DM2 and DM25
- Limited changes to the Draft Policies Map
- An updated and expanded glossary.

In addition to the preferred options comments, the Pre-Submission Local Plan has also been updated to:

- Provide greater clarification and consistency
- Respond to more recent discussions with Duty to Cooperate bodies about their Preferred Options responses and the changes sought
- Respond to more recent discussions with infrastructure providers about their services, such as education and healthcare
- Reflect the outputs of new evidence studies including an updated Infrastructure Delivery Plan, updated Strategic Housing Needs Assessment, Archaeology Assessment, Open Space Study and Local Wildlife Sites Review
- Reflect more recent information and updates including the 2024 Annual Monitoring Report, April 2024 housing land supply data and the latest planning status of allocated sites
- Respond to more recent discussions with promoters about their sites identified in the Preferred Options Consultation Document
- Improve its effectiveness for decision making following feedback from Development Management colleagues, and
- Have regard to the housing numbers and transitional arrangements for the progression of Local Plans at an advanced stage of preparation set out in the revised NPPF December 2024.

It is important to note that the report does not summarise all the representations received or identify every individual issue. The 'CCC response to the comments made' table also does not provide a response to each individual comment.

CCC responses to site allocation consultation comments appear under the relevant specific site policy.

The Council commissioned Essex Highways to review and consider the key issues raised in the highway and transportation responses received to the consultation. This report entitled Preferred Spatial Approach - Response to Representations (November 2024) is given in Appendix 2 and includes a review of the Transport Technical Note, prepared by Stomor (June 2024) on behalf of Little Baddow, Danbury, Boreham Parish Councils. The Preferred Spatial Approach - Response to Representations (November 2024) report has been used by CCC to understand and respond to matters of concern raised in this You Said We Did report and to inform the Pre-Submission Local Plan.

It is important to note that all comments received to the preferred options consultation have been reviewed and are noted. Overall, all support for the plan is welcomed. Objections/concerns raised are also acknowledged including the significant and high level of opposition to some sites including Hammonds Farm (SGS16a), Junction 18 A12 Employment Area (SGS16b) and Land West of Barbrook Way, Bicknacre (GS11c). To avoid duplication support for and objections to the plan have not been stated in the ‘CCC response to the comments made’ under each policy/section.

All the comments received can be viewed in full on the Council’s [planning policy consultation portal](#).

Key statistics are included at the top of each section. Where relevant these include the number of yes/no responses and the number of written comments received to.

Foreword

This section of the consultation document provides a foreword from the Leader of the Council. Miscellaneous comments that do not relate to a specific or obvious section of the consultation document have been summarised here.

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Foreword	3	0	3	3

Summary of Representations – main issues and suggested changes:

- Supportive of focus on climate action in response to the Council’s declared climate and ecological emergency in 2019 and proposed work towards reaching net zero by 2030 (CNG Fuels)
- Supportive of the spatial strategy and policy approach to climate change and the multifunctional benefits of green and blue infrastructure. Some limitations which need to be addressed within the Local Plan regarding sustainable and resilient growth and infrastructure capacity. In terms of locating growth where there is headroom to accept and treat additional flows at our water recycling centres within existing permits, and where new infrastructure is provided, the quantum of growth means carbon efficiencies can be achieved. Ongoing engagement will continue (Anglian Water)
- Add reference to a new sports stadium to be an aspiration and supported in principle within the Local Plan. Current Melbourne Park venue, used primarily by the Athletics Centre and Football Club, is not ideal as a shared facility for either sport.

CCC response to the comments made
Strategic Priority 1 has been amended to promote carbon resilience.
Requirements for developments to provide sufficient wastewater treatment capacity have been strengthened in the plan, for example, site policies 7a-c.
There are no proposals in the Local Plan for a new sports stadium.

Sustainability is at the heart of the Pre-Submission Local Plan.

Introduction

This section of the consultation document describes the consultation document and key information about the review process.

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Introduction	4	4	40	40

Summary of Representations – main issues and suggested changes:

- Document needs to be re-ordered in policy sequence and is too long and repetitive
- Several obstacles in the way for residents to respond including that the portal is overly complicated and a short consultation period
- Papers published one week before the Policy Board meeting did not give adequate time to review
- Consultation deadline should have been extended to allow for additional meetings following announcement of the General Election (Great Baddow Parish Council)
- Welcome continued engagement with CCC in relation to the authorities' respective local plan preparation (Southend-on-Sea City Council)
- Support the allocation of sites for Gypsy, Traveller and Travelling Showpeople housing needs (Basildon Borough Council)
- Development in Growth Area 3 could impact on the need for infrastructure within Basildon Borough. Regular Duty to Co-operate meetings requested to ensure that any emerging cross boundary issues are fully discussed and addressed (Basildon Borough Council)
- Cumulative traffic impacts could occur, especially along the A130 and A1245 towards the Fairglen interchange and the A12 towards J28 of the M25. Encourage collaboration with the local Highway Authority and National Highways to identify potential road network impacts for the IDP and plan policies (Rochford District Council, Brentwood Borough Council)
- Support the proposed Strategic Priorities and policies and recommend Statement of Common Grounds at the appropriate stage (Rochford District Council, Brentwood Borough Council)
- Chelmsford has engaged with us through the Duty to Co-operate, we are content with the contents and accuracy of the plan and satisfied it would be in general conformity with the basic conditions (Braintree District Council)
- Two cross boundary issues not adequately reflected in the plan are sustainable connectivity with South Essex and Thames Freeport. This requires joint working between South Essex authorities through SEC, CCC and ECC (Castle Point Council)

- Amend para. 1.35 to clarify that ECC is not required to be consulted on all non-mineral related development proposed within Safeguarded Areas (Essex County Council)
- Amend para. 1.39 to clarify that ECC is not required to be consulted on all non-waste related development proposed within Waste Consultation Areas (Essex County Council)
- Amend para. 1.42 to refer to ECC documents required to be submitted with planning applications and update the Council's Local Validation List to list these (Essex County Council)
- Non-Technical summary appears missing from the HRA (Natural England)
- Plan should draw on the knowledge of local conservation officers, the county archaeologist and local heritage groups (Historic England)
- Work with your neighbours including London to ascertain whether any unmet needs will arise which will impact on the demand for new homes in Chelmsford (Home Builders Federation)
- Evidence base documents will require updating to reflect the change in circumstances, such as landscape, sustainable accessibility mapping, further IIA work and Infrastructure and Viability Report (Gladman Development Ltd)
- Refer to the South East Marine Plan remit which ranges from Mean High Water Springs (MHWS) or the tidal limit out to the territorial limit (Marine Management Organisation)
- The Chelmer Valley landscape is of great interest, and, through its association with Baker's writing, it can now also be regarded as nationally significant cultural landscape (Chelmer Valley Landscape Group)
- Continue to engage with the NHS and ICB on the Infrastructure Delivery Plan (IDP). Appropriate healthcare costs should be factored into the Local Plan Viability Assessment for relevant typologies (NHS Property Services Ltd)
- More needed on sustainability and reducing litter/waste
- More services/facilities should be provided in the town centre for youth groups.

CCC response to the comments made
The plan policies are shown in the order they would appear in the final plan and will be renumbered in later versions.
The consultation exceeded requirements set out in legislation and the Council's Statement of Community Involvement.
The Committee papers were published in line with Council policy.
Request for continued Duty to Cooperate engagement is welcomed.
Reasoned Justification amended to include the Thames Freeport cross-boundary issue.
Reasoned Justification amended to clarify that ECC is not required to be consulted on all non-mineral related development proposed within Safeguarded Areas or all non-waste related development proposed within Waste Consultation Areas.
Reasoned Justification amended to refer to ECC documents required to be submitted with planning applications.
Reasoned Justification amended to clarify the remit of the South East Marine Plan and to refer to marine licences.
As Non-Technical Summary has not been produced for the HRA as it is an inherently technical report aimed at a technical audience, and there is no

requirement for it in the legislation. However, an executive summary has been produced.
The Pre-Submission Local Plan and evidence base has been informed by engagement with Duty-to-Cooperate bodies including service providers through the updated Infrastructure Delivery Plan.
Measures to reduce the impact of development on the Chelmer Valley landscape are set out in the updated East Chelmsford Garden Community Site Policy 16a.
Sustainability is at the heart of the Pre-Submission Local Plan.

About Chelmsford

This section of the consultation document sets out the key challenges and opportunities to address over the plan period to 2041.

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
About Chelmsford	6	1	12	12

Summary of Representations – main issues and suggested changes:

- The Great Eastern mainline rail route (GEML), Elizabeth line and A12 provide key strategic transport links and important commuting flows in both directions. (Transport for London)
- New green and blue infrastructure should accord with our Green Infrastructure Framework - Principles and Standards for England. Add references to protecting and enhancing the natural environment (Natural England)
- Reference the Essex Local Nature Recovery Strategy in paras 2.38, 2-39, 2.42 (Natural England)
- Where relevant there should be linkages with the Biodiversity Action Plan, Local Nature Partnership, Rights of Way Improvement Plans, Green Infrastructure Strategies and Nature Recovery Network (Natural England)
- Amend para. 2.14 to (i) add a reference the growing population of people with disabilities (ii) clarify that the growing and ageing population also covers Chelmsford as part of Central Essex and (iii) to add additional references to sustainable transport opportunities (Essex County Council)
- Amend Figure 6 and para. 2.23 to refer to the Great Eastern Mainline connections to Colchester, Ipswich and Norwich (Essex County Council)
- Comment from landowner/developer suggesting that their proposed development site will accord with the preferred plan/spatial strategy (Saxtons 4x4)
- Support key strategic objectives of the authorities to provide sufficient new homes (Mrs Mary Rance)
- Supportive of the Council key objectives
- Figure 15 misrepresents the size of the distance SWF is from The Dengie
- Urban area should be the focus for any new development.

CCC response to the comments made

Reference added to the Essex Local Nature Recovery Strategy in the Reasoned Justification.
No change to the Reasoned Justification in respect of strategic objectives of North and Central Essex authorities as this has previously been agreed between the Councils and cannot be altered unilaterally by CCC.
Amendments made to Figure 6 and transport section to refer to the Great Eastern Mainline connections to Colchester, Ipswich and Norwich.
Amendments made to regional context section to include reference to South Essex and Thames Freeport.
Figures updated to include latest data and provide clarity.

What are our Strategic Priorities

This section of the consultation document sets out the Strategic Priorities which are the key priorities that the Local Plan is based on.

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
What are our Strategic Priorities	20	11	50	50

Main issues are listed under the Strategic Priority they relate to. The abbreviations in the sub-headings below relate to the Strategic Priorities as follows:

SP1	Strategic Priority 1	Addressing the Climate and Ecological Emergency
SP2	Strategic Priority 2	Promoting smart, active travel and sustainable transport
SP3	Strategic Priority 3	Protecting and enhancing the natural and historic environment, and support for an increase in biodiversity and ecological networks
SP4	Strategic Priority 4	Ensuring sustainable patterns of development and protecting the Green Belt
SP5	Strategic Priority 5	Meeting the needs for new homes
SP6	Strategic Priority 6	Fostering growth and investment and providing new jobs
SP7	Strategic Priority 7	Creating well designed and attractive places, and promoting the health and social wellbeing of communities
SP8	Strategic Priority 8	Delivering new and improved infrastructure to support growth
SP9	Strategic Priority 9	Encouraging resilience in retail, leisure, commercial and cultural development

SP1

Summary of Representations – main issues and suggested changes:

- Support priority (Brentwood Borough Council, Southend-on-Sea City Council, Rochford District Council, Chignal Parish Council, North Chelmsford Villages

Community Group, Anglian Water Services Ltd, Sport England, Rosehart Properties, Hammonds Estates and Wates Developments, CNG Fuels, Dominus Chelmsford Ltd, Croudace Homes)

- Support the increased emphasis on addressing climate change and sequence of priorities (Broomfield Parish Council)
- Add emphasis on climate resilience, particularly in terms of flood risk management and move reference to the 10-year tree planting campaign under priority 3 (Anglian Water Services Ltd)
- Add reference to the Essex Local Nature Recovery Strategy in combating climate change, the role of nature-based solutions and the whole catchment approach to managing water resources (Natural England)
- Add reference to the remit of the South East Marine Plan remit and requirement of a marine licence (Marine Management Organisation)
- Support priority but it will not be achieved through housing allocations beyond the Green Belt away from the city. Undertake a Green Belt Review to identify more sustainable development options (Vistry Group)
- Plan does not have sufficient regard to the Council's wider corporate responsibilities including the aims of the Waterways Working Group (Vistry Group)
- The requirement for net zero development must be considered in terms of overall impact on development viability as the Local Plan continues (Dandara Eastern, Dandara) and align with national policies and regulations (Higgins Group, Hill Residential).

SP2

Summary of Representations – main issues and suggested changes:

- Support priority (Brentwood Borough Council, Essex County Council, Sport England, Rochford District Council, Chignal Parish Council, North Chelmsford Villages Community Group, Rosehart Properties, Hammonds Estates and Wates Developments, CNG Fuels, Dominus Chelmsford Ltd, Croudace Homes)
- Amend para. 3.6 to refer to ECC's Safer Greener Healthier campaign (Essex County Council)
- Hammonds Farm is not the most sustainable location with regards to transport connections and facilities available within the immediate community and does not fully accord with this priority (Dandara Eastern)
- Plan should prioritise development to areas which are already in sustainable well-connected locations (Dandar, Obsidian Strategic, Hill Residential) and avoid isolated development proposals (Higgins Group)
- Priorities should support opportunities to enhance the sustainability of existing service villages in line with the NPPF
- Support for promoting and encouraging active and sustainable travel but need to overcome barriers e.g., badly maintained pavements, pavement parking and scooting, bike thefts, poor and costly bus services
- Support expressed from public.

SP3

Summary of Representations – main issues and suggested changes:

- Support priority (Brentwood Borough Council, Rochford District Council, Chignal Parish Council, Environment Agency, North Chelmsford Villages Community Group, Rosehart Properties, Hammonds Estates and Wates Developments, Dandara, Hill Residential, Dominus Chelmsford Ltd, Croudace Homes)
- Ensure the plan is underpinned by up-to-date environmental evidence including local ecological networks and Local Biodiversity Action Plans. Explore opportunities for development to enhance ecological networks and ensure development decisions consider impact on soils. CCC is referred to various advice and guidance for more information (Natural England).

SP4

Summary of Representations – main issues and suggested changes:

- Support priority (Brentwood Borough Council, Rochford District Council, Essex County Council, Writtle Parish Council, Chignal Parish Council, North Chelmsford Villages Community Group, Hammonds Estates and Wates Developments, Dominus Chelmsford Ltd, Croudace Homes)
- Revise to refer to re-using suitable excavated materials and the following guidance 'The Definition of Waste: Development Industry Code of Practice; and The Waste Management' (Environment Agency)
- Amend para. 3.22 to be consistent with the NPPF e.g., to refer to practical and environmentally feasible prior extraction (Essex County Council)
- Include reference to directing new development to locations close to existing or proposed local facilities, so that people can walk, cycle or use public transport and be less reliant on the car (Richborough)
- Move reference to 'protecting the Green Belt' into priority 3 (Broomfield Parish Council)
- Insufficient evidence available to support approach that exceptional circumstances do not exist to review Green Belt boundaries (Rosehart Properties)
- A Green Belt review is required to identify suitable development areas currently within the Green Belt and to provide a more balanced/sustainable Spatial Strategy (Vistry Group, Whirlledge & Nott, Higgins Group, Croudace Homes, Hill Residential)
- Should assess opportunities for sustainable development in the Green Belt
- Ignoring the Green Belt skews development to areas which have already experienced significant growth.

SP5

Summary of Representations – main issues and suggested changes:

- Support priority (Brentwood Borough Council, Rochford District Council, Essex County Council, Chignal Parish Council, North Chelmsford Villages Community Group, Rosehart Properties, Hammonds Estates and Wates Developments, Dandara, Higgins Group, Hill Residential, Dominus Chelmsford Ltd, Croudace Homes)
- Amend para. 3.24 to be consistent with the Strategic Housing Needs Assessment (SHNA) to refer to the significant demand for affordable housing, particularly rented affordable (Essex County Council)
- Add reference to meeting qualitative and quantitative housing needs in full in line with the NPPF (Richborough)
- Strengthen by referring to providing homes for those of working age to support the local economy (Hammonds Estates and Wates Developments)
- Strengthen ambition to meet the range of housing needs in full and make clear that growth is supported outside of Chelmsford (Obsidian Strategic Asset Management Ltd)
- Support expressed from public.

SP6

Summary of Representations – main issues and suggested changes:

- Support priority (Brentwood Borough Council, Rochford District Council, Chignal Parish Council, North Chelmsford Villages Community Group, Rosehart Properties, Hammonds Estates and Wates Developments, CNG Fuels, Dominus Chelmsford Ltd, Croudace Homes).

SP7

Summary of Representations – main issues and suggested changes:

- Support priority (Brentwood Borough Council, Rochford District Council, Chignal Parish Council, North Chelmsford Villages Community Group, Sport England, Rosehart Properties, Hammonds Estates and Wates Developments, Dominus Chelmsford Ltd)
- Insufficient consideration is being given to the health benefits of and creation of Public Rights of Way (PROWs) and bridleways (Essex Bridleway Association)
- Add that the built environment should prioritise safety, particularly for young women and girls, to create a more inclusive environment. Add reference to stewardship to reflect the Garden Community allocations (Hammonds Estates and Wates Developments, Croudace Homes).

SP8

Summary of Representations – main issues and suggested changes:

- Support priority (Brentwood Borough Council, Rochford District Council, Chignal Parish Council, Essex County Council, Environment Agency, North Chelmsford Villages Community Group, Sport England, Anglian Water)

Services Ltd, Rosehart Properties, Hammonds Estates and Wates Developments, Dominus Chelmsford Ltd, Croudace Homes)

- Amend para.3.39 to provide reassurance that the Preferred Option represents the best option in transport terms (Essex County Council)
- Add reference to support the shift to a low carbon community, prevent worsening congestion and encourage a variety of modes of travel behaviours (Hammonds Estates and Wates Developments)
- Include references to facilities and police, ambulance and fire and rescue (Essex Police)
- Support reference to service providers within this priority (Hill Residential)
- Expand para. 3.37 to refer to a sufficient rolling supply of employment land, meeting local and wide strategic needs and allocating new employment areas (Greystoke GB)
- The Spatial Strategy focuses pressure on existing infrastructure to a few limited locations. Exceptional reasons exist to justify a Green Belt review to identify sustainable Green Belt development locations (Whirledge & Nott, Croudace Homes)
- Traffic modelling needs to provide evidence that the A132 and B1012 has been modelled to include all the traffic from the Dengie to 2041.

SP9

Summary of Representations – main issues and suggested changes:

- Support priority (Brentwood Borough Council, Rochford District Council, Chignal Parish Council, North Chelmsford Villages Community Group, Rosehart Properties, Hammonds Estates and Wates Developments, Dominus Chelmsford Ltd)
- The Council's Plan for Improving Rivers and Waterways should have a greater prominence given that significant change is planned to the River Chelmer during the plan period (Hammonds Estates and Wates Developments, Croudace Homes)
- Include actions to repair and increase the sea wall height around SWF by 2041.

Other

Summary of Representations – main issues and suggested changes:

- The three priority groupings (climate, growth and place) effectively balance the demands of the planning system and provide coherent plan priorities (Basildon Borough Council)
- Add additional priority to pursue opportunities to enhance the sustainability of existing service villages to prevent them from stagnating (Croudace Homes)
- Plan policies and site allocations are not based on accurate evidence or NPPF complaint (Vishal Sharma PO24-9579).

CCC response to the comments made
--

The Council can meet its development requirements without needing to undertake a Green Belt review. This approach accords with National Planning Guidance.
Table of the propriety groupings has been added for clarity.
SP1 – Supporting text amended to include the need for resilience to climate change, nature based mitigation solutions and tree planting, and reference to the Essex Local Nature Recovery Strategy.
SP2 – Supporting text amended to include reference to ECC’s Safer, Greener, Healthier campaign.
SP3 – Supporting text amended to include reference to Natural England’s Green Infrastructure Framework.
SP4 – Supporting text updated to include reference to the Waste Development Industry Code of Practice (DoWCoP); and clarification on prior extraction of minerals.
SP5 – Supporting text amended to include rented affordable housing.
SP7 – Built environment safety and stewardship matters are covered by SP6, Policy DM24 and Garden Community site policies SGS6 and SGS16.
SP8 – Supporting text adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.
SP9 – already refers to the Council’s Plan for Improving Rivers and Waterways – no further reference is considered necessary.

Our Vision and Spatial Principles

This section of the consultation document describes the long-term Vision and Spatial Principles for managing and accommodating growth within Chelmsford up to 2041 and beyond.

Vision for Chelmsford

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Vision for Chelmsford	7	5	21	21

Summary of Representations – main issues and suggested changes:

- Support (Essex County Council, Anglian Water, Broomfield Parish Council, Chignal Parish Council, North Chelmsford Villages Community Group, Dandara, Basildon Borough Council, Dominus Chelmsford Limited, CNG Fuels Limited, Sport England, Wates Developments and Hammonds Estates LLP)
- Avoid repetition by translating into a broader statement around sustainable growth and addressing the climate and ecological emergency (Anglian Water)
- Add two additional bullet points to celebrate, conserve and enhance the City’s rural hinterland, and to maximise the opportunities of the countryside for healthy leisure activities, tranquillity and wellbeing (Broomfield Parish Council)
- Expand to encompass providing better village bus services and improving the safety of rural roads to encourage cycling and walking. Rural employment

sites should be accessible by sustainable means of transport (Chignal Parish Council)

- Expand to support our vibrant urban centres and very rural areas. Add new bullet on the health benefits of environmental tranquillity (North Chelmsford Villages Community Group)
- Explain how the bullet points relate to the vision and strategic priorities and will be used in future decision making (Hill Residential Ltd, Higgins Group, Dandara)
- Include reference to Green Belt (Higgins Group)
- Expand to refer to guiding growth towards a more sustainable community (Rosehart Properties Ltd, Croudace Homes)
- Amend to support opportunities to decarbonise the HGV sector (CNG Fuels Limited)
- Hammonds Farm is separated from the City by the A12 and contrary to the Vision. There are also questions over its deliverability (Dandara Eastern)
- Expand bullet 2 to support the logistics sector (Greystoke CB)
- The plan vision and our vision for Hammonds Farm strongly align. Enhance by referring to safety in bullet 10, the creation of new forms of connectivity in bullet 5, and by clarifying what is meant by modal shift (Wates Developments and Hammonds Estates LLP)
- Expand bullet 9 to refer to multifunctional green/blue infrastructure (Essex County Council)
- Expand bullet 9 to include reference to police facilities (Essex Police)
- Add new bullet to deliver Biodiversity Net Gain and wider environmental net gains, that forms an important component of nature recovery (Essex County Council)
- Do not support. Vision should acknowledge that development needs are to be met in full, including for housing (Richborough, Obsidian Strategic Asset Management)
- Various comments from landowners/developers suggesting that their proposed development sites will accord with the preferred Vision.

CCC response to the comments made
Brief explanation added of how the bullet points relate to the Vision.
Protection of the Green Belt is addressed by Strategic Policy S1.
Reference added to facilities alongside infrastructure relating to police, ambulance and fire and rescue.
Safety, the creation of new forms of connectivity, modal shift and Biodiversity Net Gain are adequately addressed elsewhere in the Plan.
The Council has considered the suitability of alternative development strategies and sites to accommodate development as part of the plan preparation process. Some areas/sites proposed for development by developers/landowners have been rejected as part of this process.

Spatial Principles

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S1 - Spatial Principles	27	11	59	59

Summary of Representations – main issues and suggested changes:

- Support expressed (Essex County Council, Anglian Water, Chelmer Housing Partnership (CHP), Cliffords Group Ltd, Tritton Farming Partnership LLP, Cliffords Group Ltd, Dominus Chelmsford Limited, Dandara Eastern, Wates Developments and Hammonds Estates LLP, Mr J Bolingbroke, Bloor Homes (Eastern), C J H Farming Ltd, Chignal Parish Council, Miscoe Enterprises Ltd, Tritton Farming Partnership LLP, Dandara Eastern, This Land, Hill Farm (Chelmsford) Ltd, A.G. & P.W.H Speakman, The Bucknell Family, Crest Nicholson, Dandara, Richborough, Pigeon (Sandon) Ltd, Daniel James Developments, Chris & Helen Copping, Martin Grant Homes)
- Support all except e. The settlement hierarchy is not a robust basis for identifying sustainable development locations. Amend to enable settlements outside the Green Belt to protect or create local services through targeted development, where appropriate (Broomfield Parish Council)
- Part c - Brownfield land may have high value for invertebrates and ecological surveys should be carried out to inform allocations and planning decisions (Natural England)
- Providing housing should be given more prominence and weight in the plan (Chelmer Housing Partnership (CHP))
- Disagree/concern expressed to part b. A Green Belt review is required to identify sustainable development opportunities in the Green Belt (Hill Residential Ltd, Higgins Group, Vistry Group, Whirledge & Nott, Croudace Homes, Martin Grant Homes)
- Include reference to the presumption in favour of sustainable development (Martin Grant Homes)
- Amend e to include identifying sustainable growth opportunities within the Green Belt which respect the development pattern and settlement hierarchy (Whirledge & Nott, Croudace Homes)
- Expand to also include service settlements e.g., Ford End which is proposed for new development (Dandara)
- Hammonds Farm is contrary to the principles (Obsidian Strategic, Dandara Eastern)
- The former BAE site should be allocated as a Special Policy Area (SPA) to guide its future redevelopment (Rosehart Properties Ltd)
- Place more emphasis on previously developed land (Dominus Chelmsford Limited)
- Expand h to include low carbon transport related infrastructure close to strategic transport junctions (CNG Fuels Limited)

- Plan proposals and site allocations fail to apply the principles in practice (Dandara Eastern, Vistry Group)
- Swap paras. 4.15 and 4.16 or merge h and i. Actively engaging with partners in 4.16 should apply to all new development not just significant new greenfield housing development (Wates Developments and Hammonds Estates LLP)
- Recommend an additional principle around integrating strategic green infrastructure with ecological networks and the wider landscape to deliver multiple environmental, social and economic benefits (Essex County Council)
- Object to plan reliance on the proposed garden communities, raising concerns over delivery in the early years of the plan period and disproportionately skewing new growth up to 2041 (Crest Nicholson)
- Expand supporting text of h and i to include references to police facilities (Essex Police)
- Various comments from landowners/developers suggesting that their proposed development sites will accord with the preferred Spatial Principles
- Do not agree. Need to include protection of Grade 2 agricultural land
- Parts a, h and I – for the policy to succeed it needs a strategy to link SWF to Chelmsford by regular public transport.

CCC response to the comments made
The Council can meet its development requirements without needing to undertake a Green Belt review. This approach accords with National Planning Guidance.
Additional references to providing police facilities have been added to other parts of the plan including the Vision and Strategic Priorities – no further changes considered necessary.
Reasoned Justification for Principles h and i to remain as written, as these are most applicable to the Spatial Principles they sit under. It should be noted that the Spatial Principles are not presented in any order of priority.
Integration of strategic green infrastructure is more appropriately dealt with under strategic policies including S4, S9, S16 and site allocation policies.
Other proposed development sites are dealt with in the consideration of Strategic Policy S7, and addressed by the Pre-Submission Integrated Impact Assessment.
The Settlement Hierarchy is just one of a number of considerations for the Spatial Strategy, along with the Vision and Spatial Principles, and is considered to be a robust approach.
The Council has considered the suitability of alternative development strategies and sites to accommodate development as part of the plan preparation process. Some areas/sites proposed for development by developers/landowners have been rejected as part of this process.

Creating Sustainable Development

This section of the consultation document sets out Strategic Policies which underpin and guide the Spatial Strategy by addressing climate change, promoting social inclusion, conserving and enhancing the historic and natural environment and safeguarding community assets.

Strategic Policy S2 – Addressing Climate Change and Flood Risk

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S2 – Addressing Climate Change and Flood Risk	13	5	36	36

Summary of Representations – main issues and suggested changes:

- Support expressed for policy (Natural England, Anglian Water Services Ltd, Crest Nicholson, This Land, Essex County Council, Wates Developments and Hammonds Estates LLP, Obsidian Strategic Asset Management Ltd, C J H Farming Ltd, Chelmsford & Central Essex RSPB Local Group, Sport England, Chris & Helen Copping, Pigeon (Sandon) Ltd)
- Add direct reference to our Green Infrastructure Framework and recognition of Green Infrastructure’s role in strengthening climate change resilience (Natural England)
- Ensuring new development minimises flooding impact should be more ambitious towards delivering resilient growth and addressing opportunities for new strategic development to provide betterment in terms of flood risk (Anglian Water Services Ltd)
- Support expressed but emission reduction targets should consider the forthcoming 2025 Future Homes Standards (FHS) and not set a policy expectation that cannot be delivered and create viability issues. Review the viability assessment to consider Ministerial Statement ‘Local Energy Efficiency Standards Update’ and Government’s appraisal of the FHS. Amend policy to ‘encourage’ net zero emissions ‘as encouraged’ by DM31 (Chelmsford Garden Community Consortium, Vistry Group)
- Support expressed but optimise housing densities to reflect additional costs and constraints of Net-Zero carbon new homes on developers (Dominus Chelmsford Limited)
- Concern that net zero requirements is being applied retrospectively to existing allocated sites (Hopkins Homes Ltd)
- Requirements go beyond current policy and guidance, may impact viability and deliverability of residential development, are not justified by the evidence base (Whirledge & Nott, Hopkins Homes Ltd) and are inappropriate as standards will change/evolve over the plan period (Hill Residential Ltd, Higgins Group, Dandara, Dandara Eastern). Policy requirements should instead be ambitions and applied flexibly (Croudace Homes, Whirledge & Nott)
- Do not support. Exceeding Building Regulations Part F and L is unsound. Relying on building regulations should be considered a policy reasonable alternative as it is the preferred approach by government (Home Builders Federation)

- The South East Marine Plan policies such as SE-EMP-1 should be used as evidence to support the local plans policies (Marine Management Organisation)
- Add reference to the South East Marine Plan remit and requirements for marine licences (Marine Management Organisation)
- Recommend reference to the marine/coastal/intertidal element of the policy area, particularly where both terrestrial and marine habitats have the potential to be impacted by the policy (Marine Management Organisation)
- Reference the name of the future flood resilience scheme in the policy (Environment Agency)
- Add additional bullet to assist the delivery of net gain for biodiversity that will restore our ecosystems and deliver mitigation and adaptation benefits (Essex County Council)
- Include actions to repair and increase the sea wall height around South Woodham Ferrers by 2041
- Policies should set out appropriate nature-based solutions for climate mitigation and adaptation such as woodland or wetland creation or peatland restoration. Consider the Climate Change Adaptation Manual, Carbon Storage and Sequestration by Habitat and National biodiversity climate change vulnerability model (Natural England)
- Addressing climate change must be compatible with other planning objectives including housing delivery (Gladman Developments Ltd)
- Add support for the decarbonisation of the road freight industry (CNG Fuels Limited)
- Support expressed but amend to direct growth to sustainable settlements to reduce travel by private car and promote active travel modes of transport, and to locations served by new strategic infrastructure including the Chelmsford North East Bypass (Bloor Homes (Eastern))
- Policy should support viable housing delivery and allow for site-specific Viability Assessment at the planning application stage (Bloor Homes (Eastern))
- The Exception Test should describe that 100% of the built development (for vulnerable uses) at Hammonds Farm is in Flood Zone 1, outside of the floodplain. The new Garden Community will incorporate measures to mitigate flood risk both within and off-site in all flood zones (Wates Developments and Hammonds Estates LLP)
- There is a discrepancy between the Environment Agency Peak Rainfall allowance and the SFRA 1. According to the Environment Agency, Table 4-2 in the SFRA Level 2 should be in accordance with the table submitted alongside this comment (Wates Developments and Hammonds Estates LLP)
- Various comments from landowners/developers suggesting that their allocated or proposed development sites will accord with this policy
- Plan does not acknowledge CO2 emissions from the construction industry
- Plan must contain a policy requiring all new development, where practical, to install solar panels on roofs.

CCC response to the comments made
Reference to Natural England's Green Infrastructure Framework has not been included in Policy S2 as it is covered elsewhere in the Local Plan, notably section 3.
Biodiversity Net Gain is addressed in other plan policies, notably Policy S4 and DM16 – it is not necessary to duplicate references in Policy S2.
Additional bullet to restore our ecosystems and deliver mitigation and adaptation benefits has been included.
The South East Marine Plan has been used as evidence to inform the Pre-Submission plan policies.
Additional references to the South East Marine Plan remit and requirements for marine licences have been added to Section 1. As the plan is read as a whole, no further reference is considered necessary.
Policy DM31 requires all new development to have rooftop solar photovoltaic (PV) panels.
Amendments made to the policy and Reasoned Justification referencing integrated water management techniques.
Whilst a named flood resilience cannot be stated at this time, reference has been added to a 'future flood resilience scheme'.
Amendments made to the Reasoned Justification to include a reference to latest technical guidance, including the Environment Agency's and CIRIA.
The Council has considered the suitability of alternative development strategies and sites to accommodate development as part of the plan preparation process. Some areas/sites proposed for development by developers/landowners have been rejected as part of this process.

Strategic Policy S14 - Health and Wellbeing

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S14 - Health and Wellbeing	14	2	30	30

Summary of Representations – main issues and suggested changes:

- Support policy and welcome reference to Sport England Active Design Principles (Sport England)
- Support expressed (Essex County Council, Anglian Water, Mid and South Essex Integrated Care Board (ICB), Wates Developments and Hammonds Estates LLP, Cliffords Group Ltd, Hill Farm (Chelmsford Ltd), Dominus Chelmsford Ltd)
- Amend to reference that tranquil landscapes can support mental health and wellbeing (Broomfield Parish Council)
- Define what is meant by an initial assessment to make the text clear that all larger scale developments should be the subject of a health impact assessment (Mid and South Essex Integrated Care Board (ICB))
- A site level HIA would repeat the plan IIA. HIAs may only be appropriate for larger unallocated sites where the impacts may not have been fully considered through the plan HIA (Home Builders Federation)

- Policy needs to be flexible, not every development will achieve each requirement given site constraints and characteristics. Add clarity on how a decision maker balances requirements when judging development proposals (Hill Residential Ltd and Higgins Group)
- Concern that requirements e.g., Livewell Development Accreditation Scheme, Sport England and National Design Guide Active Design principles are outside of the Local Plan process and subject to change without the same consultation and examination as other requirements (Hill Residential Ltd)
- Concern on how the viability of the policy has been considered (Hill Residential Ltd)
- Concern about the level of engagement needed with health care providers and identifying and delivering requirements in a timely manner to not delay developments (Hill Residential Ltd and Higgins Group)
- Suggest amendments to provide consistency and links with further guidance such as the Chelmsford Health and Wellbeing Plan, interconnectivity between the wider determinants of health, adaptable housing, Essex Design Guide and supplementary guidance (A New Development Model for Essex, October 2023) and Chelmsford Food Plan (2023) (Essex County Council)
- Policy does not address the needs of older people
- Healthcare facilities need to meet the needs of new communities.

CCC response to the comments made
Policy is designed to ensure that health and wellbeing is promoted within new development, rather than to identify existing places/areas which may help support mental health and wellbeing e.g. tranquil landscapes.
Reasoned Justification amended to clarify what and when HIAs will be required and to recommend early engagement with the Council and Essex County Council to inform decisions on development proposals
Reasoned Justification amended to provide consistency and links with further guidance such as the Chelmsford Food Plan (2023).
Site level HIAs will provide more detail on the health and wellbeing impacts of specific development projects.
The Pre-Submission Local Plan is supported by an updated Viability Assessment 2024.
Other plan policies seek to ensure that new development is supported by healthcare facilities, where appropriate, including site allocation policies and S9.
Policy DM1 ensures that the plan provides for a mix of housing including for older people.
No requirement to contribute towards priorities in the Essex Joint Health and Wellbeing Strategy added, as this document is subject to change and outside the control of CCC.
Bullet 8 is specifically about access to nature, reference to services and facilities would be inappropriate.
Other proposed amendments are not considered necessary/ appropriate/ or workable.

Strategic Policy S15 – Creating Successful Places

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S15 – Creating Successful Places	1	2	11	11

Summary of Representations – main issues and suggested changes:

- Support as a key priority. Could refer to stewardship as well as place-keeping (Wates Developments and Hammonds Estates LLP)
- The policy aligns with developer’s own development principles and is supported (Dominus Chelmsford Limited)
- Add a reference to the importance of providing the right amount and type of employment and business opportunities, particularly in larger developments and garden communities (Essex County Council)
- Considerations are suggested to minimise fire risk and spread of fire, ensure safe access, and reduce risks to water sources (Essex County Fire and Rescue Service)
- Concern that the policy could pose an unnecessary planning burden on functional development and do not support design codes which will be inflexible in some circumstances (CNG Fuels Ltd)
- This policy is already covered by S14 (bullet 3) (Dandara Eastern) and repeats the NPPF (Dandara, Higgins Group, Hill Residential).

CCC response to the comments made
Stewardship is an example of place keeping – so the specific reference is considered to be necessary.
Providing the right amount and type of employment opportunities is already addressed in Plan policies including site allocation policies – no further references are necessary.
Fire risk is covered by Building Regulations and other legislation, which does not need to be repeated in the Plan.

Strategic Policy S3 – Conserving and Enhancing the Historic Environment

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S3 – Conserving and Enhancing the Historic Environment	6	1	10	10

Summary of Representations – main issues and suggested changes:

- Support (Historic England, Dominus Chelmsford Limited, C J H Farming Ltd, This Land, Pigeon (Sandon) Ltd)
- Recommend use of the South East Marine Plan policies as evidence to support the plan policies (Marine Management Organisation)

- Do not support. Delete 'rare' in reference to the canal water feature at Boreham House in para. 5.36 as this is misleading (CNG Fuels Limited)
- Policy wording should state the specific designated heritage assets on site and nearby, and specific mitigation measures identified in site Heritage Impact Assessments. Where there are impacts policies should read: "Development should conserve or where appropriate enhance the significance of heritage assets including any contribution made to their significance by their settings. Appropriate mitigation measure including ... will be required (Historic England).

CCC response to the comments made
Additional references to the South East Marine Plan remit and marine licences have been added to Section 1. As the plan is read as a whole, no further reference is considered necessary.
It is rare to have a linear canal water feature at Boreham House. It is unique to Essex and the only other known early eighteenth-century example is Shotover in Oxfordshire. The description as 'rare' is therefore justified.
Heritage Impact Assessments were undertaken and published alongside the Preferred Options Local Plan. Site policies consider significance of designated and non-designated heritage assets.

Strategic Policy S4 – Conserving and Enhancing the Natural Environment

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S4 – Conserving and Enhancing the Natural Environment	8	6	31	31

Summary of Representations – main issues and suggested changes:

- Support for the policy (Environment Agency, Natural England, Wates Developments and Hammonds Estates LLP, Chelmsford and Central Essex RSPB Local Group, CJH Farming Ltd, Pigeon (Sandon) Ltd)
- The policy ambition for 20% BNG is welcomed (Anglian Water Services Ltd)
- Suggest referencing other relevant evidence documents and the Local Nature Recovery Strategy and Networks (Essex County Council, Anglian Water Services Ltd)
- Add a reference to our Local Character Landscapes study, which highlights important and distinctive rural landscapes which should be valued and protected (Chignal Parish Council)
- Local Plan could draw on policies in the South East Inshore Marine Plan (Marine Management Organisation)
- The importance of the underlying aquifer/groundwater resource should be noted, with references added to pollution and protection guidance (Environment Agency)

- Make the distinction between public green spaces and wildlife habitats, with greater focus on integrating biodiversity rather than segregation; planting and biodiversity features should use native species; and call for riparian corridors to maintain a buffer zone for public space rather than private gardens (Environment Agency)
- RAMS contributions are welcomed, but additional accessible greenspace may also be required (Natural England)
- Contributions are no longer required to be secured towards recreational mitigation measures at Hatfield Forest SSSI/NNR (Natural England)
- Protection of best and most versatile agricultural land should be strengthened to support food security and shorten supply routes (Broomfield Parish Council)
- Opposition to a requirement for 20% BNG on the Garden Community Sites as it exceeds national requirements, and has not taken the cumulative effect of this and required tree planting into account (Bellway Homes Ltd)
- Concerns about the deliverability of 20% BNG on large greenfield sites; the policy should be more flexible to express this as a target and not a requirement (Whirledge and Nott, Croudace Homes, Vistry Group)
- Clarification of the BNG provision is needed, e.g. is delivery per phase or for overall development; offsite provision may be more appropriate so greater flexibility is suggested (Chelmsford Garden Community Consortium)
- The requirement for 10% BNG on most development is welcomed; a higher percentage of BNG would need robust evidence (Obsidian Strategic Asset Management, Dandara Eastern, Dandara, Hill Residential Ltd, Dominus Chelmsford Limited)
- Higher BNG requirements should take account of viability considerations, and a take more realistic view of the costs than assumed in the evidence base, which appear to be too low (Dandara Eastern).

CCC response to the comments made
References added to other relevant evidence documents and the Local Nature Recovery Strategy.
The plan is supported by its own landscape evidence base.
The South East Marine Plan has been used as evidence to inform the Pre-Submission plan policies.
10% BNG is a national requirement. 20% BNG for the Garden Community allocations has been subject to viability testing and is deliverable.
References to contributions towards recreational mitigation measures at Hatfield Forest SSSI/NNR have been removed as they are no longer required.
The distinction between public green spaces and wildlife habitats, biodiversity integration, use of native species and riparian corridor a buffer zones added to DM16. As the plan is read as a whole, no further reference is considered necessary.
Additional accessible greenspace is addressed in the Reasoned Justification and relevant site policies - no further reference is considered necessary.

Strategic Policy S5 – Protecting and Enhancing Community Assets

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S5 – Protecting and Enhancing Community Assets	8	1	15	15

Summary of Representations – main issues and suggested changes:

- Support for the policy as it recognises the importance of sports and leisure facilities in new development and the need to secure new provision through planning obligations or CIL (Sport England)
- The proposal that existing community assets will need to be protected from inappropriate changes of use or redevelopment is supported as this is necessary for meeting current and future community needs (Sport England)
- Support for the policy (Dominus Chelmsford Limited, Cliffords, Hill Farm (Chelmsford) Ltd, Dandara/Dandara Eastern, Obsidian Strategic)
- Add references in policy and para. 5.59 to safe and cohesive communities and the protection of police facilities (Essex Police)
- Policy could be extended to community coastal assets using the South East Marine Plan policies as evidence (Marine Management Organisation)
- Support for the provision of sufficient, quality community facilities but the policy should be more flexible to avoid unjustified delays to vital reinvestment in health facilities and services for the community. The disposal of no longer suitable or redundant healthcare sites and properties helps to fund new or improved services (NHS Property Services Ltd).

CCC response to the comments made
Reasoned Justification amended to refer to safe and cohesive communities and the protection of police uses.
Policy covers a wide range of community assets – listing all types of assets is not considered necessary.
The policy is consistent with national planning policy, and appropriately covers healthcare facilities.

How will Future Development Growth be Accommodated?

This section of the consultation document sets out Strategic Policies which underpin and guide the Spatial Strategy including policies related to securing infrastructure and delivering growth.

How will Future Development Growth be Accommodated? (paragraph 6.1)

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Paragraph 6.1	0	0	1	1

Summary of Representations – main issues and suggested changes:

- Add that the strategic policies in this section secure ‘facilities’ as well as infrastructure (Essex Police).

Strategic Policy S6 – Housing and Employment Requirements

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S6 – Housing and Employment Requirements	19	24	74	74

Summary of Representations – main issues and suggested changes:

- Support/some support for requirements and approach (Essex County Council, Basildon Borough Council, Rochford District Council, Brentwood Borough Council, Castle Point Council, Anglian Water Services Ltd, Broomfield Parish Council, S J R Farming, Hawridge Land, Dominus Chelmsford Limited, Obsidian Strategic Asset Management Ltd, Dandara Eastern, Cliffords Group Ltd, Wates Developments and Hammonds Estates LLP, Vistry Group, C J H Farming Ltd, Seax Development, Miscoe Enterprises Ltd, Home Builders Federation, This Land, Hill Farm (Chelmsford) Ltd, Van Diemens Property Company, Mrs A Mossman, A.G. & P.W.H Speakman, The Bucknell Family, Redrow Homes & Speakman Family, Crest Nicholson, Whirledge & Nott, Croudace Homes, Dandara, Pigeon (Sandon) Ltd, Daniel James Developments, Woosington One, Welbeck Strategic Land V Limited)
- Support supply buffer (Broomfield Parish Council, Wates Developments and Hammonds Estates LLP, Dandara)
- Use some supply buffer to target affordable homes for local people in perpetuity e.g., through a Community Land Trust (Broomfield Parish Council)
- Expand para 6.16 for employment growth and skills capacity to aim to match levels of housing growth to help reduce out commuting (Essex County Council)
- Request whether Chelmsford can accommodate any of their unmet housing need (Castle Point Council and Southend-on-Sea City Council)
- Amend Part A to read ‘at least’ 1,000 net new homes (Mrs A Mossman)
- Use updated annual housing requirement (913 as stated in Turley, March 2024) and give high priority to bring empty properties back into use (Danbury Parish Council)
- Explore a higher housing requirement to meet all the housing needs of the area’s residents including those living in unsuitable accommodation and newly forming households (Tritton Farming Partnership LLP)
- Need to consider how the ageing population affects housing needs as there is a significant growing need for more specialist housing units (Opus Little Waltham Developments Ltd)

- Housing for older people should have its own requirements and standalone policy (McCarthy Stone)
- Include requirements for elderly persons within the policy. Allocated sites will not meet needs alone (Mrs Mary Rance)
- Increase requirements above the minimum Standard. Reasons cited include to deliver greater choice and more affordable housing, address the housing crisis, reduce reliance on windfall sites, help meet neighbouring area's unmet needs, past housing delivery records and the significant new infrastructure coming to the area (Hill Residential Ltd, Tritton Farming Partnership LLP, Higgins Group, Gladman Developments Ltd, Bloor Homes (Eastern), Richborough, Martin Grant Homes)
- Expand Table 1 to reflect the amendments made to the yields of existing allocations and increase supply buffer to 20% to address in part an historic under delivery of affordable housing (Richborough)
- Need a more balanced/diverse pool of allocations, including small-medium sites (Martin Grant Homes) which are not/less constrained by infrastructure burdens rather than relying on Garden Communities (Richborough, Welbeck Strategic Land V Limited)
- Based on previous delivery rates, apply a non-implementation rate to allow for an element of under-implementation (Obsidian Strategic Asset Management Ltd), allocate more housing sites (Dandara, Welbeck Strategic Land V Limited) and identify Green Belt and non-Green Belt reserve sites (Newell Properties Development Ltd)
- No evidence that windfalls will continue to come forward given likely declining opportunities within built up areas. Affordable housing delivery will likely be lower than required. There is no assessment of the potential for double counting with the 3,745 homes that have permission and are capable of being built out in the next 5 years and beyond (Martin Grant Homes)
- The Duty to Co-operate Statement is unclear on what co-operation has taken place in relation to housing delivery and any unmet housing needs (Obsidian Strategic Asset Management Ltd)
- Plan needs to allocate more sites that could deliver more quickly based on previous housing delivery records and given Hammonds Farm will come forward later in the plan period (Dandara Eastern, Welbeck Strategic Land V Limited)
- Until the Gypsy and Traveller Accommodation 2024, we are unable to comment on numbers (IBA Planning Ltd, Vistry Group)
- Reconsider if the large strategic allocations will meet Gypsy and Travellers and Travelling Showpeople needs within a reasonable timescale. Confirm if the Gypsy and Traveller Accommodation Assessment includes Roselawn Farm in the baseline (IBA Planning Ltd)
- Do not support/object to policy (IBA Planning Ltd, Vistry Group, Chelmsford Garden Community Consortium, Mrs Mary Rance, McCarthy Stone, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- The evidence base and planning logic for Hammonds Farm is questionable (Dandara Eastern)

- No need to allocate sites 16a and 16b and their potential benefits do not outweigh the significant adverse impacts. Alternative locations with less harmful impacts have not been properly considered. Hammonds Farm is not needed to address the area's housing requirements (as recommended by the Strategic Housing Needs Assessment). Existing employment allocations and commitments can meet minimum employment requirements, so Junction 18 of the A12 employment allocation is not needed (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- As Little Boyton Hall Farm Rural Employment Area (Location 15) is inaccessible by bus, walking or cycling it will lead to an increase in congestion on local roads (Chignal Parish Council)
- Spatial Strategy should support the rural and City economy and Chelmsford's status as a regional hub for employment (Hill Farm (Chelmsford) Ltd, Van Diemens Property Company)
- Encourage development of existing employment sites in sustainable locations given long lead-in times for large strategic site allocations (Rosehart Properties Ltd)
- Scenario 3 of the Employment Land Review (ELR) 2023 does not fully account for the planned growth in the economically active population
- The employment requirements are insufficient to meet the growing need of logistics in the area, given the locational advantages on the A12 corridor and the shift to larger warehouses and greater automation. In line with national policy, an objective assessment of the requirements of the logistics sector across the sub-region is required (Greystoke CB)
- Need to consider sites for employment in rural areas (The Bucknell Family)
- Spatial Strategy lacks a proportionate, district wide distribution of growth and infrastructure (Whirledge & Nott, Croudace Homes)
- Extend plan period to 2042/3 to allow for any timetable slippage and increase developments requirements accordingly (Gladman Developments Ltd, Greystoke CB)
- Various comments from landowners/developers promoting their proposed development sites will accord with the proposed Spatial Strategy
- There should be a high priority to bring empty properties back into use
- Support housing requirements
- Do not agree. An additional 4,000 homes are unnecessary, unsustainable, and make compliance with the Vision impossible.

CCC response to the comments made
Policy updated to reflect the proposed transitional arrangements for housing need and use of the new Standard Method to set housing figures and annual targets.
Policy updated to reflect the Gypsy and Traveller Accommodation Assessment (GTAA) 2024 which has been published.
Policy updated to reflect the Employment Land Review Focused Update 2024 which considers the most up-to-date assumptions and data regarding future economic growth prospects for Chelmsford between 2022 and 2041.
This plan seeks to meet and where appropriate exceed the minimum employment requirements over the plan period.

The size and type of housing, including that for new households and older people, is set out in policy DM1, and it is not appropriate to include it here.
Do not amend Reasoned Justification as employment growth and skills capacity is addressed in Policy S8 and reducing out commuting is not a plan requirement.
References to the employment evidence are included within the policy.
CCC has engaged with Castle Point Council and Southend-on-Sea City Council through the Duty to Co-operate and advised that Chelmsford cannot accommodate any of their unmet housing need.
Site allocation policies have been amended to require contributions towards police facilities.
See relevant site allocation policies for responses to site specific comments.
The Council has considered the suitability of alternative development strategies and sites to accommodate development as part of the plan preparation process. Some areas/sites proposed for development by developers/landowners have been rejected as part of this process.

Strategic Policy S7 – The Spatial Strategy

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy 7 – The Spatial Strategy	21	32	144	144

Summary of Representations – main issues and suggested changes:

- Support/broad support expressed (Essex County Council, Anglian Water Services Ltd, Richard Speakman, Hawridge Land, Hallam Land Management, Cliffords Group Ltd, Gladman Developments Ltd, Wates Developments and Hammonds Estates LLP, Mr J Bolingbroke, C J H Farming Ltd, Seax Development, North Chelmsford Villages Community Group, Miscoe Enterprises Ltd, Cliffords Group Ltd, A.G. & P.W.H Speakman, The Bucknell Family, Redrow Homes & Speakman Family, Dandara, Pigeon (Sandon) Ltd, Daniel James Developments, Welbeck Strategic Land V Limited)
- Most new allocations will come forward from 2029 which will enable alternative wastewater treatment solutions to be developed where capacity is constrained (Anglian Water Services Ltd)
- Mostly support but using the Settlement Hierarchy to allocate future development is not effective or sustainable in practice. Delete references to the Settlement Hierarchy in the policy (Broomfield Parish Council)
- Delete requirement for GS9a to make a financial contribution to the Chelmsford North East Bypass as it is not needed (Essex County Council)
- Amend paras 6.43 and 6.49 and site policies to read that SGS6, 7, 8, 16a and 16b will help to deliver strategic infrastructure including the Chelmsford North East Bypass (Essex County Council)
- Amend para 6.24, bullet 1 to read ‘Sustainable urban extensions of Chelmsford, Great Leighs and South Woodham Ferrers for new housing and employment’ (Essex County Council)

- Add to all site policies infrastructure requirements to ensure wastewater treatment and disposal is available, including any required mitigation with the sewerage network (Environment Agency)
- After 'infrastructure' in line 2 of the penultimate paragraph add 'and facilities' (Essex Police)
- Site allocations and their respective policies need to be informed by Heritage Impact Assessments (Historic England)
- Reconsider if the large strategic allocations will meet Gypsy and Travellers and Travelling Showpeople needs within a reasonable timescale. Confirm if the Gypsy and Traveller Accommodation Assessment includes Roselawn Farm in the baseline (IBA Planning Ltd)
- Support rejection of Chatham Green and to expansion of SGS2 and SGS8 (Broomfield Parish Council)
- Expand reasons for rejecting expansion of Broomfield village to include landscape capacity and sensitivity, risk of settlement coalescence and primary school capacity concerns (Broomfield Parish Council)
- Agree with dismissal of alternative development sites (Wates Developments and Hammonds Estates LLP)
- Clarify in reasonable alternative text that significant expansion of North East Chelmsford is proposed during the plan period to 2041 (Wates Developments and Hammonds Estates LLP)
- There are no overriding constraints to the allocation of land at Junction 17 A12 (Greystoke CB)
- Enlarge Little Boyton Hall Rural Employment Area (Growth Site 15) and allocate for E(g)(i-ii) alongside B2 and B8 (C J H Farming Ltd)
- Requirements for masterplans on strategic sites should be on a site-by-site basis to reflect issues such as land use and landownership (C J H Farming Ltd, Pigeon (Sandon) Ltd)
- Object to 10 Traveller pitches for SGS6 (Chelmsford Garden Community Consortium) and additional travelling showpeople plot (Vistry Group)
- Unable to comment on Gypsy and Traveller requirements in absence of the Gypsy and Traveller Accommodation 2024 (Chelmsford Garden Community Consortium, Vistry Group)
- Reinstate adopted plan wording for around 1,200 new homes and around 1,000sqm of business floorspace for SGS10 (Vistry Group)
- Do not support/opposition expressed for policy (IBA Planning Ltd, Obsidian Strategic, Dominus Chelmsford Limited, Bloor Homes (Eastern), Vistry Group, Tritton Farming Partnership LLP, Dandara Eastern, This Land, Crest Nicholson, Mr Paul Hopkins, Richborough, ARU, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Mr and Mrs Andrew Parker, Mrs Fiona McCallum, Taylor Wimpey, Martin Grant Homes, Croudace Homes, Barratt David Wilson (Eastern Counties))
- Increase the housing requirement to help deliver more homes (Hallam Land Management), ensure development needs are met (Farming Partnership LLP, Newell Properties Development Ltd) and to address uncertainties with windfall sites (Urban Provincial, Martin Grant Homes)

- Proposed allocations fall short of housing requirements (Opus Little Waltham Developments Ltd)
- Housing trajectory is unrealistic without more allocations including within the Green Belt (Newell Properties Development Ltd)
- Existing allocated large-scale sites are not meeting the time-scales as predicted in the draft Plan (Dandara)
- The 20% buffer is largely formed by dwellings which are potentially undeliverable in the Plan period (Martin Grant Homes)
- Projected housing supply in the first five years is too ambitious and needs to be revised. Confirm status of allocated sites rolled forward to demonstrate delivery (Martin Grant Homes)
- Provide evidence to explain (i) how the preferred options were selected and (ii) the availability of services, functional relationships and sustainability used to inform the Settlement Hierarchy (Martin Grant Homes)
- Amend Settlement Hierarchy to read 'Chelmsford Urban Area'
- Allocate more small/medium housing and employment sites (Opus Little Waltham Developments Ltd, Richard Speakman, H R Philpot & Sons, Hill Farm (Chelmsford) Ltd, Van Diemans Property Company, Dandara, Mrs Carolyn Morling, Mr James Gardner, Bellway Strategic Land, Martin Grant Homes) including housing sites under 1ha (Tritton Farming Partnership LLP)
- Allocate a greater variety of site sizes cross more parts of the plan area including in/on the edge of Chelmsford Urban Area and in/around villages e.g., to ensure a more balanced distribution of growth and support rural areas and (Bloor Homes (Eastern), Seax Development, Gladman Developments Ltd, S J U 2016 discretionary settlement trustees, Dominus Chelmsford Limited, Hill Residential Ltd, Higgins Group, Miscoe Enterprises Ltd, Tritton Farming Partnership LLP, Bellway Homes Ltd, H R Philpot & Sons, Cliffords Group Ltd, Mr Graham Weal, A.G. & P.W.H Speakman, The Bucknell Family, Crest Nicholson, Mrs Carolyn Morling, Mr James Gardner, Taylor Wimpey, Martin Grant Homes, Barratt David Wilson (Eastern Counties))
- Provide Almshousing to help meet local affordable housing needs (Seax Development, Miscoe Enterprises Ltd)
- Provide housing for the elderly to meet local needs (J & T Wardrop and the Wardrop Trust)
- Plan needs a co-living policy (Highgate Capital Ltd)
- Review the Green Belt to identify the most sustainable strategy and sustainable Green Belt releases (Obsidian Strategic, Vistry Group, Mrs R Armstrong and Mr B Howard, H R Philpot & Sons, Newell Properties Development Ltd, Whirlledge & Nott, Croudace Homes, Taylor Wimpey, Martin Grant Homes, J & T Wardrop and the Wardrop Trust, Barratt David Wilson (Eastern Counties))
- Not undertaking a Green Belt Review has led to unsustainable development patterns e.g., increased journey times to the City Centre, a lack of community infrastructure in areas and poor cohesivity with existing communities (Barratt David Wilson (Eastern Counties))

- Allocate additional/expand existing employment sites (including in the Green Belt) to provide flexibility and support existing employment areas/businesses (S J R Farming, Hill Farm (Chelmsford) Ltd, Saxtons 4x4)
- Policies S7, S8 and S11 should more clearly support rural businesses changing, expanding, adapting and improving to avoid disagreements at planning application stage (Strutt & Parker)
- Review of the role of the Green Wedge to promote active travel corridors and improve accessibility of the Green Wedge to areas of wildlife/ecological value (Cliffords Group Ltd)
- Review the Green Wedge to establish areas of land that serve little contribution to the role and function of the Green Wedge and to identify the most sustainable development options (Miscoe Enterprises Ltd, Hill Farm (Chelmsford) Ltd, Mr Graham Weal, The Bucknell Family, Mr Paul Hopkins)
- Plan is too reliant on large strategic sites (e.g. Garden Communities) making it inflexible/unreliable. There are delivery and viability risks/issues with such sites, long lead in times and the housing trajectory is over ambitious (Urban Provincial, Opus Little Waltham Developments Ltd, Richard Speakman, Hill Residential Ltd, Obsidian Strategic, Tritton Farming Partnership LLP, Bloor Homes (Eastern), Dandara, Bellway Homes Ltd, This Land, Dandara, Martin Grant Homes, Bellway Strategic Land, Martin Grant Homes, Croudace Homes, Welbeck Strategic Land V Limited, Barratt David Wilson (Eastern Counties))
- Concern/objection to Hammonds Farm allocation. Comments cited include previously scored poorly, physically and spatially detached from Chelmsford, requires significant infrastructure investment and too optimistic modal shift targets. More sustainable, accessible locations have been dismissed (Dandara, Bellway Homes Ltd, This Land, Bellway Strategic Land, Croudace Homes, Barratt David Wilson (Eastern Counties), Gladman Developments Ltd, Vishal Sharma)
- Council has ignored its evidence base (Croudace Homes) including by selecting Hammonds Farm over better performing sites (Mr and Mrs Andrew Parker)
- SGS16a and b are not needed to meet the area's housing and employment requirements; are in unsustainable and inaccessible locations; would have significant adverse impacts that cannot be adequately mitigated including on flood risk, highway network, landscape, heritage, loss of agricultural land, wildlife, ecology and minerals safeguarding; are situated within a highly sensitive setting; would significantly impact multiple Parishes and contradict relevant 'made' and emerging Neighbourhood Plans, and are premature as the land is a potential new area for a 'National Landscape' designation (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Croudace Homes)
- There is large-scale public objection to Hammonds Farm and there have been no changes since the plan adoption to warrant removing the land's current level of high protection (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)

- The proposed benefits of the Hammonds Farm development (e.g. new country park) do not outweigh the harm; the Council's evidence base is questionable/unsound and not all impacts have been properly assessed. More sustainable options to SGS16a and have been rejected without proper interrogation including the continued expansion of NEC, smaller-scale allocations across the Settlement Hierarchy and Green Belt development through a review. A landscape assessment, heritage assessment, flood risk statement and transport technical note are submitted alongside the representation (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- Hammonds Farm would be a long-term option and commencing before completion of North East Chelmsford will split available infrastructure funding and market interest. The Spatial Strategy fundamentally departs from the adopted Local Plan and 'made' Neighbourhood Plans, and the rationale for this 'U'-turn is unclear and unjustified (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- Separation between Chelmsford and Danbury would largely disappear with Hammonds Farm contrary to the Spatial Principles (The Danbury Society)
- Hybrid Spatial Strategy options were not part of the consultation (The Danbury Society)
- Constraints at SGS6 and Great Leighs SGS7 (e.g. heritage, Critical Drainage Area) could delay delivery (Wates Developments Limited, Urban Provincial)
- Splitting the Settlement Hierarchy by Outside and Within the Green Belt is not justified and fails to reflect development opportunities across the plan area (Hill Residential Ltd, Higgins Group)
- South Woodham Ferrers should be its own category in the hierarchy given its scale and service provision
- Delete requirement for proposals within Special Policy Areas to be considered against an approved masterplan as education priorities date quickly requiring regular costly updates. Instead assess proposals against prevailing plan policies (ARU)
- Spatial Strategy should specifically recognise the needs of the logistics sector in Chelmsford (Greystoke CB)
- Increase capacity of GS17b to at least 30 dwellings in line with the SHELAA (Mrs A Mossman)
- Expand allocations 3b, 3c and 3d at East Chelmsford (Redrow Homes & Speakman Family)
- Expand 14b for 50 homes (Dandara)
- 20 units at 11c fails to make effective use of land. Allocate for more homes to help deliver improvements to local services and facilities (Welbeck Strategic Land V Limited)
- Increase allocation for Danbury. Question suitability of allocating through the Neighbourhood Plan which is not time-controlled risking delayed site delivery (Richborough)
- Provide more flexibility on growth outside settlement limits (Park View Group)

- Various comments from landowners/developers/promoters promoting that their proposed development sites should be allocated in the Spatial Strategy and added to the Key Diagram
- Various comments disagreeing with the Council's SHELAA 2024 site assessment methodology and/or scoring of their submitted sites
- The A132/B1012 Improvements fail to consider the increase in traffic flows from the development to the east of SWF
- The Secretary of State regarded about 1000 homes acceptable for SGS10
- Better to build on brownfield land or the edge of large towns
- Consider traffic impacts of RHS Hyde Hall Special Policy Area which will be improved/enlarged causing increased traffic on Willow Grove
- Support expressed including protection of the Green Wedge and Green Belt
- Opposition expressed e.g., development proposals will spoil the countryside, adversely impact on road safety and congestion
- Build on brownfield land or the edge of large towns
- Opposition expressed to Hammonds Farm allocation. Reasons include it is not properly evidenced or justified; loss of agricultural land; more sustainable locations are available; lack of existing infrastructure; landscape, biodiversity and heritage impacts, increased traffic impacts and congestion; no guarantee that the development and infrastructure can be delivered in the time scale; shortage of GPs; pollution; detached from Chelmsford; not close to new and existing transport infrastructure such as the new bypass; would require disproportionate investment in highways infrastructure, and lack of existing utility provision
- There is no advantage to Hammonds Farm over North East Chelmsford
- Hammonds Farm should not be the sole major growth area
- Need to undertake a Green Belt Review to identify sustainable new housing Green Belt settlements to sustain their vitality and services
- Unclear why expansion of North East Chelmsford is no longer deliverable since the Issues and Options consultation
- There is nothing to prevent mineral extraction and housing development in North East Chelmsford over the plan period
- Plan is premature as Labour propose 'grey belt' land which could be a better alternative to Hammonds Farm
- Re-distribute growth around planned new infrastructure i.e. North East Chelmsford and away from Hammonds Farm
- Concerns about 14a and 14b e.g., loss of agricultural land and flood risk
- Question classification of Ford End as a Service Settlement as it lacks services including a shop
- Opposition expressed to SGS2 and SGS3
- Consider growth east of Great Baddow, north of Writtle village, and land surrounding Galleywood and Danbury instead of proposed spatial strategy
- Large solar farms should be designated and shown as semi industrial on Local Plan diagrams.

CCC response to the comments made
--

Wording added to Settlement Hierarchy to clarify that 'Chelmsford' includes its Urban Area such as Chelmer Village, Great Baddow and Springfield.
The Settlement Hierarchy ranks settlements according to their size, function, characteristics and sustainability. It is one of many factors used to inform where development is most sustainable and informs planning decisions so is retained.
Reference to exception sites in the Policy expanded to include affordable and community-led developments.
Reference to 'sustainable urban extensions' in the Reasoned Justification expanded to clarify these include extensions at Great Leighs and South Woodham Ferrers, as well as Chelmsford.
Reasoned Justification updated to reflect latest predicted losses of Grade 2 and Grade 3 agricultural land as a result of development in the Plan.
Requirement for GS9a to make a financial contribution to the Chelmsford North East Bypass deleted as evidence shows it would be unreasonable to require this site to contribute to this.
Reasoned Justification amended to refer to SGS6, 7a, 7b, 7c and 8 helping to deliver strategic infrastructure including Section 1a of the Chelmsford North East Bypass.
All numbers and locations updated to reflect latest housing, employment and Gypsy and Traveller numbers and site allocations.
Site policies have been amended to ensure wastewater treatment and disposal is available, including any required mitigation with the sewerage network.
Reference to the need for police facilities has been added to Policy S9 and relevant site policies. The Plan should be read as a whole, so it is not necessary to duplicate in this Policy.
Heritage Impact Assessments were published alongside the Preferred Options Local Plan and have been used to inform site allocation policies.
Large strategic allocations will meet Travelling Showpeople needs in full with delivery on some sites within the first five years of the Plan.
The 2024 Gypsy and Traveller Accommodation Assessment includes Roselawn Farm in the baseline and is published as part of the evidence base.
Due to the lack of available and suitable alternative sites for Gypsies, Travellers and Travelling Showpeople, and the need to build cohesive and inclusive communities, the most appropriate way to meet these needs is through larger strategic site allocations.
Information on reasonable alternatives that have been considered and rejected is contained within the Spatial Strategy Topic Paper, Preferred Options Consultation Document and IIA.
The housing supply includes a small supply buffer, and the Council can demonstrate a Five Year Housing Land Supply which will be monitored through the Authority Monitoring Report throughout the Plan period. Housing figures are 'around' and allow for more units to come forward if sites can accommodate them in a sustainable manner. For these reasons no further housing allocations are required.
The Housing Trajectory and timings within it are considered deliverable as established through the Council's Five Year Housing Land Supply Methodology (April 2024). The Trajectory is updated annually, and the Pre-Submission Local Plan uses the latest available Housing Site Schedule (April 2024).
The site allocations, with the addition of existing permissions and windfall sites as set out in the April 2024 Housing Site Schedule, creates a good range of site sizes to assist in delivery of sites to meet housing needs over the Plan period.

The Council can meet its development requirements without needing to undertake a Green Belt review. This approach accords with National Planning Guidance.
The 'small sites' (under 1ha) are an important part of the Plan to ensure delivery of a variety of sites in a timely manner, and to meet NPPF requirements to provide 10% of small sites. The enlargement of these sites would be likely to put greater pressure on local facilities and infrastructure which could make such sites unsuitable for development.
Policy DM1 has been amended to introduce a new requirement for 10% market housing for Older Persons on greenfield sites of more than 500 dwellings.
There is no requirement or local need for the Plan to include a co-living policy.
The employment allocations alongside existing commitments are expected to meet the identified employment needs. The use of 'around' employment floorspace figures in specific site allocation policies allows for an appropriate degree of flexibility in provision. DM4 protects, and allows for expansion of, existing employment uses – the Plan should be read a whole, so it is not necessary to repeat in Policy S7.
Suitable brownfield sites have been allocated within the Urban Area. There are not sufficient brownfield sites to meet the Local Plan's development requirements so greenfield sites must be allocated.
The requirement for Masterplans for strategic sites and SPAs goes beyond just land use and ownership and are required to ensure wider community and stakeholder engagement at an early stage of the planning process. Reference to these being approved before a planning application is submitted has been amended to require them to be approved before a planning application is determined. It is noted that a masterplan for ARU was approved in 2024.
Policies DM8 and DM11 provide support for the growth and expansion of rural businesses – no need to add further details to Strategic Policies.
The SHELAA has been updated to inform the Pre-Submission Local Plan and any appropriate changes or updates have been made.
It is not necessary to allocate specific sites for renewable energy production as the suite of policies within the Plan allow for such developments to come forward. A number of planning applications for such large-scale development, including a large DCO for 'Longfield Solar Farm' have been approved in the Council's administrative area, demonstrating that the policies are sufficient to allow for such development to come forward and that there is no specific need to allocate sites.
See relevant site allocation policies for responses to site specific comments.
The Council has considered the suitability of alternative development strategies and sites to accommodate development as part of the plan preparation process. Some areas/sites proposed for development by developers/landowners have been rejected as part of this process.

CCC responses to site allocation consultation comments appear under the relevant specific site policy. For example, see page 113 for CCC responses to Hammonds Farm (SGS16a).

Strategic Policy S8 - Delivering Economic Growth

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
--------------------	-----	----	----------	---------------------------

Strategic Policy 8 - Delivering Economic Growth	8	1	22	22
---	---	---	----	----

Summary of Representations – main issues and suggested changes:

- Policy is broadly supported (Gladman, C J H Farming Ltd, Van Diemans Property Company, Wates Development and Hammonds Estates LLP)
- Bullet 1 should also refer to active modes of transport (Essex County Council)
- Add a new bullet supporting regional growth sector priorities and clustering of economic activity (Essex County Council)
- Add reference in para 6.58 to the need for an appropriate mix of uses to reflect market need (Essex County Council)
- Amend para 6.59 to remove the reference to South East Local Enterprise Partnership and include a reference to the Local Skills Improvement Plan (Essex County Council)
- Paragraph 6.62 should refer to the importance of the strategic sites and Garden Communities creating the agglomeration for economic development (Essex County Council)
- Reference ECC’s Developers Guide to infrastructure contributions in the Reasoned Justification. Para 6.63 should reflect the need for Employment and Skills Plans to be agreed by the LPA and ECC ahead of agreeing S.106 Agreements (Essex County Council)
- Concerns expressed that the SGS15 scored lowest in average sustainable accessibility in the Transport Impact Appraisal (Chignal Parish Council)
- In accordance with the NPPF and PPG, the policy should be amended to reference the logistics sector (Greystoke CB)
- Additional smaller employment sites should be allocated to further diversify Chelmsford’s economy (Hill Farm (Chelmsford) Ltd, Van Diemans Property Company)
- Add an additional bullet to refer to low carbon transport infrastructure (CNG Fuels Ltd)
- The South East Marine Plan policies such as SE-EMP-1 should be used as evidence to support the local plans policies (Marine Management Organisation).

CCC response to the comments made
Various amendments to strengthen and update the policy including references to active and sustainable modes of transport and support for regional growth sector priorities and clustering of economic activity.
The policy includes B8 development as stated in Reasoned Justification – no further change considered necessary.
Additional references to the South East Marine Plan have been added to Section 1 (Introduction) of the plan. As the plan is read as a whole, it is not considered necessary to repeat this in Policy S8.
The policy already refers to the sectors which will be nurtured - reiterating this in the Reasoned Justification in relation to strategic sites would be duplication.

The plan will allow for a range of different employment uses to come forward, where appropriate – there is no evidence to justify a specific reference to low carbon transport infrastructure.

The policy for SGS15 Little Boyton Hall Farm requires a range of measures to promote active travel safe to the site.

The plan allocates a range of employment sites to meet the employment floorspace requirements in the Policy S6 – no further allocations required.

Strategic Policy S16 – Connectivity and Travel

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy 16 – Connectivity and Travel	14	2	26	26

Summary of Representations – main issues and suggested changes:

- Support for the policy (Essex County Council, Sport England, Wates Developments and Hammonds Estates LLP, Cliffords Group Ltd, Dandara / Dandara Eastern, Gladman Developments Ltd, Hill Residential, Dominus Chelmsford Ltd, CJH Farming Ltd, The Bucknell Family, Chris & Helen Copping, Pigeon (Sandon) Ltd, Daniel James Developments)
- Welcome further text relating to Bio/CNG and alternative fuels (CNG Fuels)
- Add a reference to how the policy can support the LCWIP routes through physical provision or financial contributions (Essex County Council)
- Include actions to remove barriers to travel for vulnerable users (Essex County Council)
- Encourage the plan to take account of the challenging targets for mode share and road safety as already in place in London (Transport for London)
- Walkable neighbourhood principles may not always be achievable, particularly for logistics development (Greystoke CB)
- Clarification sought on definition and thresholds for major and strategic development (ARU)
- Add reference to development proposals having regard to the principles in Active Design as well as the Essex Design Guide as the Walkable Communities Principle provides guidance on practical measures for implementing walkable neighbourhoods (Sport England)
- Include reference to the modal hierarchy, distinguish between the bullets points in Part A and clarify alternatives for commercial vehicles (Wates Developments and Hammonds Estates LLP)
- Concerns about future traffic and impact on Great Baddow and the Baddow bypass
- There needs to be greater provision for disabled parking close to the shops in the City Centre, and better public transport
- Better public transport is needed particularly from Chelmer Village to Springfield and Beaulieu Park.

CCC response to the comments made
Strategic Policy S1 includes the modal hierarchy – the plan should be read as a whole, so it is not necessary to repeat it in Policy S16.
The bullet points under Section A seek to achieve different measures to achieve active and sustainable transport and are retained.
Reasoned Justification describes alternatives for commercial vehicles – no further change considered necessary.
Reasoned justification amended to include a wider definition of vulnerable users.
Reference to how development can support the delivery of LCWIP routes added to the Reasoned Justification.
The definition and thresholds for major and strategic development in the policy are appropriate – no further change considered necessary.
Reference to the London Plan is noted. The Chelmsford Local Plan includes targets for mode share and seeks to improve safety and connectivity.
Reference added to development proposals having regard to the principles in Active Design.
Walkable neighbourhood principles are already addressed adequately in the policy – no further change considered necessary.

Strategic Policy S9 – Infrastructure Requirements

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy 9 – Infrastructure Requirements	23	3	48	48

Summary of Representations – main issues and suggested changes:

- Support for the policy (Sport England, Environment Agency, Gladman, Anglian Water, Tritton Farming Partnership LLP, Dominus Chelmsford Limited, Whirledge and Nott, Croudace Homes, Vistry Group)
- The list of transport infrastructure measures should better reflect the correct user hierarchy prioritisation of sustainable modes (Wates Developments and Hammonds Estates LLP)
- The policy fails to specifically address the potential impacts of sites 16a and 16b on Danbury, combined with planned housing growth in Maldon, South Woodham Ferrers and Danbury, and the potential new power station. Modelling has already shown that mitigation is needed for Eves Corner and Well Lane junctions, without additional growth (Danbury Parish Council)
- Add active and sustainable travel to education and health facilities (Essex County Council)
- Separate Chelmsford North East Bypass and new Park and Ride sites bullets, refer to bypass phasing and future actions, and separate bus priority and inter-urban public transport bullets (Essex County Council)
- Update route-based strategies for the A414 and A132, including requirements for physical or financial contributions where development adds traffic (Essex County Council)

- Provide evidence to support the strategy for the A132, it is close to capacity and improvements may not deliver the required improvements
- Support principle of a sustainable bridge connection from Site 16a directly into Sandon Park and Ride but some qualifying text is needed (Wates Developments and Hammonds Estates LLP)
- There are opportunities to improve the National Cycle Network in the area, namely improvements to NCN1 and an additional route the junction 19 which would link to Beaulieu Station and North Chelmsford, as well as providing a link to the countryside for leisure cyclists and is a better alternative to the existing cycle route (Cycling UK)
- Would not support buses through the Park and Ride site, and would prefer a connection nearby (Essex County Council)
- The supporting text refers to new development creating demand for cycling, rail and road use only. The wording should be updated to include reference to walking and buses (Wates Developments and Hammonds Estates LLP)
- Clarify the supporting text to evidence the requirement and timing for the Chelmsford North East Bypass (CNEB) Phases 1b and 2. The requirement appears to be associated primarily with background increases in traffic using the A12, rather than trips from Hammonds Farm (Wates Developments and Hammonds Estates LLP).
- Support for the conclusion of the Transport Impact Appraisal of Preferred Spatial Approach (March 2024) that by maximising the potential for sustainable accessibility to and from the site along the A12 corridor, the impact on the strategic highway network should not be considered severe – rather than a requirement to ensure that background traffic flows along the A414 are not unreasonably delayed by the addition of development trips as stated elsewhere in the appraisal (Wates Developments and Hammonds Estates LLP)
- Include a reference to the Chelmer Waterside access bridge, to be consistent with Strategic Policy S17 (Essex County Council)
- The Army and Navy improvements are wider than the junction itself and include connecting routes (Essex County Council)
- Further assessment work is underway on some road locations, and we will work with the Council on appropriate mitigation if necessary (Highways England)
- Any new Park and Ride site for West Chelmsford should be outside the Green Belt (Writtle Parish Council)
- There is a need for joint working between South Essex authorities to improve sustainable travel connectivity north-south, particularly for access to jobs; and to address implications and opportunities arising from Thames Freeport (Castle Point Council)
- Changes to the strategic road network should be considered in the context of potential impacts on the wider network, including the A12 in London (Transport for London)
- Concerns about future traffic and impact on Great Baddow and the Baddow bypass
- Add provision of 5G mobile service to the utilities section (Essex County Council)

- Encourage opportunities to enhance and establish green infrastructure along sustainable transport and the Public Rights of Way networks (Essex County Council)
- Include a policy reference to incorporating urban greening (Natural England)
- Strengthen reference to the capacity of foul drainage and waste water treatment to address pollution prevention (Chelmsford & Central Essex RSPB Local Group)
- Add further text relating to low carbon refuelling facilities (CNG Fuels)
- Rephrase policy to be consistent with Policy DM16, and to clarify that bespoke mitigation measures, where appropriate, would be in addition to RAMS contributions (Natural England).
- Add references to the requirement for a range of developer funded police facilities to provide for effective community safety, cohesion and policing to create sustainable new communities (Essex Police)
- The Cathedral School is at full capacity and would need to expand to two form entry to meet demand, but a strategic approach is required to include independent schools in overall longer-term education planning and funding as part of a cohesive strategy (The Cathedral School)
- All the required infrastructure should be set out in each site policy to make it clearer what they are expected to provide (Dandara, Hill Residential Ltd) and clearly linked to proposed growth
- It is unclear how infrastructure will be delivered, implemented and funded (Higgins Group)
- Policy should address the need to mitigate impacts on primary, community, acute and ambulance service capacity (Mid and South Essex Integrated Care Board (ICB))
- Lack of hospital capacity, with sufficient car parking, and GP capacity is an issue
- If we cannot provide the infrastructure, we should not build the houses and there should be legal requirements to ensure that schools, GPs, cycle routes, bus lanes are provided
- Evidence documents refer to uncertainty in forecasting forward beyond 2041 and therefore do not test more than 3,000 dwellings at East Chelmsford Garden Community (Hammonds Farm) (Wates Developments and Hammonds Estates LLP).

CCC response to the comments made
It is not necessary to list transport infrastructure by order of the modal hierarchy – no further change considered necessary.
Cross-boundary issues related to sustainable travel connectivity north-south, and to address Thames Freeport are addressed in Section 1 of the plan (or Introduction) – the plan should be read as a whole, so it is not necessary to repeat them here.
Qualifying text relating to the bridge connection from Site 16a is provided in the site policy (SGS16a).
Reasoned Justification refers to new development creating demand for measures to encourage sustainable travel choices which includes for walking and buses.
Reasoned Justification amended to reflect the latest position regarding the funding for the Chelmsford North East Bypass (CNEB). With section 1a being funded by the Housing Infrastructure Fund, followed by section 1b and section 2,

<p>which are anticipated to be subject to a future round of Department for Transport/Major Road Network funding combined with developer contributions and will be delivered at a later date.</p>
<p>Reference to 'emergency services infrastructure' replaced with "Police, ambulance and fire and rescue facilities" for completeness. Adding additional references to policing and police facilities would add unnecessary duplication.</p>
<p>Requirements for developer funded police facilities is addressed in the Infrastructure Delivery Plan and such detail is not appropriate within a Strategic Policy – no further change considered necessary.</p>
<p>Policy already contains a specific section on utilities which includes foul drainage and waste water treatment. Requirements for utilities is addressed in the Infrastructure Delivery Plan and relevant site allocation policies informed by the Water Cycle Strategy including SGS7a– no further change considered necessary.</p>
<p>It is not necessary to list other examples of sites that Beaulieu Park rail station will encourage sustainable travel to – no further change considered necessary.</p>
<p>The requirement for 'Improvements to the Improvements to the Army and Navy Junction' has been expanded to include the routes connecting to the junction as part of a sustainable transport package.</p>
<p>For completeness, reference to the A1016 has been added to 'New foot/cycle bridge across A131'.</p>
<p>Reference to new and improved active and sustainable travel routes has been expanded to include reference to 'bridges' to reflect additional items identified by the updated IDP. The need for such routes to connect to education and health centres has also been added to this bullet point.</p>
<p>The need for a new active and sustainable route and bridge over the A12 from East Chelmsford Garden Community to connect to Sandon Park and Ride has been amended to connect 'close' to the Park and Ride.</p>
<p>Reasoned Justification amended to refer to 5G mobile connectivity.</p>
<p>The requirement for bus priority measures has been expanded to also include 'bus services' and has been separated into two bullet points from the requirement for 'Improvements to inter-urban public transport'.</p>
<p>Measures to promote the greening of sustainable transport and Public Rights of Way is outside the scope of this Policy and is addressed by Policy S4 – no further change considered necessary.</p>
<p>Reasoned Justification updated to reflect the latest position with regards to the CNEB, Route Based Strategies for Mid Essex and Local Transport Plan.</p>
<p>The provision of new lock and replacement of weir gates at Chelmer Waterside, the provision of serviced moorings along the River Chelmer, and cemetery space and crematorium provision have been added to the policy requirements to reflect additional items identified by the updated IDP.</p>
<p>The IDP sets out how infrastructure will be delivered, implemented and funded so it is not necessary to repeat this detail in the policy - no further change considered necessary.</p>
<p>Contributions towards addressing cumulative recreational pressure on SSSIs has been added as a policy requirement to reflect the site specific policies requiring this.</p>
<p>Reasoned Justification updated to require major developments to provide suitable alternative and accessible natural greenspace on-site, in addition to financial contributions in accordance with the adopted RAMS Supplementary Planning Document.</p>

Strategic Policy S10 – Securing Infrastructure and Impact Mitigation

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy 10 – Securing Infrastructure and Impact Mitigation	11	2	28	28

Summary of Representations – main issues and suggested changes:

- Supportive of the policy (Environment Agency, Anglian Water, Vistry Group, Chelmsford Garden Community Consortium, Essex County Council, NHS Property Services Ltd, Wates Developments and Hammonds Estates LLP)
- Include reference to ‘facilities’ within the policy and Reasoned Justification (Essex Police)
- Include reference to green and ‘blue’ infrastructure (Essex County Council)
- Amend ‘emergency services’ to ‘police, ambulance and fire and rescue facilities’ (Essex Police)
- Delete second policy paragraph as it should not be for a development, especially for one that has been allocated in the local plan, to subsequently demonstrate that there is sufficient capacity within local infrastructure to support that development (Home Builders Federation)
- Any reliance placed on planning obligations to fund infrastructure need to consider how much growth is being directed to locations that relate to such infrastructure, and whether such growth is sufficient to provide the requisite funding (Tritton Farming Partnership LLP)
- New housing sites necessitate developer funded police and healthcare facilities to be provided. Further changes are set out by Essex Police throughout the Plan (Essex Police, Mid and South Essex Integrated Care Board)
- Policies S9 and S10 should address the need to mitigate impacts on primary, community, acute and ambulance service capacity (Mid and South Essex Integrated Care Board)
- Greater clarity is sought within the evidence base with regards to specific details on the infrastructure being required for each site and how that will be secured. At present there is no link between Policy S9 and Policy S10 which should explain which infrastructure is relevant to which site and how delivery will be secured (Whirlledge & Nott, Croudace Homes)
- Include reference to the fact the IDP is a living document that will continue to be updated in the Reasoned Justification (Essex County Council)
- Supportive of the reference to ‘flood protection’ in the Reasoned Justification (Environment Agency).

CCC response to the comments made

Last sentence of the policy regarding the need to ensure that the cumulative impact of planning policy, standards and infrastructure requirements do not render most sites and development identified in the Local Plan unviable and therefore undeliverable has been moved to the Reasoned Justification.

Definition of infrastructure expanded to include green and 'blue' infrastructure.
Reasoned Justification expanded to clarify that the Infrastructure Delivery Plan is a 'living' document that will be reviewed to ensure the most up-to-date information is used to inform the planning application process.
All site allocation policies have been updated to clarify that financial contributions for infrastructure listed in the site policy and Policy S9 will be sought in accordance with Policy S10.

Strategic Policy S11 – The Role of the Countryside

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy 11 – The Role of the Countryside	8	4	29	29

Summary of Representations – main issues and suggested changes:

- Support policies which prevent development on the land between the A12 Bypass and the Green Belt, even if the Green Belt boundary changes (Essex Local Access Forum)
- Preserve agricultural land within the Green Belt between Chelmsford and south of the A12 as a breathing space for inhabitants
- Amend policy to align with Council's response to the climate and ecological emergency to add significant material weight to developments that assist in delivering net zero emissions (CNG Fuels)
- Add more protection for the rural villages to prevent encroachment from larger settlements (Sandon Parish Council)
- Undertake a Green Wedge review (The Bucknell Family, Cliffords Group Ltd, Vistry Group, Obsidian Strategic Asset Management Ltd, Miscoe Enterprises Ltd and Hill Farm (Chelmsford) Ltd)
- Policy should be more flexible to allow sustainable development to come forward outside of defined built-up areas (Gladman Developments Ltd)
- Support principle of Green Wedges but no need for a specific Green Wedge Policy (Obsidian Strategic Asset Management Ltd)
- Support reference to Landscape Character Assessments, Historic Landscape Characterisation Study, Sensitivity and Capacity Assessments evidence base (Chignal Parish Council)
- Support policy (Writtle Parish Council)
- Question whether all areas of Green Belt serve the five key purposes as the context and role of these areas has evolved, particularly, land south of Chelmsford (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- A Green Belt Review should be undertaken (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Newell Properties Development Ltd, Hill Residential Ltd, Vistry Group, Higgins Group)

- Amend to refer to the Essex Green Infrastructure Strategy (2020) and the Essex Green Infrastructure Standards Technical Guidance, Essex Green Infrastructure Standards Non-Technical Guidance and the Local Nature Recovery Strategy (Essex County Council)
- Suggests policy wording in relation to rural economic development, with particular regard to existing businesses in rural locations, is clarified and more supportive of growth, expansion and diversification to avoid different interpretations at planning application stage (Strutt and Parker)
- Consider a small-scale alteration to the Green Wedge boundary and an extension to Widford Employment Area (Saxtons 4x4)
- Comments from landowners/developer suggesting alternative development sites are taken forward.

CCC response to the comments made
Plan seeks to prevent the encroachment of growth into undeveloped areas and the coalescence of existing built-up areas – no further changes needed.
Development growth in the Green Belt has been discounted as there is sufficient and suitable land is available outside the Green Belt to meet the development needs in a sustainable way. It would also undermine national planning policy. A Green Belt Review is not required.
The Green Wedge is a locally important designation. Changes to the Green Wedge boundaries to allow development growth has been discounted as there is sufficient and suitable land elsewhere to meet development needs in a sustainable way. No Green Wedge Review is required, and the deletion of Green Wedge policies would be inappropriate.
Other policies in the plan adequately deal with net zero carbon, Green Wedge and Rural Area development including DM8 and DM31. The plan should be read as a whole, so further provision in S11 would be duplication.
CCC has prepared its own Green Infrastructure Strategy and Action Plan for the plan area – it is not necessary to also refer to the Essex-wide documents.
Reasoned Justification amended to clarify that reference is made to the spatial role and function of land.
A range of alternative development sites have been considered and rejected when developing the Spatial Strategy. More information is set out in the IIA, Spatial Strategy Topic Paper and Preferred Options Local Plan.

Strategic Policy S12 – Role of City, Town and Neighbourhood Centres

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S12 – Role of City, Town and Neighbourhood Centres	0	0	3	3

Summary of Representations – main issues and suggested changes:

- Support the distinction of centres with Chelmsford City Centre listed first (which is contrary to Policy S7) (Dominus Chelmsford Limited)
- Consider adding Hammonds Farm Neighbourhood Centre to the list of centres identified in para. 6.125 (Essex County Council)
- The policy lacks a reference to the benefits of/need for appropriate residential uses on upper floors in the city centre/designated centres (Dominus Chelmsford Limited/ Highgate Capital Limited).

CCC response to the comments made
As Hammonds Farm has not yet been built, the exact scale and location of a neighbourhood centre is currently unknown, so no change is proposed.
Strategic Policy S17 adequately covers the opportunities for residential uses on upper floors in Part C: Living in the City Centre. Residential use on the upper floors of designated centres is also covered by Policy DM5.

Strategic Policy S17 – Future of Chelmsford City Centre

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S17 – Future of Chelmsford City Centre	6	1	9	9

Summary of Representations – main issues and suggested changes:

- Proposals for flood defences and flood management are welcome. The supporting text could include encouragement for developers to liaise with the Chelmsford Flood Resilience Partnership (The Environment Agency)
- Support for innovative and sustainable approaches, long-term resilience, nature-based solutions and natural flood management (Anglian Water Services Ltd)
- Support for policy approach, and specifically for The Meadows with some enhancements to text proposed (Dominus Chelmsford Limited)
- Amend text to refer to Park and Ride as part of bus connections (Essex County Council)
- Opportunity corridors supported – suggest amendment to reflect availability of planning tool for urban greening, and provide clarification of appropriate land uses (Essex County Council)
- The Meadows was only built in 1992 and does not need to be rebuilt, the proposal is unsustainable
- Proposals for The Meadows should include health facilities.

CCC response to the comments made
The policy has been redrafted to reduce its length and remove repetition. Detail that was contained within Part F. is now largely contained in the relevant site policies SGS1a and SGS1w.
Part D. Bullet 2, reference to Park and Ride has been added.

Figure 15, Area 5, has been updated to include the allocation of Andrews Place (SGS1cc).

Reference to the Chelmsford Flood Resilience Partnership is made in Strategic Policy S9. The plan should be read as a whole, so further provision in S17 would be duplication.

Strategic Policy S13 – Monitoring and Review

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Policy S13 – Monitoring and Review	4	0	6	6

Summary of Representations – main issues and suggested changes:

- Support for policy (Richborough, Vistry Group, Higgins Group, Hill Residential Group, Gladman)
- Add a commitment for the future review to be completed and adopted within five years to ensure a rolling up-to-date Local Plan (Richborough)
- A full review is always necessary over a focussed review (Hill Residential Ltd).

CCC response to the comments made

No changes have been made as the policy meets the necessary requirements and sets a date for a future review.

Where Will Development Growth be Focused?

This section of the consultation document provides the site policies for delivering the Spatial Strategy.

Section 7 – Where Will Development Growth be Focused? (Paragraph 7.1 to 7.6)

Consultation point	Yes	No	Comments	Total number of responses
Section 7 - Where Will Development Growth be Focused? (Paragraph 7.1 to 7.6)	0	0	3	3

Summary of Representations – main issues and suggested changes:

- Recommend policy wording relating to the capacity of water recycling centres is included in all site allocation policies (Environment Agency)
- Suggest adding reference to police facilities (Essex Police)
- Suggest change to the name of this area to better reflect its location (Dominus Chelmsford Limited).

CCC response to the comments made
Reference to the capacity of water recycling centres added to the relevant policies for affected sites at SGS7 and SGS10.
Plan text adjusted to refer to emergency services facilities.

Growth Area 1 – Central and Urban Chelmsford (paragraph 7.7-7.11 and Figure 16)

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Chelmsford Urban Area (paragraph 7.7 - 7.11 and Figure 16)	2	0	11	11

Summary of Representations – main issues and suggested changes:

- Support the approach to use brownfield land (Basildon Borough Council), the role of this area in the strategy (Gladman) and the opportunity for green/blue and natural infrastructure (Anglian Water Services Ltd)
- Suggest additional wording to ensure early discussions with developers (Anglian Water Services Ltd)
- Suggested wording changes to reflect education provision and delivery, and provision of bus services (Essex County Council)
- Additional site proposed for consideration for a co-living scheme (Highgate Capital Limited)
- Opposed to removal of car parks to allow for development

- Concern for the level of public service provision and securing promised infrastructure.

CCC response to the comments made
Support to using brownfield land noted.
Wording has been altered throughout Section 7 to clarify land and provision of primary and early years and childcare facilities, where this is a site policy requirement.
Contributions for bus services may not always be appropriate, depending on location, so this is covered through the requirement for development to maximise opportunities for active and sustainable travel for relevant site policies.
Plan is supported by an updated evidence base including an updated Infrastructure Delivery Plan.
Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

Location 1 – Chelmsford Urban Area (paragraph 7.12)

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Chelmsford Urban Area (paragraph 7.12)	0	0	1	1

Summary of Representations – main issues and suggested changes:

- Suggest wording changes to reflect opportunities for active and sustainable travel (Essex County Council).

CCC response to the comments made
Reference to active and sustainable travel has been included.

Strategic Growth Site Policy 1a - Chelmer Waterside

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 1a - Chelmer Waterside	4	0	9	9

Summary of Representations – main issues and suggested changes:

- Clarification sought on costs of any relocation and adequacy of width of waterside margin (Chelmsford Canoe Club)
- Suggest adding reference to police facilities (Essex Police)
- Early engagement will be required on sewer constraints (Anglian Water Services Ltd)

- Amend text to include a flood risk and management requirement and potential financial contributions (Environment Agency)
- Add reference to the role of multifunctional green infrastructure in water management (Essex County Council)
- The Cathedral School is at full capacity and would need to expand to meet demand, and a strategic approach is required (The Cathedral School)
- Additional site proposed for consideration in the allocation area, for co-living scheme (Highgate Capital Limited).

CCC response to the comments made
Reference added in the Reasoned Justification to the presence of a large diameter sewer through site CW1d.
The Policy and the Reasoned Justification have been adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.
An additional bullet has been added for the requirement for financial contributions towards provision of a new lock and replacement weir gates.
Flood risk is covered within the Policy and at Para. 7.15.
CCC will continue to work closely with ECC as the Local Education Authority on the plan to ensure that education requirements are met.

Strategic Growth Site Policy 1w – Meadows Shopping Centre and Meadows Surface Car Park

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 1w – Meadows Shopping Centre and Meadows Surface Car Park	1	3	14	14

Summary of Representations – main issues and suggested changes:

- Additional text suggested in relation to education contributions, parking, pedestrian and cycle routes (Essex County Council)
- A Heritage Impact Assessment should be undertaken before the next consultation stage (Historic England)
- Amend text to include a flood risk and management requirement and potential financial contributions (Environment Agency)
- Suggest adding reference to police facilities (Essex Police)
- Consider sewer assets and easements, and the need for maintenance access, which should shape the layout (Anglian Water Services Ltd)
- Consider on-site health care facilities to meet growing needs (Mid and South Essex Integrated Care Board)
- Support allocation but propose greater development density and a higher number of homes (Dominus Chelmsford Limited)
- Do not agree with building homes here, it is not a sustainable option to demolish it

- Opposed to the removal of car parks to allow for development, and active travel should feature
- Concerns expressed about loss of shops and jobs, the centre has good occupancy and could be revamped for shopping
- Proposals for The Meadows should include health and education facilities.

CCC response to the comments made

Additional bullet added to the Policy and Reasoned Justification to require safeguarding of access for maintenance of foul and surface water drainage infrastructure, and the presence of a wastewater pumping station on the site.

Flood risk is covered within the Policy and through a link to Policy S10 at Para. 7.40.

Clarification made to bullet relating to loss of car parking, and enhancement of bus services.

An additional bullet has been added for the requirement for financial contributions towards provision of a new lock and replacement weir gates.

The Policy and Reasoned Justification adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.

The site policy requires financial contributions to education provision and/or onsite provision of other community facilities including healthcare provision.

The site policy requires proposals to seek to retain an equivalent amount of commercial floorspace compared to the existing shopping centre.

Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

Strategic Growth Site Policy 1b – Former St Peter’s College, Fox Crescent

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 1b – Former St Peter’s College, Fox Crescent	1	0	9	9

Summary of Representations – main issues and suggested changes:

- Support for the policy requirement to provide or make financial contributions to sport, leisure and recreation facilities, and for commuted sums in lieu of loss of open space (Sport England)
- Add reference to police facilities (Essex Police)
- Add reference to specialised supported housing (Essex County Council)
- Change wording relating to how special schools are referred to (Essex County Council)
- Add additional text in relation to green infrastructure (Essex County Council).

CCC response to the comments made

The Policy and Reasoned Justification have been adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.
An additional bullet has been added to outline the requirement for inclusion of 60 units of specialist residential housing.
Bullet 3 - the wording around special schools has been clarified.
Text added in relation to green infrastructure.

Strategic Growth Site Policy 1x – Former Kay Metzeler Premises, Brook Street

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 1x – Former Kay Metzeler Premises, Brook Street	2	0	7	7

Summary of Representations – main issues and suggested changes:

- The Cathedral School is at full capacity and would need to expand to meet demand, and a strategic approach is required (The Cathedral School)
- A Heritage Impact Assessment should be undertaken before the next consultation stage (Historic England)
- Add a reference to police facilities (Essex Police)
- Consider sewer assets and easements, and the need for maintenance access, which should shape the layout (Anglian Water Services Ltd)
- Add additional text in relation to green infrastructure and nature recovery networks (Essex County Council).

CCC response to the comments made
This site is no longer available for development and will not be allocated.

Strategic Growth Site Policy 1d – Riverside Ice and Leisure Land, Victoria Road

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 1d – Riverside Ice and Leisure Land, Victoria Road	2	0	11	11

Summary of Representations – main issues and suggested changes:

- The Cathedral School is at full capacity and would need to expand to meet demand, and a strategic approach is required (The Cathedral School)
- Amend text to include flood risk and management requirement and potential financial contributions (Environment Agency)
- Suggest adding reference to police facilities (Essex Police)

- Consider sewer assets and easements, and the need for maintenance access, which should shape the layout (Anglian Water Services Ltd)
- Add additional text in relation to pedestrian and cycle links, and active and sustainable travel (Essex County Council)
- Opposed to the removal of car parks to allow for development.

CCC response to the comments made
Additional bullet added to the Policy to require safeguarding of access for maintenance of foul and surface water drainage infrastructure, and the presence of a wastewater pumping station on the site.
Additional bullet added to the Policy to require provision of SuDs and flood risk management.
The Policy and Reasoned Justification have been adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.
An additional bullet has been added for the requirement for financial contributions towards provision of a new lock and replacement weir gates.
CCC will continue to work closely with ECC as the Local Education Authority on the plan to ensure that education requirements are met.
Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

Strategic Growth Site Policy 1e – Civic Centre Land, Fairfield Road

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 1e – Civic Centre Land, Fairfield Road	0	0	5	5

Summary of Representations – main issues and suggested changes:

- Add reference to police facilities (Essex Police)
- Consider sewer assets and easements, and the need for maintenance access, which should shape the layout (Anglian Water Services Ltd)
- Add additional text in relation to active and sustainable travel, and Chelmsford Transport Interchange Project (Essex County Council)
- Opposed to the removal of car parks to allow for development.

CCC response to the comments made
Additional bullet added to the Policy to require safeguarding of access for maintenance of foul and surface water drainage infrastructure.
The Policy and Reasoned Justification have been adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.
A proposed Chelmsford Transport Interchange Project is considered to be at too early a stage to be included in this iteration of the Plan.

Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

Strategic Growth Site Policy 1f – Eastwood House Car Park, Glebe Road

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 1f – Eastwood House Car Park, Glebe Road	0	0	5	5

Summary of Representations – main issues and suggested changes:

- Add additional text in relation to green infrastructure and nature recovery networks (Essex County Council)
- Consider sewer assets and easements, and the need for maintenance access, which should shape the layout (Anglian Water Services Ltd)
- Add reference to police facilities (Essex Police)
- Opposed to the removal of car parks to allow for development.

CCC response to the comments made

Additional bullet added to the Policy to require safeguarding of access for maintenance of foul and surface water drainage infrastructure.

The Policy and Reasoned Justification have been adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.

Text added in relation to green infrastructure.

Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

Strategic Growth Site Policy 1y – Land Between Hoffmanns Way and Brook Street (Marriages Mill)

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 1y – Land Between Hoffmanns Way and Brook Street (Marriages Mill)	2	0	5	5

Summary of Representations – main issues and suggested changes:

- Add additional text in relation to green infrastructure and nature recovery networks (Essex County Council)

- Add reference to police facilities (Essex Police)
- Include reference to removal of modern buildings and retaining a link to the nearby Grade II listed Marconi 1912 Building (Historic England)
- The Cathedral School is at full capacity and would need to expand to meet demand, and a strategic approach is required (The Cathedral School).

CCC response to the comments made
The Policy and Reasoned Justification have been adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.
Text added in relation to green infrastructure.
Bullets under 'historic and natural environment' amended to include the requirement for the removal of modern buildings, and retaining a visual link with the 1912 Building.
CCC will continue to work closely with ECC as the Local Education Authority on the plan to ensure that education requirements are met.

Policy GR1 – Growth Sites in Chelmsford City Centre/Urban Area

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Policy GR1 – Growth sites in Chelmsford City Centre/Urban Area	2	0	10	10

Summary of Representations – main issues and suggested changes:

- Support for requirements to make contributions towards new/enhanced sport, leisure and recreation facilities (Sport England)
- Add additional text in relation to active and sustainable travel, and additional bullet for sites to enhance existing pedestrian and cycle routes (Essex County Council)
- Add additional text in relation to green infrastructure and nature recovery networks (Essex County Council)
- Sustainable drainage systems should be a consideration on all proposed development sites, and aligned with green and blue infrastructure provision wherever possible (Anglian Water Services Ltd)
- Add reference to police facilities (Essex Police)
- Concerned about traffic generation in the City Centre, public transport, sustainable travel and car clubs should be considered
- Other sites could also be considered such as Andrews Place (Chelmer Housing Partnership (CHP)).

CCC response to the comments made
Policy amended to include the requirement for suitable SuDS and flood risk management.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.

The Policy and Reasoned Justification have been adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.

Text added in relation to active and sustainable travel.

Text added in relation to green infrastructure.

Growth Site Policy 1g – Chelmsford Social Club, Springfield Road

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 1g – Chelmsford Social Club, Springfield Road	0	0	0	0

No comments.

CCC response to the comments made

No changes.

Growth Site Policy 1h – Ashby House Car Parks, New Street

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 1h – Ashby House Car Parks, New Street	0	0	1	1

Summary of Representations – main issues and suggested changes:

- Opposed to the removal of car parks to allow for development.

CCC response to the comments made

Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

Growth Site Policy 1i – Rectory Lane Car Park West

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 1i – Rectory Lane Car Park West	0	0	1	1

Summary of Representations – main issues and suggested changes:

- Opposed to the removal of car parks to allow for development.

CCC response to the comments made

Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

Growth Site Policy 1z – Granary Car Park, Victoria Road

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 1z – Granary Car park, Victoria Road	2	3	8	8

Summary of Representations – main issues and suggested changes:

- A Heritage Impact Assessment should be undertaken due to proximity to Grade II listed Springfield Water Mill (Historic England)
- The Cathedral School is at full capacity and would need to expand to meet demand, and a strategic approach is required (The Cathedral School)
- Scale of development should be much more modest due to its location, such as a small terrace to mirror existing nearby houses
- Retain site as City open space; this natural open space should be protected
- Concerns about increased strain on local infrastructure including education
- Previous proposals have not been financially viable
- Opposed to the removal of car parks to allow for development; it is a very important and convenient car park for the nearby hotel, sports events, shopping.

CCC response to the comments made

Bullet 7 amended to include layout, height and design considerations to reduce visual impact on the setting of the Grade II listed Springfield Water Mill.

The site is informed by a Heritage Impact Assessment published alongside the Preferred Options Consultation Document.

The plan is informed by a wide range of evidence base reports including an updated Infrastructure Delivery Plan, Viability Assessment, Housing Capacity in Chelmsford City Centre and Urban Area and Open Space Assessment.

CCC will continue to work closely with ECC as the Local Education Authority on the plan to ensure that education requirements are met.

Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

Growth Site Policy 1k – Former Chelmsford Electrical and Car Wash, Brook Street

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 1k – Former Chelmsford Electrical and Car Wash, Brook Street	0	0	0	0

No comments.

CCC response to the comments made
No changes. However, the site policy has been updated to reflect that a planning application has been submitted.

Growth Site Policy 1aa – Coval Lane Car Park

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 1aa – Coval Lane Car Park	0	1	4	4

Summary of Representations – main issues and suggested changes:

- Scale of development should be much more modest to be in keeping with surrounding development
- Concerns about increased traffic from new development
- Development should be conditional on provision of a further Park and Ride site at Widford
- Opposed to the removal of car parks to allow for development; loss of parking may impact on West End businesses; there is not enough on-street parking to accommodate the local residents' needs
- Cumulative effect of other nearby development should be considered including office to housing conversions at Paragon House.

CCC response to the comments made
The consequential change of adding SuDS and flood risk management to the over-arching Policy GR1 means that the bullet is deleted from this policy.
The plan is informed by a wide range of evidence base reports including an updated Infrastructure Delivery Plan, Viability Assessment, Transport Modelling, Housing Capacity in Chelmsford City Centre and Urban Area and Open Space Assessment.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.
Policy S9 states that additional Park and Ride facilities will be considered in West Chelmsford.
Site policy already requires the development character, scale and layout to have regard and respond to the site's surrounding context.

Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

CCC response to the comments made

Reference to safe and convenient pedestrian access added.

Growth Site Policy 1bb – Glebe Road Car Park

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 1bb – Glebe Road Car Park	0	1	3	3

Summary of Representations – main issues and suggested changes:

- A Heritage Impact Assessment should be undertaken due to location in the West End Conservation Area (Historic England)
- Opposed to the removal of car parks to allow for development; this is the only overnight car park; there is already not enough parking for local residents
- Concern that overlooking and noise will be an issue.

CCC response to the comments made

The consequential change of adding SuDS and flood risk management to the over-arching Policy GR1 means that the bullet is deleted from this policy.

Bullet 4 amended to define the local context of 2-3 storeys, and that services should be screened from the streetscene.

The site is informed by a Heritage Impact Assessment published alongside the Preferred Options Consultation Document.

Allocated sites are supported by the evidence base including Housing Capacity in Chelmsford City Centre and Urban Area. The NPPF promotes the use of brownfield sites for new homes and other identified needs and the car parks allocated in the Local Plan are promoted for redevelopment – no changes.

Policy DM29 requires development proposals to not be overbearing or result in result in excessive noise.

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 2 – West Chelmsford	3	2	20	20

Summary of Representations – main issues and suggested changes:

- Add reference to ‘multifunctional’ green infrastructure to ensure consistency throughout the Plan (Essex County Council)
- Minor policy change suggested to reflect the provision of a primary school and early years nursery (Essex County Council)
- Add reference to active and sustainable modes of transport, where alternatives to the private car are prioritised, and financial contributions towards bus services (Essex County Council)
- Provide safe and convenient pedestrian and cycle connections, links to the urban area and accessibility for bus services (Essex County Council)
- Provide a safe traffic free environment around school pedestrian entrances having regard to the requirements set out in ECC’s Developers’ Guide to Infrastructure Contributions (Essex County Council)
- Support for requirements to make contributions towards new/enhanced sport, leisure and recreation facilities, and inclusion of these facilities in the masterplan (Sport England)
- Add reference to police facilities (Essex Police)

- Concerns of the impact from development on local services such as Writtle GP surgery (Good Easter Parish Council)
- Unclear what healthcare provision is envisaged as part of the proposed neighbourhood centre; a new GP surgery could be provided here (Good Easter Parish Council)
- Concerns about the potential traffic impact on Roxwell Road/A1060, a proportion of the traffic should be able to use Chignall Road via Trent Road/Avon Road (Good Easter Parish Council)
- The proposed multi-user crossing will cause further congestion, although its purpose and intended users is not clear (Good Easter Parish Council)
- Buses will be delayed by traffic queues without space to provide a bus lane
- The commitment to CIL funding is welcome, and assurance is sought that this will not change in future (Writtle Parish Council).

CCC response to the comments made
Text relating to provision of education has been updated to reflect ECC requirements, and types of provision have been clarified.
Reference to traffic free environments around school entrances are considered too detailed for the Policy but would be dealt with at masterplanning or planning application stage.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.
Provision of a new stand-alone early years and childcare nursery removed from supporting on-site development and site infrastructure requirements to reflect latest ECC position regarding need.
Requirement for pedestrian and cycle connections expanded to ensure these are 'safe and convenient'.
Additional requirements for a 'new dedicated pedestrian and cycle links to the existing urban area' and the need to 'provide well-connected and integrated internal road layouts which allow good accessibility for bus services' added to policy to reflect the removal of a bus link via Avon Road.
Policy and Reasoned Justification updated to expand reference to 'multifunctional' green infrastructure to ensure consistency across the Plan.
Policy and Reasoned Justification updated to expand reference to 'active and sustainable transport to ensure consistency across the Plan.
Site infrastructure requirements updated to include reference to Police, ambulance and fire and rescue facilities.
The necessary contributions to healthcare are covered by site infrastructure requirements. Full details of what these may be will be informed through the planning application process and advice of NHS Mid and South Essex Integrated Care Board.

Location 3 – East Chelmsford

Strategic Growth Site Policy 3a – East of Chelmsford, Manor Farm

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
---------------------------	------------	-----------	-----------------	----------------------------------

Strategic Growth Site Policy 3a – East of Chelmsford, Manor Farm	2	1	16	16
--	---	---	----	----

Summary of Representations – main issues and suggested changes:

- Support policy requirements including for development to provide or make financial contributions to new or enhanced sport, leisure and recreational facilities (Sport England)
- Add to policy requirements for a foul drainage strategy and SuDs as part of a multifunctional green and blue infrastructure delivery framework should an alternative development strategy be taken forward for this site (Anglian Water Services Ltd)
- Support the allocation ((Hopkins Homes Ltd)
- Para. 7.135 – The site has no existing or planned access for horse riders and any proposals could conflict with the residential area and country park users (Hopkins Homes Ltd)
- Do not support Para. 7.141 - Requirement for a Minerals Resource Assessment is inconsistent with Policy S8 of the Minerals Local Plan which exempts land already allocated in adopted plans (Hopkins Homes Ltd)
- Ensure any need for minerals extraction is factored into the housing trajectory to allow for the potential delays to delivery (Hopkins Homes Ltd)
- In absence of any justification, with reference to the CIL Regulations, delete the requirement to fund the creation of a visitors' centre at Sandford Mill (Hopkins Homes Ltd)
- Requirements for financial contributions for education, community and healthcare, sports, leisure and recreation duplicate S9 and S10. If retained in the policy, amend to state that contributions will be “appropriate and proportionate” (Hopkins Homes Ltd)
- A new plan policy is required to address the cumulative recreational pressure on Blakes Wood and Lingwood Common SSSI, Woodham Walter Common SSSI, Danbury Common SSSI and other wildlife sites from increased levels of recreational pressure arising from the new residents at Growth Sites 16a, 3a and 13 (Natural England)
- Add to SGS3a and d policies that active travel connections should be to existing and proposed development areas within East of Chelmsford and at East Chelmsford Garden Community (Wates Developments and Hammonds Estates LLP)
- Expand SGS3a and d to require appropriate measures to enable public transport access to and from the site, and to ensure public transport strategy proposals integrate with existing and proposed development areas within East Chelmsford and at the East Chelmsford Garden Community (Wates Developments and Hammonds Estates LLP)
- Amend Historic and Natural Environment, bullet 4 to refer to ‘multifunctional’ green infrastructure (Essex County Council)
- Amend Movement and Access bullet to refer to ‘safe and convenient’ pedestrian and cycle connections (Essex County Council)

- Amend Site infrastructure requirements bullet 7 to 'Provision of a new northwest safe and convenient pedestrian/cycle link through the Country Park to provide a connection to future off-site cycle links.' (Essex County Council)
- For consistency with other parts of the plan refer to 'active and sustainable travel' in para. 1 of the policy (Essex County Council)
- Object to site for multiple reasons including potential contamination of land, flood risk, housing density and positioning, education and medical care, biodiversity and traffic impacts (Great Baddow Parish Council)
- Under 'Site infrastructure requirements' expand bullet point 10 to refer to police facilities as required by Essex Police (Essex Police)
- Support proposal to improve the cycle crossing of the River Chelmer at Sandon Mill (Cycling UK)
- Include requirement for a more direct cycle route to the city centre which follows Essex Yeomanry Way to the Army and Navy (Cycling UK)
- It appears that the extension to Sandon Park and Ride is now intended to serve Hammonds Farm development
- The SGS3a masterplan should consider pollution sampling from the former nearby landfill site and the nuclear bunker
- The Local Plan is undermined by speculative applications such as the proposed warehouse development at Sandon
- There aren't enough trained professionals to staff the new infrastructure needed e.g. schools
- Unsustainable to build new homes close to the flood plain adjacent to the Army and Navy
- Proposed new developments will increase flooding potential.

CCC response to the comments made
Policy S9 already requires developments to provide foul drainage infrastructure.
The site policy already requires flood mitigation measures including SuDS.
Various site policy adjustments have been made including deletion of horse-riding reference as there are no existing or planned access points for horse riders; new requirements to address the cumulative recreational pressure on nearby SSSIs; new requirement for multifunctional green infrastructure; new requirements for active and sustainable travel and connections with East Chelmsford Garden Community and, new requirement for financial contributions towards Police, ambulance and fire and rescue facilities.
Requirements for financial contributions are informed by the plan evidence base including the updated Infrastructure Delivery Plan.
A Minerals Resource Assessment remains a policy requirement.
The plan is informed by a wide range of evidence including a Strategic Flood Risk Assessments and Sequential and Exception Testing.
The Council cannot prevent planning applications from being submitted.
The site already has an approved masterplan.
The site policy already requires safe and convenient pedestrian and cycle connections.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.

Strategic Growth Site Policy 3b – East of Chelmsford, Land North of Maldon Road (Employment)

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 3b – East of Chelmsford, Land North of Maldon Road (Employment)	0	0	10	10

Summary of Representations – main issues and suggested changes:

- Expand policy to require the development to prepare a strategy for responding to the National Grid Electricity Transmission plc (NGET) overhead transmission lines within the site which demonstrates how the NGET Design Guide and Principles have been applied at the masterplanning stage and how the impact of the assets has been reduced through good design (National Grid Electricity Transmission)
- Under ‘Site infrastructure requirements’ expand bullet point 5 to refer to police facilities as required by Essex Police (Essex Police)
- Replace Site Infrastructure Requirements, bullet 1 with ‘New 56 place stand-alone early years and childcare nursery (Use Class E(f)) on 0.13 hectares of suitable land allocated for education and childcare use (Essex County Council)
- Support allocation (Redrow Homes & Speakman Family)
- Amend Movement and Access bullet 3 to refer to ‘safe and convenient’ pedestrian and cycle connections (Essex County Council)
- Amend para. 7.151 to refer to ‘safe and convenient cycle/footway’ (Essex County Council)
- Amend Historic and Natural Environment, bullet 3 to refer to ‘multifunctional’ green infrastructure (Essex County Council).

CCC response to the comments made

Various site policy adjustments have been made including a new requirement to prepare a strategy for responding to the National Grid Electricity Transmission plc (NGET) overhead transmission lines; revised requirement for a 56 place stand-alone early years and childcare nursery; new requirement for multifunctional green infrastructure, and new requirements for active and sustainable travel connections and, new requirement for financial contributions towards Police, ambulance and fire and rescue facilities.

Strategic Growth Site Policy 3c – East of Chelmsford, Land South of Maldon Road

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
--------------------	-----	----	----------	---------------------------

Strategic Growth Site Policy 3c – East of Chelmsford, Land South of Maldon Road	0	0	5	5
---	---	---	---	---

Summary of Representations – main issues and suggested changes:

- Amend Movement and Access bullet 3 to refer to ‘safe and convenient’ pedestrian and cycle connections (Essex County Council)
- Given that SGS3c and SGS3d are at planning application stage, the policy should not include additional infrastructure requirements e.g., a Pegasus crossing unless some flexibility is given (Redrow Homes & Speakman Family)
- Support allocation, but expand the site allocation (Redrow Homes & Speakman Family)
- Object to site for multiple reasons including potential contamination of land, flood risk, housing density and positioning, education and medical care, biodiversity and traffic impacts (Great Baddow Parish Council).

CCC response to the comments made
Various site policy adjustments have been made including new requirements for safe and convenient pedestrian and cycle connections.
It is right that the site policy has been updated since the adoption of the Local Plan. Requirements are informed by the plan evidence base including the IDP.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.
Objections to the site are noted. The plan allocation is rolled over from the adopted plan and is supported by evidence. Matters such as housing positioning are considered at planning application stage.

Strategic Growth Site Policy 3d – East of Chelmsford, North of Maldon Road

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 3d – East of Chelmsford, North of Maldon Road	0	0	6	6

Summary of Representations – main issues and suggested changes:

- Amend Movement and Access bullet 3 to refer to ‘safe and convenient’ pedestrian and cycle connections (Essex County Council)
- Amend para. 7.176 to read 'A safe and convenient cycle/footway should connect the site to Sandon Park and Ride to the east to maximise use of the existing Park and Ride site (Essex County Council)
- Amend Historic and Natural Environment, bullet 3 to refer to ‘multifunctional’ green infrastructure (Essex County Council)

- Support allocation but given that SGS3c and SGS3d are at planning application stage, the policy should not include additional infrastructure requirements e.g., a Pegasus crossing unless some flexibility is given (Redrow Homes & Speakman Family).

CCC response to the comments made

Various site policy adjustments have been made including requirements for safe and convenient cycle/footway connections and multifunctional green infrastructure.

It is right that the site policy has been updated since the adoption of the Local Plan. Requirements are informed by the plan evidence base including the IDP.

Location 4 – Growth Site Policy 4 – Land North of Galleywood Reservoir

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 4 – Land North of Galleywood Reservoir	0	0	4	4

Summary of Representations – main issues and suggested changes:

- For consistency with other parts of the plan, strengthen references to active travel in policy and para 7.190 (Essex County Council)
- Policy text should require multifunctional green infrastructure (Essex County Council).
- The viability and deliverability of this site is questioned as it has been allocated for over four years (Park View Group).

CCC response to the comments made

Policy adjustments include strengthened requirements for safe and convenient pedestrian and cycle connections and to provide multifunctional green infrastructure.

The site has planning permission and is expected to be delivered between 2025 and 2026.

Location 5 – Growth Site Policy 5 – Land Surrounding Telephone Exchange, Ongar Road, Writtle

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 5 – Land Surrounding Telephone Exchange, Ongar Road, Writtle	1	0	4	4

Summary of Representations – main issues and suggested changes:

- Support allocation. The site is expected to be surplus to operational requirements (as a telephone exchange) by 2031. Adjust boundary to fully reflect our land ownership and ensure deliverability (Telereal Securitised Property GP Limited)
- Use a minimum or indicative capacity of 25 to enable a future planning application to determine the exact quantum, layout, form, mix and tenure of new homes (Telereal Securitised Property GP Limited)
- Amend policy to enable a future planning application to be informed by an arboricultural impact assessment with regards to the potential retention of trees on site (Telereal Securitised Property GP Limited)
- Policy text in relation to infrastructure requirements should be modified to be appropriate and proportionate (Telereal Securitised Property GP Limited)
- For consistency with other policies, amend to strengthen references to active travel (Essex County Council)
- Split bullet 1 under Site Development Principles into two for consistency with other site policies (Essex County Council)
- Policy text should require multifunctional green infrastructure (Essex County Council).

CCC response to the comments made
Site boundary has been reduced to reflect the land promoted for development.
The use of the 'around' housing figure would allow for a higher density development to be brought forward where this conforms with other policies in the Plan as a whole.
Various site policy adjustments have been made including requirements for safe and convenient cycle/footway connections, to provide multifunctional green infrastructure, to provide new and enhanced cycle routes and footpaths where appropriate, and to include reference to an arboricultural impact assessment.

Growth Area 2 – North Chelmsford (paragraphs 7.200-7.205 and Figure 17)

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Area 2 – North Chelmsford (paragraphs 7.200-7.205 and Figure 17)	2	1	9	9

Summary of Representations – main issues and suggested changes:

- Support for the importance of North East Chelmsford and Chelmsford Garden Community in delivering significant levels of growth (Cliffords Group Ltd, Daniel James Developments)
- Support for inclusion of Little Boyton Hall (C J H Farming Ltd)
- Excluding development at Boreham is a missed opportunity (Gladman)

- There is currently no right of way through the Green Wedge from Broomfield, so reference to this should be removed (Broomfield Parish Council).

CCC response to the comments made

It is appropriate to retain the reference to using the Green Wedge for sustainable travel to reflect local aspirations for active travel connectivity.

Figures have been updated to reflect the revised Spatial Strategy.

Development in Boreham village has been considered but rejected due to for example, the impact on the local road network and landscape capacity and sensitivity concerns.

Location 6 – North East Chelmsford (Chelmsford Garden Community)

Strategic Growth Site Policy 6 – North East Chelmsford (Chelmsford Garden Community)

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site 6 – North East Chelmsford Garden Community	7	0	31	31

Summary of Representations – main issues and suggested changes:

- Support for the policy (Cliffords Group Ltd, Hallam Land Management)
- Support the policy subject to detailed proposed amendments to wording including replacing 20% biodiversity with 10%, and replacing a new Country Park with three new destination parks and (Vistry Group, Chelmsford Garden Community Consortium)
- Support for measures to encourage physical activity and new or enhanced sport, leisure and recreation facilities (Sport England)
- Support for the inclusion of a country park and green infrastructure, and 20% BNG (Natural England)
- An assessment of what is being provided as suitable alternative natural greenspace is needed (Natural England)
- The distinction between public green spaces and wildlife habitats could be made, with greater focus on integrating biodiversity rather than segregation; planting and biodiversity features should use native species; and would like riparian corridors to maintain a buffer zone for public space rather than private gardens (Environment Agency)
- Ensure that sufficient flood risk measures are incorporated and, where possible, as part of multi-functional green and blue infrastructure; and nature based solutions to provide environmental gains, rather than carbon intensive 'grey infrastructure' mitigation (Anglian Water Services Ltd)
- Refer to 'multifunctional' green infrastructure to ensure consistency throughout the Plan (Essex County Council)
- Make a reference to active and sustainable travel (Essex County Council)

- Strengthen the supporting text to reference the importance of the innovation park, the critical success factors needed, skills and the employment mix (Essex County Council)
- Clarify the wording relating to the quantity and type of education provision (Essex County Council)
- Provide a safe traffic free environment around school pedestrian entrances having regard to the requirements set out in ECC’s Developers’ Guide to Infrastructure Contributions (Essex County Council)
- Policy should require renewable and low carbon energy schemes, rather than just encourage them (Essex County Council)
- Stewardship principles are supported. Add additional bullets requiring stewardship activities to be in place for the first housing occupations and for an Asset Schedule of ownership and responsibility for community assets to be prepared (Essex County Council)
- Add to the end of para. 7.216 “Appropriate funding will also need to be made for police facilities to provide for community safety, cohesion and policing as required by Essex Police.” (Essex Police)
- Ten Gypsy and Traveller plots have already been provided through the adopted Local Plan; there is now sufficient provision within this community, and it would be desirable to consider locations elsewhere (Chelmsford Garden Community Council)
- Additional land proposed at Domsey Lane, Cranham Road, and Wheelers Hill (Daniel James Developments, Hallam Land Management).

CCC response to the comments made
The Policy and Reasoned Justification have been adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.
Text relating to provision of education has been updated to reflect ECC requirements, and types of provision have been clarified. Reference to traffic free environments around school entrances are considered too detailed for the Policy but would be dealt with at masterplanning or planning application stage.
The distinction between public green spaces and wildlife habitats is now covered by updates to Policy DM16; but has also been added to the Reasoned Justification for this policy.
Policy amended to include reference to capacity for wastewater treatment and disposal, and safeguarding of access for the maintenance of foul and surface water drainage infrastructure.
References to safe and convenient travel have been included.
Reference to multifunctional green infrastructure has been added.
The references to country parks have been replaced with Destination Parks.
Stewardship requirements have been clarified, but an asset schedule will be part of stewardship arrangements and does not need to be included in the Policy.
Travelling Showpeople provision is now required instead of Gypsy and Traveller provision, in line with the revised Spatial Strategy.
Referring to only 10% BNG for new Garden Communities would be inconsistent with Policy DM16, which requires 20% BNG on these sites. The Local Plan is supported by the plan evidence base including an updated Viability Assessment.
A number of initiatives are underway in relation to employment uses and labour and skills, the suggested amendments are considered too detailed for this Policy.

The encouragement of appropriate development of renewable, low carbon and decentralised energy schemes within the site policy has been amended to state where these are deliverable and do not give rise to environmental or other amenity impacts. However, this remains something that will be encouraged and not required as there is insufficient evidence or policy to require this on site.

Location 7 – Great Leighs

Strategic Growth Site Policy 7a – Great Leighs – Land at Moulsham Hall

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site 7a – Great Leighs – Land at Moulsham Hall	2	3	19	19

Summary of Representations – main issues and suggested changes:

- Support for the policy (Environment Agency)
- Policy requirement to provide or make financial contributions to new or enhanced sport, leisure and recreational facilities is welcomed (Sport England)
- Policy change suggested to reflect Essex Police (Essex Police)
- Make reference to ‘multifunctional’ green infrastructure to ensure consistency throughout the Plan (Essex County Council)
- Policy change suggested to clarify wording for the primary school provision and childcare facilities (Essex County Council)
- Provide additional safe and convenient pedestrian and cycle connections to Great Leighs village, and ensure good accessibility for buses (Essex County Council)
- Add a reference to active and sustainable travel (Essex County Council)
- Provide a safe traffic free environment around school pedestrian entrances having regard to the requirements set out in ECC’s Developers’ Guide to Infrastructure Contributions (Essex County Council)
- There are woodlands on or in proximity to several allocations including those at Great Leighs, including Ancient Semi Natural Woodland, Plantations on Ancient Woodland Sites and Priority Habitat Woodland. Decisions should be made in line with paragraph 186 (c) of the NPPF. Council is also referred to information in Natural England and Forestry Commission’s Standing Advice on Ancient Woodland (Forestry Commission England)
- Phasing conditions may be needed to align development with Anglian Water’s investment plans (Environment Agency)
- The policy does not mention the site location is within the RAMS zone of influence, meaning that an assessment of suitable alternative natural greenspace may be needed (Natural England)
- Clarify wording in relation to the capacity of Great Leighs Water Recycling Centre (Anglian Water)
- Further land is promoted adjacent to the site (Harris Strategic Land Ltd)

- The policy should include a clear requirement for buffer habitat to protect the Essex Wildlife Trust Phyllis Currie Nature Reserve and a financial contribution towards mitigating increased recreational impacts (Essex Wildlife Trust).

CCC response to the comments made
Policy wording has been amended to clarify the requirement for sufficient wastewater capacity and disposal. This leaves the reference to phasing conditions, and further references to constraints, as unnecessary.
Text relating to provision of education has been updated to reflect ECC requirements, and types of provision have been clarified. Reference to traffic free environments around school entrances are considered too detailed for the Policy but would be dealt with at masterplanning or planning application stage.
Requirement for pedestrian and cycle connections expanded to ensure these are 'safe and convenient'.
Policy and Reasoned Justification updated to expand reference to 'multifunctional' green infrastructure to ensure consistency across the Plan.
Policy and Reasoned Justification updated to expand reference to 'active and' sustainable transport to ensure consistency across the Plan.
Site infrastructure requirements updated to include reference to Police, ambulance and fire and rescue facilities.
The requirement for a habitat buffer is already covered by the Policy and Reasoned Justification.
The requirement for RAMS contributions has been removed from all site policies and is covered by Policy S4 and DM16. Policy S4, S9 and DM16 collectively cover an updated requirement for relevant major developments to provide suitable alternative and accessible natural greenspace on-site, in addition to financial contributions in accordance with the adopted RAMS Supplementary Planning Document – no change considered necessary to the site policy.
Policies S4 and DM17 protects sites of international, national, regional and local nature conservation importance including Ancient Woodlands.

Strategic Growth Site Policy 7b – Great Leighs – Land East of London Road

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site 7b – Great Leighs – Land East of London Road	0	0	12	12

Summary of Representations – main issues and suggested changes:

- Add a reference to active and sustainable travel, and that bus enhancements should be funded by the developer (Essex County Council)
- Provide additional safe and convenient pedestrian and cycle connections to Great Leighs village, especially for older persons (Essex County Council)
- Add reference to 'multifunctional' green infrastructure to ensure consistency throughout the Plan (Essex County Council)
- Seek clarification on the affordable housing and specialist residential accommodation mix (Essex County Council)

- Policy changes suggested to reflect Essex Police (Essex Police)
- There are woodlands on or in proximity to several allocations including those at Great Leighs, including Ancient Semi Natural Woodland, Plantations on Ancient Woodland Sites and Priority Habitat Woodland. Decisions should be made in line with paragraph 186 (c) of the NPPF. Council is also referred to information in Natural England and Forestry Commission's Standing Advice on Ancient Woodland (Forestry Commission England)
- Phasing conditions may be needed to align development with Anglian Water's investment plans (Environment Agency)
- Clarify wording in relation to the capacity of Great Leighs water recycling centre (Anglian Water)
- The policy does not mention the site location is within the RAMS zone of influence, meaning that an assessment of suitable alternative natural greenspace may be needed (Natural England).

CCC response to the comments made
Policy wording has been amended to clarify the requirement for sufficient wastewater capacity and disposal. This leaves the reference to phasing conditions, and further references to constraints, as unnecessary.
Requirement for pedestrian and cycle connections expanded to ensure these are 'safe and convenient'.
Policy and reasoned Justification updated to expand reference to 'multifunctional' green infrastructure to ensure consistency across the Plan.
Site infrastructure requirements updated to include reference to Police, ambulance and fire and rescue facilities.
Policy and reasoned Justification updated to expand reference to 'active and' sustainable transport to ensure consistency across the Plan.
The policy sets out that the site will be required to provide affordable housing - no change considered necessary to the site policy.
The requirement for RAMS contributions has been removed from all site policies and is covered by Policy S4 and DM16. Policy S4, S9 and DM16 collectively cover an updated requirement for relevant major developments to provide suitable alternative and accessible natural greenspace on-site, in addition to financial contributions in accordance with the adopted RAMS Supplementary Planning Document – no change considered necessary to the site policy.
Policies S4 and DM17 protects sites of international, national, regional and local nature conservation importance including Ancient Woodlands.

Strategic Growth Site Policy 7c – Great Leighs – Land North and South of Banters Lane

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site 7c – Great Leighs – Land North and South of Banters Lane	0	1	13	13

Summary of Representations – main issues and suggested changes:

- Support for the allocation (Landvest and Harding Homes)
- Add a reference to active and sustainable travel, and that bus enhancements should be funded by the developer (Essex County Council)
- Provide additional safe and convenient pedestrian and cycle connections to Great Leighs village, especially for older persons (Essex County Council)
- Add a reference to ‘multifunctional’ green infrastructure to ensure consistency throughout the Plan (Essex County Council)
- Policy change suggested to reflect Essex Police (Essex Police)
- There are woodlands on or in proximity to several allocations including those at Great Leighs, including Ancient Semi Natural Woodland, Plantations on Ancient Woodland Sites and Priority Habitat Woodland. Decisions should be made in line with paragraph 186 (c) of the NPPF. Council is also referred to information in Natural England and Forestry Commission’s Standing Advice on Ancient Woodland (Forestry Commission England)
- Clarify wording in relation to the capacity of Great Leighs Water Recycling Centre (Anglian Water)
- Phasing conditions may be needed to align development with Anglian Water’s investment plans (Environment Agency)
- The policy does not mention the site location is within the RAMS zone of influence, meaning that an assessment of suitable alternative natural greenspace may be needed (Natural England).

CCC response to the comments made
Policy wording has been amended to clarify the requirement for sufficient wastewater capacity and disposal. This leaves the reference to phasing conditions, and further references to constraints, as unnecessary.
Requirement for pedestrian and cycle connections expanded to ensure these are ‘safe and convenient’.
Policy and reasoned Justification updated to expand reference to ‘multifunctional’ green infrastructure to ensure consistency across the Plan.
Site infrastructure requirements updated to include reference to Police, ambulance and fire and rescue facilities.
Policy and reasoned Justification updated to expand reference to ‘active and’ sustainable transport to ensure consistency across the Plan.
Reasoned Justification amended to include any enhancements to bus services required to support the site needing to be funded by the developer.
The requirement for RAMS contributions has been removed from all site policies and is covered by Policy S4 and DM16. Policy S4, S9 and DM16 collectively cover an updated requirement for relevant major developments to provide suitable alternative and accessible natural greenspace on-site, in addition to financial contributions in accordance with the adopted RAMS Supplementary Planning Document – no change considered necessary to the site policy.
Policies S4 and DM17 protects sites of international, national, regional and local nature conservation importance including Ancient Woodlands.

Location 8 – Strategic Growth Site Policy 8 – North of Broomfield

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Location 8 – Strategic Growth Site Policy 8 – North of Broomfield	7	0	33	33

Summary of Representations – main issues and suggested changes:

- Requirement to provide or make financial contributions to new or enhanced sport, leisure and recreational facilities and providing a coherent network of public open space, formal and informal sport, recreation and community space within the site is welcomed (Sport England)
- Address the missing link between Goulton Road and the start of the segregated cycle tracks on Broomfield Road as the current situation is a major barrier to active travel between the site and the city centre (Cycling UK)
- Need more religious facilities/community spaces including for Muslim population in North Chelmsford (Essex Muslim Centre)
- Policy change suggested to add ‘and police facilities as required by Essex Police’ (Essex Police)
- Refer to a robust traffic strategy for the local road network, in lieu of the hospital access road and to add flexibility about how the new health care facility could be achieved (Broomfield Parish Council)
- For consistency with other parts of the plan, strengthen references to active travel and refer to ‘safe and convenient’ pedestrian and cycle connections (Essex County Council)
- Amend to reflect ECC’s preferred wording for ‘new 56 place stand-alone early years and childcare nursery (Use Class E(f)) on 0.13 hectares of suitable land allocated for education and childcare use’, and refer to ‘nursery’ rather than ‘nursery school’ in supporting text (Essex County Council)
- Refer to ‘multifunctional’ green infrastructure to ensure consistency throughout the Plan (Essex County Council)
- Add individual bullets requiring financial contributions to the North East Bypass and education (Essex County Council)
- Amend reference to ‘good accessibility for buses’ rather than ‘bus priority measures’ (Essex County Council)
- The requirement for a health care facility could be met by a contribution for delivery on an alternative site (Broomfield Parish Council)
- Some allocations have woodland on/near to the site including Ancient Semi Natural Woodland, Plantations on Ancient Woodland Sites and Priority Habitat Woodland. Proposals should reduce any impact on irreplaceable habitat. Decisions should reference Natural England and Forestry Commission’s Standing Advice on Ancient Woodland – plus supporting Assessment Guide and “Keepers of Time” – Ancient and Native Woodland and Trees Policy in England (Forestry Commission England).

CCC response to the comments made

Various site policy adjustments have been made including reference to active and sustainable travel, multifunctional green infrastructure, financial contributions towards Police, ambulance and fire and rescue facilities and good accessibility for
--

bus services. Amended requirement for financial contributions to delivery of Section 1a of the Chelmsford North East Bypass.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.
Mitigation measures for the impact of development on the Main Road corridor will be included within a traffic assessment at planning application stage.
An alternative solution to delivering a healthcare facility is not relevant to the site allocation and would require a separate planning application.
Site policy already requires provision of pedestrian and cycle connections.
There are no specific proposals for a religious facility on this site. Policies and S9 and DM20 support the development of community facilities within the plan area.
The site policy includes requirements for a woodland buffer. Policies S4 and DM17 protects sites of international, national, regional and local nature conservation importance including Ancient Woodlands.

Location 9 – Growth Site Policy 9a – Waltham Road Employment Area

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Location 9 – Growth Site Policy 9a – Waltham Road Employment Area	1	11	16	16

Summary of Representations – main issues and suggested changes:

- Support for the allocation which is in a suitable location and complimentary to the existing provision with no known constraints (LVJ Maldon Limited)
- The use of ‘around’ 3,500sqm is supported but flexibility is needed so that further land can be included to meet employment needs. Boundary should be enlarged to include land to the north (LVJ Maldon Limited)
- Designated heritage assets in and outside the Boreham Roman Road/Plantation Road Conservation Area are unlikely to be impacted (Historic England)
- For consistency with other parts of the plan, strengthen references to active travel in the policy (Essex County Council)
- The existing employment area is a bad example of town planning, an eyesore with larger industrial type operations and in an inappropriate location for employment space, and this proposal would make it worse (Boreham Conservation Society)
- Any additional highway works would adversely infringe on the rural setting of this country road
- Concern over the loss of prime agricultural land, increased flood risk and that the site lacks mains utilities (Boreham Conservation Society)
- Concerns it would generate additional traffic movements through Boreham (already approaching capacity) on top of those already proposed due to the A12 widening scheme (Boreham Conservation Society)

- Existing cycle and walkways are poorly maintained (Boreham Conservation Society)
- The size boundary appears much larger than necessary so could lead to uncontrolled development
- The proposal contradicts ECC's Boreham Traffic Mitigation Scheme
- The planned solar farm development and train station would generate additional traffic movements on top of those from this site
- The proposal would ruin the countryside adjacent to a local wildlife site
- Would lead to increased pollution, the existing employment area is already a nuisance to neighbours
- The existing employment area does not benefit the local community as occupiers are mainly large operators and all employees must travel by car.

CCC response to the comments made
The site allocation, quantum and boundary are supported by the plan evidence base including the Heritage Impact Assessment, traffic modelling, Strategic Flood Risk Assessment and Employment Land Review – no changes proposed.
Waltham Road Employment Area is a well-established site and its expansion will provide further rural inward investment opportunities and also reflect the aspirations of national policy to support the sustainable growth and expansion of business in rural areas.
Site policy adjusted to require safe and convenient pedestrian and cycle links.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.

Location 14 – Ford End

Growth Site 14a – Land West of Back Lane, Ford End

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site 14a – Land West of Back Lane, Ford End	1	17	20	20

Summary of Representations – main issues and suggested changes:

- Ford End is within Great Leighs Water Recycling Centre catchment area which has some capacity to accommodate flows from small scale growth. There are no Anglian Water assets within the indicated areas for growth at Ford End (Anglian Water)
- A Heritage Impact Assessment (HIA) would be beneficial to identify any necessary mitigation and enhancement measures. Amend policy is require a Heritage Impact Assessment with a planning application (Historic England)
- Object to the allocation. Concerns include access, flooding, heritage impacts and neighbour amenity (Great Waltham Parish Council)
- Policy changes suggested relating to education provision (Essex County Council)
- Support the allocation expressed

- Concerns expressed relating to loss of Grade 2 agricultural land, impacts on heritage assets, flood risk, limited pedestrian and cycle connections to the site and, noise, air and light pollution
- Proposal will increase traffic and congestion, previous requests for road calming measures were rejected by Essex Highways
- Lack of existing infrastructure to support the development including a suitable road network, local shops, school and utility capacity and public transport
- Unsuitable/unsafe access and egress to the site, including roads being too narrow for vehicles and pedestrians
- Concerns over impacts on settlement character and countryside
- The development will not contribute to the local economy
- There more suitable sites within the vicinity as set out in the SHELAA
- Impact on neighbour amenity owing to (amongst other matters) the ground levels being higher at the allocation site.

CCC response to the comments made

Following further consideration, this site has been removed from the plan and it is no longer considered deliverable given existing site constraints including poor pedestrian access and impact on heritage assets.

Heritage Impact Assessments were published alongside the Preferred Options Local Plan and have been used to inform site allocation policies.

The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.

Growth Site 14b – Land South of Ford End Primary School

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site 14b – Land South of Ford End Primary School	2	18	24	24

Summary of Representations – main issues and suggested changes:

- Support but allocate the whole site (5.37ha) for around 50 homes. This would deliver substantial benefits (Dandara Eastern)
- Support and consider a greater quantum on a single site rather than Growth Site 14a (Great Waltham Parish Council)
- Development should include appropriate access arrangements, traffic management, and mitigation and contributions towards education (Great Waltham Parish Council)
- Development would not affect any designated heritage assets (Historic England)
- Ford End is within Great Leighs Water Recycling Centre catchment area which has some capacity to accommodate flows from small scale growth. There are no Anglian Water assets within the indicated areas for growth at Ford End (Anglian Water)

- Policy changes suggested relating to education provision (Essex County Council)
- Support expressed for site
- Concerns expressed relating to loss of Grade 2 agricultural land, impacts on heritage assets, flood risk and drainage, limited pedestrian and cycle connections to the site and, noise, air and light pollution
- Proposal will increase traffic and congestion, previous requests for road calming measures were rejected by Essex Highways
- Lack of existing infrastructure to support the development including a suitable road network, local shops, school and utility capacity and public transport
- Unsuitable/unsafe access and egress to the site, including roads being too narrow for vehicles and pedestrians
- Concerns over impacts on settlement character and countryside
- The development will not contribute to the local economy
- There more suitable sites within the vicinity as set out in the SHELAA
- Impact on neighbour amenity owing to (amongst other matters) the ground levels being higher at the allocation site.
- The development will conflict with the school's current access arrangements, impacting on the safety of children
- Concerns that houses will overlook the school and impact on the safety of children.

CCC response to the comments made
The site allocation is supported by the plan evidence base including Strategic Flood Risk Assessments, Water Cycle Studies, Landscape Sensitivity and Capacity Study, new Air Quality Assessment and traffic modelling. The Small Sites Planning Briefs/Concept Framework 2024 considers that there are no overriding site constraints which mean that the site is unsuitable or undeliverable.
The 'small sites' (under 1ha) are an important part of the Plan to ensure delivery of a variety of sites in a timely manner, and to meet NPPF requirements to provide 10% of small sites. The enlargement of these sites would be likely to put greater pressure on local facilities and infrastructure which could make such sites unsuitable for development.
This allocation will provide housing on a site no larger than one hectare to help meet requirements in national planning policy - the site boundary is acceptable.
The site policy sets our development principles including access arrangements and infrastructure requirements including contributions towards education.
The use of the 'around' housing figure would allow for a higher density development to be brought forward where this conforms with other policies in the Plan as a whole.
The Reasoned Justification has been amended to recognise that speeding by vehicles on Main Road (B1008) is an issue and as such traffic calming should be provided as part of the development including speed reduction measures.
Ford End is a Service Settlement with a primary school and bus service making it suitable for small scale development.
The allocation will help to support the services and facilities in the village and help to maintain a diverse housing supply.
The site policy requires appropriate active and sustainable travel connections to be provided within the site with links into the wider network, including the primary

school. It also includes provision for appropriate improvements, as necessary, to the local and strategic road network.

The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.

The plan has been changed to recognise that there is limited parking and drop-off at the primary school and that future access arrangements into the development site could exacerbate this issue. Therefore, the plan provides a new area of parking for the primary school's use adjacent to the site allocation. This is shown on the Draft Policies Map.

The site policy has been expanded to require development to be set back from Main Road (B1008) and to restrict the height of new development to two-storey.

The site policy requires the development to be appropriate to the character of the area.

To meet our development needs it is inevitable that some agricultural land will be used for development.

Location 15 – Little Boyton Hall Farm Employment Area

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Location 15 – Little Boyton Hall Farm Employment Area	2	1	8	8

Summary of Representations – main issues and suggested changes:

- Existing and prospective tenants support the proposal. They respect for example, the location, provision of parking and landscaping (Christopher Philpot)
- Support but amend policy to optimise flexibility and deliverability of the site for example by removing the need for a masterplan or changing the timing of when it is required (CJH Farming Ltd)
- Expand the range of uses that can come forward, provide a flexible site capacity, and expand the allocation boundary (CJH Farming Ltd)
- Grade II listed Little Boyton Hall is adjacent to the site but impacts are considered unlikely. Amend policy text to ensure it is protected (Historic England)
- Add additional text in relation to green infrastructure (Essex County Council)
- For consistency with other parts of the plan, strengthen references to active travel (Essex County Council)
- Concerns expressed including loss of agricultural land, site is unsustainable, will be harmful to the landscape and adversely impact on views from the north which is largely ignored by the consultant (Chignal Parish Council)
- The site is near an Ancient Woodland. Consider direct and indirect effects of development during the construction and operational phases (Forestry Commission England)
- The site is very tranquil, is poorly served by public transport and difficult to cycle to, hence most users will drive

- Whilst the site is intended to be served from the A1060, occupiers might access from Chignal/Mashbury/High Easter where the lanes are in a very poor condition.

CCC response to the comments made
The plan requires masterplans all Strategic Growth Sites to inform the planning application process and to help ensure that the resulting development is amongst other considerations well designed and high quality.
The type of employment floorspace to be provided will help meet future needs as identified in the Employment Land Review 2024.
The site policy includes protection for the setting of Little Boyton Hall Grade II Listed Building.
Amendments have been made to strengthen references to active travel and to require 'multifunctional' green infrastructure.
To meet our development needs it is inevitable that some agricultural land will be used for development.
The site allocation is supported by the plan evidence base including a Landscape Sensitivity and Capacity Study 2024 and traffic modelling.
The site allocation requires the protection of the nearby Ancient Woodland Nightingale Wood.
The site allocation requires the provision of safe and convenient pedestrian and cycle connections and opportunities to maximise the provision of public transport.
The site allocation requires vehicular access to be via the existing site access road off the A1060.

Growth Area 3 – South and East Chelmsford (paragraphs 7.340-7.348 and Figure 18)

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Area 3 – South and East Chelmsford (Paragraphs 7.340-7.349 and Figure 18)	2	5	10	10

Summary of Representations – main issues and suggested changes:

- Support expressed (Pigeon (Sandon) Ltd, Cycling UK)
- In para. 7.341 add reference to 'multifunctional' green infrastructure to ensure consistency throughout the Plan (Essex County Council)
- Reword 'Site infrastructure requirements' sections in revised site policies to simply refer to school land requirements i.e. 'A new primary school (Use Class F1(a)) with co-located early years and childcare nursery (Use Class E(f)) on 2.1 hectares of suitable land allocated for education and childcare use' (Essex County Council)
- Expand para. 7.343 to refer to 'new' bus services as well as enhanced (Essex County Council)
- Amend para 7.345 to reflect that only Location 10 will provide improvements to the A132/B1012 Rettendon Turnpike Junction as development at Danbury

and Bicknacre will only provide site access and local walking and cycling improvements as appropriate (Essex County Council)

- Require financial contributions for provision of new and/or enhanced bus services in the 'Movement and Access / Site Infrastructure Requirements' sections of site policies (Essex County Council)
- Do not support. Need a Green Belt Review to identify a more sustainable distribution of new housing including within/around Key Service Settlements in the Green Belt (Whirlledge & Nott, Croudace Homes)
- Various comments from landowners/developers promoting their proposed development sites including within the Green Belt.

Main issues raised in relation to locations in Growth Area 3 appear under the specific sites e.g. SGS16a.

CCC response to the comments made
Various text amendments made including reference to 'multifunctional' green infrastructure and new bus services.
Site policies have been reworded in respect to school land requirements.
The amount of development required during the plan period 2022-2041 can be accommodated outside of the Green Belt so there is no need to carry out a Green Belt review. This accords with national policy and guidance.
The Council has considered the suitability of alternative development strategies and sites to accommodate development as part of the plan preparation process. Some areas/sites proposed for development by developers/landowners have been rejected as part of this process.

Location 16 – East Chelmsford

Strategic Growth Site 16a – East Chelmsford Garden Community (Hammonds Farm)

Key statistics:

<u>Consultation point</u>	<u>Yes</u>	<u>No</u>	<u>Comments</u>	<u>Total number of responses</u>
Strategic Growth Site 16a – East Chelmsford Garden Community (Hammonds Farm)	9	4410	4433	4448

It should be noted that in some cases, members of the public raised similar points to stakeholders listed in brackets. This is especially the case in relation to comments made by Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group to this Strategic Growth Site which have been replicated and amplified by many individuals. To avoid duplication, these comments have not been repeated in the public comments. However, this does not affect the consultation process as this report focuses on the main issues received rather than the number of representations to any individual section of the plan.

Summary of Representations – main issues and suggested changes:

- Supportive of Garden Communities and that they follow TCPA Garden City Principles, and recommend that East Chelmsford is progressed having regard to the key principles set out in the Essex Design Guide - Garden Communities (Essex County Council)
- Fully support the numbers and types of homes/employment proposed in the site allocation (Wates Developments and Hammonds Estates LLP)
- Support the introduction of new employment uses in the area that will help strengthen Chelmsford's economy (CNG Fuels)
- The delivery of Site 16b is conditional upon the masterplan of Site 16a, and consequently the expectation of delivery by 2030 maybe unrealistic (Greystoke CB)
- Identify in the policy that the Garden Community has potential to support an innovative and bespoke housing mix to assist in optimising delivery, and achieving Garden City Principles (Wates Developments and Hammonds Estates LLP)
- Inconsistent with two very recently adopted neighbourhood plans (Little Baddow Neighbourhood Plan (2023) and the Sandon Neighbourhood Plan (2023)) as well as with the Reg 15 Submission Version of the emerging Danbury Neighbourhood Plan (2024) (Croudace Homes)
- The site is not needed in the Plan, the housing numbers could be met by extending North East Chelmsford Garden Community
- Building more at North East Chelmsford Garden Community would be more suitable as it has the infrastructure in place already, and would preserve this rural area, its good quality farmland and protect the community here (Little Baddow Society, Danbury Parish Council)
- All of the previous five options included additional growth in North East Chelmsford Garden Community so why is development not going there
- The housing numbers are not needed until the end of the Plan period so it is premature to consider the site now
- Development should be on brownfield sites, not greenfield sites
- This is Green Belt land and should not be built on
- Green Belt land to the southwest of Chelmsford should be considered instead (Boreham Conservation Society, Barratt David Wilson (Eastern Counties))
- A continuation of development between Regiment Way and the route of the new NE Bypass to the West of Broomfield would be better (Boreham Conservation Society)
- The site is in an unsuitable location, detached from Chelmsford. Development would result in urban sprawl and there should be no development to the east of the A12 as it is a defensible boundary (Boreham Conservation Society, Richborough, This Land Ltd, Croudace Homes, Barratt David Wilson (Eastern Counties))
- Unacceptable loss of high grade agricultural land (Sandon Parish Council, Great Baddow Parish Council, CPRE Essex, Boreham Conservation Society, Danbury Parish Council)
- There is no evidence showing actual land quality, only general agricultural land classifications have been provided (Sandon Parish Council, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- Additional crime in the area

- The site was not selected in the current adopted Local Plan and nothing has changed for the reasons it was not selected then, so it should not go ahead now (This Land Ltd, Danbury Parish Council, Croudace, Barratt David Wilson (Eastern Counties))
- Support the allocation of sites for Gypsy, Traveller and Travelling Showpeople housing needs (Basildon Borough Council)
- No evidence that a Gypsy and Traveller site is needed, and this is not a suitable location for one
- Support for additional employment in the area
- ‘Supporting on-site development’, bullet 3 should be amended as it is premature to assume the school will be an all-through school. However, the primary and secondary school should be co-located to provide the option of an all-through school, but a statutory process is required to be followed to determine the type(s) of school(s) established (Essex County Council)
- ECC’s document ‘SEND Sufficiency Plan For Engagement Autumn 2023’ identifies a lack of special educational needs schools in the east of Essex. Due to the number of schools proposed at site 16a, consider a SEND school for children aged up to 16 years (and beyond if possible) on the site for the provision of children and young people in east Essex (Maldon District Council)
- No infrastructure is in place to support this development (roads, healthcare – GPs and Hospitals, dentists, education, waste water and sewerage, emergency services) (Boreham Conservation Society, Woodham Walter Parish Council, Danbury Parish Council)
- The amount of infrastructure required will delay the delivery timeframe for the site (This Land Ltd, Croudace Homes)
- The site policy does not plan sufficiently for the provision and use of shared space, community facilities (such as local shops, meeting places, sports venues, cultural buildings, public houses and places of worship) and other local services to enhance the sustainability of communities and residential environments (Great Baddow Parish Council)
- Policy should be more positive requiring the development to provide renewable, low carbon and decentralised energy schemes on site (Essex County Council)
- Supports in principle the Movement and Access requirements for the site to provide substantive active and sustainable travel connections to the Chelmsford Urban Area and key destinations (Essex County Council)
- Site requirements should be amended to help ensure wider connectivity to and from the site is achieved (Essex County Council)
- Include in the site infrastructure measures to ensure the community is highly walkable with safe and lit pathways which connect forming a walking and cycling network to surrounding areas such as Danbury, Little Baddow, Sandon and Great Baddow (Great Baddow Parish Council)
- There are opportunities to improve the National Cycle Network in the area, including improvements to NCN1 which has some significant issues deterring its use (Cycling UK)
- The proposed cycle route link to Boreham junction will be very important to provide an active travel link to Beaulieu Station, North Chelmsford and a link to the countryside for leisure cyclists and is a better alternative to the existing cycle route (Cycling UK)

- No suitable mitigation measures set out for transport/highways impacts (Little Baddow Society)
- The impact assessment indicates that the development in this location will cause issues on the A12 between J17 and J19, which National Highways has no plans to mitigate
- The proposed mitigation to reduce congestion on the A414 acknowledges that this will drive more rat-running through Little Baddow and Sandon, exacerbating an already significant problem
- Traffic congestion will impact wider Villages and areas such as Little Baddow, Great Baddow, Bicknacre, Danbury, Sandon and Boreham, Woodham Walter, as well as residents from Maldon (Sandon Parish Council, Great Baddow Parish Council, Chelmer Valley Landscape Group, Little Baddow Society, Boreham Conservation Society, Little Baddow Society, Little Baddow History Centre, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Woodham Walter Parish Council, Danbury Parish Council)
- Unacceptable impact on the local (rat-running and congestion, including the A414 and Eves Corner) and strategic road (A12 capacity and junctions) networks with no evidence to support the proposal (Sandon Parish Council, Essex Waterways Ltd, Chelmer Valley Landscape Group, Little Baddow Society, Boreham Conservation Society, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, This Land Ltd, Woodham Walter Parish Council, Danbury Parish Council, Croudace Homes, Barratt David Wilson (Eastern Counties))
- Will result in delays along the A414 from Danbury for buses from SWF and Maldon unless dedicated bus lanes are factored into the road improvements along this section of the A414 (South Woodham Ferrers Residents Party, Danbury Parish Council)
- More traffic onto the A130/A12 causing further commuter delays at the Howe Green and Sandon junctions. There may also be negative effects on the use of the Sandon Park and Ride (South Woodham Ferrers Residents Party)
- Impact of wider projects including the Lower Thames crossing, A12 widening, Norwich to Tilbury Pylons, Bradwell power station on traffic flows has not been considered (Great Baddow Parish Council, Boreham Conservation Society)
- Impact of traffic using the new station has not been sufficiently accounted for in the traffic modelling (Sandon Parish Council)
- The impact of additional houses in North East Chelmsford Garden Community would be less on local roads and the A12 than this location
- No traffic modelling has taken place to support this site
- Traffic modelling evidence is insufficient and the impact of the proposed development on the main road network (A12 and A414) is highly likely to be severe (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Danbury Parish Council)
- Impact of construction traffic on already congested local road network (Chelmer Village Council)
- Encourage ongoing discussions with the Public Transport Operator and the Local Highway Authority to assist with the continuing delivery of infrastructure in Growth Area 3 (Basildon Borough Council)
- Further evidence on how active travel corridors will be made safe and lit to encourage sustainable travel is required (Great Baddow Parish Council)

- Challenge the deliverability of sustainable travel opportunities to deliver a 60% modal share for active and sustainable transport, particularly to the two Stations. If not achieved the impact on the A12 cannot be effectively mitigated (Strutt and Parker Farms Ltd, Gladman Developments Ltd, This Land Ltd, Croudace Homes)
- Increased use of City Centre train station which is nearing capacity (Barratt David Wilson (Eastern Counties))
- Remove the word 'dedicated', from bullet point 6 under Movement and access, so that all avenues for providing car clubs with operators can be explored (Wates Developments and Hammonds Estates LLP)
- Agree with the policy requirement for significant new multifunctional green and blue infrastructure, and this should form the framework for delivering suitable SuDS and flood risk management and achieving 20% BNG (Anglian Water)
- Support that at least half the gross site area is multifunctional green and blue infrastructure, to provide sufficient space to maximise all opportunities including public access and amenity (Anglian Water)
- A distinction between public green spaces and habitats for wildlife should be explicitly clarified in the site policy (Environment Agency)
- While the Local Plan promotes habitat enhancement and biodiversity through measures like vegetation planting, and encourages designs that incorporate biodiversity features, we would like to see it specified that native species are used in all cases (Environment Agency)
- Add an explicit preference to retaining riparian corridors as public open space over private gardens. Include buffer zones alongside rivers reserved as public space, rather than private land that backs directly onto a river (Environment Agency)
- Supports the Historic and Natural Environment masterplanning principles to include conserve and enhance biodiversity and avoid adverse effects on the River Chelmer, and Old Hare Wood Local Wildlife Sites, Waterhall Meadows Essex Wildlife Trust Nature Reserve, and Long Spring Wood and Hall Wood ancient woodlands, and Blakes Wood and Lingwood Common SSSI. Also reference Danbury Common SSSI (National Trust)
- The site currently floods, and this will be made worse both within and around the site if built on. It could impact rivers if suitable waste water/sewerage facilities are not sufficient to deal with flooding and climate change impacting the health of waterway users as well as pollution to wildlife (Sandon Parish Council, Great Baddow Parish Council, Chelmer Valley Landscape Group)
- Insufficient modelling has been undertaken to review the full effects of flood risk, including future climate change and if this will adversely affect flooding (Great Baddow Parish Council, Chelmer Valley Landscape Group, Little Baddow Society, Boreham Conservation Society, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Danbury Parish Council)
- Significant areas of the allocation lie within Flood Zone 2 and 3. The site allocation does not pass the sequential test as there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding (Strutt and Parker Farms Ltd, Richborough, This Land Ltd, Tayor Wimpey)
- Pollution and harm to the river environment from the development, including the Chelmer and Blackwater Navigation Landscape Conservation Area

(Sandon Parish Council, Great Baddow Parish Council, Chelmer Valley Landscape Group, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Woodham Walter Parish Council)

- Additional pressure on the Chelmer and Blackwater Navigation for recreational purposes including walking, cycling, canoeing, paddle-boarding and boating as well as visitor parking without any proposals to provide improvements or mitigation (Essex Waterways Ltd, Chelmer Valley Landscape Group)
- The proposed new bridge will split the development in half, be unduly prominent in the river valley, create noise and moving visual intrusion, and be detrimental to the character and appearance of the designated Chelmer and Blackwater Navigation Conservation Area and views from Boreham House. No amount of landscape enhancement will mitigate the harm it will cause (Essex Waterways Ltd, Chelmer Valley Landscape Group, Boreham Conservation Society)
- Impact on users' enjoyment of existing footpaths and rivers for recreation and pleasure
- Harm to the rural landscape and urbanisation of the area, including Waterhall Meadow, an ancient flood meadow (Sandon Parish Council, CPRE Essex, Little Baddow Society, Boreham Conservation Society, Essex Wildlife Trust, Danbury Parish Council, Croudace Homes)
- The impact on the landscape would be damaging and hard to mitigate (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- Increased air pollution
- Harm to the natural environment and protected areas of wildlife/habitats in the vicinity (Sandon Parish Council, CPRE Essex, Essex Wildlife Trust, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Richborough)
- Harm to wildlife in the area and loss of habitat for species including, muntjac, bats, badgers, foxes, birds (Sandon Parish Council, Little Baddow Society, Boreham Conservation Society, Essex Wildlife Trust, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- There are several areas of Lowland Mixed Deciduous Woodland, which are Priority Habitat Woodland, within or adjacent to the site which need to be considered. Lowland Mixed Deciduous Woodlands are on the Priority Habitat Inventory, England. Fragmentation of woodland reduces its ecological value and woodlands can suffer loss or deterioration from development nearby (Forestry Commission England)
- Any planning application for major residential development should be required to include a robust assessment of the residual recreational impact of the development on the nearby SSSI's, local wildlife sites and ancient woodlands, and that mitigation measures are included where appropriate. This should consider cumulative development in the area (National Trust, Natural England, Essex Wildlife Trust, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Richborough)
- The site has been submitted for consideration for it to be designated as an Area of Outstanding Natural Beauty/National Landscape and proposals for development are premature until this has been considered by Natural England (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Danbury Parish Council, Croudace Homes)

- Undertake a Heritage Impact Assessment (HIA) in advance of Regulation 19 to determine whether the site is suitable for allocation, to inform its capacity, and to identify any necessary mitigation and enhancement measures. If the site is deemed suitable incorporate any mitigation and enhancement measures into the site policy (Historic England)
- Impact on heritage and archaeological assets in the area (Little Baddow Society, Little Baddow History Centre, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Richborough)
- Maintain the character of and biodiversity along Graces Walk (Cycling UK)
- Agree with the principle of bullet 4 of Historic and Natural Environment, but adjust to reflect that all of the listed buildings are outside of the development's ownership, rendering it impossible to enhance the structures themselves (Wates Developments and Hammonds Estates LLP)
- The policy wording in relation to heritage assets utilises the statutory language of 'preservation'. Suggest a more appropriate term would be 'conservation', to reflect national planning policy (Wates Developments and Hammonds Estates LLP)
- Remove Church Lane as a 'Protected Lane' as the Protected Lanes Study for Chelmsford Borough Council: Summary Report 2009 states that it does not meet the 'protected lane' threshold (Wates Developments and Hammonds Estates LLP)
- It is not yet known whether the site contains a viable minerals resource that would require extraction prior to development (Little Baddow Society, Little Baddow History Centre, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Croudace Homes, Taylor Wimpey)
- Ensure any Anglian Water assets within and adjacent to the site that may be affected by the development are reflected in the site policy including a requirement for appropriate safeguarding of suitable access for the maintenance of foul and surface water drainage infrastructure (Anglian Water)
- Expand policy to require the development to prepare a strategy for responding to the National Grid Electricity Transmission plc (NGET) overhead transmission lines present within the site which demonstrates how the NGET Design Guide and Principles have been applied at the masterplanning stage and how the impact of the assets has been reduced through good design (National Grid Electricity Transmission)
- Houses should not be built close to the pylons on site
- The National Grid Transmission Overhead Lines, UK Power Networks Overhead Lines and Cadent Local High Pressure Gas Mains constrain the site for development (This Land Ltd)
- Support the reference in 'Site infrastructure requirements' regarding early years, primary and secondary provision subject to some minor amended wording including adding a reference to accordance with Policy S10 (Essex County Council)
- Support for the provision of open spaces, sports, and physical activity provided in the policy (Sport England)
- Under the subheading 'site infrastructure requirements' and in bullet point 8 at the end add "and police facilities as required by Essex Police" (Essex Police)
- Uncertainty over the viability of the site in respect of the scale and cost of highways improvements that will be required (Strutt and Parker Farms Ltd, Richborough, Gladman Developments Ltd, Taylor Wimpey)

- The site is in multiple ownerships and therefore constraints associated with land values and timely delivery (Richborough)
- Support bullet points 1-3 of Site Infrastructure Requirements, but welcome further flexibility through additional text stating “or the equivalent land take needed to deliver the school places identified as needed by the Local Authorities with Responsibility for Education (LARE)”, given the requirement could flex over time. References to the education provider should be renamed as the Local Authorities with Responsibility for Education (Wates Developments and Hammonds Estates LLP)
- Support the principle of providing contributions towards the facilitation of necessary highway transport infrastructure under bullets 4 and 5 Site infrastructure requirements, but add clarity that the appropriate improvements will be defined by the Transport Assessment (Wates Developments and Hammonds Estates LLP)
- In relation to bullet 6 of Site Infrastructure Requirements clarification is sought in the wording that the definition of bus-based rapid transit refers only to the sustainable modes bridge over the A12, and does not require the provision of dedicated bus corridors throughout the development (Wates Developments and Hammonds Estates LLP)
- Bullet 8 of Site Infrastructure Requirements could be interpreted as open-ended, add additional wording so it reads “Provide and/or financial contributions to healthcare provision as required by the NHS Mid and South Essex Integrated Care Board to address the needs of the development.” (Wates Developments and Hammonds Estates LLP)
- Stewardship principles are supported and should be established early on with an asset schedule prepared to outline management and maintenance of assets (Essex County Council)
- Do not support the description of a masterplanning principle within Para. 7.224 (Section 3) that there should be a “choice of unimpeded route corridors within the developed area, able to carry rapid transit services”. Whilst bus priority is supported in principle, this could suggest a need for a continuous dedicated bus-only corridor through the site. The principle of bus priority and rapid transit can be achieved through a combination of measures (Wates Developments and Hammonds Estates LLP)
- Add a new line at the end of para. 7.362 as follows “Appropriate funding will also need to be made for police facilities to provide for community safety, cohesion and policing as required by Essex Police.” (Essex Police)
- Joint working between the Councils is needed to ensure there are no detrimental impacts on Basildon Borough and its residents from development in Growth Area 3 (Basildon Borough Council).

CCC response to the comments made
As the site is allocated as a new Garden Community and the largest new Strategic Allocation, an additional requirement for a Travelling Showpeople site for 13 serviced plots has been included to ensure the Plan seeks to meet the higher identified Travelling Showpeople’s needs identified by the updated GTAA.
The policy has been amended to clarify that the new Country Park will be primarily informal and natural in nature to better reflect the aspiration for this area set out in the Reasoned Justification – that the area is expected to retain and improve habitats for wildlife and provide new and enhanced recreational opportunities, including the waterways.

The policy now includes a requirement to provide necessary mitigation to address the cumulative recreational pressure on SSSIs in proximity to the site.
Danbury Common has been added as a SSSI to be conserved and enhanced, and to avoid adverse effects on within the policy requirements and Reasoned Justification.
Site infrastructure requirements and Reasoned Justification have been expanded to include contributions towards addressing cumulative recreational pressure on SSSIs in proximity to the site.
The Reasoned Justification has been expanded to explain that high quality semi-natural greenspaces of at least 12ha each should be provided to meet Natural England's 8ha/1000 new population metric and minimum circular dog-walking route on or off site of 2.3km which make use of existing Public Rights of Way and/or highways.
Reference to the precise uses of the multifunctional green and blue infrastructure being defined through the masterplanning process has been added to the Reasoned Justification. This now sets out that this will include delineating specific areas where wildlife and ecological areas are prioritised.
For clarity the policy requirements now require the area to the east of Sandon Brook notated on the Policies Map for Future Recreation/SuDS/Biodiversity should focus on informal recreation, natural and semi natural green infrastructure uses rather than formal sports recreation requiring floodlighting or significant servicing.
The need to provide visual and acoustic screening to the A12 and minimise the impact of lighting in particular within the employment areas has been added as a requirement to the policy.
The Reasoned Justification has been expanded to include buffer zones alongside rivers, reserved as public space, as part of compensatory measures to provide landscape enhancement as part of a scheme.
The Reasoned Justification has been expanded to note that the achievement of 20% biodiversity net gain on site will be subject to site constraints.
Reference to the need for the new Country Park to include high quality semi-natural greenspace to be used in conjunction with the existing PROW network to provide circular dog-walking routes of at least 2.3km has been added to the Reasoned Justification.
To reflect that it is as yet unknown if the school on site will be a through school or not the policy wording and Reasoned Justification amended to include a co-located primary and secondary school with early years and childcare nursery (with potential for a sixth form centre).
Reference to traffic free environments around school entrances are considered too detailed for the Policy but would be dealt with at masterplanning or planning application stage. No changes required.
Policy requirement and Reasoned Justification for new and enhanced pedestrian, cycle and where appropriate bridleway connections within the site expanded to ensure both the Reasoned Justification and policy requirement include reference to links to the River Chelmer Navigation, Little Baddow and Great Baddow.
Reference to a 'dedicated' car club for residents and businesses on site has been amended to ensure it is also available to wider users in the area.
The Council has undertaken various Heritage Impact Assessments to inform the Local Plan, with a specific assessment being undertaken for the Hammonds Farm site. The levels of harm identified within the Hammonds Farm Heritage Impact Assessment are considered to be justified. Whilst parts of the site are identified as being of high heritage value, other parts, particularly to the south are of variable or

<p>lower heritage value. The heritage harms identified do not necessarily rule out the development, rather they need to be avoided, minimise or mitigated as part of the masterplan for the proposals. Reference to heritage assets which require consideration have been updated in the policy requirements and Reasoned Justification.</p>
<p>The requirement for a detailed Heritage Impact Assessment to be prepared has been added as a policy requirement as the site, particularly land to the north of Rumbolds Farm, Hammonds Road, contains a significant number and configuration of crop marks requiring further investigation. The Reasoned Justification sets out the requirements for such an assessment, and that once complete the evaluation will inform the location of development parcels and open space within the masterplan.</p>
<p>The Little Baddow, Danbury, Boreham Parish Councils response included a reference to Little Baddow Parish Councils proposals for three conservation areas to be designated; at Great Graces, St Marys Church and North Hill. Further work is being undertaken to explore a conservation area on North Hill by CCC. Conservation areas at Grace Graces and St Marys Church are not justified and the duty to preserve and enhance the setting of the various designated heritage assets at these sites is considered adequate.</p>
<p>Wording used in the description of how various heritage assets should be treated e.g. preserved/conserved etc, and their significance complies with National Policy and Guidance. No changes required.</p>
<p>The requirement for a sensitively designed new bridge to assist in preserving and enhancing the character or appearance of the Chelmer and Blackwater Navigation Conservation Area and its setting has been added to the policy.</p>
<p>The need to provide appropriate landscape buffers within the site to protect the settings of The Hammonds, Phillows and Rumbolds farmsteads which are within the site (the latter farmhouse being a non-designated heritage asset) has been added as a policy requirement.</p>
<p>Reference to Boreham has been added to the policy requirement to protect and celebrate landmark views, including those to Danbury, Little Baddow and Sandon Churches.</p>
<p>The need to provide substantial linear landscape buffers to retain the significance of the Hurrells Protected Lane and Graces Walk has been added as a policy requirement. Church Lane is identified within the 2010 Protected Lanes Study so is considered as such.</p>
<p>The requirement for heritage trails has been expanded to also require ecological trails to be delivered. The need to recognise and celebrate the site's rich historic, social and natural history through such trails has also been added to this policy requirement.</p>
<p>The Reasoned Justification has been expanded to ensure heritage, social history and natural environment celebration and interpretation plays a positive role in reinforcing local character and promoting heritage and understanding such as the works of renowned local nature writer J. A. Baker who has connections with this area.</p>
<p>The need for development on the eastern and northern margins of the site to be lower density and landscaped to reflect a transition to the open countryside beyond has been added as a policy requirement.</p>
<p>A further policy requirement to provide public art which contributes towards place creation and celebrates the historic, social and environmental context of the site and the local area has been added.</p>

<p>The need for the layout of the site to provide a strategy for responding to the National Grid Electricity Transmission overhead transmission lines present within the site has been added as a policy requirement with further guidance on this included within the Reasoned Justification.</p>
<p>The design and layout of the site needing to incorporate appropriate safeguarding of suitable access for the maintenance of foul and surface water drainage infrastructure has also been added as a new policy requirement and set out in the Reasoned Justification.</p>
<p>Financial contributions to the delivery of the Chelmsford North East Bypass (CNEB) has been removed as a policy requirement as the full CNEB is not required to support the Local Plan growth. Contributions towards, or the provision of, other sections of the CNEB are a requirement of site SGS6, 7a, 7b, 7c and 8 as they are directly related to the need for these sections.</p>
<p>The policy requirement to provide a new active and sustainable route and bridge over the A12 to connect to Sandon Park and Ride has been amended for it to be 'close to' Sandon Park and Ride.</p>
<p>The policy requirement for traffic calming measures has been expanded to clarify that this is to deter traffic on local roads from using Church Road and now also includes reference to Plantation Road and Main Road in Boreham.</p>
<p>For clarity and consistence, reference to 'active' and sustainable transport has been added to the Reasoned Justification.</p>
<p>The Council commissioned Essex Highways to review and consider the key issues raised in the highway and transportation responses received to the consultation. This is given in Appendix 2 and includes a review of the Transport Technical Note, prepared by Stomor (June 2024) on behalf of Little Baddow, Danbury, Boreham Parish Councils. Essex Highways response has been used by CCC to understand and respond to matters of concern raised in this You Said We Did report and to inform the Pre-Submission Local Plan.</p>
<p>The highways modelling undertaken for the Local Plan is strategic and area-wide in nature. More detailed modelling to assess the impact of proposed development on the local road network and the detailed mitigation required to accommodate new trips associated with it, will be required and undertaken as part of the planning application process for allocated sites in the Local Plan.</p>
<p>Updated junction modelling has been undertaken as part of the Pre-Submission Local Plan Highways Modelling Appraisal. Early concept development accesses onto the wider road network are also included in the latest Local Plan Pre-Submission modelling, based on outline developer proposals.</p>
<p>Overall, the Pre-Submission Local Plan Highways Modelling Appraisal, undertaken by Essex Highways, concludes that by maximising the potential for sustainable accessibility to and from the sites along the A12 corridor, the impact on the strategic highway network should not be considered severe. However, continued discussions with National Highways will be necessary to best ensure that future development growth in Chelmsford can be supported by the strategic highway network over the long-term.</p>
<p>It is not within the practical scope of the Local Plan highways modelling to assess the scale of mitigation required along alternative sustainable corridors into the city centre from the Hammonds Farm site. However, the Local Plan transport modelling evidence base does recognise the need for a city centre sustainable access corridor study to be undertaken as part of the Hammonds Farm planning application, should proposals for a bus service to Beaulieu Rail Station be</p>

compromised by access difficulties at the Boreham Interchange. No changes required.
Site infrastructure requirement has been amended to require the provision or contributions towards other community facilities, including police, ambulance and fire and rescue facilities.
The encouragement of appropriate development of renewable, low carbon and decentralised energy schemes, and mass waste collection systems within the site policy has been amended to state where these are deliverable and do not give rise to environmental or other amenity impacts. However, this remains something that will be encouraged and not required as there is insufficient evidence or policy to require this on site.
As with the North East Chelmsford Garden Community a further policy requirement has been added to require stewardship activities to be in place in advance of the first housing occupations to ensure timely delivery of community development activities. Any further references to the requirements to stewardship arrangements will be determined through the relevant Stewardship Strategy, once agreed.
As with other site allocations where there may be mineral resources a Minerals Recourse Assessment is required to be undertaken. An initial assessment has been undertaken and additional wording added to the Reasoned Justification which acknowledges that is a workable mineral resource that would be sterilised by the non-mineral development and thus the supporting statement to the application needs to demonstrate that the need for the built development is such that it outweighs the sterilisation of the mineral resource.
The plan is informed by an up to date and proportionate flood risk evidence base including Level 1 and 2 SFRAs and Sequential & Exception Test supported by detailed modelling. The flood risk reports make use of the most recent national policy and legislation available at the time of writing (Autumn 2024, pre the 12 th December 2024 NPPF) and are informed by discussions with the Environment Agency, considers risks from all sources of flooding and include climate change modelling.
In response to the Flood Risk Summary Statement prepared by Stomor (June 2024) on behalf of Little Baddow, Danbury, Boreham Parish Councils, the Level 2 SFRA site summary table including the key messages section has been amended and updated. An updated site boundary has also been tested and included in the assessment.
The new SFRA Level 2 site summary table for 16a assessed the site allocation boundary included within the Pre-Submission Local Plan. Except for the bridge across the Chelmer approximately 400m east of the A12 and an access road, no development is proposed in Flood Zones 2 and 3. The bridge and access road are classed as 'essential infrastructure and are therefore included in the assessment. At planning application stage, the site-specific Flood Risk Assessment (FRA) produced by the applicant will need to demonstrate that the bridge and access road will not increase flood risk elsewhere. As a water compatible use, the Country Park has not been assessed for flood risk.
Being a large strategic allocation, the wider site includes an area of flood risk. As shown on the Policies Map, development will only be located in areas at least risk of flooding. The areas at higher risk of flooding will form the country park, which will largely be natural in character, and other open space.
As stated in the NPPF, the exception test is a method used to demonstrate that flood risk to people and property will be managed appropriately, where alternative

sites at a lower flood risk are not available. The exception test is applied following the sequential test. The Sequential and Exception Test for this site has been informed by the Level 2 SFRA and IIA and has been updated to reflect updated information, the revised site boundary and considerations of reasonable alternatives as part of the IIA. This has informed the Pre-Submission Local Plan.

The Local Plan is informed by an Air Quality Assessment 2024 which overall concludes that the impact of the Local Plan in 2041 can be considered negligible for all pollutants.

The need to conserve and enhance biodiversity and wildlife sites is covered by the Policy requirement to Conserve and enhance biodiversity and avoid adverse effects on the River Chelmer, and Old Hare Wood local wildlife sites, Waterhall Meadows Essex Wildlife Trust Nature Reserve, and Long Spring Wood and Hall Wood ancient woodlands, and Blakes Wood, Danbury Common, and Lingwood Common. In addition, Policy DM16 requires all developments to conserve and enhance the network of habitats, species and sites (both statutory and non-statutory, including priority habitats and species) of international, national and local importance commensurate with their status and give appropriate weight to their importance. Collectively these requirements will ensure all habitats are protected appropriately. No further changes required.

The use of native species in planting on sites is set out in Policy DM16. The Plan should be read as a whole so it is not necessary to repeat this in site policies. No changes required.

Natural England has confirmed to CCC that they are not taking on any additional new Area of Outstanding Natural Beauty (AONB) designation projects at the current time. They have also advised that there is no formal application process for National Park or National Landscape (AONB) designation and that any future search will be England-wide. As such, the site allocation is not considered premature and Natural England are not objecting to the site allocation in principle. A copy of the Natural England letter confirming their position in December 2023 is attached at Appendix 3.

A full Plan Viability Assessment has been undertaken which shows the site, with the required infrastructure identified, is viable to develop. No changes required.

Where relevant design guidance in the Neighbourhood Plans for Little Baddow, Sandon and Danbury will be used to assist in masterplanning and planning application process for the site. No changes required.

To meet our development needs it is inevitable that some agricultural land will be used for development.

The site a greenfield site but not 'Green Belt' land, where different planning policy and guidance applies.

Policy S7 tested a range of reasonable alternative options and sites. Alternative spatial strategies and sites for allocation in the Local Plan are covered in more detail within the Spatial Strategy Topic Paper and IIA.

The detailed mix of employment uses and size and type of units will be determined through the masterplan process. No changes required.

The Housing Trajectory and timings within it are established through the Council's Five Year Housing Land Supply Methodology (April 2024). The Trajectory is updated annually, and the Pre-Submission Local Plan uses the latest available Housing Site Schedule (April 2024).

The Council has considered the suitability of alternative development strategies and sites to accommodate development as part of the plan preparation process.

Some areas/sites proposed for development by developers/landowners have been rejected as part of this process.

Strategic Growth Site 16b – Land adjacent to A12 Junction 18 Employment Area

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site 16b – Land adjacent to A12 Junction 18 Employment Area	5	4331	4337	4348

It should be noted that in some cases, members of the public raised similar points to stakeholders listed in brackets. This is especially the case in relation to comments made by Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group to this Strategic Growth Site which have been replicated and amplified by many individuals. To avoid duplication, these comments have not been repeated in the public comments. However, this does not affect the consultation process as this report focuses on the main issues received rather than the number of representations to any individual section of the plan.

Summary of Representations – main issues and suggested changes:

- Inconsistent with two very recently adopted neighbourhood plans (Little Baddow Neighbourhood Plan (2023) and the Sandon Neighbourhood Plan (2023)) as well as with the Reg 15 Submission Version of the emerging Danbury Neighbourhood Plan (2024)
- The site is not needed in the Plan, the housing numbers could be met by extending North East Chelmsford Garden Community
- Building more at North East Chelmsford Garden Community would be more suitable as it has the infrastructure in place already, and would preserve this rural area, its good quality farmland and protect the community here (Little Baddow Society, Danbury Parish Council)
- All of the previous five options included additional growth in North East Chelmsford Garden Community so why is development not going there
- The housing numbers are not needed until the end of the Plan period so it is premature to consider the site now
- Development should be on brownfield sites, not greenfield sites
- This is Green Belt land and should not be built on
- Green Belt land to the southwest of Chelmsford should be considered instead (Boreham Conservation Society)
- A continuation of development between Regiment Way and the route of the new NE Bypass to the West of Broomfield would be better (Boreham Conservation Society)
- The site is in an unsuitable location, detached from Chelmsford. Development would result in urban sprawl and there should be no development to the east of the A12 as it is a defensible boundary (Boreham Conservation Society)

- Unacceptable loss of high grade agricultural land (CPRE Essex, Boreham Conservation Society, Danbury Parish Council)
- There is no evidence showing actual land quality, only general agricultural land classifications have been provided (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- Additional crime in the area
- The site was not selected in the current adopted Local Plan and nothing has changed for the reasons it was not selected then, so it should not go ahead now (Danbury Parish Council)
- No evidence that a Gypsy and Traveller site is needed, and this is not a suitable location for one
- Support the cluster of employment opportunities coming forward at Locations 3, 16a and 16b that will help strengthen Chelmsford's economy (Wates Developments and Hammonds Estates LLP, CNG Fuels)
- Support for the range and types of uses in the allocation but consider it should be a minimum of 55,000 sqm, or state in the policy that more than 43,000 sqm will be supported where it can be successfully demonstrated as deliverable through the planning application processes (Pigeon (Sandon) Ltd)
- The site is in single ownership and there has been pre-application engagement so there is no need for the requirement for a masterplan in the policy. If the requirement remains request paragraph 7.386 is amended to read 'The development of the site will be subject of a masterplan agreed with the Council prior to the determination of a planning application' (Pigeon (Sandon) Ltd)
- Standardise the buildings within the site for sustainability and emphasise active travel movement to the site for employees from the local area (Great Baddow Parish Council)
- The site should provide employment for higher paid/skilled employment areas. In particular, Business Innovation Hub, Corporate Offices, Research and Development Centres, Co-Working Spaces, Incubators and Accelerators, High-Tech Manufacturing, commitments to apprenticeships and working with local schools to develop career pathways, and research and new methods of food production, to mitigate the decrease in agricultural land (Great Baddow Parish Council)
- Employment space should be closer to the City Centre with better transport links
- The employment space should be smaller than proposed
- Support for additional employment in the area
- Support Movement and Access bullet 2 that site access must be provided "in a manner that complements and does not prejudice access to East Chelmsford Garden Community (Hammonds Farm)" (Wates Developments and Hammonds Estates LLP)
- Site can come forward via an access which is completely independent of Hammonds Farm and does not prejudice access to Hammonds Farm. Notwithstanding, fully committed to working collaboratively with 16a to ensure site access arrangements and connections are deliverable in respect of both sites (Pigeon (Sandon) Ltd)
- Essex County Council's document 'SEND Sufficiency Plan For Engagement Autumn 2023' identifies a lack of special educational needs schools in the east of Essex. Due to the number of schools proposed at site 16a, consider

the development of a SEND school for children aged up to 16 years (and beyond if possible) to be located to the east of Chelmsford for the provision of children and young people in east Essex (Maldon District Council)

- Remove reference to early years and childcare nursery in paragraph 7.389 as there is not a policy requirement for one on this site (Essex County Council)
- No infrastructure in place to support this development (roads, healthcare – GPs and Hospitals, dentists, education, waste water and sewerage, emergency services) (Boreham Conservation Society, Woodham Walter Parish Council, Danbury Parish Council)
- There are opportunities to improve the National Cycle Network in the area, including improvements to NCN1 which has some significant issues deterring its use (Cycling UK)
- The proposed cycle route link to Boreham junction will be very important to provide an active travel link to Beaulieu Station, North Chelmsford and a link to the countryside for leisure cyclists and is a better alternative to the existing cycle route (Cycling UK)
- Site infrastructure requirements, bullet 1, amend to read ‘Provide safe and convenient pedestrian and cycle links to Sandon Park and Ride and to the east of the site, and routes associated with the East of Chelmsford allocations including East Chelmsford Garden Community (Hammonds Farm)’ (Essex County Council)
- Pedestrian and cycle links to the south are not necessarily the most desirable in terms of connectivity and desire lines for movement. The policy should allow for greater flexibility including exploring options for links to the east of the site to connect to the wider road and footpath network (Pigeon (Sandon) Ltd)
- No suitable mitigation measures set out for transport/highways impacts (Little Baddow Society)
- There should be an emphasis of active and sustainable travel for workers on the site (Great Baddow Parish Council)
- Concern over the impact on A12 Junction 18 and if congested traffic will use local roads (Great Baddow Parish Council)
- The impact assessment indicates that the development in this location will cause issues on the A12 between J17 and J19, which National Highways has no plans to mitigate
- The proposed mitigation to reduce congestion on the A414 acknowledges that this will drive more rat-running through Little Baddow and Sandon, exacerbating an already significant problem
- Encourage ongoing discussions with the Public Transport Operator and the Local Highway Authority to assist with the continuing delivery of infrastructure in Growth Area 3 (Basildon Borough Council)
- Traffic congestion will impact wider Villages and areas such as Little Baddow, Great Baddow, Bicknacre, Danbury, Sandon and Boreham, Woodham Walter, as well as residents from Maldon (Chelmer Valley Landscape Group, Little Baddow Society, Boreham Conservation Society, Little Baddow History Centre, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Woodham Walter Parish Council, Danbury Parish Council)
- Unacceptable impact on the local (rat-running and congestion, including the A414 and Eves Corner) and strategic road (A12 capacity and junctions) networks with no evidence to support the proposal (Chelmer Valley

Landscape Group, Little Baddow Society, Boreham Conservation Society, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Woodham Walter Parish Council, Danbury Parish Council)

- Will result in delays along the A414 from Danbury for buses from SWF and Maldon unless dedicated bus lanes are factored into the road improvements along this section of the A414 (South Woodham Ferrers Residents Party, Danbury Parish Council)
- More traffic onto the A130/A12 causing further commuter delays at the Howe Green and Sandon junctions. There may also be negative effects on the use of the Sandon Park and Ride (South Woodham Ferrers Residents Party)
- Impact of wider projects including the Lower Thames crossing, A12 widening, Norwich to Tilbury Pylons, Bradwell power station on traffic flows has not been considered (Boreham Conservation Society)
- The impact of additional houses in North East Chelmsford Garden Community would be less on local roads and the A12 than this location
- No traffic modelling has taken place to support this site
- Traffic modelling evidence is insufficient and the impact of the proposed development on the main road network (A12 and A414) is highly likely to be severe (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Danbury Parish Council)
- The site currently floods, and this will be made worse both within and around the site if built on. This could impact rivers if suitable waste water/sewerage facilities are not sufficient to deal with flooding and climate change impacting the health of waterway users as well as pollution to wildlife (Chelmer Valley Landscape Group)
- Insufficient modelling has been undertaken to review the full effects of flood risk, including future climate change and if this will adversely affect flooding (Chelmer Valley Landscape Group, Little Baddow Society, Boreham Conservation Society, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Danbury Parish Council)
- Significant areas of the allocation lie within Flood Zone 2 and 3. The site allocation does not pass the sequential test as there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding
- Pollution and harm to the river environment from the development, including the Chelmer and Blackwater Navigation Landscape Conservation Area (Chelmer Valley Landscape Group, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Woodham Walter Parish Council)
- Additional pressure on the Chelmer and Blackwater Navigation for recreational purposes including walking, cycling, canoeing, paddle-boarding and boating as well as visitor parking without any proposals to provide improvements or mitigation (Chelmer Valley Landscape Group)
- The proposed new bridge will split the development in half, be unduly prominent in the river valley, create noise and moving visual intrusion, and be detrimental to the character and appearance of the designated Chelmer and Blackwater Navigation Conservation Area and views from Boreham House. No amount of landscape enhancement will mitigate the harm it will cause (Essex Waterways Ltd, Chelmer Valley Landscape Group, Boreham Conservation Society)

- Impact on users' enjoyment of existing footpaths and rivers for recreation and pleasure
- Harm to the rural landscape and urbanisation of the area, including Waterhall Meadow, an ancient flood meadow (CPRE Essex, Little Baddow Society, Boreham Conservation Society, Danbury Parish Council)
- The impact on the landscape would be damaging and hard to mitigate (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- Increased air pollution
- Harm to the natural environment and protected areas of wildlife/habitats in the vicinity (CPRE Essex, Essex Wildlife Trust, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- Harm to wildlife in the area and loss of habitat for species including, muntjac, bats, badgers, foxes, birds (Little Baddow Society, Boreham Conservation Society, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- There are several areas of Lowland Mixed Deciduous Woodland, which are Priority Habitat Woodland, within or adjacent to the site which need to be considered. Lowland Mixed Deciduous Woodlands are on the Priority Habitat Inventory, England. Fragmentation of woodland reduces its ecological value and woodlands can suffer loss or deterioration from development nearby (Forestry Commission England)
- Any planning application for major residential development at the East Chelmsford Growth location should be required to include a robust assessment of the residual recreational impact of the development on the nearby SSSI's, local wildlife sites and ancient woodlands, and that mitigation measures are included where appropriate. This should take account of cumulative development in the area (Essex Wildlife Trust, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- The site has been submitted for consideration for it to be designated as an Area of Outstanding Natural Beauty/National Landscape and proposals for development are premature until this has been considered by Natural England (Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group, Danbury Parish Council)
- Supportive of the Historic and Natural Environment, and Design and Layout principles (Pigeon (Sandon) Ltd)
- A Heritage Impact Assessment (HIA) should be undertaken in advance of Regulation 19 to determine whether the site is suitable for allocation, to inform its capacity, and to identify any necessary mitigation and enhancement measures. If the site is deemed suitable, incorporate any mitigation and enhancement measures into the site policy (Historic England)
- Impact on heritage and archaeological assets in the area (Little Baddow Society, Little Baddow History Centre, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)
- It is not yet known whether the site contains a viable minerals resource that would require extraction prior to development (Little Baddow Society, Little Baddow History Centre, Little Baddow, Boreham, Danbury and Sandon Parish Council Cross Working Group)

- The site falls below the threshold for the need to carry out a Minerals Resource Assessment so remove requirement from the site policy (Essex County Council)
- Houses should not be built close to the pylons on site
- Support for the provision of open spaces, sports, and physical activity provided in the policy (Sport England)
- The delivery of Site 16b is conditional upon the masterplan of Site 16a, and consequently the expectation of delivery by 2030 maybe unrealistic (Greystoke CB)
- Buildings should be sustainably built (Great Baddow Parish Council)
- A Waste Infrastructure Assessment is not required as the affected area will fall outside of the proposed red line boundary for future planning applications (Pigeon (Sandon) Ltd)
- Joint working between the Councils is needed to ensure there are no detrimental impacts on Basildon Borough and its residents from development in Growth Area 3 (Basildon Borough Council).

CCC response to the comments made
This site is for an employment allocation and matters raised which relate to housing or other issues directly within or relating specifically to Site 16a are covered in the feedback for Site 16a.
The policy requirement to protect important views into and through the site from across the Chelmer Valley has been expanded to also include reference to Danbury Ridge.
The policy requirement to mitigate the visual impact of the development has been expanded to include the impact of lighting.
The policy requirement to provide for a mix of building sizes and styles including building design measures to soften visual impact has been expanded to ensure layout, scale, massing and materials are included in this consideration.
The Landscape Sensitivity and Capacity Study 2024 notes that the site has moderate overall landscape sensitivity rating, with a low landscape value rating, and medium to high overall capacity rating. The policy includes requirements to conserve and enhance the local landscape character and has been amended to identify further views to be protected and measures to soften the developments visual impact.
As with all other relevant site allocations the requirement for a masterplan to be agreed with the Council prior to the submission of a planning application has been amended to be required prior to the determination of a planning application.
All site allocation figure is 'around' and would allow for more units to come forward if the site can accommodate it in a sustainable manner. This is the approach used consistently through the Plan. No changes required.
The policy requirement to provide safe and convenient pedestrian and cycle connections has been expanded to include connection within the site and to the wider area including to local bus stops, Sandon Park and Ride, Woodhill Road, routes associated with the East of Chelmsford allocations including East Chelmsford Garden Community (Hammonds Farm) and Danbury and the east of the site.
The requirement for a Waste Infrastructure Assessment has been removed following advice from the Waste Authority (ECC), as the entrance to site 16B is not within 250m of the Waste Consultation Area for Sandon Quarry.

Suitable brownfield sites have been allocated within the Urban Area. There are not sufficient brownfield sites to meet the Local Plan's development requirements so greenfield sites must be allocated.
The site is allocated for the needs and uses as identified in the Council's Employment Land Review. For this site that is Use Classes E(g)(i-iii), B2 and B8. This site policy also allows for other appropriate ancillary employment generating uses so provides flexibility for a range of suitable uses. No changes required.
Reference to early years and childcare nursery in the Reasoned Justification has been removed as ECC has confirmed that there is not a requirement for one on this site.
The infrastructure necessary to support this site allocation is set out within the site policy and Policy S9. Relevant changes have been made to these policies based on the infrastructure needs identified in the updated IDP.
The Council undertook various Heritage Impact Assessments to inform the Local Plan, with a specific assessment being undertaken for the Hammonds Farm site and wider area which covers 16b. Reference to heritage assets which require consideration are included in the policy requirements and Reasoned Justification. No changes required.
CCC has raised the consideration of a special educational needs (SEND) school with ECC through the Duty to Cooperate. More certainty would be needed on the type of provision needed and the fit with ECC's overall strategy. Not enough detailed evidence to change the Plan currently, but CCC will review after Pre-Submission consultation.
Financial contributions to the delivery of the Chelmsford North East Bypass (CNEB) has been removed as a policy requirement as the full CNEB is not required to support the Local Plan growth. Contributions towards, or the provision of, other sections of the CNEB are a requirement of site SGS6, 7a, 7b, 7c and 8 as they are directly related to the need for these sections.
The Council commissioned Essex Highways to review and consider the key issues raised in the highway and transportation responses received to the consultation. This is given in Appendix 2 and includes a review of the Transport Technical Note, prepared by Stomor (June 2024) on behalf of Little Baddow, Danbury, Boreham Parish Councils. Essex Highways response has been used by CCC to understand and respond to matters of concern raised in this You Said We Did report and to inform the Pre-Submission Local Plan.
The highways modelling undertaken for the Local Plan is strategic and area-wide in nature. More detailed modelling to assess the impact of proposed development on the local road network and the detailed mitigation required to accommodate new trips associated with it, will be required and undertaken as part of the planning application process for developments identified as preferred sites in the Local Plan.
Updated junction modelling has been undertaken as part of the Pre-Submission Local Plan Highways Modelling Appraisal. Early concept development accesses onto the wider road network are also included in the latest Local Plan Pre-Submission modelling, based on outline developer proposals.
Overall, the Pre-Submission Local Plan Highways Modelling Appraisal, undertaken by Essex Highways, concludes that by maximising the potential for sustainable accessibility to and from the sites along the A12 corridor, the impact on the strategic highway network should not be considered severe. However, continued discussions with National Highways will be necessary to best ensure that future

development growth in Chelmsford can be supported by the strategic highway network over the long-term.
As with other site allocations where there may be mineral resources a Minerals Resource Assessment is required to be undertaken. No changes required.
CCC has raised the consideration of a special educational needs (SEND) school with ECC through the Duty to Cooperate. More certainty would be needed on the type of provision needed and the fit with ECC's overall strategy. Not enough detailed evidence to change the Plan currently, but CCC will review after Pre-Submission consultation.
The plan is informed by an up to date and proportionate flood risk evidence base including Level 1 and 2 SFRAs and Sequential & Exception Test supported by detailed modelling. The flood risk reports make use of the most recent national policy and legislation available at the time of writing (Autumn 2024, pre the 12 th December 2024 NPPF) and are informed by discussions with the Environment Agency, considers risks from all sources of flooding and include climate change modelling of surface water risk and fluvial risk from Sandon Brook.
As stated in the NPPF, the exception test is a method used to demonstrate that flood risk to people and property will be managed appropriately, where alternative sites at a lower flood risk are not available. The exception test is applied following the sequential test.
The Local Plan is informed by an Air Quality Assessment 2024 which overall concludes that the impact of the Local Plan in 2041 can be considered negligible for all pollutants.
Natural England has confirmed to CCC that they are not taking on any additional new Area of Outstanding Natural Beauty (AONB) designation projects at the current time. They have also advised that there is no formal application process for National Park or National Landscape (AONB) designation and that any future search will be England-wide. As such, the site allocation is not considered premature and Natural England are not objecting to the site allocation in principle. A copy of the Natural England letter confirming their position in December 2023 is attached at Appendix 3.
Where relevant design guidance in the Sandon Neighbourhood Plan will be used to assist in the Masterplanning and planning application process for the site. No changes required.
To meet our development needs it is inevitable that some agricultural land will be used for development.
The site is a greenfield site but not 'Green Belt' land, where different planning policy and guidance applies.
Policy S7 tested a range of reasonable alternative options and sites. Alternative spatial strategies and sites for allocation in the Local Plan are covered in more detail within the Spatial Strategy Topic Paper and IIA.
The delivery of Site 16b is not conditional upon the masterplan of Site 16a. They can come forward independently of one another. The expected delivery timeframe is therefore considered reasonable. No changes required.
The policy requires the development to avoid ecological impacts and provide on-site ecological mitigation, compensation and enhancement measures. With the Reasoned Justification setting out that ecological assets on the site shall be maintained and enhanced, with the local wildlife sites Old Hare Wood to the north east and Sandon Pit to the south being protected. The design of the scheme should also enhance and protect Sandon Brook, which runs along the eastern

boundary of the site, and which is recognised as being important for biodiversity. No changes required.

Relevant buildings on site will be required to be built in accordance with Policy DM31 to ensure they are built in a sustainable manner. The Plan should be read as a whole, so no changes required.

Location 10 – South Woodham Ferrers

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Location 10 – South Woodham Ferrers	2	5	25	25

Summary of Representations – main issues and suggested changes:

- Support expressed (Sport England)
- Traffic concerns from this site and other sites proposed in both Chelmsford and Maldon
- Proposed capacity improvements on A132/B1012 are not sufficient
- Retail offer in SWF is limited, increasing the retail offering would provide employment opportunities
- Improve bus services that connect to Chelmsford, Baddow, Danbury and Bicknacre and employment areas
- Better pedestrian and cycle connection is needed including safe crossing points on Burnham Road
- Rail service is at capacity with little or no potential for future expansion (South Woodham Ferrers Residents Party)
- Increase inclusivity for accessibility and teens/young adults
- Flooding concerns
- New education and healthcare facilities are needed
- Habits have changed following Covid. Use more brownfield sites for housing need and retain green space for future generations and wildlife (South Woodham Action Group)
- Create a public woodland north of the site managed in perpetuity to encourage habitat improvement and countryside access (South Woodham Ferrers Residents Party)
- Minor policy change suggested to policy and supporting text to add ‘and police facilities as required by Essex Police’ (Essex Police)
- Refer to ‘multifunctional’ green infrastructure to ensure consistency throughout the Plan (Essex County Council)
- Amend to reflect the provision of proportionate financial contributions towards the co-located primary and early years nursery (Essex County Council)
- Refer to active and sustainable travel (Essex County Council)
- Provide a safe traffic free environment around school pedestrian entrances in line with in ECC’s Developers’ Guide to Infrastructure Contributions (Essex County Council)

- Support expressed but policy should remain generic in terms of its requirements including around 1,200 homes, around 1,000 sqm, avoid 'maximise', and for proposals to generally accord with an approved masterplan (Vistry Group)
- Amend to ensure CIL compliant requirements and reflect evidence provided with the recent planning application in terms of infrastructure (Vistry Group)
- There is limited capacity for growth at SWF Water Recycling Centre. Policy should require the need to demonstrate sufficient capacity for wastewater treatment and disposal to serve the site, including sewer connections and mitigation within the sewerage network (Anglian Water)
- The South East (Inshore) Marine Plan must be considered and a Marine Conservation Zone (MCZ) assessment may need to be undertaken. Project-level Habitats Regulations Assessment (HRA) must consider all impacts taken alone or in combination (Natural England)
- Refer to the marine/coastal/intertidal element particularly where both terrestrial and marine habitats have the potential to be impacted by the policy and interpretation of the South East Marine Plan (Marine Management Organisation)
- Expand policy to require the development to prepare a strategy for responding to the National Grid Electricity Transmission plc (NGET) overhead transmission lines within the site which demonstrates how the NGET Design Guide and Principles have been applied at the masterplanning stage and how the impact of the assets has been reduced through good design (National Grid Electricity Transmission).

CCC response to the comments made
Reference added to the Policy relating to layout responding to overhead transmission lines.
Changing the requirement from maximising sustainable travel would make the policy less effective; reference added to active and sustainable travel.
The Policy and Reasoned Justification have been adjusted to refer to facilities alongside infrastructure, and to police, ambulance and fire and rescue.
Text relating to provision of education has been clarified.
Any revised or subsequently approved masterplan would be the relevant and up to date masterplan against which development proposals would be assessed.
Infrastructure requirements are sufficiently flexible to accommodate on-site provision or financial contributions.
Reference to marine and terrestrial planning is addressed in Section 1 – adding here would be repetition.
Policy amended to demonstrate that there is sufficient capacity for wastewater treatment and disposal to serve the site, including any associated sewer connections and any required mitigation within the sewerage network.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.
The amount and type of development reflects the resolution to grant planning permission and the number is reflected in the 5 year Housing Sites Schedule April 2024. If this permission is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit.

Location 11 – Bicknacre

Growth Site 11a – South of Bicknacre

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site 11a – South of Bicknacre	1	2	8	8

Summary of Representations – main issues and suggested changes:

- Support for 42 new homes whilst acknowledging the adopted plan was for 35 new homes (Woodham Ferrers and Bicknacre Parish Council)
- The site is near Thrift Wood SSSI and all identified impacts on the designated features of the SSSI will need to be considered. The cumulative effect on Thrift Wood SSSI of all the Bicknacre sites should be considered (Natural England)
- Minor policy changes suggested relating to green and blue infrastructure, education provision and pedestrian and cycle connections (Essex County Council)
- There are woodlands on the site or nearby including Ancient Semi Natural Woodland, Plantations on Ancient Woodland Sites and Priority Habitat Woodland. Decisions should be made in line with the NPPF. The Council is also referred to Natural England and Forestry Commission's Standing Advice on Ancient Woodland (Forestry Commission England)
- Amend to reflect what has occurred on site, including the removal of large sections of hedgerow along the Main Road
- Insufficient infrastructure to support the development, including lack of public transport, the condition of roads and capacity at doctors' surgery
- Will place further strain on existing facilities
- Traffic, congestion, noise, light and road safety concerns during the construction phase of the development.

CCC response to the comments made

The site has been built-out as is therefore deleted from the plan.

Growth Site 11b – Land at Kingsgate, Bicknacre

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site 11b – Land at Kingsgate, Bicknacre	0	54	64	64

Summary of Representations – main issues and suggested changes:

- Object to the allocation. Reasons include the requirement for further housing in Bicknacre has already been satisfied since the adoption of the existing Local Plan (2020) and we are discussions to find an affordable housing site; any further housing need could be accommodated at Hammonds Farm or elsewhere; flooding concerns and drainage capacity and loss of Grade 3 agricultural land (Woodham Ferrers and Bicknacre Parish Council)
- All Bicknacre sites should take account of the cumulative effect on Thrift Wood SSSI (Natural England)
- There are woodlands on the site or nearby including Ancient Semi Natural Woodland, Plantations on Ancient Woodland Sites and Priority Habitat Woodland. Decisions should be made in line with the NPPF. The Council is also referred to Natural England and Forestry Commission's Standing Advice on Ancient Woodland (Forestry Commission England)
- The site is approximately 300m of Bicknacre Priory Scheduled Monument. A Heritage Impact Assessment (HIA) should be undertaken in advance of Regulation 19 to determine whether the site is suitable for allocation, to inform its capacity, and to identify any necessary mitigation and enhancement measures. If the site is deemed suitable it is expected that mitigation and enhancement measures are incorporated into the Policy (Historic England)
- Minor policy changes suggested relating to education provision for clarification and consistency (Essex County Council)
- Insufficient infrastructure to support the development, including lack of public transport, police and fire services, the condition of roads and capacity at doctors' surgery and the school
- Will place further strain on existing facilities and utilities
- Bicknacre has met its housing requirement with circa. 77 new homes being built/under construction and further affordable housing may be delivered – the village does not need more housing/there is sufficient housing to meet local need
- Increase in traffic, congestion and on street parking and the degradation of the condition of existing roads – concerns on pedestrian and road safety and quality of life
- Impact on settlement character and the community
- Concerns on flooding, including Sandon Brook overflowing
- Drainage issues/lack of capacity and sewerage concerns
- Loss of agricultural land
- Impact on wildlife and their habitats
- Noise and air pollution impacts – Chelmsford's Air Quality Strategy June 2022 is out of date and air pollution is likely to increase
- Concerns on pedestrian safety, including children and the vulnerable and the lack of/suitable existing footways within the village
- Impact on adjacent bridleway
- Concerns on antisocial behaviour
- Traffic, congestion, noise, light and road safety concerns during the construction phase of the development.

CCC response to the comments made
--

The site allocation is supported by the plan evidence base including a Strategic Flood Risk Assessment, Landscape Sensitivity and Capacity Study 2024 and traffic modelling. The Small Sites Planning Briefs/Concept Framework 2024 considers that there are no overriding site constraints which mean that the site is unsuitable or undeliverable.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.
To meet our development needs it is inevitable that some agricultural land will be used for development.
Site policy includes new requirements to undertake an archaeological assessment and to assess, and where appropriate mitigate, the potential cumulative effect on the designated features of Thrift Wood SSSI.
The 'small sites' (under 1ha) are an important part of the Plan to ensure delivery of a variety of sites in a timely manner, and to meet NPPF requirements to provide 10% of small sites. The enlargement of these sites would be likely to put greater pressure on local facilities and infrastructure which could make such sites unsuitable for development.
Heritage Impact Assessments have been undertaken and were published alongside the Preferred Options Local Plan. Site policies consider significance of designated and non-designated heritage assets.
The site policy requires financial contributions to services and facilities including education and healthcare provision, and to provide appropriate improvements, as necessary to the local and strategic road network.
The Local Plan is informed by an Air Quality Assessment 2024 which overall concludes that the impact of the Local Plan in 2041 can be considered negligible for all pollutants.
Policy DM17 provides protection for preserved woodlands.
Minor policy amendment made in respect to requirements for education provision.

Growth Site 11c – Land West of Barbrook Way, Bicknacre

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site 11c – Land West of Barbrook Way, Bicknacre	0	104	123	123

Summary of Representations – main issues and suggested changes:

- Support in principle but a greater site area and quantum of development should be allocated. The allocation ignores the Council's evidence base of the site's suitability and sustainability to deliver more houses – the wording of the policy is not justified or effective (Wellbeck Strategic Land V Limited)
- Consider the criteria of the Strategic Housing and Employment Land Availability Assessment has been applied inconsistently – the site should score higher (Wellbeck Strategic Land V Limited)
- Object to the allocation. Reasons include the requirement for further housing in Bicknacre has already been satisfied since the adoption of the existing Local Plan (2020) and we are discussions to find an affordable housing site; any further

housing need could be accommodated at Hammonds Farm or elsewhere; flooding concerns and drainage capacity; loss of Grade 3 agricultural land and there is a ransom strip between Barbrook Way and the site so the site is not deliverable (Woodham Ferrers and Bicknacre Parish Council)

- All Bicknacre sites should take account of the cumulative effect on Thrift Wood SSSI (Natural England)
- There are woodlands on the site or nearby including Ancient Semi Natural Woodland, Plantations on Ancient Woodland Sites and Priority Habitat Woodland. Decisions should be made in line with the NPPF. The Council is also referred to Natural England and Forestry Commission's Standing Advice on Ancient Woodland (Forestry Commission England)
- Development would not affect any designated heritage assets (Historic England)
- Minor policy changes suggested relating to education provision for clarification and consistency (Essex County Council)
- Insufficient infrastructure to support the development, including lack of public transport, police and fire services, the condition of roads and capacity at doctors' surgery and the school
- Will place further strain on existing facilities and utilities
- Bicknacre has met its housing requirement with circa. 77 new homes being built/under construction and further affordable housing may be delivered – the village does not need more housing/there is sufficient housing to meet local need
- Increase in traffic, congestion and on street parking and the degradation of the condition of existing roads – concerns on pedestrian and road safety and quality of life
- Impact on settlement character and the community
- Concerns on flooding, including Sandon Brook overflowing
- Drainage issues/lack of capacity and sewerage concerns
- Loss of Grade 3 agricultural land – the site has always been used for animal grazing
- Impact on wildlife and their habitats
- Disagree with the site's rating in the Strategic Housing and Employment Land Availability Assessment – it has been incorrectly scored and should be lower
- Impact on neighbour amenity
- Junction/road safety concerns, including the location of the drop off point of The Sandon School bus at Barbrook Way/Priory Road
- Noise and air pollution impacts – Chelmsford's Air Quality Strategy June 2022 is out of date and air pollution is likely to increase
- Concerns on pedestrian safety, including children and the vulnerable and the lack of/suitable existing footways within the village
- There is a ransom strip at the entrance at the site – the site is not deliverable
- Site contributes to community wellbeing
- Concerns on soil composition and subsidence
- There is a water main running through the site – homes cannot be built on this or within its easements
- Concerns for protected trees within and near the site
- Concerns on antisocial behaviour

- Heritage impacts
- Traffic, congestion, noise, light and road safety concerns during the construction phase of the development.

CCC response to the comments made
The site allocation is supported by the plan evidence base including a Strategic Flood Risk Assessment, Landscape Sensitivity and Capacity Study 2024 and traffic modelling. The Small Sites Planning Briefs/Concept Framework 2024 considers that there are no overriding site constraints which mean that the site is unsuitable or undeliverable.
The Local Plan is informed by an Air Quality Assessment 2024 which overall concludes that the impact of the Local Plan in 2041 can be considered negligible for all pollutants.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.
The Council is confident that the site can be accessed from Barbrook Way and that the site is deliverable – see Appendix 4 for a letter from the site promoters' Welbeck Land.
To meet our development needs it is inevitable that some agricultural land will be used for development.
Site policy includes new requirements to undertake an archaeological assessment and to assess, and where appropriate mitigate, the potential cumulative effect on the designated features of Thrift Wood SSSI.
The 'small sites' (under 1ha) are an important part of the Plan to ensure delivery of a variety of sites in a timely manner, and to meet NPPF requirements to provide 10% of small sites. The enlargement of these sites would be likely to put greater pressure on local facilities and infrastructure which could make such sites unsuitable for development.
Heritage Impact Assessments have been undertaken and were published alongside the Preferred Options Local Plan. Site policies consider significance of designated and non-designated heritage assets.
The site policy requires financial contributions to services and facilities including education and healthcare provision, and to provide appropriate improvements, as necessary to the local and strategic road network.
Policy DM17 provides protection for preserved woodlands.
The site policy requires the retention of existing natural landscaping and trees on the boundary of the site.
Minor policy amendment relating to requirements for education provision.

Location 12 – St Giles, Bicknacre

Growth Site 12 – St Giles, Moor Hall Lane, Bicknacre

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site 12 – St Giles, Moor Hall Lane, Bicknacre	1	1	5	5

Summary of Representations – main issues and suggested changes:

- Support the allocation (Woodham Ferrers and Bicknacre Parish Council)
- Minor policy changes suggested relating to ‘multifunctional’ green infrastructure and pedestrian and cycle connections (Essex County Council)
- All Bicknacre sites should take account of the cumulative effect on Thrift Wood SSSI (Natural England)
- Limited existing infrastructure to support the development, including public transport, the condition of road and capacity at doctors’ surgery
- Will place further strain on existing facilities.

CCC response to the comments made
Minor policy wording changes to refer to ‘multifunctional’ green infrastructure and to ‘safe and convenient’ pedestrian and cycle connections.
Site policy includes new requirements to undertake an archaeological assessment and to assess, and where appropriate mitigate, the potential cumulative effect on the designated features of Thrift Wood SSSI.
The site policy requires financial contributions to services and facilities including healthcare provision, and to provide appropriate improvements, as necessary to the local and strategic road network.
The site policy requires the development is provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities.

Location 13 – Danbury

Strategic Growth Site Policy 13 – Danbury

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Strategic Growth Site Policy 13 – Danbury	1	3	9	9

Summary of Representations – main issues and suggested changes:

- Add additional text in relation to safe and convenient pedestrian and cycle connections, and active and sustainable travel (Essex County Council)
- Include reference to traffic management measures at Eves Corner (Essex County Council)
- Add reference to the proximity to proposed schools and social infrastructure offered by the Hammonds Farm proposal (Wates Developments and Hammonds Estates LLP)
- Recommend an additional policy to recognise the cumulative recreational pressure on SSSIs and wildlife sites (Natural England)
- There are woodlands on or in proximity to the allocation including Ancient Semi Natural Woodland, Plantations on Ancient Woodland Sites and Priority Habitat Woodland. Decisions should be made in line with the NPPF and the

Council is referred to the Natural England and Forestry Commission's Standing Advice on Ancient Woodland (Forestry Commission England)

- Allocation is welcomed but it could deliver a greater number of homes (Martin Grant Homes)
- New housing could come forward in Danbury outside of the Neighbourhood Plan process if housing needs are not being met within an expected timeframe (Richborough)
- Concern about the recreational pressure and physical damage on vulnerable sites and land within the National Trust's ownership (National Trust)
- Additional site is promoted off Runsell Lane (Gleeson Land).

CCC response to the comments made
Bullet added to require contributions towards addressing cumulative recreational pressure on SSSIs in proximity to sites; and Reasoned Justification clarified on how measures will be costed.
Reference added to safe and convenient pedestrian and cycling connections.
Text relating to traffic management measures at Eves Corner has been updated.
Policies S4 and DM17 protects sites of international, national, regional and local nature conservation importance including Ancient Woodlands.
The allocation of around 100 homes is supported by the plan evidence base including a Strategic Flood Risk Assessment, Landscape Sensitivity and Capacity Study 2024 and traffic modelling.
Policy has been expanded to require contributions towards addressing cumulative recreational pressure on SSSIs in proximity to the site.

Location 17 – East Hanningfield

Growth Site 17a – Land North of Abbey Fields, East Hanningfield

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site 17a – Land North of Abbey Fields, East Hanningfield	1	16	18	18

Summary of Representations – main issues and suggested changes:

- Support the allocation and policy requirements, subject to the relevant legislation and planning policy (Chelmsford Diocese Board of Finance)
- A greater quantum of development may be possible on the site (Chelmsford Diocese Board of Finance)
- The delivery of site could be within two years of the adoption of the Local Plan (Chelmsford Diocese Board of Finance)
- Development would not affect any designated heritage assets (Historic England)
- Minor policy changes suggested relating to education provision for clarification and consistency (Essex County Council)
- Development would be out of keeping with the existing settlement pattern

- Impact on local services
- Lack of public transport
- Site access is below standards
- Junction/road safety concerns
- Concerns on flooding
- Increase/exacerbation of traffic, congestion and on street parking in Abbey Fields
- No sewerage capacity
- Loss of wildlife habitat/impact on biodiversity, trees (including preserved trees) and landscaping
- Noise and pollution impacts
- A right of access by the owners of the adjacent field may impact on the allocation.

CCC response to the comments made
Minor policy amendment relating to requirements for education provision.
The site allocation is supported by the plan evidence base including Strategic Flood Risk Assessments, Water Cycle Studies, Landscape Sensitivity and Capacity Study, new Air Quality Assessment and traffic modelling. The Small Sites Planning Briefs/Concept Framework 2024 considers that there are no overriding site constraints which mean that the site is unsuitable or undeliverable.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.
The 'small sites' (under 1ha) are an important part of the Plan to ensure delivery of a variety of sites in a timely manner, and to meet NPPF requirements to provide 10% of small sites. The enlargement of these sites would be likely to put greater pressure on local facilities and infrastructure which could make such sites unsuitable for development.
Heritage Impact Assessments have been undertaken and were published alongside the Preferred Options Local Plan. Site policies consider significance of designated and non-designated heritage assets.
The site policy requires financial contributions to services and facilities including education and healthcare provision, and to provide appropriate improvements, as necessary to the local and strategic road network.
The site policy requires the character, scale and layout of the development to have regard and respond to the site's surrounding context.
The site policy requires the retention of existing natural landscaping and trees in and on the boundary of the site.

Growth Site Policy 17b – Land East of Highfields Mead, East Hanningfield

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Growth Site Policy 17b – Land East of Highfields Mead, East Hanningfield	1	15	18	18

Summary of Representations – main issues and suggested changes:

- Support the allocation (Hawridge Land and Mrs A Mossman)
- The allocation boundary should reflect the total site area (circa 1.25ha) and the quantum of housing should be flexible/increased (circa 30-35 dwellings) to maximise the site’s deliverability (Hawridge Land and Mrs A Mossman)
- Development would not affect any designated heritage assets (Historic England)
- Minor policy changes suggested relating to education provision for clarification and consistency (Essex County Council)
- Limited existing infrastructure to support the development, including public transport and capacity at doctors’ surgery and school
- Loss of wildlife habitat/impact on biodiversity, trees and landscaping
- Increase in traffic, congestion and on street parking
- Concerns on pedestrian safety
- Concerns on flooding and drainage
- Impact on settlement character
- Impact on neighbour amenity
- No sewerage and water capacity
- Noise and pollution impacts.

CCC response to the comments made
The site allocation is supported by the plan evidence base including Strategic Flood Risk Assessments, Water Cycle Studies, Landscape Sensitivity and Capacity Study, new Air Quality Assessment and traffic modelling. The Small Sites Planning Briefs/Concept Framework 2024 considers that there are no overriding site constraints which mean that the site is unsuitable or undeliverable.
The latest highway modelling does not consider the overall impact on the local or strategic highway network will be severe.
The ‘small sites’ (under 1ha) are an important part of the Plan to ensure delivery of a variety of sites in a timely manner, and to meet NPPF requirements to provide 10% of small sites. The enlargement of these sites would be likely to put greater pressure on local facilities and infrastructure which could make such sites unsuitable for development.
Heritage Impact Assessments have been undertaken and were published alongside the Preferred Options Local Plan. Site policies take into account significance of designated and non-designated heritage assets.
The site policy requires financial contributions to services and facilities including education and healthcare provision, and to provide appropriate improvements, as necessary to the local and strategic road network.
The site policy requires the retention of existing natural landscaping and trees on the boundary of the site.
Minor policy amendment relating to requirements for education provision.

Special Policy Areas (SPA)

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Special Policy Areas (paragraphs 7.464-7.465)	0	0	0	0
SPA1 – Broomfield Hospital Special Policy Area	0	1	1	1
SPA2 – Chelmsford City Racecourse Special Policy Area	0	0	1	1
SPA3 – Hanningfield Reservoir Special Policy Area	0	1	3	3
SPA4 – RHS Hyde Hall Gardens Special Policy Area	0	0	2	2
SPA5 – Sandford Mill Special Policy Area	1	0	3	3
SPA6 – ARU Writtle Special Policy Area	2	1	7	7

SPA1 – Broomfield Hospital Special Policy Area

Summary of Representations – main issues and suggested changes:

- Support SPA rationale. Designate the former BAE Systems site as a SPA given its unique and historical context and potential need to provide future specialist electronic technology floorspace related to defence (Rosehart Properties Ltd).

SPA2 – Chelmsford City Racecourse Special Policy Area

Summary of Representations – main issues and suggested changes:

- For consistency with other parts of the plan, amend policy to refer to ‘active and sustainable means of travel’ (Essex County Council).

SPA3 – Hanningfield Reservoir Special Policy Area

Summary of Representations – main issues and suggested changes:

- Welcome involvement early in application process to comment on details of avoidance and mitigation measures deemed necessary for proposed developments that may impact on Hanningfield Reservoir SSSI (Natural England)
- Support SPA policy approach but expand policy to include proposals for renewable energy which would reduce reliance on the grid and contribute towards achieving climate change goals (Essex & Suffolk Water)
- Remove policy requirement to show a demonstrable need for a renewable energy scheme as the treatment works is a regulated industry (Essex & Suffolk Water)
- Delete requirement for very special circumstances for water infrastructure and ancillary development to demonstrable need and be directly associated with

the role, function and operation of the operation of the site (Essex & Suffolk Water)

- Include new text to support, in principle, appropriate proposals including additional infrastructure requirements linking the site to the wider water infrastructure network, renewable energy and leisure activities (Essex & Suffolk Water).

SPA4 – RHS Hyde Hall Gardens Special Policy Area

Summary of Representations – main issues and suggested changes:

- For consistency with other parts of the plan, amend policy to refer to ‘active and sustainable means of travel’ (Essex County Council)
- RHS Hyde Hall causes significant traffic congestion at its special events, this will worsen as it expands but there is no provision to address this or improve the access road in application 21/01961/OUT.

SPA5 – Sandford Mill Special Policy Area

Summary of Representations – main issues and suggested changes:

- For consistency with other parts of the plan, amend policy to refer to ‘active and sustainable means of travel’ (Essex County Council)
- Fully support. This SPA needs to move forward as quickly as possible (Essex Waterways Ltd).

SPA6 – ARU Writtle Special Policy Area

Summary of Representations – main issues and suggested changes:

- Support. The facility is located within Writtle Key Service Settlement and is significant for educational excellence and driving the local economy. As such, the plan should provide new housing allocations near the ARU campus (Vistry Group)
- For consistency with other parts of the plan, amend policy to refer to ‘active and sustainable means of travel’ and ‘safe and convenient’ cycling and walking connectivity (Essex County Council)
- Expand to note the importance of ARU Writtle to supporting local employment to reduce inequality, opportunities to shift to a greener economy and investment into the rural economy (Essex County Council)
- Support the policy principles but the current designation will not ensure future development reflects the operational and functional requirements of ARU Writtle. The need for its growth and success is reflected throughout the plan. As such, amend policy to acknowledge that ARU intends to grow and expand to sustain its long-term future success and to delete the requirement to identify a ‘demonstrable need’ every time an application is determined (ARU)
- Expand the SPA boundaries of the Titchmarsh Campus and Rural Education and Training Centre along Cow Watering Lane to reflect the new and improved facilities/development that will be required (ARU)

- Inclusion of the Titchmarsh Campus does not affect any designated heritage assets (Historic England)
- Support sympathetic improvements to the ARU Writtle site in line with Green Belt policy. The Norwich to Tilbury powerline proposals will have a significant impact on ARU Writtle (Writtle Parish Council).

CCC response to the comments made
Changes proposed for SPA3 including deleting the requirement for water infrastructure and ancillary development to demonstrable very special circumstances have not been taken forward as this would contradict national planning policy.
Policy SPA2, SPA3, SPA4, SPA5 and SPA6 have been amended to include active and sustainable means of transport
Policy SPA6 has been updated to include reference to National Cycle Route 1 which runs through the site.
Policy and SPA boundaries has been amended to include the Titchmarsh Campus.
Reference to 'demonstrable need' in SPA6 has not been removed as this was retained at the previous Local Plan examination.

Protecting and Securing Important Assets

This section of the consultation document provides other non-strategic policies of the Local Plan that will shape Chelmsford's development opportunities whilst protecting its important physical attributes.

Securing the right types of homes

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Policy DM1 – Size and Type of Housing	3	9	20	20
Policy DM2 – Affordable Housing and Exception Sites	3	4	19	19
Policy DM3 – Policy DM3 – Gypsy, Traveller and Travelling Showpeople Sites	2	0	3	3

Policy DM1 – Size and Type of Housing

Summary of Representations – main issues and suggested changes:

- Support for the requirement for 100% of all new homes to be accessible and adaptable to enable people to live independently for longer (Mid and South Essex Integrated Care Board, Essex County Council, Dominus Chelmsford Limited)
- ECC has commissioned 'Supported and Specialist Housing and Accommodation Needs Assessment' which will inform the Specialist

Residential Accommodation requirements when complete (Essex County Council)

- Give more support and priority to build to rent (Wates Development and Hammonds Estates LLP, Dominus Chelmsford Limited)
- Self and custom build plots should be taken forward on standalone sites not part of strategic housing allocations (Bloor Homes – Eastern)
- The 5% requirement for self and custom build plots should be capped at 5% (Bloor Homes – Eastern)
- Self-build homes should be encouraged rather than required by evidence of local need (Whirlledge & Nott, Croudace)
- The impact of self-build homes on development viability should also be considered (Whirlledge & Nott, Croudace)
- The Specialist Residential Accommodation requirement is too generic and needs to specifically allocate land to meet older persons housing need identified in the SHNA (Bloor Homes – Eastern, Sedum Ltd)
- Provision of Specialist Residential Accommodation for older and disabled people is too low to meet the identified needs and does not provide enough certainty that these needs will be met in a planned way which supports the optimum arrangement of support services (Lewis and Scott Retirement Living)
- A dedicated specialist housing policy which allows development adjacent to defined settlement boundaries would be more effective (Lewis and Scott Retirement Living)
- The process for determining when a commuted sum in lieu of on-site provision of Specialist Residential Accommodation is acceptable, how the sums will be used and what part ECC plays in this should be clarified (Essex County Council)
- All new homes should be required to have solar panels built in (Sandon Parish Council)
- Disagree with the requirement for 100% of new dwellings to be accessible and adaptable based on the additional cost of achieving these standards (Chelmsford Garden Community Consortium, Vistry)
- The policy might become outdated as building regulations and market requirements evolve across the plan period (Higgins Group, Hill Residential Limited)
- Need to justify requiring 100% of all new homes to be accessible and adaptable as it is not currently a requirement and if it does become a requirement, it does not need to be included in policy (Home Builders Federation, Dandara, Bellway)
- The requirement for 100% accessible and adaptable homes should only apply to houses and ground floor flats (Chelmer Housing)
- Set a requirement that a percentage of market homes are wheelchair accessible (Mid and South Essex Integrated Care Board)
- Specify M4(3)b to ensure the wheelchair housing is provided with adaptations already in place on completion (Chelmer Housing)
- The Specialist Residential Accommodation and self-build requirements should not apply to 100% affordable housing or affordable-led development and sites should be allocated to meet these needs rather than a requirement on strategic sites (Chelmer Housing)

- The changes to Table 4 in terms of specifying a range, not a specific percentage mix, of housing is supported but flexibility should be increased to 10 percentiles and include a link to the most recent evidence base (Dandara)
- Include Table 4 in the policy to ensure it is adhered to (Dandara PO24-9372)
- Include additional policy text to enable a flexible approach to the mix in Table 4 (Higgins Group, Hill Residential Limited, Dominus Chelmsford Limited)
- Need a clearer distinction between greenfield strategic allocations and urban developments on the requirement for and provision of housing mix, Specialist Residential Accommodation and self-build homes (Dominus Chelmsford Limited)
- Flawed assumptions underpin the Council’s viability assessment and the evidence for conclusions in para. 8.6 on the viability of Build to Rent schemes is unsound (Dominus Chelmsford Limited)
- Proposal for a different mix of affordable housing expressed as a percentage range that should apply to all affordable housing tenures (Chelmer Housing)
- Explain the policy thresholds in supporting text (Whirledge & Nott, Croudace)
- Include a co-living policy to avoid potential appeals or unregulated forms of co-living. Wording for a dedicated policy provided (Highgate Capital Limited)
- Include reference to the Nationally Designed Space Standards or greater (Chelmer Housing).

CCC response to the comments made
Various policy amendments have been made including requiring 50% of new dwellings to be accessible and adaptable dwellings (Part A ii) and a new requirement for large greenfield sites to also provide older persons market housing.
How the sums will be used and what part Essex County Council will play in commuted sums in lieu of on-site provision of Specialist Residential Accommodation will be covered in Planning Obligations Supplementary Planning Document.
Requirements for the installation of solar panels on new homes is covered by Policy DM31.
The Planning Obligations Supplementary Planning Document will promote wheelchair user dwellings on ground floor in flatted schemes where possible, but the policy target is acceptable.
The Planning Obligations Supplementary Planning Document will encourage wheelchair accessible market homes in Specialist Residential Accommodation. This is supported by the updated Local Plan Viability Assessment, 2024.
The Planning Obligations Supplementary Planning Document will clarify that 100% affordable housing led schemes will be exempt from providing self-build requirements. The policy remains appropriate.
The policy thresholds are tested in the relevant evidence base documents and explained where not linked to an evidence base document.
The policy requirements reflect the most up to date national planning and guidance and the Local Plan evidence base including the latest Strategic Housing Needs Assessment (SHNA) (2023), including the 2024 addendum report.
The impact of self-build homes on development viability is considered in the updated Local Plan Viability Update, 2024.

The Local Plan Viability Update 2023 and 2024 has been undertaken in accordance with national policy and guidance and clearly sets out the balance of policy priorities.

The Council's expectations for co-living housing proposals will be set out in the Co-Living Housing Planning Advice Note which will be published for consultation in early 2025.

Requirements for all new dwellings to adhere to the Nationally Described Space Standards is addressed in Policy DM26.

The Local Plan will be reviewed every five years. This will address relevant changes such as changes to Building Regulations. Higher accessibility standards have been tested in the Local Plan Viability Update 2024 should Building Regulations change in the regard.

DM2 - Affordable Housing and Exception Sites

Summary of Representations – main issues and suggested changes:

- Support policy as drafted (Wates Developments and Hammonds Estates LLP)
- Support but amend to allow for the submission of a Viability Appraisal at application stage should there be any unique circumstances or changes to local market conditions (Bloor Homes (Eastern))
- Support but add to A) i that this is subject to viability to not undermine deliverability (Vistry Group)
- Support but unclear why community-led exception sites cannot include neighbourhood plan allocations (Broomfield Parish Council)
- Clarification sought on whether Broomfield is eligible for a Rural Exception Site following the Community Governance Review (Broomfield Parish Council)
- To not impact on the delivery of affordable homes, amend policy to state that First Homes will not be required on 100% affordable, affordable-led and rural exception site developments (Chelmer Housing Partnership (CHP))
- For clarification, add to para. 8.23 the requirements in terms of wider types of affordable (Chelmer Housing Partnership (CHP))
- To not jeopardise site viability, policy must recognise that a tenure mix in 2024 (at para. 8.23) will unlikely reflect the needs in subsequent years (Obsidian Strategic Asset Management Ltd)
- Policy should only allow 35% market homes to increase the number of genuinely affordable home supported by a return to council house building, suspension of the Right to Buy for 10 years and increased role for co-operative developers
- Policy should recognise that First Homes is not mandatory and no more than a material consideration (Obsidian Strategic Asset Management Ltd)
- Part ii is inconsistent with national policy and should be amended to expect the mix, size, type and cost of housing to have close regard to the most recent evidence on housing needs, such as the Strategic Housing Market Assessment and monitoring data (Home Builders Federation)
- Should be flexibility in the mix set out in para 8.23 especially on percentage discount on First Homes because of the national cap at £250,000 (Home Builders Federation)

- For clarification, amend policy to add where sites deliver 100% affordable schemes the revised mix should be 70% Affordable Rent, and 30% Shared Ownership and that the Local Housing Allowance cap should be removed on affordable rent where the site is delivered as 100% affordable or affordable-led development (Chelmer Housing Partnership (CHP))
- Table 5 should apply across all affordable tenures. Request that the affordable housing unit mix (including rent and shared ownership) is 1 Bed 5-10% 2 Bed 20-25% 3 Bed 40-50% 4 Bed 15-20% (Chelmer Housing Partnership (CHP))
- Clarify detail in Table 5 and that it is only to be used as a guide as opposed to absolute requirements in decision-making (Hill Residential Ltd, Higgins Group, Dandara)
- To ensure adherence with Table 5, add into the policy alongside a reference to using the most recent housing needs assessment (Dandara)
- A one-sized fits all 35% requirement discourages a brownfield first approach (Dominus Chelmsford Limited)
- Include reference to the national policy of Vacant Building Credit (Dominus Chelmsford Limited)
- To help the NHS recruit and retain staff, consider the need for affordable housing for NHS staff and those employed by other health and care providers in housing needs assessments, site selection and allocation policies (NHS Property Services Ltd)
- Amend to allow groups of affordable housing within large strategic allocations/development phases (rather than ‘pepper potting’) as this would achieve the policy’s social objectives (Whirlledge & Nott, Croudace Homes)
- Do not support. Amend policy to enable a viability case to be made at the planning application stage (Croudace Homes, Whirlledge & Nott)
- Do not support. Amend policy to allow a transparent open book viability assessment to be undertaken and for development to come forward with an alternative approach to affordable housing delivery should site-specific viability matters arise at the planning application stage (Martin Grant Homes)
- Do not support. The Viability study should be re-run for sheltered and extra care housing incorporating our revised assumptions relating to for example, unit size, unit mix and non-chargeable/communal. This is likely to show that sheltered and extra care housing is unviable (McCarthy Stone)
- Consider the Retirement Housing Consortium paper ‘A briefing note on viability’ prepared for Retirement Housing Group by Three Dragons, May 2013 (updated February 2016 (‘RHG Briefing Note’)) (McCarthy Stone)
- An unprecedented housing crisis is currently affecting the Council, therefore a new policy DM2 Part C is proposed, which would supersede DM2 Parts A and B and come into force when more than 250 households are living in temporary accommodation, and it has been accepted by the Council that there is a duty to house them (Omtech Services Limited).

CCC response to the comments made
The policy requirements including those related to First Homes have been updated to reflect the Strategic Housing Needs Assessment (SHNA) 2024 addendum report.
Amendments added from the Planning Obligations Supplementary Planning Document to clarify how affordable housing should be designed within

developments to maximise tenure integration to achieve mixed, inclusive and sustainable communities
The policy requirements are supported by the Local Plan Viability Assessment, 2024.
Para. 73 of NPPF states that exception site for community-led housing should be on land which is not already allocated for housing – no change required to Policy DM1.
The rural exception site part of the policy relates to retention orders imposed by Statutory Instruments referenced in Planning Obligations Supplementary Planning Document.
Exemptions to First Homes requirements are set out in para. 66 of NPPF – no change required to Policy DM2.
The Local Plan will be reviewed every five years to reflect the most up to date national planning and guidance and any updated Local Plan evidence base.
Prioritisation mechanisms for First Homes will be set out in the updated Planning Obligations Supplementary Planning Document.
The 35% affordable housing requirement will help to address Chelmsford's housing crisis declared by the Council in 2022. Levels of homelessness also continue to rise and increasing the percentage of affordable housing on greenfield sites would be unviable. It is not necessary to introduce an additional threshold based on the numbers of households living in temporary accommodation but the proposed Housing Requirement is being increase, which in turn will increase affordable housing delivery across the plan period.
Changes have been made to explain the circumstances where the Council will consider a viability assessment at planning application stage.
Changes have been made to explain what the requirements for Affordable Private Rent dwellings in Build to Rent Schemes will be and the reasons for this.

Policy DM3 – Gypsy, Traveller and Travelling Showpeople Sites

Summary of Representations – main issues and suggested changes:

- Support (Wates Developments and Hammonds Estates LLP, Writtle Parish Council)
- Add 'Green Wedge' in (A)i to align with para. 8.42 (Broomfield Parish Council).

CCC response to the comments made

The policy requires new sites to be outside the Green Belt unless very special circumstances apply, in line with national planning policy. New text has been inserted to clarify that new sites shouldn't be in the Green Wedge unless it can be demonstrated that a development would not adversely impact on the role, function, character and appearance of the Green Wedge. Clarification has also been provided on new sites in the rural area not having a significant impact the intrinsic character and beauty of the countryside in the supporting / explanatory text.

Securing Economic Growth

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Policy DM4 – Employment Areas and Rural Employment Areas	7	0	8	8
Policy DM5 – Designated Centres	2	0	3	3

Policy DM4 – Employment Areas and Rural Employment Areas

Summary of Representations – main issues and suggested changes:

- Support for the policy (CNG Fuels Ltd, JH Farming Ltd, Pigeon Sandon Ltd, Wates Developments and Hammonds Estates LLP, Essex County Council)
- Expand policy criteria for allow redevelopment or changes of use from E(g), B2 and B8 Use Classes to uses which provide low carbon/renewable energy transport refuelling infrastructure” (CNG Fuels Ltd)
- Add additional text into para. 3 of the policy for proposals to consider opportunities to promote multifunctional green infrastructure (Essex County Council)
- Support for the approach but new allocations may not, per se, lead to overall economic growth if they lead to older premises becoming less attractive and lost through change of use (Basildon Borough Council)
- Consider amending to strengthen the policy for example, make it clearer that the redevelopment of existing employment areas should be for employment uses only and planning permission would only be granted for a change of use from employment where the first four criteria apply, and/or there is no reasonable prospect for the site to continue in those uses (Basildon Borough Council).

CCC response to the comments made

Policy adjusted to refer to multifunctional green infrastructure.

The criteria relating to redevelopment of existing uses offers flexibility and a positive approach as set out in the NPPF. Policy S2 supports development that provides opportunities for renewable and low carbon energy technologies and schemes so no changes are considered necessary to S8.

Policy already sets out the circumstances where redevelopment or change of use from E(g), B2 and B8 Use Classes will be granted.

Policy DM5 – Designated Centres

Summary of Representations – main issues and suggested changes:

- Support for the policy (Wates Developments and Hammonds Estates LLP, Dominus)
- Car parking at South Woodham Ferrers must be protected if the town centre is to flourish.

CCC response to the comments made

There are no proposals affecting car parking in SWF in the plan.

Protecting the Countryside

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Policy DM6 – New Development in the Green Belt	2	0	6	6
Policy DM7 – New Buildings and Structures in the Green Wedge	7	1	14	14
Policy DM8 – New Buildings and Structures in the Rural Area	2	2	4	4
Policy DM9 – Infilling in the Green Belt, Green Wedge and Rural Area	1	0	4	4
Policy DM10 – Change of Use (Land and Buildings) and Engineering Operations	1	0	4	4
Policy DM11 – Extensions to Existing Buildings within the Green Belt, Green Wedge and Rural Area	1	0	4	4
Policy DM12 – Rural and Agricultural/Forestry Workers' Dwellings	1	0	3	3

Policy DM6 – New Development in the Green Belt

Summary of Representations – main issues and suggested changes:

- Support expressed (Chelmsford & Central Essex RSPB Local Group, and Wates Developments and Hammonds Estates LLP)
- Alter Green Wedge boundary and extend the western boundary of Widford Employment Area (Map 3) to support growth in this sustainable location, with existing transport and pedestrian links (Saxtons 4x4)
- Policy contradicts the strategy of resisting development in the Green Belt and contradicts the Settlement Hierarchy which confirms that settlements within the Green Belt are sustainable (Hill Residential Ltd and Higgins Group)
- Policy lacks clarity and fails to link to the strategic policies (Hill Residential Ltd and Higgins Group).

CCC response to the comments made

The Green Wedge is a locally important designation. Changes to the Green Wedge boundaries to allow development growth has been discounted as there is sufficient and suitable land elsewhere to meet development needs in a sustainable way.

The policy seeks to protect the Green Belt in accordance with National Planning Policy. The Settlement Hierarchy informs planning decisions in relation to the most sustainable settlements but does not override National Policy regarding Green Belt – no changes considered necessary.

Policy DM7 – New Buildings and Structures in the Green Wedge

Summary of Representations – main issues and suggested changes:

- Support expressed (Chelmsford & Central Essex RSPB Local Group, and Wates Developments and Hammonds Estates LLP, Broomfield Parish Council)
- An alteration to the Green Wedge boundary should be considered and an extension to Widford Employment Area (Map 3) allowed (Saxtons 4x4)
- For consistency with other parts of the plan refer to ‘active and sustainable travel’ in criteria v (Essex County Council)
- In terms of C) replacement buildings within a floodplain, there is opportunity to seek betterment and long-term sustainability even if the flood hazard affecting existing development may not increase, this should be clarified in the policy (Environment Agency)
- Policy is overly restrictive without a detailed assessment to ensure land within the Green Wedge performs its intended purposes
- Be more flexible to residential development, particularly where it would provide opportunities to enhance the Green Wedge
- Supports the intentions behind the principle of the Green Wedge but questions the approach to the Green Wedge, when other less onerous planning policies can protect open countryside if the housing strategy is performing as it should (Obsidian Strategic Asset Management Ltd)
- Various comments from landowners/developers promoting their sites for development in the Green Wedge
- Expand policy to include small-scale commercial development that is sustainably located, accessible and well connected (Cliffords Group Ltd and Hill Farm (Chelmsford) Ltd).

CCC response to the comments made

For consistency with other parts of the Plan reference is made to ‘active and sustainable travel’ in Part A, criteria v.

The Green Wedge is a locally important designation. Changes to the Green Wedge boundaries to allow development growth has been discounted as there is sufficient and suitable land elsewhere to meet development needs in a sustainable way. No Green Wedge Review is required, and the deletion of Green Wedge policies would be inappropriate.

The Plan and its policies should be read as a whole. Flooding is covered by DM18 which requires measures to mitigate flood risk, safe means of escape, not increase flood risk elsewhere etc. Such issues will be addressed through site-specific Flood Risk Assessments – no changes considered necessary.

Policy will ensure that the Green Wedge is sufficiently protected and Part A, criteria vi allows for appropriate facilities e.g. for sport – no changes considered necessary.

The Council has considered the suitability of alternative development strategies and sites to accommodate development as part of the plan preparation process. Some areas/sites proposed for development by developers/landowners have been rejected as part of this process.

Policy DM8 – New Buildings and Structures in the Rural Area

Summary of Representations – main issues and suggested changes:

- Support expressed (Chelmsford & Central Essex RSPB Local Group, and Wates Developments and Hammonds Estates LLP)
- Part B should be more flexible (Mr Parker)
- Address inconsistencies regarding allowing new Buildings/Dwellings on Previously Developed Land (Mr Parker)
- Amend to refer to renewable energy and low carbon development, related transport infrastructure and specific locational requirements of different sectors to support the rural economy (CNG Fuels).

CCC response to the comments made

Requirements for renewable energy and low carbon development and transport infrastructure are adequately covered by Policies S2 and DM19. No changes considered necessary.

The policy is considered clear in how development on previously developed land will be considered. No changes considered necessary.

Policy DM9 – Infilling in the Green Belt, Green Wedge and Rural Area

Summary of Representations – main issues and suggested changes:

- Support expressed (Wates Developments and Hammonds Estates LLP)
- Policy needs to mention flood risk constraints (Environment Agency)
- Overly restrictive to development in the Green Wedge
- Unclear how a decision-maker will determine if a gap is ‘small’ and is contrary to the NPPF.

CCC response to the comments made

The Plan and its policies should be read as a whole. Flooding is already covered by DM18 which requires measures to mitigate flood risk, safe means of escape, not increase flood risk elsewhere etc. Such issues will be addressed through site-specific Flood Risk Assessments. No changes considered necessary.

The Reasoned Justification sets out how to determine a ‘small’ gap. No changes considered necessary.

Policy DM10 – Change of Use (Land and Buildings) and Engineering Operations

Summary of Representations – main issues and suggested changes:

- Support expressed (Wates Developments and Hammonds Estates LLP)
- Policy needs to mention flood risk constraints (Environment Agency)

- Refer to Policy S8 of the Essex Minerals Local Plan and emphasise the importance of effective early engagement with relevant site promoters (Essex County Council).

CCC response to the comments made
--

The Plan and its policies should be read as a whole. Flooding is already covered by DM18 which requires measures to mitigate flood risk, safe means of escape, not increase flood risk elsewhere etc. Such issues will be addressed through site-specific Flood Risk Assessments. No changes considered necessary.
--

Planning applications where consultation with the Minerals Planning Authority is required are already picked up at any relevant pre-application processes or the 'vetting' stage of a planning application. No changes considered necessary.
--

Policy DM11 – Extensions to Existing Buildings within the Green Belt, Green Wedge and Rural Area

Summary of Representations – main issues and suggested changes:

- Support expressed (Wates Developments and Hammonds Estates LLP)
- Policy needs to mention flood risk constraints (Environment Agency)
- Refer to Policy S8 of the Essex Minerals Local Plan and emphasise the importance of effective early engagement with relevant site promoters (Essex County Council).

CCC response to the comments made
--

The Plan and its policies should be read as a whole. Flooding is already covered by DM18 which requires measures to mitigate flood risk, safe means of escape, not increase flood risk elsewhere etc. Such issues will be addressed through site-specific Flood Risk Assessments. No changes considered necessary.
--

Planning applications where consultation with the Minerals Planning Authority is required are already picked up at any relevant pre-application processes or the 'vetting' stage of a planning application. No changes considered necessary.
--

Policy DM12 – Rural and Agricultural/Forestry Workers' Dwellings

Summary of Representations – main issues and suggested changes:

- Support expressed (Wates Developments and Hammonds Estates LLP)
- Policy needs to mention flood risk constraints (Environment Agency)
- Refer to Policy S8 of the Essex Minerals Local Plan and emphasise the importance of effective early engagement with relevant site promoters (Essex County Council).

CCC response to the comments made
--

The Plan and its policies should be read as a whole. Flooding is already covered by DM18 which requires measures to mitigate flood risk, safe means of escape, not increase flood risk elsewhere etc. Such issues will be addressed through site-specific Flood Risk Assessments. No changes considered necessary.
--

Planning applications where consultation with the Minerals Planning Authority is required are already picked up at any relevant pre-application processes or the 'vetting' stage of a planning application. No changes considered necessary.

Protecting the Historic Environment

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Policy DM13 – Designated Heritage Assets	3	0	3	3
Policy DM14 – Non-Designated Heritage Assets	2	0	2	2
Policy DM15 - Archaeology	0	1	2	2

Policy DM13 – Designated Heritage Assets

Summary of Representations – main issues and suggested changes:

- Support expressed (C J H Farming Ltd, Pigeon (Sandon) Ltd, Historic England).

CCC response to the comments made

No changes.

Policy DM14 – Non-Designated Heritage Assets

Summary of Representations – main issues and suggested changes:

- Support expressed (Historic England, Writtle Parish Council).

CCC response to the comments made

The policy has been updated to provide clarity in the considerations of identifying non-designated heritage assets in planning decisions.

Policy DM15 – Archaeology

Summary of Representations – main issues and suggested changes:

- Support expressed (Historic England)
- To reflect para. 8.128 and national policy, re-word the policy to recognise instances where the level of significance of the remains do not warrant protection, preservation or enhancement, and their loss could be justified. New policy text is proposed (Wates Developments and Hammonds Estates LLP).

CCC response to the comments made

Planning legislation and case law are based on preservation; therefore it is inappropriate to amend the wording.
Additional wording has been added to the policy and Reasoned Justification following the archaeological evidence base to clarify archaeological significance.

Protecting the Natural Environment

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Policy DM16 – Protection and Promotion of Ecology, Nature and Biodiversity	16	6	32	32
Policy DM17 – Trees, Woodland and Landscape Features	5	5	14	14
Policy DM18 – Flooding/SUDS	4	1	12	12
Policy DM19 – Renewable and Low Carbon Energy	2	1	6	6

Policy DM16 – Protection and Promotion of Ecology, Nature and Biodiversity

Summary of Representations – main issues and suggested changes:

- Support policy (Wates Developments and Hammonds Estates LLP, Dominus Chelmsford Limited, Natural England, (Pigeon (Sandon) Ltd, Chelmsford and Central Essex RSPB, Anglian Water)
- Local Plan should set criteria based policies to ensure the protection of designated biodiversity and geological sites. Such policies should clearly distinguish between international, national and local sites (Natural England)
- Sites of Special Scientific Interest (SSSIs), European sites (Special Areas of Conservation and Special Protection Areas) and Ramsar sites should be included on the Policies Map (Natural England)
- Reference to swift boxes and bricks is welcome but there is no indication which is preferable – policy change suggested to require swift bricks in accordance with best practice (Swifts Local Network: Swifts & Planning Group)
- Minor policy changes suggested relating to green infrastructure and reference to Essex Green Infrastructure Standards 2022 (Essex County Council)
- Would like to see a distinction between public green spaces and habitats for wildlife as it is not explicitly clarified (Environment Agency)
- Specify that native species should always be used for biodiversity landscaping/planting (Environment Agency)
- Plan makes no explicit preference to retaining riparian corridors as public open space over private gardens (Environment Agency)

- Add a link to the Essex LNRS in the policy (Anglian Water)
- Oppose the 20% BNG requirement on Garden Community sites as it exceeds national requirements (Bellway Homes, Bellway Strategic Land, Chelmsford Garden Community Consortium)
- No assessment of the cumulative impact of the 20% BNG requirement and the tree planting requirement (3 trees per dwelling) (Bellway Homes, Bellway Strategic Land)
- 20% BNG would undermine viability and significantly reduce the capacity of development sites which will impact the Council's growth requirements (Bellway Homes, Bellway Strategic Land)
- The viability impacts of the costs related to BNG habitat management and BNG credits has not been appropriately assessed. The Biodiversity Net Gain and Local Nature Recovery Strategies – Impact Assessment (BNG IA) is based on broad costs, not specific development sites and does not have up-to-date or realistic estimate costs (Dandara Eastern, Home Builders Federation)
- BNG IA makes no consideration to a potential reduction in the developable area to accommodate BNG provision – this assumption should be tested (Home Builders Federation)
- BNG IA underestimates the cost of delivery BNG off-site (Bellway Homes, Home Builders Federation)
- For typology testing, undertake sensitivity testing to understand the impacts of delivering BNG off-site (Home Builders Federation)
- Amend policy to clarify that developers would not be required to meet standards beyond national and local policy (Home Builders Federation)
- Concerns on the deliverability of providing 20% minimum on large sites, which are usually greenfield, as they usually have a relatively high BNG baseline value (Whirlledge & Nott, Croudace Homes)
- The 20% biodiversity net gain requirement on large sites has not been justified in evidence base as being financially viable or practically deliverable/viable (Whirlledge & Nott, Croudace Homes)
- The viability of delivery 20% BNG need to be tested locally and on current market prices (Chelmsford Garden Community Consortium, Vistry Group)
- 20% BNG should be expressed as a target/aspiration rather than a requirement (Whirlledge & Nott, Croudace Homes, Chelmsford Garden Community Consortium, Vistry Group)
- No evidence demonstrating the implications of what a 20% (BNG) uplift would require and whether the proposed allocations can achieve this in comparison to omitted sites that have a stronger BNG potential (Obsidian Strategic Asset Management Ltd)
- More sites will be needed to deliver the Local Plan housing requirement as 20% BNG will reduce developable areas resulting in lower yield of dwellings on sites. Further work is needed with site promoters to identify sites (Obsidian Strategic Asset Management Ltd)
- Policy repeats the BNG requirements of Strategic Policy S4 and national policy – the policy should avoid unnecessary repetition/it is an unnecessary

duplication and remove references to the amount of BNG requirement (Dandara Eastern, Hill Residential Ltd, Higgins Homes)

- The requirement for Garden Communities to deliver 20% BNG should be clarified in terms of when it is delivered, i.e. per phase or on completion (Chelmsford Garden Community Consortium, Vistry Group)
- For Garden Communities the policy should require 10% BNG per phase with an aspiration of 20% overall net gain (Chelmsford Garden Community Consortium, Vistry Group)
- Policy should be flexible to take account of; site specific circumstances which may require off-site provision, the viability considerations of off-site vs. on-site and circumstances where off-site provision outside of the administrative may deliver substantial benefits (Chelmsford Garden Community Consortium, Vistry Group).

CCC response to the comments made
Sites of Special Scientific Interest (SSSIs), European sites (Special Areas of Conservation and Special Protection Areas) and Ramsar sites are shown on the Draft Policies Map.
Reasoned Justification has been amended to clarify the relationship between public open space and SANGS, and biodiversity net gain provision.
Reasoned Justification has been amended to include the use of native species for landscaping.
Reasoned Justification has been amended to include opportunities to retain riparian corridors as public open space.
Reasoned Justification has been amended to confirm that public open space requirements or the provision of SANGs are separate to biodiversity net gain and will not be considered as an alternative to or a replacement for net gain provisions, and that where possible, the provision of both on site should be segregated to ensure the quality of the habitat for wildlife is maximised.
The LNRS is at draft stage, and it is not considered appropriate to link to its specific priorities until they have been adopted.
Reasoned Justification has been expanded to clarify that major developments will be required to provide on-site measures in addition to paying the RAMS tariff to help mitigate increased recreational impacts on international coastal designated sites.
The policy requirements have been tested through the Local Plan Viability assessments.
Reasoned Justification has been amended to clarify where off-site provision will be considered.
The policy includes the BNG targets of 10% and 20% for clarity and completeness.
A range of biodiversity features that can be considered is included in the Reasoned Justification and in the Council's making Places SPD. Inclusion of a specific policy requirement to provide swift bricks is not supported. The use of swift boxes and/or bricks will depend on site-by-site circumstances and specifying a preference would be inappropriate.
Policy has been amended to note that the achievement of 20% biodiversity net gain on sites 6 and 16a will be subject to site constraints.

Policy DM17 – Trees, Woodland and Landscape Features

Summary of Representations – main issues and suggested changes:

- Support expressed (Chelmsford & Central Essex RSPB Local Group, Swifts Local Network: Swifts & Planning Group, Dandara, Pigeon (Sandon) Ltd)
- Consider adding to reasoned justification the contribution to the Big Green Internet Project that aims to connect woodlands from Tendring via Chelmsford to Epping Forest (Essex County Council)
- Add a reference to Ancient Woodlands and how they are irreplaceable habitats. As such, the policy requirement for replacement of trees of a “size and type suitable for location” may not be entirely appropriate (Forestry Commission)
- New development should consider any impacts on ancient woodland and ancient and veteran trees in line with the NPPF. Support for the Forestry Commissions conclusions (Natural England)
- Clarify the term ‘preserved trees’ and expand policy to include the strict protection of irreplaceable habitats (including ancient or veteran trees and ancient woodlands) as afforded by the NPPF (Wates Development and Hammonds Estates LLP)
- Amend policy to ensure existing nest sites for building-dependent species such as swifts and house martins are protected. Alternatively, mitigation should be provided (Swifts Local Network: Swifts & Planning Group)
- Part C – New Trees is supported but additional wording sought for Part C to ensure new tree planting is adequate (Wates Development and Hammonds Estates LLP)
- The requirements of Part C of three new trees per dwelling is questioned by a number of developers as:
 - Prioritising trees in the landscaping and layout may impact negatively on the design of a scheme (Dandara)
 - Quality of trees, specimen type and location best dictate tree coverage rather than a stringent quantum. For the Meadows, this would lead to over 2,400 trees which cannot be realistically accommodated (Dominus Chelmsford Ltd)
 - It may impact on viability and should be fully evidenced and considered along with the requirements for BNG (Obsidian Strategic Asset Management Ltd, Richborough, McCarthy and Stones)
- To avoid ambiguity, clarify ‘significant’ with regards the number of trees to be delivered on strategic employment sites (Pigeon (Sandon) Ltd, CNG Fuels).

CCC response to the comments made
The Reasoned Justification for DM16 has been amended to clarify irreplaceable habitats such as ancient woodland and ancient or veteran trees.
Policy covers ancient woodlands and aged and veteran trees found outside ancient woodlands.

Reasoned Justification has been amended to include the use of native species for landscaping.
Reasoned Justification has been to include opportunities to retain riparian corridors as public open space.
Protection for nesting birds is covered by separate legislation. However, the Reasoned Justification states that the presence of protected species is a material consideration when the Council is considering a development proposal which, if carried out, would be likely to result in harm to the species or its habitat – no further change considered necessary.
Reasoned Justification already states that trees for on-site planting will be determined by the size, position, and type of location available.
Reasoned Justification already states that a judgement will be made on a case by case basis over what will be considered 'significant' taking into account the nature, scale and size of the development, the site and immediate locality with more guidance to be set out in the Making Places SPD.
Reasoned Justification has been amended to clarify that a significant number of new trees on major new employment and infrastructure sites must be provided as part of landscaping requirements.
The policy requirements have been tested through the Local Plan Viability assessments.

Policy DM18 – Flooding/SUDS

Summary of Representations – main issues and suggested changes:

- Support expressed (Chelmsford & Central Essex RSPB Local Group, Wates Developments and Hammonds Estates LLP, Dominus Chelmsford Limited)
- Policy should not prohibit appropriate land uses such as open space or attenuation measures being in flood zones (Pigeon (Sandon) Ltd)
- Add 'unless it is demonstrated to be unviable' in relation to use of SuDS under Part C to ensure development viability is not undermined (CNG Fuels Ltd)
- Support the use of SuDS schemes where appropriate to support aquifer recharge and reduce flooding. However, use of infiltration SuDS is not appropriate on all sites. Recommend guidance be referenced: The Environment Agency's Approach to Groundwater Protection, particularly statements G1 and G9 to G13; The CIRIA C753 SUDS Manual; The Susdrain website; The Sustainable Drainage Systems: Non-Statutory Technical Standards guidance on gov.uk and the Recommendations To Update (Environment Agency)
- Support the inclusion of SuDS into sites that may come forward for redevelopment and regeneration where such features would also be beneficial for the management of surface water flooding and environmental enhancement (Environment Agency)
- The policy should include: 'B) provide a safe dry refuge above the 0.1% (1 in 1000) AEP with allowance for climate change' and 'safeguarding land from development that is required, or likely to be required, for current or future flood management' (Environment Agency)

- Amend part B) ii) to clarify that brownfield sites will be treated as greenfield with discharge rates limited to the equivalent 1 in 1 year greenfield rate unless this is demonstrated as not practical (Anglian Water Services Ltd)
- Agree that opportunities for providing betterment should be explored on strategic and regeneration sites, and through retrofitting SuDS within existing urban areas at risk of surface water flooding (Anglian Water Services Ltd)
- Add reference to integrated water management measures such as rainwater/stormwater harvesting and reuse, to minimise potable water demands through utilising non-potable water for irrigation, and flushing toilets in residential properties (Anglian Water Services Ltd)
- Final paragraph of the policy is inadequate to address surface water connections to the public sewer network and amended wording suggested to reflect discharge of surface water following the sustainable drainage hierarchy (Anglian Water Services Ltd)
- Policy needs to have flexibility in approach and allow different techniques to address site specific characteristics. Integrate reference to the Lead Local Flood Authority into the policy (Higgins Group, Hill Residential Ltd)
- Amend section C to provide more consideration to the use of Green Infrastructure SuDS together to maximise benefits through multifunctionality (Essex County Council)
- Comment from landowners/developer suggesting that their proposed development site will accord with the preferred plan (Dandara).

CCC response to the comments made
The policy does not prevent development on sites at risk of flooding where they comply with the requirements of the policy and national planning policy and guidance.
In line with the NPPG, all new development is required to incorporate water management measures to reduce surface water run-off by using for example SuDS. The Pre-Submission plan is supported by an updated Viability Report (2024).
The policy supports using SuDS but is also flexible by allowing solutions for the disposal of surface water.
Various site policy changes have been made including new requirements to provide a safe dry refuge, to manage surface water run-off so that the discharge rate will not exceed the equivalent 1 in 1 greenfield rate, for rainwater / stormwater harvesting, to the sustainable drainage hierarchy, to include reference to the utilisation of Green Infrastructure, and to clarify surface water connections to the foul sewer.
A new sentence has been added to the Reasoned Justification of Strategic Policy S2 to for developments to accord with latest technical guidance, or as updated and amended, including The Environment Agency's Approach to Groundwater Protection; The CIRIA C753 SUDS Manual; and Sustainable Drainage Systems: Non-Statutory Technical Standards – adding to DM18 would be duplication.
Policy already results in an improvement on a current situation. The Council requires site specific FRAs to provide surface water flows that mimic the greenfield runoff rate which is an improvement on the present situation as it will require water to be held on site for longer and perhaps permanently. This has

been a long-standing technical requirement which can already be found in ECC's Sustainable Drainage Design Guide and the EDG – no further changes considered necessary.

Policy DM25 addresses measures to reduce non-potable water consumption, and the use of recovered water for tasks such as flushing toilets. No change required to DM18.

Amendments have been made to Policies S2, DM24 and DM25 to require to the use of integrated water management techniques. No change to DM18 as this is specific to flooding and the measures to address this.

No change in relation to safeguarding land from development that is required, or likely to be required, for current or future flood management. At this stage, we do not have a list of sites where we can identify land to be safeguarded for flood risk management interventions.

The policy supports open space and attenuation measures in flood zones.

Policy DM19 – Renewable and Low Carbon Energy

Summary of Representations – main issues and suggested changes:

- Support expressed (Chelmsford & Central Essex RSPB Local Group, Wates Developments and Hammonds Estates LLP, CNG Fuels)
- Policy should encourage biodiversity, not just impact on it, for example by the establishment of hedgerows and buffer strips (Chelmsford & Central Essex RSPB Local Group, Essex County Council)
- Para 8.163 should refer to the EDG – Solar Farm Guiding Principles (Essex County Council)
- Make the policy and supporting paragraphs more explicit at acknowledging evolving technological carbon reduction advances such as BIO-CNG fuel for the transport sector (CNG Fuels).

CCC response to the comments made

The promotion of biodiversity is addressed in the Solar Farm SPD.

The policy scope is considered appropriate and compliant with national policy.

Delivering and protecting Community Facilities

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
DM20 – Delivering Community Facilities	3	1	6	6
DM21- Protecting Community Facilities	3	2	5	5
DM22 – Education Establishments	1	1	2	2

DM20 – Delivering Community Facilities

Summary of Representations – main issues and suggested changes:

- Support for the policy (Wates Developments and Hammonds Estates LLP, Dandara, Sport England)
- There should be sufficient provision of cemetery space (Environment Agency)
- Refer in policy to vehicle parking being standards in accordance with Policy DM27 (Essex County Council)
- The policy of protecting the Green Belt is leading to other social and economic issues within some Green Belt settlements such as a decline in community infrastructure (Barratt David Wilson (Eastern Counties)).

CCC response to the comments made
--

It is not considered necessary to cross reference to Policy DM27 – this would also add duplication to the plan.

Development growth in the Green Belt has been discounted as there is sufficient and suitable land is available outside the Green Belt to meet the development needs in a sustainable way. It would also undermine national planning policy.

DM21 – Protecting Community Facilities

Summary of Representations – main issues and suggested changes:

- Support for the policy (Wates Developments and Hammonds Estates LLP, Sport England)
- Support the need for applicants to provide evidence for the change of use of a public house, particularly focusing on the pub's economic viability and importance to the local community (Chelmsford & Mid Essex CAMRA)
- Support policy premise amend to make it more effective and robust in relation to the use of the term 'economically viable' as viability can be manipulated through intentionally undermining performance. A facility could be successful under an alternative operating model such as community ownership (Theatres Trust)
- Support for the provision of sufficient, quality community facilities but the policy is not flexible enough. The disposal of no longer suitable or redundant healthcare sites and properties helps to fund new or improved services. Having to meet criterion (ii) adds unjustified delay to vital reinvestment in facilities and services for the community (NHS Property Services Ltd)
- The Spatial Principles do not consider the need for sustainable new housing in Green Belt settlements to sustain their vitality and support existing community infrastructure and services (Barratt David Wilson (Eastern Counties)).

CCC response to the comments made
--

It is not reasonable to remove requirement Aii), proposals would still need to demonstrate these tests.

It is not necessary to add additional wording in relation to an alternative operating model.
--

DM22 – Education Establishments

Summary of Representations – Main Issues:

- Support as drafted (Wates Developments and Hammonds Estates LLP)
- Support principle of policy but delete requirement for expansion proposals to be considered against an approved masterplan as education priorities date quickly requiring frequent costly masterplan updates. Instead assess development proposals against prevailing plan policies (ARU).

CCC response to the comments made

Proposals for expansions would still be required to be considered against a masterplan (particularly for ARU) as it is located within a SPA where development would otherwise be constrained – no change.

Making High Quality Places

This section of the consultation document provides the basis for the promotion of Chelmsford as a high-quality place to live, work, visit and study in.

Section 9 - Making Places

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Policy DM23 – High Quality and Inclusive Design	4	1	10	10
Policy DM24 – Design and Place Shaping Principles in Major Developments	6	1	9	9
Policy DM25 – Sustainable Buildings	9	2	19	19
Policy DM31 – Net Zero Carbon Development (In Operation)	8	7	29	29
Policy DM26 – Design Specification for Dwellings	3	0	3	3
Policy DM27 – Parking Standards	1	0	1	1
Policy DM28 – Tall Buildings	2	0	4	4

Policy DM23 – High Quality and Inclusive Design

Summary of Representations – main issues and suggested changes:

- Overall support (Wates Developments and Hammonds Estates LLP, Hill Residential Ltd, Dominus Chelmsford Limited)
- Policies DM23 and DM24 appear to overlap especially in respect of major developments (Dandara)

- Expand policy to take a comprehensive and co-ordinated approach to development including respecting site constraints and utilities situated within sites (National Grid Electricity Transmission, National Grid Gas Transmission)
- A number of further design criteria are suggested to minimise fire risk and spread of fire, ensure safe access, and reduce risks to water sources (Essex County Fire and Rescue Service)
- Design should be flexible and not be over prescriptive and limiting, to account for changes in building techniques, market expectations, viability and best practice (Higgins Group)
- The cross reference to Policy DM25 is not necessary (Vistry Group)
- Clarify the supporting text to avoid contradiction with main part of policy (CNG Fuels Limited).

CCC response to the comments made
Site constraints and facilities are considered to be covered by Part A) of the Policy and specific site policies, so no change is required.
Design criteria in relation to fire safety are covered by Building Regulations, so it is not necessary to repeat them in the Policy.

Policy DM24 – Design and Place Shaping Principles in Major Developments:

Summary of Representations – main issues and suggested changes:

- Overall support for the policy (Wates Developments and Hammonds Estates LLP, Dominus Chelmsford Limited, Chelmsford & Central Essex RSPB Local Group); and in particular the reference to Sport England’s Active Design Guidance (Sport England)
- Residential institutions (Class C2) should also be subject to Health Impact Assessment and to seek Livewell Accreditation (Essex County Council)
- Swift bricks should be required in accordance with best practice (Swifts Local Network: Swifts & Planning Group)
- Design codes would not be sufficiently flexible to respond to specific circumstances (CNG Fuels)
- Further definition of the circumstances where design codes would be expected would help to clarify whether both a design code and a masterplan would be required (CJH Farming, Pigeon (Sandon) Ltd).

CCC response to the comments made
Bullet 6 amended to include utilising integrated water management techniques.
A range of biodiversity features that can be considered is included in the Reasoned Justification and in the Council’s making Places SPD. Inclusion of a specific policy requirement to provide swift bricks is not supported.
References in the Policy to Masterplans are considered to be clear and provide sufficient scope.

Policy DM25 – Sustainable Buildings

Summary of Representations – main issues and suggested changes:

- Overall support for the policy (Wates Developments and Hammonds Estates LLP, Chelmsford & Central Essex RSPB Local Group, CJH Farming, Pigeon (Sandon) Limited, Dominus Chelmsford Limited)
- Support the principle for a water efficiency target, but recommend a more ambitious standard of 80-100 litre/person/day (Essex County Council); 100 litre/person/day as a minimum using a fittings based approach (Anglian Water Services)
- Support for rainwater harvesting (Essex County Council, Anglian Water Services)
- SuDS can be utilised to minimise overall water use (Anglian Water Services)
- Support for development having regard to the Essex Parking Guidance, and the Electric vehicle Charge Point Strategy (Essex County Council)
- Swift bricks should be required in accordance with best practice (Swifts Local Network: Swifts & Planning Group)
- Concern at the introduction of requirements in S2, DM31 and DM25 that go beyond Building Regulations, which may impact viability and deliverability of residential development (Hopkins Homes Ltd, Dandara, Whirledge and Nott, Croudace Homes) and become out of date as standards evolve (Boyer Planning)
- Provision for electric vehicle charging is covered by Building Regulations so should not be duplicated (Hopkins Homes Ltd, Home Builders Federation, Dandara); or the policy should set out where requirements go beyond Building Regulations (Chelmsford Garden Community Consortium, Vistry Group)
- Include a threshold for provision of public EV charging points, which may not be a reasonable requirement on smaller sites (Whirledge and Nott, Croudace Homes)
- Water efficiency targets are covered by Building Regulations, and the policy does not allow for flexibility and therefore is likely to become out of date quickly (Dandara, Hill Residential Ltd)
- Policy should recommend rather than require rainwater harvesting and be limited to garden irrigation (Chelmsford Garden Community Consortium, Vistry Group)
- The threshold for BREEAM assessment should be raised to 1,000sqm, less is unlikely to lead to enhanced sustainable design (Chelmsford Garden Community Consortium, Vistry Group).

CCC response to the comments made
Policy amended to require a water efficiency standard of 90 litres/person/day; and for non-residential buildings above a threshold to meet a national water consumption measure.
Policy amended to include utilising integrated water management techniques.
EV charging point infrastructure requirements have been updated to reflect ECC's Parking Standards update; therefore the reference to the EV parking standards set out in the Policy is considered appropriate.
A range of biodiversity features that can be considered is included in the Reasoned Justification and in the Council's making Places SPD. Inclusion of a specific policy requirement to provide swift bricks is not supported.

Policy DM31 – Net Zero Carbon Development (In Operation)

Summary of Representations – main issues and suggested changes:

- Fully support the policy (Wates Developments and Hammonds Estates LLP, Dominus Chelmsford Limited, Obsidian Strategic Asset Management Ltd, Essex County Council)
- Supportive of the need to support net zero carbon development and the principles of what the policy is seeking to achieve (ARU, Chelmsford & Central Essex RSPB Local Group, Dandara, Vistry Group, Chelmsford Garden Community Consortium)
- Striving to achieve net-zero carbon homes at a faster rate than the Council's and the UK Government's target of net zero carbon emissions is commendable (McCarthy Stone, Gleeson Land)
- Support the principle of energy efficient and sustainable buildings but this should be in line with Building Regulations (Richborough, Home Builders Federation)
- Going beyond Building Regulations goes against the written Ministerial Statements, the NPPF and Planning Policy Guidance (McCarthy Stone, Croudace Homes, Whirledge & Nott, Home Builders Federation)
- Any over provision of Building Regulations should be advisory or supportive, rather than a policy requirement (Richborough)
- The impact of this policy on the viability and deliverability of residential development has not been considered in the plan, its evidence base, or by the IIA (Hopkins Homes Ltd, Home Builders Federation)
- The policy should be amended to provide flexibility with regard to achieving Net Zero Carbon depending on viability (Gleeson Land, Dandara, Croudace Homes, Whirledge & Nott, Higgins Group)
- Exceeding national requirements and setting local standards provide inconsistency across the country, hampering investment and has the potential to impact upon viability and the delivery of housing in the area (Richborough, Vistry Group, Chelmsford Garden Community Consortium, Gladman, Higgins Group, Hill Residential Ltd)
- For the policy to be flexible and justified over the plan period, the requirements need to better reflect the Building Regulations requirements and allow applicants to take a combined approach subject to each individual site (Hill Residential Ltd)
- The implications of such a policy have not been properly assessed in the supporting evidence base (Home Builders Federation)
- The Local Plan Viability Study should be updated to reflect the costs identified in Report 1 of the Essex Net Zero Policy Study – Technical Evidence (Essex County Council)
- The size threshold for requirements 1-5 to apply is too low (ARU)
- Requirement 2: Future Homes Standard will ensure all new homes to be zero carbon ready so it is unnecessary to include this as it will already be addressed through building regulations by the time the local plan review is adopted (Home Builders Federation)

- Supports the policy and the securing of financial contributions where on-site carbon mitigation requirements cannot be met. NHS property could benefit from carbon offset funds (NHS Property Services Ltd)
- Requirement 4: On-site renewable energy generation needs to be applied flexibly. The level of energy use from unregulated sources is beyond the control of the developer and as such it is unreasonable to require the developer to make a payment in order to offset use from these sources (Pigeon (Sandon) Ltd, Higgins Group, Hill Residential Ltd, Home Builders Federation)
- The use of solar PV is a key contributor to achieving Net Zero, but other technologies and approaches may be more suitable for various developments and there needs to be flexibility to deliver what is necessary for the site (Hill Residential Ltd, ARU)
- Requirement 5: Monitoring development for the first five years is beyond the scope of what local planning authorities can require of a developer. Energy use will depend significantly on the occupant and how they use it (Home Builders Federation)
- Suggest amendments to Table 7 to improve clarity, which will be reflected in a revised Essex 'model policy' document to support the policy (Essex County Council)
- Applying this policy retrospectively to allocations within the adopted Local Plan would impact their viability and deliverability (Hopkins Homes Ltd)
- Relying solely on renewable fuel provided on sites is too greater risk. A "safety net" of mains electricity from the grid should be available in case the installation, designs or calculations fall short of expectations (Chelmsford & Central Essex RSPB Local Group)
- Other local authorities are mentioning the use of sustainable building materials (such as the use of home grown timber) in their new local plans (Forestry Commission England)
- Consider developing the points raised on overheating in the Reasoned Justification into a specific plan policy to give greater weight to mitigating overheating risk in new development proposals (Essex County Council)
- The new Essex evidence-led 'model policy' to address embodied carbon emissions from new development, and its supporting evidence base, should be included as an additional policy (Essex County Council).

CCC response to the comments made

Local Authorities have statutory powers to set planning policies which require energy efficiency standards that are better than Building Regulations as long as these are evidenced and justified, and policies can be expressed using energy metrics if they are supported by an evidence base that justifies their viability. The legal justification is set out in the Essex Open Legal Advice - Energy Policy and Building Regulations (February 2024), which should be read alongside the [TCPA resource page](#) (16th July 2024) which addresses the latest situation regarding the Written Ministerial Statement (WMS) 13th December 2023, including a [guest blog by Estelle Dehon KC](#) which highlights important clarifications on the WMS 2023

confirmed through published correspondence directly with the former Secretary of State for Levelling Up, Housing and Communities. No changes required.

The Building Regulations set minimum standards that must be achieved for energy performance in new homes and buildings. These are a 'floor' and not a 'ceiling'. Planning policy is necessary to address the shortcomings within the Building Regulations 2021 and the proposed Future Homes Standard 2025, which do not adequately address operational carbon emissions from new development as they only cover a proportion of energy use of a building, namely regulated energy use and they rely on grid decarbonisation to achieve 'net zero'.

Regulated energy use only makes up about half of the energy used in a building. The other half is known as 'unregulated' energy and this is not covered by Building Regulations at all. Policy DM31 covers both types and so ensures that carbon emissions from a buildings total energy use are addressed and hence delivers truly net zero carbon buildings in operation. No changes required.

It is widely acknowledged by industry that the 'Standard Assessment Procedure' (SAP) software is not an accurate software for predicting the energy performance of a building. It was never intended to be, it is a compliance software only. The former Government recognised this issue and began consulting upon the introduction of new software to replace SAP – known as the Home Energy Model. However, this has not progressed further yet. It is therefore reasonable to require major developments to use existing and well-established reliable and accurate predictive energy modelling software to demonstrate policy compliance. Minor developments may follow the 'minimum fabric specifications approach' as set out in the Reasoned Justification to provide some flexibility to smaller developers who may not wish to invest in predictive energy modelling software. In addition, as part of the wider Essex Authorities work on supporting the implementation of the net zero policy, a 'SAP conversion tool' which can be used on smaller developments to demonstrate policy compliance using SAP outputs has been created. Reference to this has been added to the Reasoned Justification.

Essex wide viability reports support the policy requirements and have fed into CCC Local Plan Viability testing and are shown to be viable. No changes required.

CCC Local Plan Viability testing has been updated to reflect the costs identified in Report 1 of the Essex Net Zero Policy Study – Technical Evidence (July 2023).

The policy applies to 1 dwelling and above, and this is supported by the Essex evidence base. The policy does seek to limit the potential burden of reporting requirements for minor developments (under 10 dwellings) by offering a 'minimum standards approach' to be followed as an alternative to submitting an energy strategy which includes the use of predictive energy modelling. No changes required.

The Future Homes Standard is not in place yet, it has only been consulted upon and the new Government has not yet responded. There is no guarantee it will be in place in a certain timescale. Therefore, to ensure all new homes and buildings are fossil fuel free in Chelmsford, the method that is under direct control of the local authority is the Local Plan and Policy DM31. No changes required.

Solar PV was selected to be modelled in the evidence base to demonstrate net zero because it is the cheapest, and most mature and commonly available renewable energy technology that is suitable for buildings to incorporate. Consideration has been given to the request to replace solar PV with renewable energy generation. However, as the Evidence is based on solar PV as this is the cheapest, most mature, commonly available and cost effective technology

reference to 'rooftop' before solar PV has been added to this policy requirement to make this clear, and is what the evidence justifies the policy requiring.
The Essex Net Zero Policy Study (July 2023) demonstrates that it is technically feasible at reasonable cost to accommodate sufficient rooftop solar PV on new homes to match the predicted annual average energy demand from the building. The Policy includes an energy offsetting clause that can be triggered in circumstances where it is not practically feasible to achieve this. The developable area of a site will not be reduced as a result of the Requirement 4 because evidence shows the requirement can be met through rooftop solar PV. The requirement is based on the buildings total energy use – and that includes both regulated and unregulated energy uses - because that is the true impact of the development proposal and can be reliably predicted at design stage through energy modelling.
Development sites will still be connected to the mains electricity grid as normal to ensure consistency in energy supply and meet the fluctuations in energy demand. The renewable energy generation on-site will also be connected to the electricity grid. It is just that roof top solar PV on buildings will be used by those occupiers in the first instance and any excess then is exported to the grid which benefits the decarbonisation of the grid too. Vice versa happens when not enough electricity is generated by the roof top solar PV to meet the energy needs of the occupiers, for example, in winter. No changes required.
The requirement for in-use monitoring applies to large scale developments of 100 dwellings or more and only requires energy information to be collated from a sample of dwellings equating to 10%. This is 10 homes on a 100 home scheme. It is considered a reasonable sample to require in order for a developer to benefit from a meaningful set of results which can then be used to aid continuous learning and improvement on the delivery of net zero homes. The Policy is flexible in how this information is to be collected, the developer can consider the most appropriate method for them and put forward a monitoring strategy at the appropriate time in the planning process. No changes required.
The energy offsetting mechanism enables flexibility in the policy to accommodate those developments where it is not technically feasible to achieve an on-site energy balance to still achieve 'net zero'. This is a well established approach. No changes required.
The table relating to 'Minimum Standards Approach Fabric Specifications (Domestic)' has seen minor amendments to improve clarity, which is a reflection of changes to the revised Essex 'model policy'.
Matters of overheating have been included into Policy S2 to give greater weight to mitigating overheating risk in new development proposals.
The new Essex evidence-led 'model policy' to address embodied carbon emissions from new development, and its supporting evidence base, was not available at an appropriate time to test and include as an additional policy in the Pre-Submission Local Plan. No changes required.
The policy supports delivery of the Council's declared climate and ecological emergency in 2019 and proposed work towards reaching net zero by 2030.

Policy DM26 – Design Specification for Dwellings

Summary of Representations – main issues and suggested changes:

- Support for the policy (Wates Developments and Hammonds Estates LLP)

- Swift bricks should be required in accordance with best practice (Swifts Local Network: Swifts & Planning Group)
- Support expressed for the overall policy objective, but further clarification on the Council's open space requirements and private amenity spaces would be helpful in this policy wording (Vistry Group).

CCC response to the comments made

A range of biodiversity features that can be considered is included in the Reasoned Justification and in the Council's making Places SPD. Inclusion of a specific policy requirement to provide swift bricks is not supported.

Policy DM27 – Parking Standards

Summary of Representations – main issues and suggested changes:

- Support for the policy (Wates Developments and Hammonds Estates LLP).

CCC response to the comments made

No changes. However, policy changes have been made to reflect the latest ECC Parking Guidance.

Policy DM28 – Tall Buildings

Summary of Representations – main issues and suggested changes:

- Support for the policy (Wates Developments and Hammonds Estates LLP, Historic England)
- More clarification is needed on how a site is assessed for its suitability for higher intensity development (Highgate Capital Limited)
- Add additional wording to include other locations that are well served by public transport (Vistry Group).

CCC response to the comments made

Suitability for higher intensity development is covered in the Reasoned Justification.

Proposals outside the City Centre will be considered on their merits, where a view on the suitability of other locations can be taken.

Protecting Living and Working Environments

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Policy DM29 – Protecting Living and Working Environments	1		1	1
Policy DM30 – Contamination and Pollution	2		3	3

Policy DM29 – Protecting Living and Working Environments

Summary of Representations – main issues and suggested changes:

- Support for the policy (Wates Developments and Hammonds Estates LLP).

CCC response to the comments made

No changes. However, policy changes have been made for clarification.

Policy DM30 – Contamination and Pollution

Summary of Representations – main issues and suggested changes:

- Support for the policy (Wates Developments and Hammonds Estates LLP, Chelmsford & Central Essex RSPB Local Group)
- Re-development of land affected by contamination is encouraged as it is a sustainable approach (Environment Agency).

CCC response to the comments made

Reasoned Justification amended to ensure developments accord with the latest technical guidance with regards to land contamination.

Monitoring Framework

This section of the consultation document deals with how the Council will monitor the Local Plan's success in meeting the challenges and opportunities set out in the Strategic Priorities to ensure that it is effective in delivering the objectives of the Local Plan.

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Table 8	0	0	1	1

Summary of Representations – main issues and suggested changes:

- S14 Page 326 - Amend 'Key Trigger' to read: 'Number of Health Impact Assessments on development for 50 or more dwelling, C2 (Residential Institutions) and non-residential development in excess of 1,000 m2' and 'Trigger for Action' to read: '(1) Health Impact Assessment is not submitted on one or more development for 50 or more dwellings, one or more C2 (Residential Institutions) and one or more non-residential development in excess of 1000 m2' (Essex County Council)
- S14 Page 326 - Consider if reference should be made to 'initial assessments' (Essex County Council)
- S14 Page 326 - Provide further clarification on the process and details for 'an initial assessment' for developments for example, desktop, rapid and full/comprehensive (Essex County Council)

- S14 Page 326 - Consider an additional indicator that captures how HIA's are effectively and positively influencing proposals and achieving what they are set out to do (Essex County Council).

CCC response to the comments made
Not necessary to add Use Class after C2 and to do so would be inconsistent with the rest of the Local Plan.
Suggestions relating to types of HIA assessment are addressed in changes set out under Strategic Policy S14.
No change to include the proposed additional HIA indicators as it is unclear how this would be monitored.

Draft Policies Map

This section of the consultation document sets out the Draft Policies Map which illustrate sites for development or protection within the Local Plan.

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Draft Policies Map (Paragraphs 11.1-11.3)	1	4	5	5
Map 3 – Chelmsford Urban Area	1	4	5	5
Map 5 – South Woodham Ferrers	0	0	1	1
Map 8 - Bicknacre	0	2	2	2
Map 11 – Chatham Green	0	1	1	1
Map 12 - Danbury	0	1	1	1
Map 16 - Galleywood	0	0	1	1
Map 23 – Little Waltham	0	1	1	1
Rural Employment Areas				
None	0	0	0	0
Other Maps				
None	0	0	0	0
Legend	0	0	0	0

Chelmsford Urban Area (Map 3)

Summary of Representations – main issues and suggested changes:

- Revise Chelmsford Urban Area to include areas of development and land east and south of the A12 (along Main Road and Paynes Lane, Boreham) (Aquila Developments, CNG Fuels)
- Revise to allocate Chantry Farm, Waltham Road, Boreham for Specialist Housing for the elderly (Mark Jackson Planning)
- SGS16a (Hammonds Farm) - Exclude land north of the River Chelmer from the Country Park and site boundary and retain in agricultural use, add the

indicative route for the access route to Junction 19, and reduce the eastern development boundary to exclude land in Flood Zones 2 and 3 adjacent to Sandon Brook (Wates Developments and Hammonds Estates LLP)

- Allocate land at north west Chelmsford, north of the existing settlement boundary (Dandara Eastern)
- Allocate land north of Runsell Lane to help meet local housing needs whilst minimising harm and protecting the purposes of the Green Belt (Obsidian Strategic)
- Expand Widford Industrial Estate to the west to support Saxtons 4x4 and to better align with the Spatial Strategy (Saxtons 4x4)
- Expand Growth Site 15 to include further land to the west to reflect the full extent of the deliverable site (CLH Farming Ltd).

South Woodham Ferrers (Map 5)

Summary of Representations – main issues and suggested changes:

- A dual carriageway on the A132 and a northern bypass on the B1012 are required rather than ‘Route Capacity Improvements’.

Bicknacre (Map 8)

Summary of Representations – main issues and suggested changes:

- Revise settlement boundary to include the entire Priory Pet & Country Supplies Store site, Horseshoe Farm to reflect recent planning history (Strutt & Parker)
- Allocate land north of Roxwell Road as an extension to Location 2 – West Chelmsford which performs better when compared against Hammonds Farm (Taylor Wimpey)
- Object to allocation of a new Garden Community at Hammonds Farm which is not deliverable by 2041 or justified by the evidence base Farm (Taylor Wimpey)
- Unclear why the Defined Settlement Boundary cuts through gardens.

Chatham Green (Map 11)

Summary of Representations – main issues and suggested changes:

- Increase the settlement boundary to make it more sustainable by including Pondsides Nursery and Yard and allocating it for employment or residential development (Mr and Mrs Andrew Parker).

Danbury (Map 12)

Summary of Representations – main issues and suggested changes:

- Allocate land north of Runsell Lane to help meet local housing needs whilst minimising harm and protecting the purposes of the Green Belt (Obsidian Strategic).

Galleywood (Map 16)

Summary of Representations – main issues and suggested changes:

- The defined settlement boundary has been drawn to exclude any worthwhile housing sites apart from site 4. The plan should be more flexible to allow the growth of Galleywood (Park View Group).

Little Waltham (Map 23)

Summary of Representations – main issues and suggested changes:

- Remove Green Wedge notation from land between 148 The Street and The Warren, Braintree Road and allocate for housing (Mr Paul Hopkins).

No comments to other maps.

CCC response to the comments made
The site boundaries have been reviewed ahead of publishing the Pre-Submission Draft Policies Map. Boundaries are supported by the plan evidence base including the Landscape Sensitivity and Capacity Study and Employment land Review 2023.
Boundary changes have been made for site policy 16a (Hammonds Farm) including change to the eastern boundary to remove flood zones 2 & 3, removal of section of the northern parcel and revised Country Park boundary and inclusion of areas for future recreation use for SuDS and or biodiversity – see more information under the site policy.
Further expansion at West Chelmsford (Location 2) and Broomfield (Location 8) have been considered and tested but rejected due to their impact on and the capacity of the local road network and their relative remoteness from the strategic road network. Unbuilt allocated sites rolled forward from the adopted Local Plan are considered to represent sustainable and sound development allocations which have been previously subject to Independent Examination.
There are no proposed changes to the Green Belt. Proposed site allocations are focused at settlements outside the Green Belt, informed by a Settlement Hierarchy to select sustainable locations.
The site boundary for Site 15 Little Boyton Hall Farm is supported by the evidence base including the Landscape Sensitivity and Capacity Study and therefore no changes are proposed.
There is no evidence to suggest that a dual carriageway on the A132 and a northern bypass on the B1012 are required.
The Bicknacre DSB was proposed for extension on the Preferred Options Draft Policies Map to include the building, not the garden in relation to the approved planning application at Priory Pet & Country Supplies Store site, Horseshoe Farm. The garden has not been included in line with criterion 7 of the DSB methodology i.e. exclude land of predominantly open character at the edge of a settlement.
The DSB methodology guidance states that the Urban Area Boundary/DSB will normally be drawn approximately 25m from the rear and side elevations of houses with large gardens (as well as pubs, churches and community halls).
Chatham green is not included within the spatial strategy as an area of growth. Chatham Green has been considered and tested but rejected due to its relative isolation from existing services and facilities which would lead to higher reliance on

the use of the private car, landscape capacity and sensitivity concerns and capacity limits at the wastewater recycling facilities serving the area.
Minor adjustments are proposed to Defined Settlement Boundaries as part of the Pre-Submission Local Plan, and these are set out in the Urban Area and Defined Settlement Review Technical notes which forms part of the evidence base. These include changes around the proposed site allocations for new housing and employment. Chelmsford UAB will be extended with the inclusion of Location 16a (Hammonds Farm) and the employment site at Location 16b.
The Green Wedge is a locally important designation. Changes to the Green Wedge boundaries to allow development growth has been discounted as sufficient and suitable land elsewhere to meet development needs in a sustainable way.

Appendices

This section of the consultation document contains four appendices.

Key statistics:

Consultation point	Yes	No	Comments	Total number of responses
Appendix A – Schedule of Superseded Documents and Policies	0	1	1	1
Appendix B – Development Standards	0	0	0	0
Appendix C – Development Trajectories	0	0	2	2
Appendix D – Glossary	1	1	5	5

Appendix A – Schedule of Superseded Documents and Policies

Summary of Representations – main issues and suggested changes:

- One comment received which relates to Policy DM2.

Appendix B – Development Standards:

No comments.

Appendix C – Development Trajectories

Summary of Representations – main issues and suggested changes:

- It seems highly unlikely that housing sites expected to deliver within the next 12 months will do, so the plan needs to allocate more deliverable smaller sites (Opus Little Waltham Developments Ltd)
- There is no evidence that 3,000 new homes at Hammonds Farm will be completed within the plan period, with a potential further 1,000 homes beyond 2041. Although large sites can deliver more homes per year over a longer time, they also have longer lead-in times. To secure short-term immediate boosts in supply – a good mix of smaller sites is necessary (Taylor Wimpey).

Appendix D – Glossary

Summary of Representations – main issues and suggested changes:

- Add the following heritage related terms: listed buildings, conservation areas, scheduled monuments, registered parks and gardens and designated and non-designated heritage assets (Historic England)
- Add ‘constituted community organisation’ referred to in para. 1.43 (Essex County Council)
- Add terms related to specific cohorts for supported and specialist housing and accommodation such as older people and people with a learning disability (Essex County Council)
- Add a definition for Renewable and Low Carbon Energy (CNG Fuels Ltd)
- Add detail relating specifically to police, ambulance and fire and rescue facilities (Essex Police).

CCC response to the comments made
The Housing Trajectory and timings within it are established through the Council’s Five Year Housing Land Supply Methodology (April 2024). The Trajectory is updated annually, and the Pre-Submission Local Plan uses the latest available Housing Site Schedule (April 2024).
The heritage related terms proposed to be included were already in the Glossary but some have been updated or tweaked for clarity and consistency.
A definition has been added for ‘renewable and low carbon energy’ for completeness.
The definition of ‘infrastructure’ has been updated for clarity and completeness
It is not considered necessary to include the remaining terms suggested.

List of Appendices

Appendix 1: Organisations consulted and copies of key consultation materials

Appendix 2 - Essex Highways responses to highway and transportation representations (Preferred Spatial Approach - Response to Representations (December 2024))

Appendix 3 - Letter from Natural England regarding designating Areas of Outstanding Natural Beauty (December 2023)

Appendix 4 - Letter from Welbeck land regarding access to Barbrook Way (Site allocation 11c)

REVIEW OF CHELMSFORD LOCAL PLAN

REGULATION 18 – PREFERRED OPTIONS

Chelmsford City Council has published its Regulation 18 Preferred Options consultation on the Review of its adopted Local Plan. This consultation is accompanied by a Preferred Options Integrated Impact Assessment.

The consultation runs for six weeks from **10am on Wednesday 8 June 2024 until 4pm on Wednesday 19 June 2024.**

Regulation 18 Preferred Options Consultation Document

This Regulation 18 Preferred Option consultation is the second formal stage in the preparation of the review of the adopted Chelmsford Local Plan, and a further opportunity for residents, businesses, developers, and other interested parties to get involved.

This is a full draft of the reviewed Local Plan. It includes updated and new policies and sets out proposed sites where new homes, employment and other facilities could be located. It also contains policies that we would use to decide planning applications.

Regulation 18 Preferred Options Integrated Impact Assessment (IIA) Consultation Document

The adopted Local Plan was developed alongside a comprehensive Sustainability Appraisal (SA) and Habitats Regulations Appraisal (HRA) process. For this review process, the Council is including other aspects of sustainable development in an Integrated Impact Assessment (IIA), which covers the following:

- Sustainability Appraisal
- Strategic Environmental Assessment
- Habitats Regulations Assessment
- Health Impact Assessment
- Equality Impact Assessment.

We are consulting on the Integrated Impact Assessment which assesses the Preferred Options against a range of social, environmental and economic indicators.

Broomfield and Danbury Neighbourhood Plans Regulation 16 Consultations

We are also consulting on two Neighbourhood Plans. These have been developed by Broomfield and Danbury Parish Councils, and cover a wide range of issues such as landscape, transport, recreation, heritage, building design, and business. When they are adopted, both Neighbourhood Plans will become part of the Local Plan and will be used for planning decision making.

Find out more at:

www.chelmsford.gov.uk/broomfieldplan and www.chelmsford.gov.uk/danburyplan.

Where to view the documents and how to make representations:

View and comment online

You can view and comment on the consultation documents on the City Council's Consultation Portal at: www.chelmsford.gov.uk/planningpolicyconsult. This is our preferred method to comment.

If you have not used this system before or have any difficulties logging in, please see our guidance notes at: www.chelmsford.gov.uk/lp-portal-guide or call us on (01245) 606330.

View in person

Paper copies can be viewed at the City Council Customer Service Centre, Civic Centre, Duke Street, Chelmsford, CM1 1JE Monday to Friday 10am to 4pm (Please note we are closed on bank holidays).

Comment via email

Comments may be submitted by email: planning.policy@chelmsford.gov.uk
Please include your name and postal address in your message.

A specially designed response form can be downloaded at www.chelmsford.gov.uk/lp-review or made available on request by telephoning (01245) 606330 or emailing planning.policy@chelmsford.gov.uk.

Paper comments

You can submit your comments by post or deliver them in person in the following ways:

Post: Spatial Planning Services, Chelmsford City Council, Civic Centre, Duke Street, Chelmsford, CM1 1JE

By hand: Monday to Friday 10am to 4pm - Customer Service Centre, Civic Centre, Duke Street, Chelmsford, CM1 1JE (outside of these hours you can use the post box outside the Customer Service Centre).

If you do not have access to a computer, you can request paper copies. A charge will be made to cover printing and postage costs.

If you have difficulties making representations by e-mail or post due to a disability, please call us (01245) 606330.

How to find out more:

We will be hosting an online virtual exhibition for the Local Plan Preferred Options Consultation as well as having in-person exhibitions at the Council Offices. Here you can view our exhibition boards which contain a summary of the consultation (please note both forms of exhibition will have the same information available).

Local Plan Virtual exhibitions: Will be available to view via www.chelmsford.gov.uk/lp-exhibition

Local Plan in-person exhibition: Drop in exhibitions will take place at the Civic Centre, where you will be able to speak to a representative of the Council. There is no booking required to attend these exhibitions, which will take place at the Chelmsford City Council Chamber, accessed via Customer Service Centre, Civic Centre, Duke Street, Chelmsford, CM1 1JE on the following dates and times:

- Thursday 16 May 2024, 6pm to 8pm
- Friday 17 May 2024, 1pm to 3pm
- Saturday 18 May 2024, 10am to 12noon
- Thursday 13 June 2024, 6pm to 8pm
- Friday 14 June 2024, 1pm to 3pm
- Saturday 15 June 2024, 10am to 12noon (*with British Sign Language interpreter available on this date*).

Further Local Plan exhibitions will be on display as follows. These will not be staffed.

- Monday 20 May to Friday 24 May, 7am to 6.30pm at High Chelmer Shopping Centre, 15a Exchange Way, Chelmsford, CM1 1XB
- Thursday 30 May, Friday 31 May, Monday 3 June to Friday 7 June, Monday 10 June and Tuesday 11 June, 9am to 4pm, South Woodham Town Council, Champions Manor Hall, Hullbridge Road, SWF.

Local Plan Website: Please visit our website www.chelmsford.gov.uk/lp-review for further information on the consultation and the Local Plan review process.

Please note that any representations must be received by the Council no later than 4pm on Wednesday 19 June 2024. We are unable to accept anonymous representations and any comments received after the closing date cannot be accepted.

The Council will acknowledge receipt of your comments and fully consider them, although we will not enter into individual correspondence.

All duly-made comments will be published on the Council's Consultation Portal in accordance with the General Data Protection Regulations.

Section 149 of the Equality Act 2010 requires that the Council should avoid any form of discrimination and also foster good relations between different ethnic groups. Comments which are deemed to be discriminatory will be inadmissible and will not be accepted.

Jeremy Potter
Spatial Planning Services Manager

May 2024

Welcome

Thank you for visiting today

What is the Local Plan

Our Local Plan shapes future growth and development of Chelmsford City Council's area. It sets out a positive vision, identifies where and how new development should take place in the future as well as areas and land uses that will be protected.

Why are we reviewing the adopted Chelmsford Local Plan?

We adopted our current Local Plan in May 2020, and good progress is being made with implementing it.

We need to review the plan at least every five years to make sure it remains up to date and meets the changing needs for development growth to 2041.

This consultation is called the Preferred Options. It is the second of three stages of consultation towards updating the adopted Local Plan and has been prepared following the Issues and Options public consultation in 2022. It is your opportunity to feed into the review process and help to shape the plan and the future of your area.

Government requirements mean that we must provide more homes but our aim is to get the right type of development in the right places to meet the growing needs of local people and businesses, while protecting our environment.

If the Local Plan becomes out of date, the Council could have very little influence over the location of new development and supporting infrastructure. Sites could be promoted for development in locations that the Council and its communities want to protect, and which are not considered sustainable.

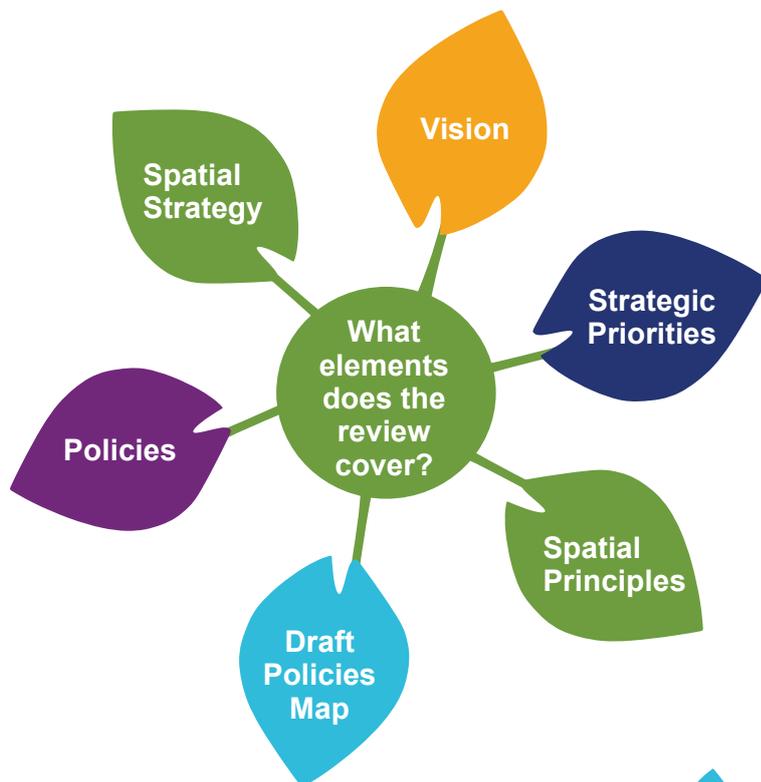

What is included in the consultation?

We want to make sure we cover the right issues and that all the suitable options for accommodating change are considered. The Preferred Options document is a full draft local plan, and includes the following key changes to the adopted Local Plan:

- Updated draft Strategic Priorities
- New draft Vision
- The amount of future development needed, including for homes and jobs
- Draft Spatial Strategy, including new site allocations, for accommodating this future development to 2041 and beyond
- Reviewed planning policies.

Many parts of the adopted Local Plan and its policies are still up to date and generally performing well, so they require no or only partial changes. Some changes and new policies are needed to reflect the latest national planning policy requirements, the Council's new ambitions and aspirations, and new development growth to 2041 and beyond.

The Local Plan is still evolving and no firm decisions have been made at this stage. However, we will not be reopening the debate on development sites which have already been allocated in the adopted Local Plan.

Preferred Options – Background and Challenges

Chelmsford is already an attractive place, comprising the City of Chelmsford, the town of South Woodham Ferrers, numerous villages within attractive countryside and a rich and diverse natural and historic environment. The growth that has taken place, over past 25 years, has helped shape Chelmsford into the successful place it is now.

Vital new infrastructure has been delivered alongside new homes, jobs, shops and leisure opportunities. Chelmsford's economy shows strengths across many sectors, but especially finance, health and education.

Taking into account the projected population increase, we are determined to ensure that future growth continues to take place in a sustainable way. This will bring further improvements to the quality of life for residents and much needed new community and transport infrastructure whilst at the same time protecting and enhancing the natural and historic environment.

The Local Plan will be forward looking, shaping the sustainable planning of Chelmsford's development and infrastructure needs not just in the foreseeable future but also providing a longer-term framework.

Previous consultation

We consulted on the first stage of reviewing the Local Plan, called the Issues and Options, from August to October 2022.

A total of 1,178 responses were received from 711 people or organisations, along with a petition. Responses came from a wide variety of groups and individuals including residents, developers, landowners and their agents, businesses and statutory bodies such as other Local Authorities and Parish/Town Councils.

We have published a document setting out a review of the consultation activity, a summary of the representations we received, and how these comments have been used to develop the Preferred Options document that we are consulting on now.

You can read this 'You said, We Did' feedback report on our website at www.chelmsford.gov.uk/lp-review.

All the comments received can also be viewed on the Council's planning policy consultation portal at www.chelmsford.gov.uk/planningpolicyconsult.

Challenges

Population – is predicted to increase by 11.5% to 202,300 by 2041. Demographic changes will shape the type and size of accommodation necessary over the Local Plan period.

Economy – 12.5% growth in jobs is anticipated by 2041. Due to its location and high education standards, Chelmsford is expected to accommodate a major share of the forecast new employment growth. Significant additional land for employment is proposed through the Local Plan.

Transport – Chelmsford occupies a key place on the regional road and rail network. New development can generate additional service provision and transport investment, through direct provision of facilities and/or financial contributions from developers.

Environment – Chelmsford enjoys a high quality environment including recreational space, parks, gardens, nature reserves and the designated Green Wedge – and over 1,000 Listed Buildings. Development proposals need to balance the needs of development with the preservation and enhancement of natural and historic assets.

Housing – The Council has declared a housing crisis, with many individuals and families in temporary or unsuitable accommodation, an often expensive private rented sector, and an overall limited supply of affordable housing. The Local Plan can help to address this through housing allocations, setting an appropriate mix of homes, and working with housing partners.

Climate change – A climate and ecological emergency was declared in 2019 to tackle the consequences of climate change and reduce our impact on the planet. Closer to home, the Local Plan can set requirements for zero carbon development, boost active and sustainable travel, require expansion of natural habitats, and improve water efficiency and flood risk management.

Communities – health inequalities and wellbeing opportunities can be tackled through the Local Plan by providing the conditions for stronger and more-connected communities.

What has been considered

The Spatial Strategy, setting out where new development should be located, takes the following as a starting point:

Strategic Priorities + Vision + Spatial Principles + Settlement Hierarchy

Our Strategic Priorities

Our Strategic Priorities are the key priorities which set the overall policy direction for the Local Plan.

Priorities for climate	Priorities for growth	Priorities for place
1. Addressing the Climate and Ecological Emergency	4. Ensuring sustainable patterns of development and protecting the Green Belt	7. Creating well designed and attractive places, and promoting the health and social wellbeing of communities
2. Promoting smart, active travel and sustainable transport	5. Meeting the needs for new homes	8. Delivering new and improved strategic and local infrastructure
3. Protecting and enhancing the natural and historic environment, and support an increase in biodiversity and ecological networks	6. Fostering growth and investment and providing new jobs	9. Encouraging resilience in retail, leisure, commercial and cultural development

The proposed updated Vision

Guiding Chelmsford's growth towards a greener, fairer and more connected community

The Local Plan Vision is a high-level guiding statement that sets out what is important for a place and how change will be managed in the future. It is a core part of a Local Plan and all the policies in the Plan will together deliver the Vision. We have reviewed the Local Plan Vision to reflect the new local priorities within the Council's Corporate Plan - Our Chelmsford, Our Plan. We have also considered other national and local priorities and Chelmsford's challenges and opportunities. It has also been simplified, shortened and purposefully aligned to the Corporate Plan, to make it easier to use.

Spatial Principles

The Spatial Principles will ensure that the Local Plan focuses growth in the most sustainable locations.

- a) Locate development at well-connected and sustainable locations
- b) Protect the Green Belt from inappropriate development
- c) Promote the use of suitable previously developed land for development
- d) Continue the renewal and enhance the vitality of Chelmsford City Centre and its Urban Area
- e) Focus development at the higher order settlements outside the Green Belt and respect the development pattern and hierarchy of other settlements
- f) Respect the character and appearance of landscapes and the built environment, and preserve or enhance the historic and natural environment and biodiversity
- g) Locate development to avoid or manage flood risk and reduce carbon emissions
- h) Ensure development is served by necessary infrastructure and encourage innovation
- i) Locate development to utilise existing and planned infrastructure effectively
- j) Ensure development is deliverable.

Settlement Hierarchy

Another factor for developing the Spatial Strategy and choosing areas for growth is the Settlement Hierarchy, which ranks towns and villages according to their size, function, characteristics and sustainability.

How much growth are we planning for?

The adopted Local Plan has allocated sites for development which are now coming forward, with Masterplans being approved and planning applications decided or in progress.

We need to work out how many more houses to plan for until 2041 using a formula set by the Government, called the standard method.

Housing requirement for Plan period	22,567 homes
Completions 2022-23	822
Adopted Local Plan allocations	12,677
Sites with planning permission	3,745
Windfall allowance (2026-2041)	1,461
New allocations needed	3,862

The Local Plan also plans to meet future employment needs by providing additional employment allocations.

Employment requirement for Plan period	162,646 sqm
Adopted Local Plan allocations	55,000 sqm
New allocations needed	107,646 sqm

New housing development, in particular, will be required to provide supporting infrastructure, services and facilities including for:

- Transport improvements including the New Beaulieu Park Rail Station, Chelmsford North East Bypass, Army and Navy junction improvements, and sustainable travel routes
- Community buildings, schools, healthcare, wellbeing measures, sports and cultural facilities
- Green infrastructure including new Country Parks, open space, green/blue networks, biodiversity and public realm improvements
- Preservation and enhancement of historic assets
- Flood risk management and utility infrastructure

New development allocations will be focused on three growth areas of Central and Urban Chelmsford, North Chelmsford and South and East Chelmsford. This distribution of growth is shown on the Key Diagram.

Discounted locations for development

Areas have been discounted as follows:

- The Green Belt, a national designation to prevent encroachment of urban growth into undeveloped areas. This covers almost 34% of the land in the south and west of Chelmsford, shaded in green on the Key Diagram
- The Green Wedge, a key local landscape designation of a green network which prevents urban sprawl and provides for wildlife and nature conservation, flood storage and active travel routes. This covers the river valleys where they pass into Chelmsford's urban area, shaded in hatched green on the Key Diagram
- Areas with known severe constraints/capacities including highways and education
- Areas where no land was being promoted through the Call for Sites exercise
- Areas which did not appear in the Issues and Options consultation document (for housing development).

Growth Area 1 – Central and Urban Chelmsford

Development in this area will deliver a number of benefits including green infrastructure and city greening, enhanced bus services, and opportunities to maximise walking and cycling into the City Centre. Previously developed land in the City Centre will be used to strengthen and expand the City as a major residential and employment centre.

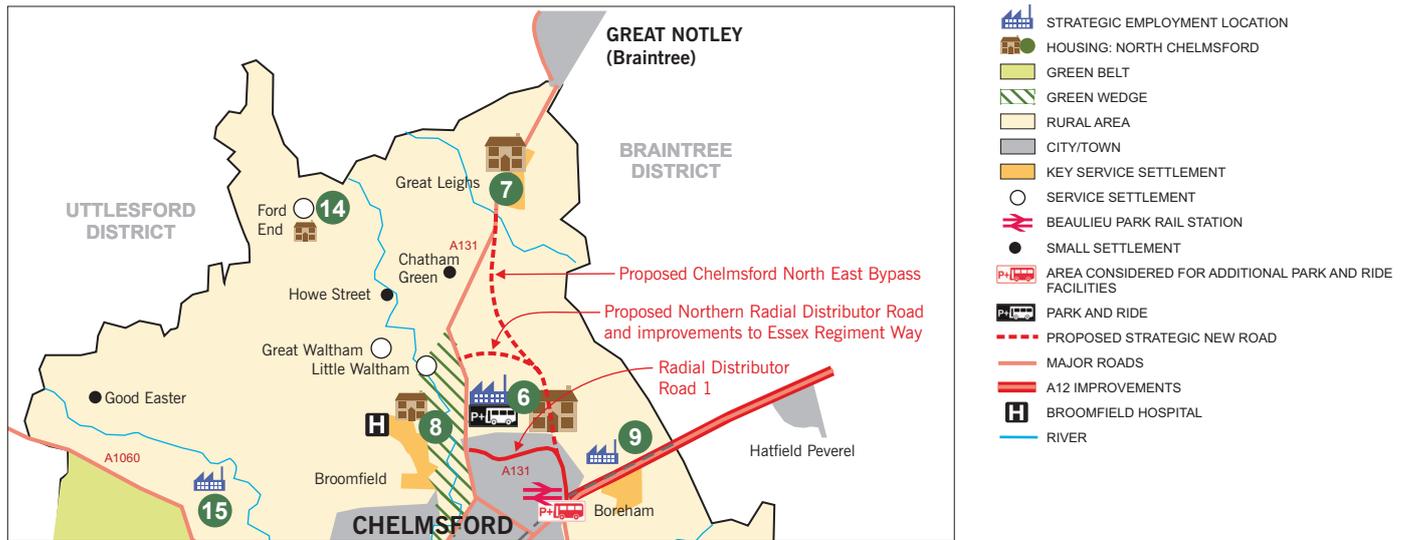

Growth Area 1 – Central and Urban Chelmsford		
Development Allocations	Total Homes	Employment Floorspace
1 Previously developed sites in Chelmsford Urban Area New sites: Meadows Shopping Centre/Surface Car Park Former Kay Metzeler, Brook Street Land between Hoffmanns Way and Brook Street Granary Car Park, Victoria Road Coval Lane Car Park Glebe Road Car Park	2,765	4,000sqm Use Class E(g)(i-ii)
2 West Chelmsford	880 plus 5 Travelling Showpeople Plots	
3a East of Chelmsford - Manor Farm	360	
3b East of Chelmsford - Land North of Maldon Road		5,000sqm Office/Business Park
3c East of Chelmsford - Land South of Maldon Road	109	
3d East of Chelmsford - Land North of Maldon Road	65	
4 Land North of Galleywood Reservoir	24	
5 Land surrounding Telephone Exchange, Ongar Road, Writtle	25	
Area Total	4,228	9,000sqm

New supporting infrastructure in Growth Area 1
Primary school
Four early years and childcare nurseries
Two new special schools
Country park
Access to Sandford Mill and a visitor centre
Financial contributions to provision of education, community facilities, healthcare, sports and recreation facilities, sustainable transport, local mobility hub and road network enhancements

Growth Area 2 – North Chelmsford

Development in this area will deliver a substantial number of new homes and employment over the Local Plan period, underpinned by a comprehensive package of new infrastructure including new schools, early years and childcare provision, green infrastructure and neighbourhood centres. Significant growth is proposed to Chelmsford Garden Community, along with extensions to two employment sites, and two small village allocations.

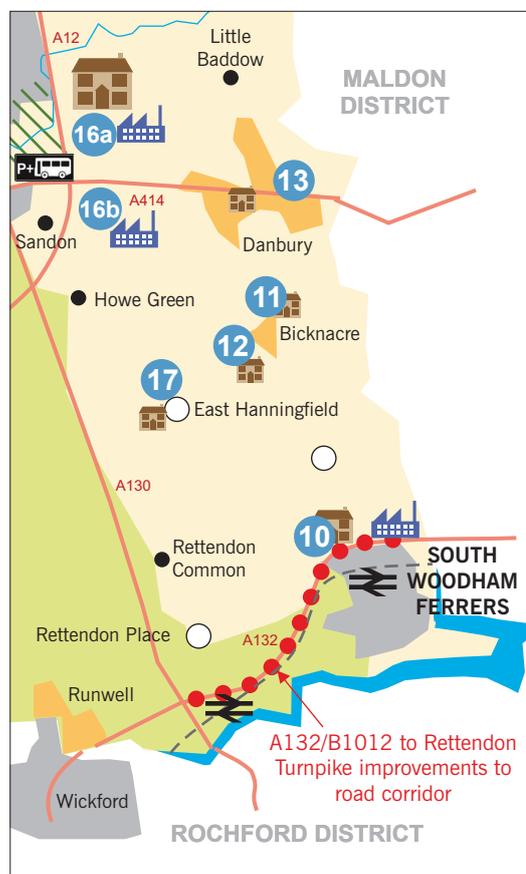

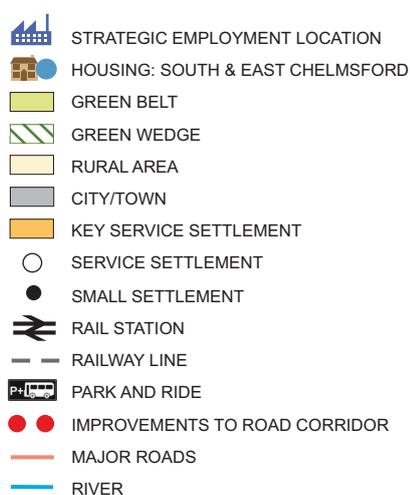

Growth Area 2 – North Chelmsford		
Development Allocations	Total Homes	New Employment Floorspace
6 North East Chelmsford (Chelmsford Garden Community)	6,250, plus 10 Traveller Pitches and 10 Travelling Showpeople Plots	56,946sqm Office/Business Park
7a Great Leighs - Land at Moulsham Hall	750, plus 5 Travelling Showpeople Plots	
7b Great Leighs - Land East of London Road	190	
7c Great Leighs - Land North and South of Banters Lane	100	
8 North of Broomfield	512	
9a New Site: Waltham Road Employment Area		3,500sqm B2/B8
14a New Site: Land west of Back Lane, Ford End	20	
14b New Site: Land south of Ford End Primary School, Ford End	20	
15 New Site: Little Boyton Hall Farm Rural Employment Area		6,000sqm B2/B8
Area Total	7,842	66,446sqm

New supporting infrastructure in Growth Area 2
Transport including Phase 1 of Chelmsford North East Bypass, Northern Radial Distributor Road, bus infrastructure
Six village/neighbourhood centres
Secondary school
Five primary schools
Seven early years and childcare nurseries
Country park
Financial contributions to Beaulieu Park Railway Station, provision of education and community facilities, healthcare, sports and recreation facilities, sustainable transport and road network enhancements

Growth Area 3 – South and East Chelmsford

Proposals include a high quality and comprehensively planned new Garden Community to the East of Chelmsford at Hammonds Farm, with a wide range of supporting uses. Also proposed is a strategic employment site, along with four smaller village allocations to contribute towards supporting existing village facilities and services.

Growth Area 3 – South and East Chelmsford		
Development Allocations	Total Homes	New Employment Floorspace
16a New Site: East Chelmsford Garden Community (Hammonds Farm)	3,000 (plus 1,500 homes post 2041), plus 20 Traveller Pitches	43,000sqm Business Space
16b New Site: Land adjacent to A12 Junction 18		43,000sqm Business Space
10 North of South Woodham Ferrers	1,220, plus 5 Travelling Showpeople Plots	1,200sqm Business Space
11a South of Bicknacre	42	
11b New Site: Land at Kingsgate, Bicknacre	20	
11c New Site: Land west of Barbrook Way, Bicknacre	20	
12 St Giles, Bicknacre	32	
13 Danbury	100	
17a New Site: Land north of Abbey Fields, East Hanningfield	15	
17b New Site: Land east of Highfields Mead, East Hanningfield	20	
Area Total	4,469	87,200sqm

New supporting infrastructure in Growth Area 3
Secondary school, up to four primary schools and eight early years and childcare nurseries
Neighbourhood centres
Transport including Bus Based Rapid Transit infrastructure, safe multi-user access routes, and capacity improvements to A132
Country park
Financial contributions to provision of education and community facilities, healthcare, sports and recreation facilities, sustainable transport and road network enhancements

New Proposed Garden Community

16a – East Chelmsford Garden Community (Hammonds Farm)

We are proposing to allocate land for a new East Chelmsford Garden Community. This is centred on Hammonds Farm, to the east of the A12 and north of the A414 Maldon Road.

New homes including affordable	3,000 (plus 1,500 homes post 2041), and 20 Traveller Pitches
New employment floorspace	43,000sqm
Supporting infrastructure	Country Park and significant new multi-functional green infrastructure and landscape
	Mixed use centres for food and other shopping, community uses, healthcare provision
	All through school, potential sixth form centre, three primary schools, six early years and childcare nurseries
	New access junction from A414 (shared with 16b); pedestrian and cycle connections; mobility hubs and bus transport; safe pedestrian/cycle access routes under and over the A12, including to Park and Ride site, and Beaulieu Park Rail Station
Historic and natural environment	Preserve the Conservation Areas and listed buildings
	Protect and retain the protected lanes and reinstate historic landscape features
	Conserve Local Wildlife Sites, Nature Reserves, ancient woodlands and SSSI
	Provide sustainable drainage and flood risk management
	Provide a minimum of 20% biodiversity net gain

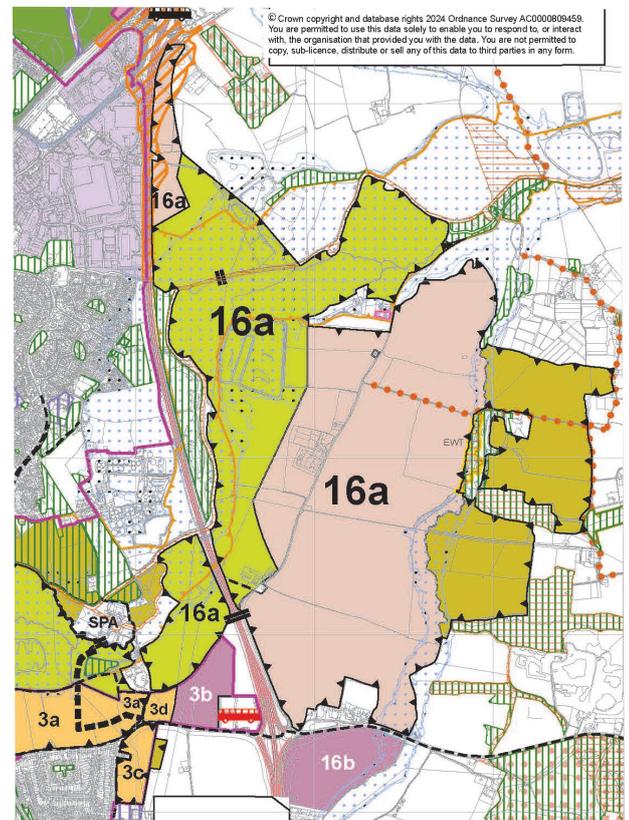

High quality garden community development will be provided through Garden City Principles. These include:

- 🍃 community and stakeholder involvement in design and delivery with long-term governance and stewardship arrangements
- 🍃 meeting the housing needs of all local people
- 🍃 providing integrated and sustainable transport systems

16b – Land adjacent to A12 Junction 18 – Employment Area

We are also proposing to allocate a separate area of land for new employment uses adjacent to Junction 8 of the A12, south of the A414.

New employment floorspace	43,000sqm for mixed employment types
Supporting infrastructure	New access junction from A414 (shared with 16a) plus multi-user crossings
	Safe pedestrian/cycle access connections including to Park and Ride site, Hammonds Farm, bus stops and Danbury
Historic and natural environment	Preserve Danbury Conservation Area
	Retain boundary trees, plant new trees and extensive landscape buffers

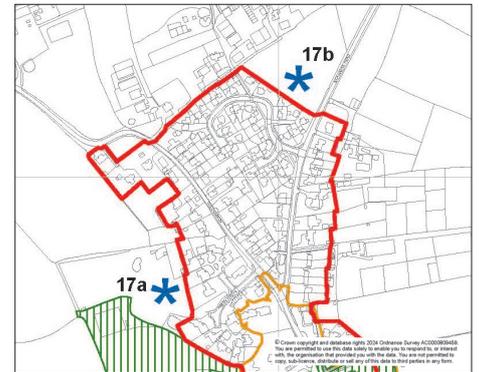

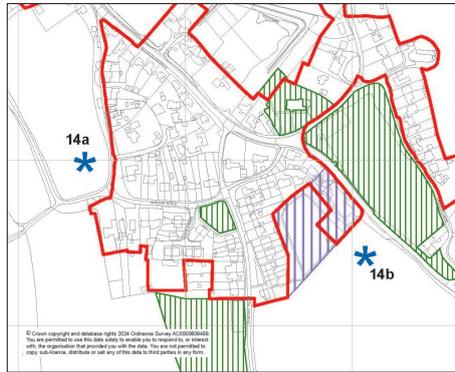

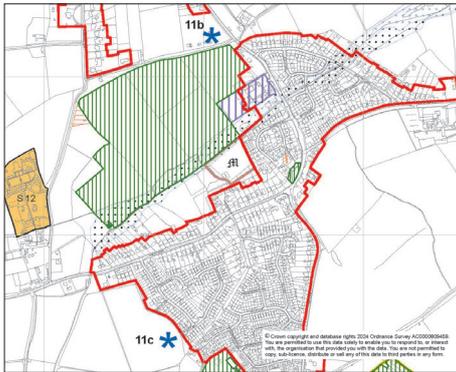

Proposals for Villages

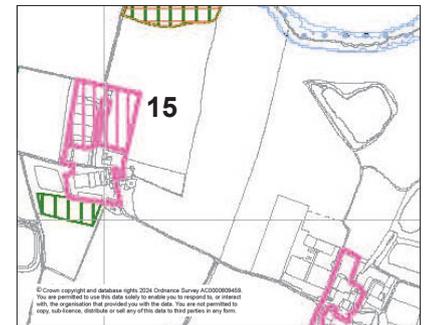

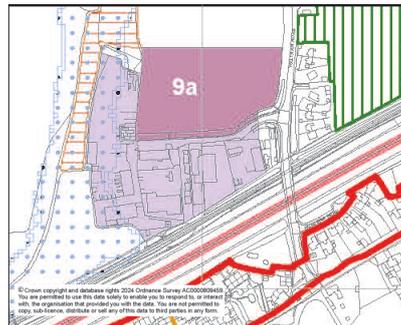

Limited development is proposed in some villages including Bicknacre, Ford End, East Hanningfield, Boreham and Boyton Cross.

We aim to address the Government's requirement to allocate some smaller sites which can be built earlier in the Local Plan period and give smaller development companies the opportunity to build locally. Bicknacre, Ford End and East Hanningfield have primary schools and community facilities, making them suitable for small scale development, which will include affordable homes.

Village	Site	Proposal
Bicknacre	11b Land at Kingsgate, Bicknacre Road	Around 20 homes
	11c Land West of Barbrook Way	Around 20 homes
Ford End	14a Land West of Back Lane	Around 20 homes
	14b Land South of Ford End Primary School	Around 20 homes
East Hanningfield	17a Land North of Abbey Fields	Around 15 homes
	17b Land East of Highfields Mead	Around 20 homes

We also propose to expand two employment sites at Little Boyton Hall Farm, Boyton Cross and Waltham Road, Boreham. Expansion of these well-established employment sites will provide rural employment opportunities and support the sustainable growth and expansion of business in rural areas.

Site	Proposal
9a Waltham Road Employment Area, Boreham	3,500sqm B2/B8 use (general industrial, and storage and distribution)
15 Little Boyton Hall Farm Rural Employment Area, Boyton Cross	6,000sqm B2/B8 use (general industrial, and storage and distribution)

What else is in the Local Plan?

We use the Local Plan policies to deliver the Strategic Priorities (what we want to achieve overall) and the Spatial Strategy (locations for growth). The different types of policies are set out below.

Strategic Policies	High level policies including for climate change, social inclusion, the natural environment, infrastructure, and housing requirements
NEW	Proposed new Strategic Policies: Health and Wellbeing, Creating Successful Places, Connectivity and Travel, Future of Chelmsford City Centre
Site Policies	Covering the amount of development, design guidance, and infrastructure that must be provided
Development Management Policies	All planning applications are considered against these policies to make sure they provide what is needed and protect what is important
NEW	Proposed new Development Management Policy: Net Zero Carbon Development (In Operation)
Special Policy Areas	For Broomfield Hospital, Chelmsford City Racecourse, Hanningfield Reservoir, RHS Hyde Hall Gardens, Sandford Mill, ARU Writtle
Development Standards	For all new residential development including privacy, open space, and recycling and waste guidance
Policies Map	All the proposals shown on a map

Other consultations: Integrated Impact Assessment (IIA)

The Local Plan is subject to an ongoing process of assessing its proposals against a sustainability framework. This covers the potential environmental, social, economic and health performance of the Local Plan and any reasonable alternative approaches.

Other consultations: Neighbourhood Plans

Neighbourhood Plans have been developed by Broomfield and Danbury Parish Councils, and cover a wide range of issues such as landscape, transport, recreation, heritage, building design, and business. When they are adopted, both Neighbourhood Plans will become part of the Local Plan and will be used for planning decision making.

Both Neighbourhood Plans are proposing to allocate land for development as follows:

Broomfield	Community-led housing at Saxon Way with open space and a potential GP surgery A community facility for non-residential day facilities and local/informal green space at Broomfield Place You can find out more at: www.chelmsford.gov.uk/broomfieldplan
Danbury	Around 93 homes across five sites at Sandpit Field (around 10 homes) Tyndales Farm West (around 65 homes) South of Jubilee Rise (around 2 homes) Woodhill Road (around 14 homes) Mayes Lane (around 2 homes) You can find out more at: www.chelmsford.gov.uk/danburyplan

How to comment

Making your comments through the consultation portal allows you to download the consultation documents and sign up for alerts to future consultation events.

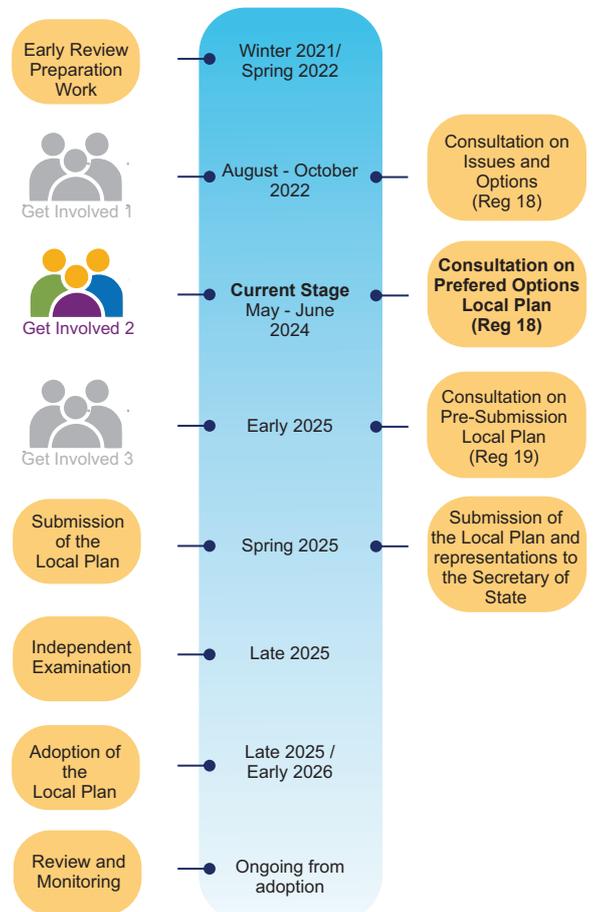

You can also make comments:

By email to planning.policy@chelmsford.gov.uk
By post to Spatial Planning Services, Chelmsford City Council, Civic Centre, Duke Street, Chelmsford, CM1 1JE.

The consultation on the Preferred Options documents runs for six weeks from 10am on Wednesday 8 May to 4pm on Wednesday 19 June 2024.

What happens next

We will consider all the comments received alongside further studies, the findings of the IIA and national planning policy to finalise the Pre-Submission Local Plan, for public consultation in early 2025.

Chelmsford Local Plan Review

Chelmsford City Council is consulting on a review of its adopted Local Plan with the Preferred Options consultation running from **8 May 2024 to 19 June 2024**.

View our exhibition to find out more. There are also links to the main consultation material.

This is the second of three stages of consultation towards updating the adopted Local Plan, and has been prepared following initial consultation in 2022. We want to make sure we cover the right issues and that all the suitable options for accommodating change are considered. This is your opportunity to feed into the review process and help to shape the plan and the future of your area.

Review of the Chelmsford Local Plan - Get involved now!

We are reviewing our Local Plan which sets out how much new development is needed and identifies land for housing, schools, shops and jobs as well as areas for protection, such as open space and sites important for wildlife.

The Council's Local Plan was adopted in 2020. We need to review the plan at least every five years to ensure that it remains up to date and continues to meet our needs for development growth to 2041 and beyond.

We undertook the first stage of consultation in 2022 and have carefully considered all the responses alongside updated evidence, national planning policy, new local priorities, and monitoring data to progress the Preferred Options stage.

The Preferred Options document is a full draft Local Plan and includes:

- updated and new Strategic Priorities.
- proposed new sites where new homes, jobs and other facilities could be located.
- new and updated policies that the Council would use to decide planning applications.

We are consulting on the Preferred Options Local Plan from 10am on Wednesday 8 May 2024 until 4pm on Wednesday 19 June 2024. We are inviting comments on the plan so residents can influence it and ensure that it is fit for purpose to meet local needs. We are not reopening any debates about already adopted allocated sites.

For more information go to www.chelmsford.gov.uk/lp-review

Why should I get involved?

I want to make sure Chelmsford has the best services and facilities

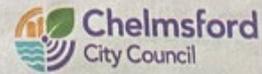

I want a say over how to improve my local area

I want a say over where new homes will be built

I want a say on local planning policies

I want to influence decision-making in my area

I want to make sure Chelmsford continues to be a place where I enjoy living and working

SAVE MALDON'S MEDICAL SERVICES-
REF. ST PETER'S HOSPITAL

In a recent meeting held on 19th March, the South Woodham Ferrers Health and Social Care Groups presented concerning evidence to the NHS ICB regarding the potential closure of St Peter's Hospital. We are deeply troubled by the implications of these views which were expressed for our community's access to essential healthcare services. These views are not widely held by others in the Maldon District and believe South Woodham Ferrers would support the retention of St Peter's Hospital Services.

Save Maldon's Medical Services, a grassroots organization dedicated to preserving healthcare access in the whole Maldon District, is spearheading efforts to prevent the closure of St Peter's Hospital Services until a viable alternative, such as a new NHS Community Hospital in Maldon, can be provided.

It is paramount that we rally support from every household in South Woodham Ferrers to ensure that our voices are heard. Dispersing outpatient services across different locations such as Banks or other commercial buildings which might be available, potentially even outside the Maldon District, would be detrimental to the health and wellbeing of our community.

I urge you to amplify our message and raise awareness about this crucial issue. By shining a spotlight on the efforts of Save Maldon's Medical Services and the concerns of South Woodham Ferrers residents, we can work together to safeguard the future of St Peter's Hospital Services. Please write to your Member of Parliament explaining your concerns that services must be maintained in St Peter's for the foreseeable future and/or until a cohesive plan for locating these services is delivered.

Many residents have made their feelings known and we thank them, and Mayor Donna Eley, for their continued support. You can follow Save Maldon's Medical Services on Facebook where we have our 3000 people already involved.

Steve Rogers
On behalf of SMMS

REVIEW - PREFERRED OPTIONS
CONSULTATION

Chelmsford

Chelmsford City Council is consulting on a review of its adopted Local Plan with the Preferred Options consultation running from 8 May 2024 to 19 June 2024.

This is the second of three stages of consultation towards updating the adopted Local Plan, and has been prepared following initial consultation in 2022. The City Council wants to make sure the Plan covers the right issues and that all the suitable options for accommodating change are considered. The consultation is your opportunity to feed into the review process and help to shape the plan and the future of our area.

Chelmsford City Council adopted the current Local Plan in May 2020. It needs to review the plan at least every five years, to make sure it remains up to date and meets the changing needs for development to 2041. The review considers new national policy and changing local people.

The Preferred Options Local Plan is a full draft Local Plan. It includes updated and new Strategic Priorities, site allocations for new homes and employment, and policies that will be used to decide planning applications.

Chelmsford Local Plan Review – Preferred Options Consultation

Chelmsford City Council is consulting on a review of its adopted Local Plan with the Preferred Options consultation running from 8 May 2024 to 19 June 2024.

This is the second of three stages of consultation towards updating the adopted Local Plan, and has been prepared following initial consultation in 2022. The City Council wants to make sure the Plan covers the right issues and that all the suitable options for accommodating change are considered. The consultation is your opportunity to feed into the review process and help to shape the plan and the future of our area.

Chelmsford City Council adopted the current Local Plan in May 2020. It needs to review the plan at least every five years, to make sure it remains up to date and meets the changing needs for development to 2041. The review considers new national policy and changing local circumstances. The aim is to get the right type of development in the right places to meet the growing needs of local people and businesses, while protecting our environment.

The Preferred Options Local Plan is a full draft Local Plan. It includes updated and new Strategic Priorities, site allocations for new homes and employment, and policies that will be used to decide planning applications.

What is proposed in South Woodham Ferrers?

The Preferred Options Local Plan carries forward the allocation of Land North of South Woodham Ferrers from the adopted Local Plan, called Strategic Growth Site 10. This is identified for 1,220 new homes, around 1,200sqm of business floorspace and a Travelling Showpeople site alongside supporting infrastructure including a new Neighbourhood Centre and early years and childcare nurseries. No other sites are proposed for allocation in South Woodham Ferrers.

Chelmsford City Council is inviting comments on the Preferred Options Local Plan to ensure that it is fit for purpose to meets local needs. It is not reopening any debates about the principle of already adopted allocated sites. The Council is also consulting on an Integrated Impact Assessment which assesses the impacts of the Preferred Options Local Plan in terms of key sustainability issues.

How can I get involved?

You can view and comment on the consultation documents during the consultation period on our specially designed consultation portal www.chelmsford.gov.uk/planningpolicyconsult

Why suffer in silence

Hello, my name is Sonia & I'm a Counsellor & Hypnotherapist. My business is home based in South Woodham Ferrers.

Counselling can be used to treat a range of issues including depression, anxiety, grief, relationship issues, trauma & addiction. I offer clients a safe & confidential space in order to explore their presenting issue/s, helping them to identify possible root causes too. I also share coping strategies & small lifestyle changes that can help manage symptoms.

In my experience Hypnotherapy can also be beneficial to help manage depression & anxiety, making a direct change to the subconscious mind where all events, experiences & emotions are stored. I also offer hypnosis for weight loss.

This sets out future growth for Chelmsford up to 2041 and includes proposed site allocations for new residential and employment-led development. Site 1aa on the map shown is a **new** potential site allocation in the Preferred Options Local Plan.

Read and comment on the plan at www.chelmsford.gov.uk/planningpolicyconsult. Paper copies can also be viewed at the City Council's Customer Service Centre, Civic Centre, Duke Street, Chelmsford, CM1 1JE, Monday to Friday 10am to 4pm (closed on bank holidays).

All information on this consultation is available at www.chelmsford.gov.uk/lp-review.

(THIS IS NOT A PLANNING APPLICATION)

To find out more and discuss the consultation with a Planning Officer visit an in-person exhibition at the Civic Centre, Duke Street, Chelmsford on:

- Thursday 16th May 6pm-8pm
- Friday 17th May 1pm-3pm
- Saturday 18th May 10am-12pm
- Thursday 13th June 6pm-8pm
- Friday 14th June 1pm-3pm
- Saturday 15th June 10am-12pm (British Sign Language interpreter available on this day)

Please check our website www.chelmsford.gov.uk/lp-review for full details of all exhibitions and any changes to the timetable before making a special trip.

All representations must be received by 4pm on 19 June 2024.

If you require further assistance please call 01245 606330

Local Plan Review Newsletter

NUMBER 2 May 2024

What is a Local Plan?

A Local Plan shapes future growth and development of the City Council's area. It sets out a positive vision, identifies where and how new development should take place in the future as well as areas and land uses that will be protected.

Why are we reviewing the adopted Chelmsford Local Plan?

We adopted our current Local Plan in May 2020 and good progress is being made with implementing it. We need to review the plan at least every five years to ensure that it remains up to date and continues to meet our needs for development growth to 2041 including new homes, employment opportunities, and facilities for local people such as new schools, healthcare provision and upgraded transport infrastructure.

Government requirements mean we must provide more homes but our aim is to get the right type of development in the right places to meet the growing needs of local people and businesses while protecting our environment. If the Local Plan becomes out of date, the Council could have very little influence over the location of new development and supporting infrastructure.

What stage is the review at?

We are currently at the Preferred Options stage in the plan review process, with the plan due to

be adopted in 2025/26. Many people and organisations commented on the first Issues and Options stage consultation in 2022. All the responses have been carefully considered and used to progress the Preferred Options alongside an updated plan evidence base, national planning policy, new local priorities, and monitoring data.

A 'You Said We Did' feedback report and the evidence base of technical studies can be read on our website: www.chelmsford.gov.uk/lp-review

The Preferred Options document is a full draft local plan. It includes updated and new policies and sets out proposed sites where new homes, jobs and other facilities could be located, and contains policies that the council would use to decide planning applications.

We are inviting comments on the plan so residents can influence it and ensure that it is fit for purpose to meet local needs. We are not reopening any debates about the principle of already adopted allocated sites.

New Development: Where and how much?

The Preferred Options plan follows the approach in the adopted Local Plan by continuing to focus new housing and employment growth to the most sustainable locations in three Growth Areas. The existing site allocations in the adopted plan which are not yet built are carried forward in the Preferred Options plan. Many of these sites are now coming forward, with masterplans being approved and planning applications decided or in progress and some sites have started building.

To meet additional growth needs to 2041 it is estimated that we need to allocate new sites for around 3,862 new homes with provision made for a further 1,500 new homes beyond 2041, and around 162,646sqm of new employment floorspace. This is over and above the new homes and employment land in the current plan. To accommodate this identified additional growth, we have reviewed the Spatial Strategy and are proposing new development sites. The preferred Spatial Strategy (Policy S7) shown in the consultation document has been informed by the outcome of the Issues and Options consultation and further evidence. **We are not considering growth in the Green Belt.**

Central and Urban Chelmsford

Continued focus on strengthening the city as a centre for residential, employment and retail. Two existing allocations carried forward to the west and east of Chelmsford maximise cycling and walking opportunities into the City Centre.

1 Previously developed sites in Chelmsford Urban Area

- 2,765 homes (of which around 750 are on proposed new site allocations)

- 9,000sqm Business space

2 West Chelmsford

- 880 homes
- 5 Travelling Showpeople Plots
- Primary school and 2 nurseries
- Neighbourhood Centre

3a-3d East of Chelmsford

- 3a Manor Farm: 360 homes
- 3b Land North of Maldon Road: 5,000sqm Office/Business Park
- 3c Land South of Maldon Road: 109 homes
- 3d Land North of Maldon Road: 65 homes
- Country Park
- New pedestrian and cycle bridge to Sandford Mill

4 Land North of Galleywood Reservoir

- 24 homes

5 Land surrounding Telephone Exchange, Ongar Road, Writtle

- 25 homes

North Chelmsford

North Chelmsford (Chelmsford Garden Community) will continue as a key area for new neighbourhoods and employment opportunities. New smaller allocations at Ford End and extensions to two existing employment areas. Existing allocations carried forward at Great Leighs and Broomfield.

6 North East Chelmsford (Chelmsford Garden Community)

- 6,250 homes

- 10 Gypsy and Traveller Pitches

- 10 Travelling Showpeople Plots
- 56,946sqm Office/Business Park
- Country Park
- Chelmsford North East Bypass
- 4 Neighbourhood Centres
- 1 all-through school
- 3 primary schools with nurseries
- 2 nurseries

7a-7c Great Leighs

- 7a Land at Moulsham Hall: 750 homes
- 5 Travelling Showpeople Plots
- 7b Land east of London Road: 190 homes
- 7c Land North and South of Banter's Lane: 100 homes
- Neighbourhood Centre
- Primary school with nursery

8 North of Broomfield

- 512 homes
- Neighbourhood Centre
- Nursery

9a Waltham Road Employment Area

- 3,500sqm B2/B8 Use

14a & 14b Ford End

- 14a Land west of Back Lane, Ford End: 20 homes
- 14b Land south of Ford End Primary School: 20 homes

15 Little Boyton Hall Farm Rural Employment Area

- 6,000sqm B2/B8 Use

South and East Chelmsford

Proposals include a new garden community at East Chelmsford (Hammonds Farm), and a strategic employment site. New smaller allocations in Bicknacre and East Hanningfield. Existing allocations carried forward at South Woodham Ferrers, Bicknacre and Danbury.

10 North of South Woodham Ferrers

- 1,220 homes
- 5 Travelling Showpeople Plots
- 1,200sqm Business Space
- Neighbourhood Centre
- 2 nurseries and potential primary school

11a-c Bicknacre

- 11a South of Bicknacre: 42 homes
- 11b Land at Kingsgate: 20 homes
- 11c Land west of Barbrook Way: 20 homes

12 St Giles, Bicknacre

- 32 homes

13 Danbury

- 100 homes

16a East Chelmsford Garden Community (Hammonds Farm)

- 3,000 homes to 2041 (plus 1,500 homes post 2041)
- 20 Gypsy and Traveller Pitches
- 43,000sqm Business Space
- Country Park
- Neighbourhood Centres
- 1 all-through school
- 2 primary schools and nursery
- 3 nurseries

16b Land adjacent to A12 Junction 18

- 43,000sqm Business Space

17a & 17b East Hanningfield

- 17a Land North of Abbey Fields: 15 homes
- 17b Land east of Highfield Mead: 20 homes

Highlighted text: Proposed new development allocations in the review of Local Plan.

Local Plan policies

There are a number of new and updated policies included within the Preferred Options Local Plan. These cover many topics including housing, climate change, economy, environment, health and wellbeing, travel and transport, heritage, and design. We are not proposing to fundamentally change the general approach in the adopted Local Plan, but we want to take on board updated information and address some of our major challenges including acting on the climate emergency, responding to the housing affordability crisis and strengthening community ties.

It is important to note that the Local Plan is still evolving, and no firm decisions have been made at this stage. We will continue to gather evidence throughout the Local Plan preparation and the Preferred Options consultation will be an important aspect of this. **All the evidence and comments received will be used to prepare the final draft version of the Local Plan.**

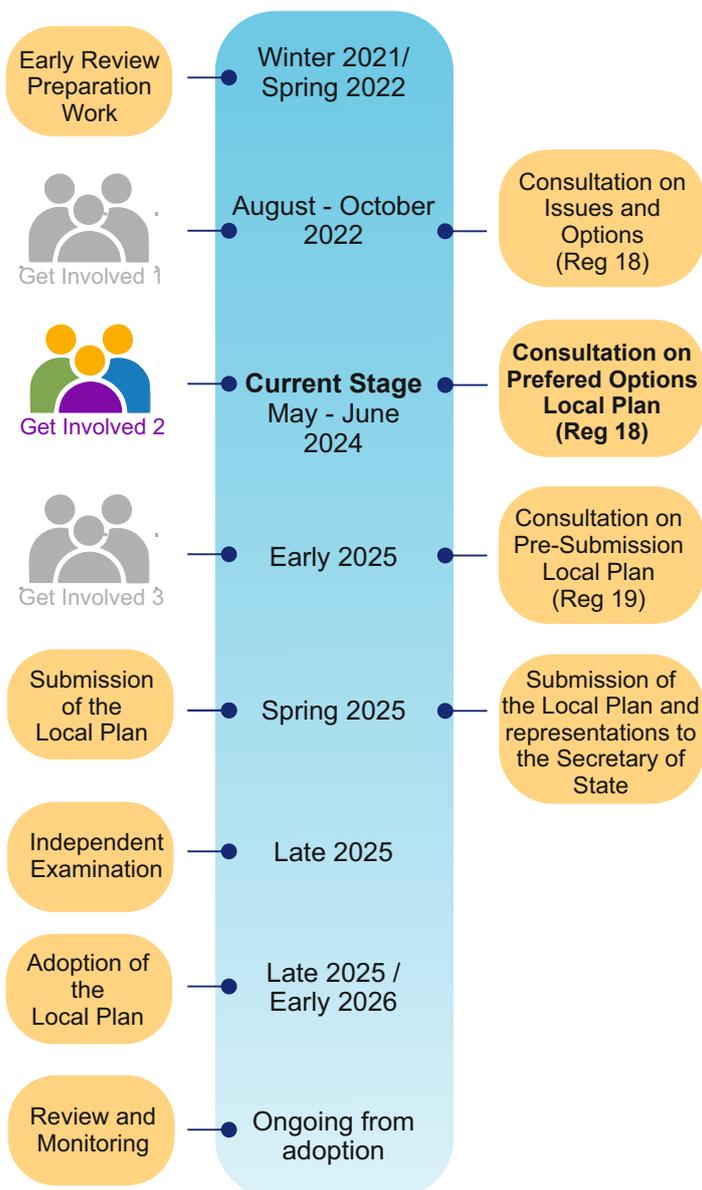

What is the Integrated Impact Assessment (IIA)?

The IIA identifies the key sustainability issues for the Review of the Local Plan. These feed into a framework against which the proposals have been assessed. It covers the potential environmental, social, economic and health performance of the Local Plan and any reasonable alternatives. The IIA includes:

- Sustainability Appraisal (SA)
- Strategic Environmental Assessment (SEA)
- Habitats Regulations Assessment (HRA)
- Health Impact Assessment (HIA)
- Equality Impact Assessment (EqIA)

We will be consulting on the IIA as part of the Preferred Options consultation.

What is the Local Plan timetable?

Where can I view the consultation documents?

The consultation documents will be available to view and comment on via our consultation portal at www.chelmsford.gov.uk/planningpolicyconsult. They will be available to read during normal opening hours at the Council's Customer Service Centre in Chelmsford.

There is an interactive online exhibition available during the consultation period – this can be found at www.chelmsford.gov.uk/lp-review. We will also be holding in-person exhibitions at Civic Centre, Duke Street, Chelmsford. These exhibitions will provide an opportunity for you to find out more and discuss the consultation with a Planning Officer. These will be held on

- Thursday 16th May 2024 6pm - 8pm
- Friday 17th May 2024 1pm - 3pm
- Saturday 18th May 2024 10am - 12pm
- Thursday 13th June 2024 6pm - 8pm
- Friday 14th June 2024 1pm - 3pm
- Saturday 15th June 2024 10am - 12pm (with British Sign Language interpreter available)

Consultation dates and how to have your say

The consultation on the Preferred Options documents runs for a period of six weeks from 10am on Wednesday 8 May 2024 to 4pm on Wednesday 19 June 2024. Comments made before or after these dates will not be considered.

You can respond:

- Via our consultation portal at www.chelmsford.gov.uk/planningpolicyconsult.
- By email to planning.policy@chelmsford.gov.uk
- By post to Spatial Planning Services, Chelmsford City Council, Civic Centre, Duke Street, Chelmsford, CM1 1JE.

Next Steps

All comments will be used to inform the next stage of the process, the Pre-Submission Local Plan. We plan to consult on this in 2025.

Preferred Spatial Approach – Response to Representations

The following table documents a summary of key representations made during the summer 2024 consultation on the transport modelling evidence base for Chelmsford City Council’s Local Plan Review Preferred Spatial Approach, along with Essex Highways’ response to queries raised.

Table Item ID:	Summary Point:	Summary of detailed representation made:	Essex Highways Modelling Response:
Comment by: Wates Developments and Hammonds Estates LLP – Comment ID: PO24-4653			
1.	Clarity needed on the requirement for CNEB contributions	It is unclear currently from the council’s current transport evidence base why contributions to the CNEB are required, as this is not indicated by the results of the Transport Testing of the Preferred Option to 2041 (dated March 2024) and the Local Junction Capacity Assessment Modelling (dated May 2024); rather, the March 2024 document concludes that the completion of the CNEB is only required once capacity issues along the A12 mainline are addressed. On this basis, the requirement for the CNEB is associated primarily with background increases in traffic using the A12, rather than development trips at East Chelmsford Garden Community (Hammonds Farm). Clarification of this point, and therefore the robustness of this the policy requirement for S106 contributions towards this infrastructure, are sought and should be addressed more fully in the next iteration of the Plan.	Essex Highways understand that CCC and ECC are reviewing the funding options for delivery of the CNEB. Whilst the strategic modelling undertaken to support the Local Plan transport evidence base suggests that the distribution of trips between Hammonds Farm and the CNEB will be small (<10%), approximately one third of development trips to/from Hammonds Farm are shown in the forecast modelling to access the A12 Junction 19 Boreham Interchange, at the southern end of the CNEB.
Comment by: Wates Developments and Hammonds Estates LLP – Comment ID: PO24-4743			
2.	Disagreement on early conclusions regarding requirements for Hammonds Farm	Do not agree with some of the early conclusions about the requirements for the East Chelmsford Garden Community (Hammonds Farm). The executive summary on Page 11 of the Transport Appraisal of the Preferred Option (March 2024) states that: “Critical to the planning application process should be a requirement to ensure that background traffic flows along the A414 are not unreasonably delayed by the addition of development trips. This may well require significant highway measures in the vicinity of the site access”.	The wording used in the Transport Appraisal of the Preferred Spatial Approach does not state that highway measures should be implemented to ensure a nil detriment impact of development at Hammonds Farm. Rather, that there is an expectation that sustainable and active mode measures, along with potential highway capacity improvements will be identified as part of the planning application process to mitigate against “unreasonable delays” to these modes –

Preferred Spatial Approach – Response to Representations

Table Item ID:	Summary Point:	Summary of detailed representation made:	Essex Highways Modelling Response:
		<p>We disagree with this statement as it is not consistent with NPPF Paragraph 115, where the key test relates to severity of impact, and not to protecting against “unreasonable delays” or providing “nil detriment” to motorists. Even if subsequent modelling evidence shows an increased period over which drivers would experience delay, it is not the aim of national or local policy to protect the convenience of commuting car drivers.</p>	<p>which could ‘help to achieve’ a nil detriment impact.</p> <p>By “unreasonable delays” we (Essex Highways) mean, for example, a notable increase in journey times for background traffic flows - including buses and emergency service vehicles and/or delays that lead to a notable worsening of noise and air quality along the A414 corridor.</p>
<p>Comment by: Walshingham Planning, on behalf of Little Baddow, Sandon, Boreham & Danbury Parish Councils – Comment ID: PO24-8576</p>			
3.	5.1.10 Uncertainty in Hammonds Farm forecast beyond 2041	<p>Both December 2023 and March 2024 evidence documents refer to uncertainty in forecasting forward beyond 2041 and therefore do not test more than 3,000 dwellings at East Chelmsford Garden Community (Hammonds Farm). There will always be uncertainty which requires addressing in forecasting, and whilst development locations beyond this Local Plan Review to 2041 are not known, it is considered that a sensitivity assessment of the East Chelmsford Garden Community in 2041 with 4,500 dwellings could provide an initial indication of the scale of impacts and mitigation required and may be helpful during the next stage of Local Plan evidence and formulation of the council’s IDP.</p> <p>Trip Generation: The Strategic Growth Site Policy 16a (Hammonds Farm) includes residential proposals for up to 4,500 dwellings to the period 2048. The Chelmsford VISUM model is only forecast to 2041 and allows for only 3,000 dwellings at the Hammonds Farm site. Again, the impact on the local highway network and at key junctions is likely to be far greater than is currently predicted as a result of the additional trips generated by the extra 1,500 dwellings.</p>	<p>Alongside the challenges of forecasting background levels of demand and road infrastructure 20+ years into the future and beyond the current Local Plan period, an assessment of an additional 1,500 dwellings at Hammonds Farm would require an assumption to be made on the mitigation already in place to support a 3,000 dwelling development by 2041. The scope and delivery timeframes for this mitigation have yet to be agreed between developers and ECC/CCC.</p> <p>Observations from the strategic modelling suggest that without capacity improvements, additional development traffic added to the A12 corridor would result in a wider dispersal of background traffic and/or reductions in peak hour trips being modelled. Therefore, the scale of impact from a further 1,500 dwellings, and the mitigation required, would be difficult</p>

Preferred Spatial Approach – Response to Representations

Table Item ID:	Summary Point:	Summary of detailed representation made:	Essex Highways Modelling Response:
			<p>to assess using the modelling methodology adopted for the Local Plan evidence base.</p> <p>It is, however, expected that any capacity improvement measures identified as part of the planning application process would be tested with a full 4,500 dwelling build-out, with assumptions to be agreed with developers on the volume of background growth to be applied.</p>
4.	3.4.3 - 3.4.7 Lack of detailed modelling of site accesses at Hammonds Farm	No work has been undertaken to determine the location, type or scale of the Site access onto A14 Maldon Road required to accommodate the vehicle trips predicted to be generated by the Site.	<p>The modelling undertaken for the appraisal of the Local Plan Preferred Approach, is strategic and area-wide in nature and further local/detailed modelling will be required and undertaken as part of the planning application process for the Hammonds Farm development.</p> <p>Whilst access proposals for Hammonds Farm have yet to be fully designed and assessed, the location of accesses onto the wider road network will be included in the Local Plan Pre-Submission modelling, based on outline developer proposals at this stage.</p>
5.	3.4.8 Lack of detailed modelling of junction 19	Whilst it is also proposed to provide an additional access to serve Strategic Growth Site Policy 16a via the A12 Junction 19 to the north, the modelling undertaken in support of the Preferred Spatial Approach does not include detailed analysis of Junction 19 with Local Plan Review development trips and it is therefore unclear if such an access can be accommodated at this junction to serve the Site.	Outputs from a VISSIM microsimulation model of A12 Junction 19, built to assess National Highways' A12 widening DCO proposals, will be referenced and evaluated within the context of the Local Plan appraisal as part of the next stage of modelling.

Preferred Spatial Approach – Response to Representations

Table Item ID:	Summary Point:	Summary of detailed representation made:	Essex Highways Modelling Response:
			<p>Early concept development accesses onto the wider road network will be included in the latest Local Plan Pre-Submission strategic modelling, based on outline developer proposals.</p>
6.	3.4.11 – 3.4.13 Future impact on approach to Beaulieu Station not properly assessed	<p>The ‘Transport Impact Appraisal of Spatial Approaches’ (December 2023) report suggests that delays along the approach to the Beaulieu Rail Station should be monitored over time to determine the long-term viability of the route as a bus access link between the proposed allocated Site at Hammonds Farm and the railway station. Whilst this is typical for new developments as part of travel plan monitoring, proposing such a measure once infrastructure is already provided may be short sighted.</p> <p>The report goes on to say that “should future journey times to Beaulieu Station via the Boreham Interchange increase substantially, consideration should be given to placing additional focus on enhancing the provision of sustainable transport links to the existing rail station in Chelmsford city centre. Services could make use of the existing bus lane along the A1114 Essex Yeomanry Way (Baddow Bypass) and improved access through the redesigned Army and Navy Roundabout. However, PM peak traffic congestion along Parkway in the city centre would need to be managed to help improve travel times for buses heading out of the city centre.”</p> <p>These statements and worded solutions do not appear to fully address likely issues of congestion on the local highway network. This highlights the fact that further modelling work would be required to assess this scenario.</p>	<p>It is expected that analysis of outputs from the VISSIM microsimulation model of A12 Junction 19 will help to infer the level of future bus accessibility between Beaulieu Station and the proposed Hammonds Farm development.</p> <p>It is not within the practical scope of the Local Plan appraisal to assess the scale of mitigation required along alternative sustainable corridors into the city centre from the Hammonds Farm site. However, the Local Plan transport modelling evidence base does recognise the need for a city centre sustainable access corridor study to be undertaken as part of the Hammonds Farm planning application – should proposals for a bus service to Beaulieu Rail Station be compromised by access difficulties at the Boreham Interchange.</p>

Preferred Spatial Approach – Response to Representations

Table Item ID:	Summary Point:	Summary of detailed representation made:	Essex Highways Modelling Response:
7.	3.4.16 – 3.4.17 Evidence does not demonstrate suitable access to Hammonds can be provided	<p>Given that the proposed bus, walking, and cycling infrastructure improvements appear unlikely to achieve the necessary mode shift away from car use as set out above, there is concern as to the ability of appropriate Site access junctions to be provided to accommodate the likely vehicle trips generated by the proposed allocated Sites.</p> <p>The transport modelling evidence base does not clearly demonstrate suitable access can be provided to serve Strategic Growth Site Policy 16a at Hammonds Farm and Strategic Growth Site 16b to the south.</p>	<p>The modelling undertaken for the appraisal of the Local Plan Preferred Approach, is strategic in nature, but where available, early-stage access proposals provided by developers of Local Plan sites will be modelled as part of the Local Plan Pre-Submission appraisal.</p> <p>More detailed modelling to assess the impact of proposed development on the local road network and the detailed mitigation required to accommodate new trips associated with it, will be required and undertaken as part of the planning application process for developments identified as allocated sites in the Local Plan.</p>
8.	4.2.2 - 4.2.8 Use of 2019 model and historic traffic surveys	<p>Modelling for the critical A12 Junctions 18 and 19 are based upon 2019 traffic surveys that were used to support the strategic VISUM traffic model, which notably, has not been calibrated to turning movements at junctions.</p> <p>Traffic flows for modelling of the A12 Junction 18 have been based upon traffic surveys undertaken just prior to the Covid-19 pandemic. Whilst turning movement proportions have been checked against historic 2016 data, travel behaviour and patterns have changed since the pandemic and thus utilising data from this period may be unrepresentative of current conditions.</p> <p>Traffic survey data is typically valid for a period of three years and when considering the significance and scale of the proposed site allocations, use of recent and up to date traffic</p>	<p>The appendices of the ‘T002 - Transport Impact Appraisal of Preferred Spatial Approach – March 2024’ report contain the findings of a study undertaken to look at the differences in traffic flow patterns around Chelmsford in the years post-Covid-19. Whilst it is accepted that there are statistical differences between pre and post Covid-19 traffic flows at individual locations on the road network, at an aggregate level, there is no significant difference in either the AM or PM peak. This supports DfT findings that overall volumes are still at pre-pandemic levels and have not yet stabilised. Given that the VISUM model uses count data at an aggregate level, the 2019 validation is considered to still be</p>

Preferred Spatial Approach – Response to Representations

Table Item ID:	Summary Point:	Summary of detailed representation made:	Essex Highways Modelling Response:
		<p>survey data would be more appropriate for creating a base scenario for junction assessment.</p> <p>The base traffic survey data used to create the Chelmsford VISUM and local junction models requires updating to reflect current travel behaviour and patterns</p> <p>Significant manipulation of historic pre-Covid-19 pandemic traffic survey data has been undertaken to create baseline survey data to support junction assessments. The base traffic survey data used to create the VISUM and local junction models is therefore questionable and requires updating to reflect current travel behaviour and patterns.</p>	<p>appropriate for use and provides a reliable, stable base for the modelling.</p> <p>Additional junction modelling will be undertaken as part of the Pre-Submission Local Plan appraisal which will use traffic data collected in September 2024 along the A12 corridor to improve base junction model validation/calibration in post-Covid conditions.</p> <p>It should be noted that calibration/validation to turning flows at junctions would not be expected for a strategic assignment model of the size developed for Chelmsford. Nevertheless, effort has been made to ensure that turning flows appear reasonable at key junctions, and where differences are noted, findings have been caveated in the analysis.</p>
9.	4.3.1 - 4.3.13 Using 'Low' trip rates underestimates the volume of development trips	<p>It is suggested that the trip rates used in the forecast modelling are low as a result of internalisation and sustainable and active travel mode-share, however, these vehicle trip rate reducing factors would already be accounted for in the trip rates determined from the TRICS database. As such, these low vehicle trip rates used would in fact be a double counting of sustainable and active travel mode-share trips and thus significantly underestimate the vehicle trip generation of the proposed allocated sites.</p> <p>Given that it has already been identified that the proposed bus, walking, and cycling infrastructure improvements proposed as part of the Strategic Growth Area Policy 16a are</p>	<p>The Local Plan appraisal makes use of the core trip rates already found within the VISUM forecast model, which have been used across several studies in Chelmsford. These include; the appraisal of Army & Navy junction design options (the modelling of which has been approved by DfT), the appraisal of the Chelmsford North-East Bypass, and the impact appraisal of the proposed Chelmsford Garden Community to the north of the city centre. It was considered appropriate to use the same trip rate assumptions to maintain consistency in approach across these studies.</p>

Preferred Spatial Approach – Response to Representations

Table Item ID:	Summary Point:	Summary of detailed representation made:	Essex Highways Modelling Response:
		<p>unlikely to achieve the necessary mode shift away from car use, and the fact that a development proposal at Northeast Chelmsford of very similar nature to that proposed as part of the Site allocation at Hammonds Farm uses far higher, and as expected vehicle trip rates, for determining development vehicle trips suggests that vehicle trip rates used in the Chelmsford forecast model is significantly underestimated.</p> <p>Residential vehicle trip rates for the Local Plan Review Preferred Spatial Approach that are used in the Chelmsford forecast model appear to be significantly underestimated and the impact on the local highway network and at key junctions is likely to be far greater than is currently predicted</p>	<p>It is recognised that the trip rates used are representative of an aspirational approach to development planning and the levels of trip generation that could be achieved with the successful implementation and uptake of sustainable and active mode infrastructure through travel plan monitoring, penalties for failing to meet targets, monitor and manage practices etc. The trip rates are, however, not considered ‘unrealistic’, and are aligned with latest NPPF guidelines for Local Plan development.</p>
10.	4.4.4 - 4.4.15 Impact on A12 J18 & lack of mitigation measures	<p>The impact of a Site Access along A414 Maldon Road to serve Strategic Growth Site Policy 16a and Strategic Growth Site 16b is unknown and may cause additional delay and queuing along the A414 Maldon Road approach to the A12 Junction 18. The existing model only assesses the impact of the additional vehicle trips on the A12 Junction 18 without understanding how vehicles queued back along A414 Maldon Road may block or impact on the operation of a Site access junction.</p> <p>The ‘Transport Impact Appraisal of Preferred Spatial Approach’ (March 2024) document suggests that initial proposals to mitigate the impact on the A12 Junction 18 are contained in the October 2022 Stantec report ‘Hammonds Farm Transport Technical Report’. These proposals will be refined through the ongoing Local Plan master planning and planning application process.</p> <p>A review of the Stantec report does not identify any other mitigation measures beyond those already proposed as part</p>	<p>Where available, early-stage access proposals provided by the Hammonds Farm developer will be modelled as part of the Local Plan Pre-Submission appraisal.</p> <p>However, the modelling undertaken for the appraisal of the Local Plan Preferred Approach, is strategic in nature, with a focus on the wider patterns of impact across the road network in Chelmsford. This is understood to be commensurate with the typical scope of modelling required for a Local Plan transport appraisal. More detailed modelling will be undertaken to assess the impact of development and access proposals on the local road network, and the detailed mitigation required, through developer Transport Assessments as part of the planning</p>

Preferred Spatial Approach – Response to Representations

Table Item ID:	Summary Point:	Summary of detailed representation made:	Essex Highways Modelling Response:
		of the Site allocation requirements, which include the sustainable and active travel bridge over the A12 and bus priority link to the north at the A12 Junction 19.	application process for the Hammonds Farm development.
11.	4.4.21 – 4.4.29 A12 J19 Boreham Interchange, insufficient evidence to demonstrate access at Hammonds can be accommodated	<p>In order to demonstrate that the A12 Junction 19 can be considered a suitable option for providing access to the Hammonds Farm site, further modelling work is required</p> <p>Whilst the VISUM strategic forecast model incorporates the latest Junction 19 designs and signal timings published as part of the A12 Chelmsford to A120 widening scheme DCO, it does not allow for the Site access to the Strategic Growth Site Policy 16a at Hammonds Farm.</p> <p>It should also be noted that all modelled junctions except for two, one of which is the A12 Junction 19, were built using demand flows taken directly from the 2041 Chelmsford VISUM forecast model for scenarios with and without Local Plan Review development trips.</p> <p>Current modelling results related to the A12 Junction 19 that are presented in the evidence base in support of the Preferred Spatial Approach cannot be relied on and do not demonstrate that at this stage, an additional access from the A12 Junction 19 to serve the allocation of development at Hammonds Farm can be accommodated.</p>	Updated junction modelling will be undertaken as part of the Pre-Submission Local Plan appraisal, including the use of outputs from a VISSIM microsimulation model of A12 Junction 19, built to assess National Highways' A12 widening DCO proposals. Where available, early-stage access proposals provided by the Hammonds Farm developer will be modelled at A12 Junctions 18 and 19.

Dear

Thank you for your email enquiry and for sharing your report on the natural, cultural, and historical significance of the Little Baddow and Danbury area in Essex with Natural England in support of the Danbury Ridge and the Chelmer Valley National Landscape Working Group's ambition for a National Landscape designation in this area. We acknowledge the accompanying letters of support for the Danbury Ridge and the Chelmer Valley National Landscape you propose submitted to us alongside your report from the National Trust, Essex Wildlife Trust, Essex Waterways & the Essex Bat Group.

By way of update, since our last written correspondence, Natural England are still working on the current round of National Landscape (Area of Outstanding Natural Beauty, AONB) designation projects announced in [June 2021](#), these are:

- A new Yorkshire Wolds AONB
- A new Cheshire Sandstone Ridge AONB
- An extension to the Surrey Hills AONB
- An extension to the Chilterns AONB

Landscape designation is a multi-year process and we remain fully resourced and committed to the above four cases. Additionally, following on from [Government's announcement on 29 November 2023](#), we will be starting work to consider the possibility of designating a new National Park. We are therefore not taking on any additional new designation projects at the current time.

It is important to note that there is no formal application process for National Park or National Landscape (AONB) designation. Natural England takes an evidence-led approach, using information such as the All-England Strategic Landscape Mapping Assessment Tool. We are also guided by government policy steers, and any future search will be England-wide.

Natural England is not in a position to confirm timescales for when our next landscape designation programme will commence, nor to confirm the format for the process. We will, however, keep the report you have submitted to us and supporting documentation on file in addition to any further appendices you wish to submit to us.

Yours sincerely,

West Anglia Area Team

28th October 2024

Dear Jeremy,

Re: Land West of Barbrook Way, Bicknace (Draft Allocation 11c)

Further to our discussions, I write in relation to the above draft allocation, and in response to some third party comments received as part of the Preferred Options Consultation on the Local Plan Review that closed in June 2024. It is understood that concerns have been raised in relation to access being deliverable from Barbrook Way. This Statement seeks to provide comfort that the site is deliverable.

For context prior to entering the Promotion Agreement for the land Welbeck Land undertook significant due diligence into potential access points for the development. This included a detailed topographical survey and significant investigation into any legal issues related to land ownership.

The results of our highways search would indicate the extent of the adopted highway does not include this sliver of land albeit due diligence is ongoing to see if the underlying s38 agreement for Barbrook Way can be secured in order to check that the highways search result is correct and the sliver of land is not, indeed, adopted.

We have also undertaken detailed investigations into any potential third parties (persons or entities) that may be able to successfully claim ownership of the land. Our research has not identified any such party that could realistically make such a claim. With this information we have been able to secure an indemnity insurance policy which benefits the development site, successors in title, service providers and alike to protect against the risk, however slim, of any third party either seeking to claim ownership of the third party strip and being successful in doing so.

These indemnity insurance policies exist precisely for such scenarios which are not unusual, particularly given errors in the mapping on Land Registry UK, often owing to many of the boundaries being drawn historically. Therefore, we strongly believe that the Council should consider this sufficient to demonstrate that the site is deliverable, and there is no reason to discount it or remove its allocation for housing in the forthcoming Plan.

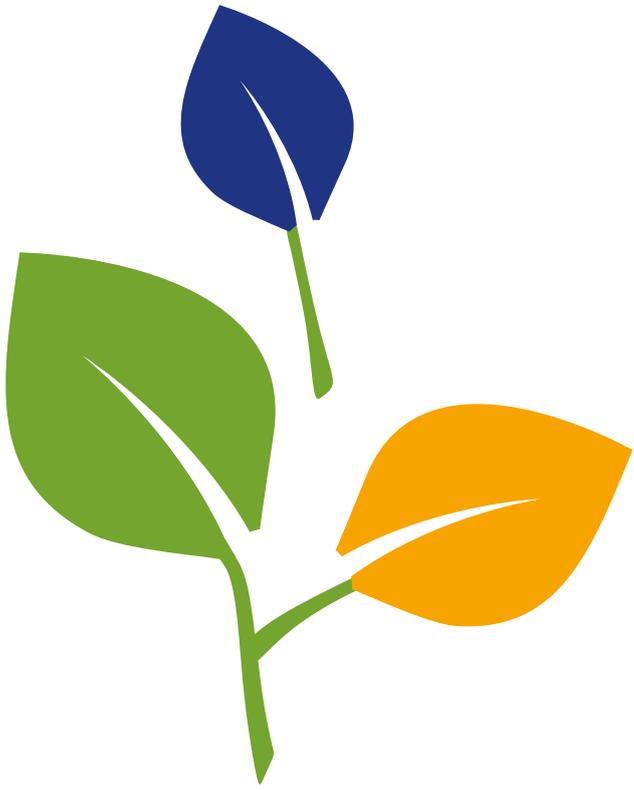

Furthermore, and as provided to the Council we have to date produced several indicative masterplans of varying scale from 160 to 250 dwellings. Given our confidence in our ability to rely on Barbrook Way we have indicated this as our primary access.

However, our detailed investigations have demonstrated that alternative access points are available from Priory Road. Although it is acknowledged that this is not the Council's preferred option, it does

assist in demonstrating that the site is not ransomed. Enclosed are the alternative options for information.

Yours sincerely

Foreword

Guiding Chelmsford's growth to be a greener, fairer, more-connected community

The City Council is reviewing its Local Plan to meet key aims; act on the climate and ecological emergency; tackle the housing affordability crisis; strengthen communities and the economy.

The Government says we must also review whether we have the right targets for creating new homes and jobs and they require us to do this every five years. As we adopted the current Local Plan in 2020, this review ensures that we can consult and involve the public properly before the five year period ends in 2025. The Council consulted on the main issues and options for this review in 2022 and preferred options for this review in 2024. The consultation responses, alongside collected evidence and national policy, have been used to develop this Pre-Submission document for publication. We invite representations on this version of the Local Plan and these will be sent to a Planning Inspector to consider as part of the Independent Examination of the Local Plan.

The plan period extends to 2041 to ensure we plan for our community's needs well into the future. We are not fundamentally changing the general approach in the adopted Local Plan; we want to improve it to address our major challenges and take on board updated information.

Climate action

As Chelmsford continues to develop, it is vital that we continue to tackle the consequences of climate change and biodiversity loss to reduce our impact on the planet we share. The City Council declared a climate and ecological emergency in 2019 and is working to a robust and comprehensive Action Plan: <https://www.chelmsford.gov.uk/media/vicpii5u/climate-change-action-plan.pdf>. The Council aspires to net zero its own carbon emissions by 2030 and will continue to provide leadership and support for us all to do the same as soon as possible.

The Pre-Submission Local Plan focuses on:

- integrating measures to enable these actions to happen, including the requirement for zero carbon developments
- boosting opportunities for active and sustainable travel
- requiring new tree planting, expanding natural habitats and biodiversity, and
- improving water efficiency.

Affordable homes and pride in Chelmsford's places

We also have an ambition to tackle the challenges that face our economy, society and environment. We seek to deliver a plan that meets the needs of the community in terms of housing, employment and infrastructure.

Allocating land for housing and employment is key. However, it is also vital that we provide the infrastructure which supports that - schools, health facilities, shops, transport and more.

The Council places high importance on:

- maximising the delivery of affordable housing
- creating places which are easily accessible
- promoting walking, cycling and public transport

- securing developer contributions for infrastructure, and
- providing jobs for local residents.

This Pre-Submission document sets out how to do more for our economy and job creation by proposing significant new land for employment and supporting local people to access the new jobs. It also considers proposed changes to national planning policy which is likely to result in a higher Local Plan housing requirement.

More-connected community

In parallel, our proposed changes to the Local Plan will give opportunities for making better provision for our communities and building stronger, more-connected neighbourhoods. Such measures will further develop a sense of pride and deliver local facilities and services to support our communities.

The plan also goes further to enhance health and wellbeing and tackle health inequalities by

- promoting active lifestyles
- providing new spaces for play, recreation and sports, and
- creating a network of great places and spaces which promote social cohesion.

Listening to your views

This is the third stage of consultation on a version of the Plan that the Council believes meets legal and soundness requirements and can be submitted for independent examination. It is a requirement of the Planning Inspectorate, that at this stage responses are focused only on legal and soundness matters. The Plan sets out more information on what this means, to enable residents, businesses, developers and others to get involved and make their comments. Help us guide Chelmsford's growth to be a greener, fairer, more-connected community.

Stephen Robinson
Leader of the Council

Rose Moore
Cabinet Member for a Greener Chelmsford

1 – Introduction

About this document

1.1 Chelmsford City Council has been at the forefront of plan-making in recent years and much of our planned development is either complete or well underway. To continue this success, it is important that we keep our plans up-to-date to ensure that Chelmsford remains a vibrant and attractive place to live, work and socialise. The Council's review of the Local Plan will update our planning framework to meet local development needs for the period 2022-2041 and will consist of a Written Statement (this document) and a Policies Map.

1.2 As the County Town of Essex, with a strong economy, good transport connections, high quality of life and attractive environment, it is already a major draw for employment, shopping, leisure and one of the best places to live in the United Kingdom¹. Over the coming decades, Chelmsford is forecast to be the major growth location for new homes and jobs in Essex.

1.3 Along with the City of Chelmsford, the Council's administrative area includes the riverside town of South Woodham Ferrers and villages set within attractive countryside. For the purposes of this document, where we talk about Chelmsford we are referring to the Council's whole area, and where we talk about the Council we are referring to Chelmsford City Council, unless otherwise identified.

1.4 Having a clear and up-to-date Local Plan which meets local development needs and reflects the views of local people on how they wish Chelmsford to develop will be central to the success of this future growth.

1.5 The Local Plan outlines the strategic priorities and long-term vision for Chelmsford and identifies locations for delivering housing and other strategic development needs such as employment, retail, leisure, community and transport development. It contains a Spatial Strategy to deliver this vision. The Local Plan sets out the amount and location of new development, and how places will change and be shaped throughout the Local Plan period and beyond. The Local Plan together with the adopted Minerals and Waste Local Plan, South East (Inshore) Marine Plan and any made (adopted) Neighbourhood Plans form the statutory Development Plan for the area. Planning applications will be determined against the Development Plan, unless material considerations deem otherwise. The Development Plan policies should be read as a whole and alongside the National Planning Policy Framework (NPPF).

1.6 This Local Plan will run from when it is adopted until 2041. Having no growth is not an option, so we have the Local Plan to make sure development is properly planned. The aim is to get the right type of development in the right places to meet the growing needs of local people and businesses whilst protecting our environment.

1.7 Once adopted this Local Plan will supersede the previously adopted Local Plan (2013-2036) and its policies. A schedule of these superseded policies is included at Appendix A of this document.

¹ The Sunday Times, 2019

1 - Introduction

1.8 The Local Plan identifies the number and locations for houses, employment and businesses we are planning for, along with all the other things needed to support growth, such as where children will go to school, where people will work, and how they will get around. It includes site allocation policies for future development including Strategic Growth Sites and Growth Sites. All site allocation policies within the Local Plan are also classified as Strategic Policies.

1.9 The format of this document is set out below:

Section 1 - introduces the Local Plan, its purpose, the Local Plan period, the Integrated Impact Assessment and community-led planning.

Section 2 - sets out the ambitions for growth across Essex² as a whole and within the sub-areas of Northern and Central Essex. It describes how Chelmsford will continue to be a major focus for new growth within the County over the next 20 years and beyond, and how the Council will work with neighbouring authorities to plan positively for this. It also sets out information on the geography, demography and population of Chelmsford and identifies a series of challenges and opportunities that the Local Plan will address.

Section 3 – sets out the nine Strategic Priorities for the Local Plan area.

Section 4 – sets out the long-term Vision and Spatial Principles for managing and accommodating growth within Chelmsford up to 2041 and beyond.

Section 5 – sets out how the Local Plan will deliver sustainable development to meet development needs throughout the Local Plan period.

Section 6 – sets out how much development is needed and how it will be accommodated through a Spatial Strategy. In addition it presents a number of strategic policies including those related to securing infrastructure and delivering growth.

Section 7 – sets out the key features of the Local Plan and the focus on place shaping and provision of supporting infrastructure based on development within three Growth Areas – (1) Central and Urban Chelmsford, (2) North Chelmsford and (3) South and East Chelmsford. It continues with site-specific policies related to specific allocations.

Section 8 – provides the policies for securing the right type of homes and economic growth, and protection of the countryside, historic environment, natural environment and community assets.

Section 9 – focuses on design and place-shaping including policies related to securing high quality urban design, parking standards, and sustainable buildings.

Section 10 – sets out how the Local Plan will be monitored in delivering its objectives.

Section 11 – the Policies Map and inset maps, identify the spatial proposals of the Local Plan including site allocations and areas for protection. It also identifies sites in the Mineral Consultation and Safeguarding Areas.

² The reference to Essex in this document includes the Unitary Council areas of Southend-on-Sea and Thurrock often referred to as Greater Essex

What stage are we at?

1.10 This document is the Review of the Adopted Local Plan - Pre-Submission Consultation Document published in accordance with Regulations 19 and 20 of the Town and Country Planning (Local Planning) (England) Regulations 2012. It has been prepared following two public consultations, firstly the Issues and Options consultation in 2022 and secondly the Preferred Options consultation in 2024.

1.11 The Issues and Options consultation was the first stage towards updating the adopted Local Plan and provided a starting point for engagement with our communities. The main purpose of the Issues and Options consultation document was to ensure that we covered the right issues and that all suitable options for accommodating change were considered. The Preferred Options consultation was a full draft plan and included:

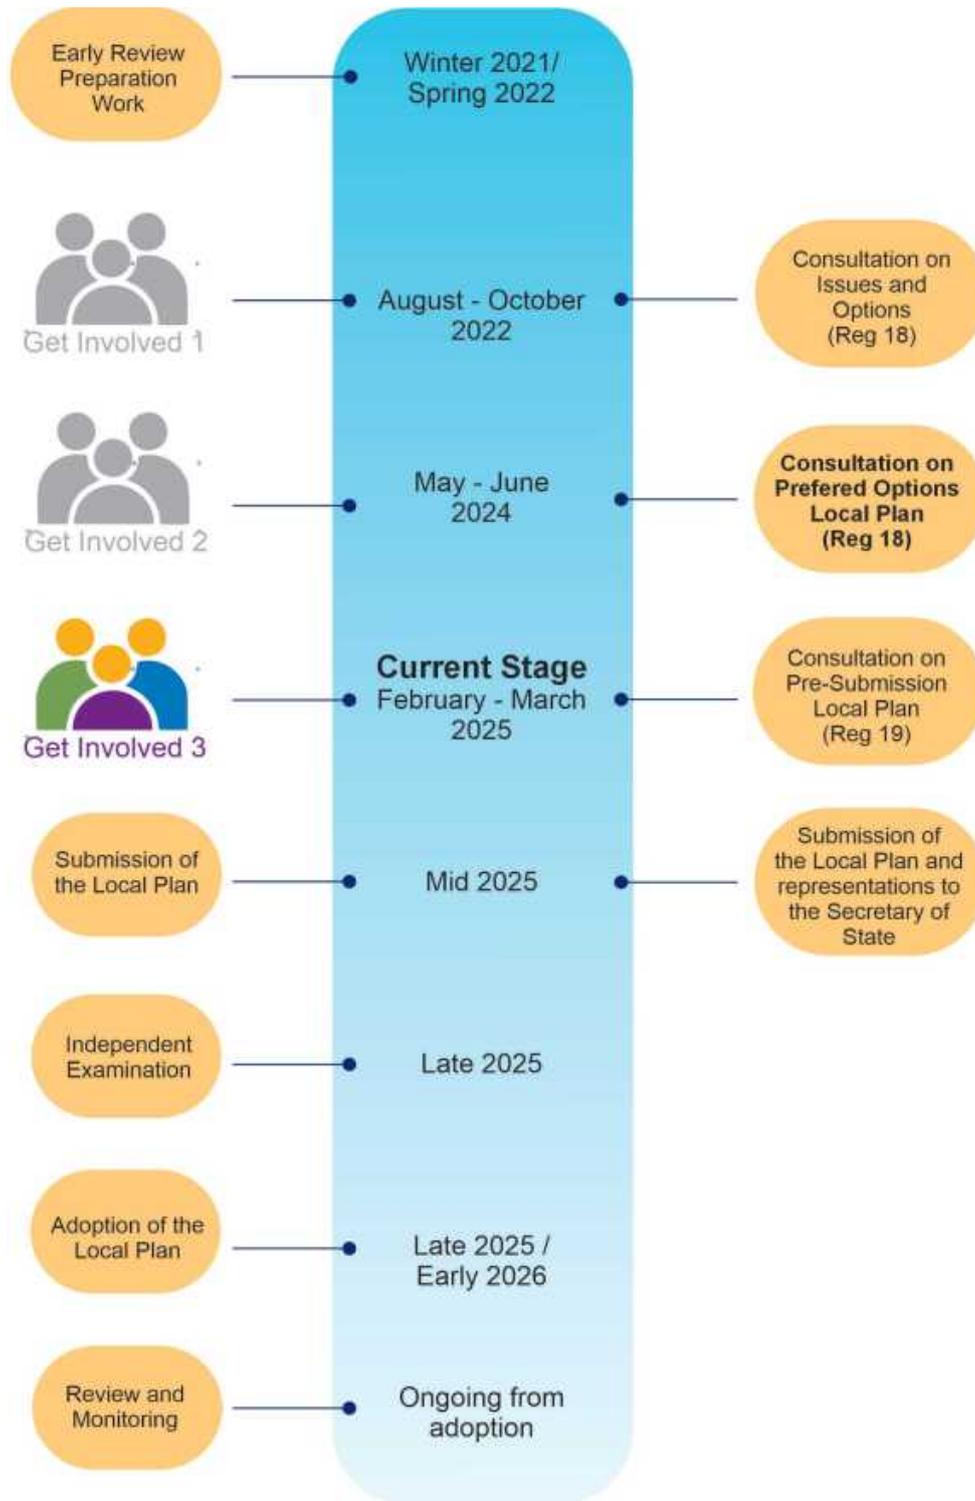

- Updated draft Strategic Priorities
- New draft Vision
- The approach to calculating future development requirements, including homes and employment
- Spatial Strategy and preferred site allocations for future development
- Revised draft planning policies.

1.12 The comments received at the Preferred Options stage have been considered as part of drafting this Review of the Adopted Local Plan - Pre-Submission Consultation Document. More information on how these comments have been used can be found in the Preferred Options 'You Said, We Did' feedback report which has been published on our website at: www.chelmsford.gov.uk/lp-review

What is the timetable for the Local Plan review?

1.13 There are more stages to go through until the Local Plan can be adopted. This is the third round of public consultation on the draft Local Plan prior to its submission for examination by an independent Planning Inspector. The diagram below shows where we are now, and the work we still have to do. The detailed timetable is set out within our Local Development Scheme, which is available to view online at: <https://www.chelmsford.gov.uk/media/ew4mbrsr/chelmsford-local-development-scheme-2023-2028.pdf>

Figure 1 : Local Plan Timetable

How can I have my say?

1.14 This Pre-Submission consultation is the final stage before submitting the Local Plan to the Secretary of State for an Independent Examination. The representations received will be collated and submitted to the Planning Inspector holding the Independent Examination, alongside the Local Plan.

1.15 We want to encourage as many people and organisations as possible to have their say on this Pre-Submission Local Plan.

1.16 You can comment on as much or as little as you wish but for this stage in plan making, it is important that you identify which part you are commenting on. In addition, the Inspector will need to know whether you support or object to the Local Plan, whether the Council has met the legal requirements and whether it meets the test of soundness set out in the National Planning Policy Framework (Paragraph 35). Plans are sound if they are:

- Positively prepared – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is practical to do so and consistent with achieving sustainable development;
- Justified – the plan should be an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
- Effective – the plan should be deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters
- Consistent with national policy – the plan should enable the delivery of sustainable development in accordance with the policies in this Framework and other relevant national planning policy statements.

Consultation on the Review of the Adopted Local Plan – Pre-Submission Consultation Document will run for a period of xxxx weeks from 10am on xxx to 4pm on xxx.

Our preferred means of receiving comments is through our consultation portal at www.chelmsford.gov.uk/planningpolicyconsult. This ensures that your comments are recorded accurately and are processed quickly. This system also allows you to download the consultation documents and sign up for alerts to future consultation events.

Alternatively, you can submit your comments by: Email to planning.policy@chelmsford.gov.uk Post to Spatial Planning Services, Chelmsford City Council, Civic Centre, Duke Street, Chelmsford, CM1 1JE.

You can comment on as much or as little as you wish but please ensure you clearly mark which paragraph/figure/table/policy your comments relate to.

Please note we are unable to accept anonymous representations and any comments received after the closing date cannot be accepted.

Full details of how to make comments can be found in the Consultation Statement available at: www.chelmsford.gov.uk/lp-review

1 - Introduction

1.17 Alongside this Pre-Submission consultation, we are consulting on an Integrated Impact Assessment (IIA). This encompasses the sustainability appraisal, strategic environmental assessment, habitats regulations assessment, health impact and equality assessment of the review of the adopted Local Plan, and you can read and comment on it using the details above.

1.18 To find out more about how to use the consultation portal, please read our user guide: www.chelmsford.gov.uk/lp-portal-guide.

1.19 If you are experiencing problems, you can contact us via <https://forms.chelmsford.gov.uk/contact-us-planning/> or call our helpline on 01245 606330.

What happens next?

1.20 We will acknowledge all comments that have been made, although we cannot write to you about your individual comments.

1.21 Comments received to this consultation will be published on the Council's consultation portal in accordance with the Data Protection Act. The comments, together with evidence base studies, will be submitted to the Planning Inspectorate for the Independent Examination.

1.22 A feedback report summarising the main issues raised in the consultation responses will be published on our website.

What has been considered?

National Planning Policy

1.23 Local Plans must be consistent with national planning policy to ensure the delivery of sustainable development. This is set out in the National Planning Policy Framework (NPPF). Consistency with the NPPF is one of the tests of soundness considered at the Independent Examination of Local Plans. Alongside the NPPF, the national Planning Practice Guidance (PPG) provides more practical guidance for the implementation of national planning policy. The Local Plan takes account of the provisions of national planning policy and guidance.

How we have assessed environmental impacts

1.24 An Integrated Impact Assessment (IIA) has been undertaken by specialist consultants on behalf of the Council.

1.25 The IIA assesses the site options and policies set out in this Pre-Submission Local Plan against a range of social, environmental, economic, health and equality indicators and helps to identify all the likely significant effects. The IIA advises on ways in which any adverse effects could be avoided, reduced or mitigated or how any positive effects could be maximised.

1.26 The IIA includes a Habitats Regulations Assessment (HRA). This assesses whether the new Local Plan would adversely affect a European habitat site which include Special Areas of Conservation (SAC), Special Protection Areas (SPA) and Ramsar sites, for example, the Crouch and Roach Estuaries in South Woodham Ferrers. The HRA advises whether there are any likely significant effects on European habitat sites and sets out appropriate mitigation strategies where adverse effects are identified.

1.27 The Council is seeking views on the Pre-Submission IIA as part of this consultation. The Council will take into account the findings of the IIA assessment when updating the Local Plan, alongside national policy and guidance, our evidence base and formal consultation responses.

1.28 The IIA is available to view on our website at:

www.chelmsford.gov.uk/planning-and-building-control/planning-policy-and-local-plan/local-plan-review-2022/

How we have engaged with other Councils and partners

1.29 The Council is committed to co-operate with other councils and key organisations on strategic planning issues under the 'Duty to Co-operate'. The Council has complied with the Duty to Co-operate. This has made sure that issues such as providing land for new homes, employment, infrastructure, and managing flood risk are properly co-ordinated. The Council has led discussions with a number of key partners including other local planning authorities, Essex County Council and National Highways. Further joint working will continue.

1.30 The Council's approach to this positive engagement has been detailed throughout the plan making process in the Duty to Co-operate Strategy and Duty to Co-operate Position Statement, which details who we have engaged with, when and what methods were used. The Council will continue to have regard to other authorities' plans. This includes neighbouring authorities' Local Plans, Essex County Council's Minerals and Waste Plans, and strategies of any other relevant bodies.

What evidence have we used?

1.31 As well as working with partners and stakeholders, the Council has undertaken a significant amount of research to help inform the proposals and policies within this document. This is called the Evidence Base, and includes background information, the Council's existing strategies and current planning policy, and specially commissioned studies on particular topics where more information was helpful. These include environment, heritage, population, homes, transport, economy, and infrastructure.

Topic Papers

1.32 We have produced a range of Topic Papers to set out how the review of the Local Plan has been developed. These have been refreshed and updated to support the Pre-Submission consultation with the latest information/position. Topic Papers provide background information and further explanation, but they do not contain any policies, proposals, or site allocations. The Topic Papers cover the Spatial Strategy and Integrated Impact Assessment, Climate Change, Housing, Employment, Health and Wellbeing, Natural Environment, Historic Environment, Infrastructure and Transport and can be viewed on the evidence base page of the Council's Local Plan website.

1.33 All key Evidence Base documents prepared to support this Pre-Submission Local Plan can be viewed on our website.

1 - Introduction

Essex Minerals Local Plan 2014

1.34 Essex County Council is the Minerals Planning Authority for Chelmsford, and is responsible for preparing planning policies and assessing applications for mineral development. The Essex Minerals Local Plan (MLP) (2014) forms part of the statutory Development Plan and should be read alongside the Chelmsford Local Plan. The role of the MLP is to ensure a steady and adequate supply of mineral resources to facilitate development over the Local Plan period and beyond and is currently being reviewed.

1.35 There are active quarry sites in Chelmsford as well as currently unworked sand and gravel deposits which are subject to a Minerals Safeguarding policy within the MLP. The safeguarding policy requires that the Minerals Planning Authority - Essex County Council - be consulted on development proposals covering 5 hectares or more within the sand and gravel Minerals Safeguarding Area.

1.36 Essex County Council must be consulted on all non-mineral related development proposed within these Safeguarded Areas that meet the threshold and relevant tests set out in Policy S8 of the MLP. The Policies Map in Section 11 identifies the relevant Minerals Safeguarding Areas.

1.37 The MLP also designates Mineral Consultation Areas at a distance of 250m around active quarries, other mineral infrastructure and areas allocated or permitted for mineral extraction. Essex County Council must be consulted on all non-mineral related development proposed within these Consultation Areas that meet the tests set out in Policy S8 or its successor policy, including the scoping of any Minerals Resource Assessment and Minerals Impact Infrastructure Assessment. The latest MLP, which can be found at <https://www.essex.gov.uk/planning-land-and-recycling/planning-and-development/minerals-and-waste-planning-policy/existing> identifies existing and allocated Minerals sites and their relevant Consultation Areas within the Council's area.

Essex and Southend-on-Sea Waste Local Plan

1.38 Essex County Council is also the Waste Planning Authority for Chelmsford, and is responsible for preparing planning policies, and also for assessing applications for waste management development. The Essex and Southend-on-Sea Waste Local Plan (WLP) was adopted in July 2017 forming part of the statutory Development Plan and should be read alongside the Chelmsford Local Plan. The WLP covers the period from 2017 to 2032. It sets out where and how waste management developments can occur, and contains the policies against which waste management planning applications are assessed.

1.39 The WLP proposes new waste development in Chelmsford at two locations: Sandon Quarry and Blackley Quarry, Great Leighs.

1.40 The WLP also identifies a number of areas of search across the county where the Waste Planning Authority may support development outside of allocated waste sites. These areas of search are all existing industrial estates, and any waste use proposed on these estates will be required to be in keeping with existing development. The WLP seeks to focus any new proposals for waste management facilities, which support local housing and economic growth, within these areas of search before other locations are considered. Five are proposed for Chelmsford, at Drovers Way, Dukes Park Industrial Estate, Springfield Business Park, Westways and Widford Industrial Estate.

1.41 The WLP also designates Waste Consultation Areas within 250m of safeguarded sites, or within 400m of a Water Recycling Centres. Essex County Council must be consulted on all non-waste related development within these areas, that meet the tests set out in Policy 2 (except for exceptions defined in Appendix C), to ensure that the proposed development would not adversely impact on their existing or future operation, along with the scoping of any Waste Infrastructure Impact Assessment. The latest Waste Local Plan, which can be found at <https://www.essex.gov.uk/planning-land-and-recycling/planning-and-development/minerals-and-waste-planning-policy/waste-local>, identifies existing Waste sites and their relevant Consultation Areas within the Council's area.

South East (Inshore) Marine Plan

1.42 The Marine Management Organisation (MMO) adopted its South East (Inshore) Marine Plan in June 2021. It includes land to the south of South Woodham Ferrers. The Marine Plan's jurisdiction overlaps with the Council's responsibilities (which ranges from Mean High Water Springs (MHWS) or the tidal limit out to the territorial limit). This remit covers both the marine area and tidal rivers, and extends up to MHWS where there is an overlap with terrestrial planning. As such, the South East (Inshore) Marine Plan must be considered alongside the Local Plan to provide a consistent approach for planning on land, and within the inter-tidal and marine environment. It should also be noted that a marine licence may be required for certain activities carried out within the UK marine area.

Planning Validation Requirements

1.43 Planning applications will be determined in light of policies and proposals within the Local Plan. In order for planning applications to be considered valid, a range of information must be submitted including plans and/or supporting documents. The Council's local validation list is available on our website and clarifies what information is required. This will vary for different types and scales of application being made and will be reviewed as necessary to take account of statutory changes or Government guidance.

1.44 The supporting documents which the Council can require to validate an application include a Design and Access Statement, Biodiversity Checklist and Report, Heritage Statement, Agricultural Land Classification Survey, Transport Assessment and Travel Plan, and Land Contamination Assessments. Chelmsford City Council operates within a two-tier local government system. Essex County Council (ECC) has a statutory role as the highway and transportation authority; the lead authority for Education including early years and childcare (EYCC), Special Education Needs and Disabilities (SEND), and Post 16 education; the Minerals and Waste Planning Authority; the Waste Disposal Authority; Lead Local Flood Authority, lead advisors on public health; responsibilities for adult social care (housing needs of older people and adults with disabilities); and the provision of libraries. The ECC Developers' Guide to Infrastructure Contributions should be used for guidance on the required documents and plans to be submitted with planning applications, such as Land Compliance Study for education facilities, Transport Assessments/Transport Statements, Travel Plans and matters related to Sustainable Drainage Systems.

1 - Introduction

What is Community-Led Planning and where does it fit in?

1.45 A Town or Parish Council, or a constituted community organisation, has the ability to prepare further plans and orders that complement the Local Plan. These optional rights and powers were introduced to enable communities to get more involved in planning for their areas.

1.46 These community groups can prepare the following:

- **Neighbourhood Development Plan** – provides local policies for development and use of land in a neighbourhood
- **Neighbourhood Development Order** – enables Town and Parish Councils to grant planning permission for certain types of development without the need for people to apply to the Council
- **Community Right to Build Order** – enables small-scale development in communities such as housing or community facilities.

1.47 These planning tools are designed to be used positively to plan for future development and support planned growth in a local area, build on the strategic needs set out in a Local Plan, and also conform with national policy and guidance. The Council will work together with communities who are developing their community-led plans alongside the Local Plan, to make sure they complement each other. Once a community-led plan has been finalised, a referendum is held in the neighbourhood area it covers. If it is approved by the community, it will be adopted by the Council as part of the Local Plan.

1.48 Neighbourhood Plans have been 'made' (adopted) for South Woodham Ferrers, Writtle, Little Baddow and Sandon. The areas covered by these plans are shown on the Policies Map.

2 – About Chelmsford

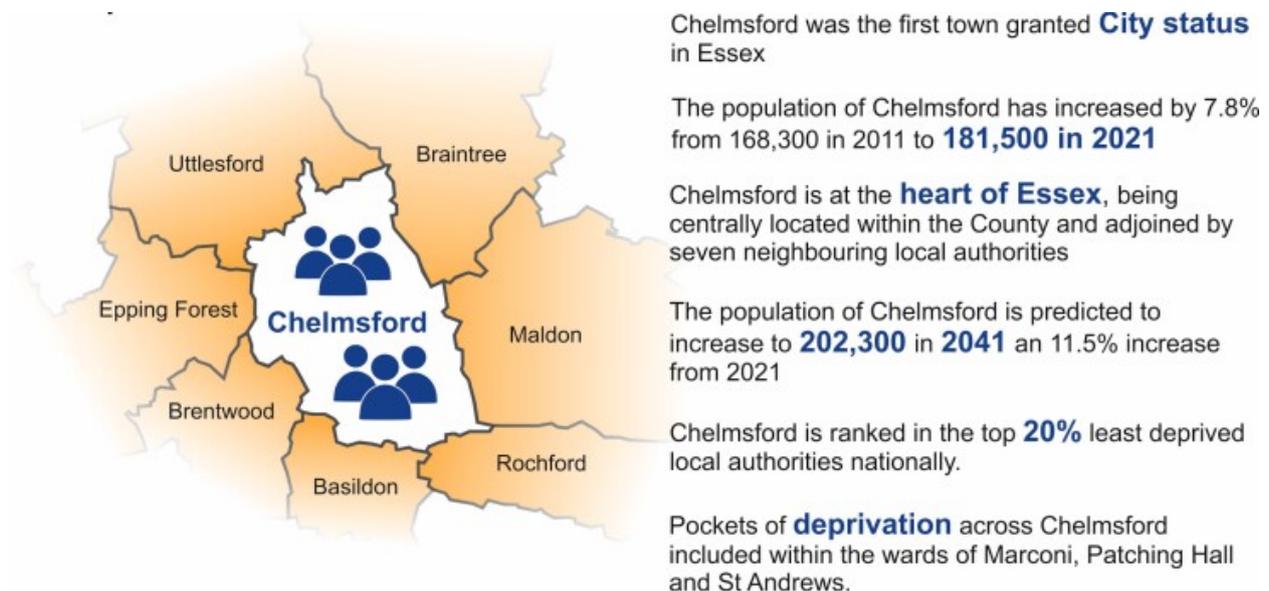

2 - About Chelmsford

2.1 To help us to plan for the future, we must have a good understanding of the characteristics of Chelmsford today, and the issues and opportunities that these present. These are set out in the Evidence Base documents supporting the Local Plan and summarised below. More detailed information is set out within the Integrated Impact Assessment.

2.2 Chelmsford has an important regional and sub-regional role. It provides a focus for jobs, shopping, healthcare, education, leisure and recreation for the wider area. The information in this section reflects this role.

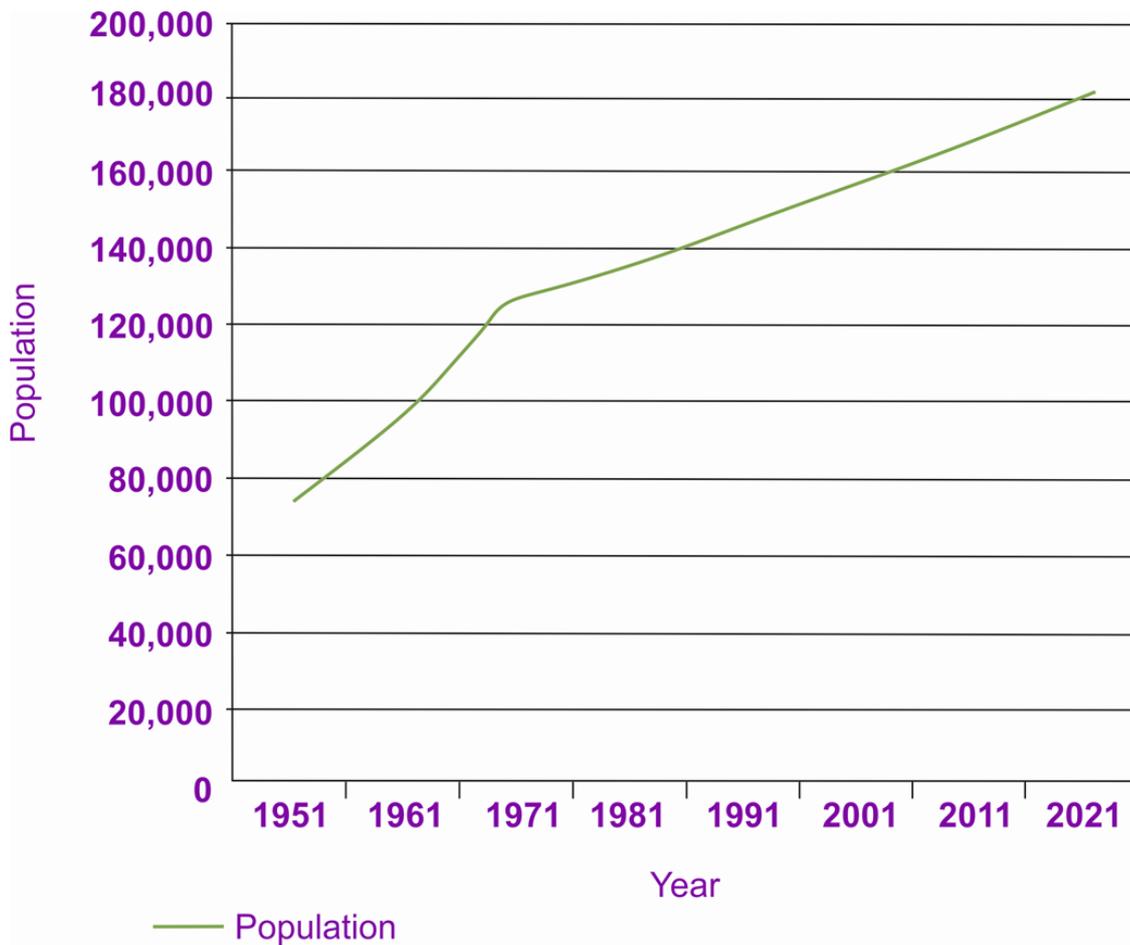

Population

Figure 2 : Population

2.3 Chelmsford's population is continuing to grow and is predicted to increase by 20,800 – from 181,500 in 2021 to 202,300 by 2041 (ONS Census 2021). Over a similar period, the number of households is expected to increase by 631 a year from around 76,000 in 2022 to around 88,000 in 2041 (Strategic Housing Needs Assessment 2023). Historic population growth since the 1950s is shown in Figure 3.

Figure 3 : Historic population growth

2.4 In terms of population change by age group in Chelmsford, there has been an increase of 26.0% in people aged 65 years and over from 2011 to 2021, an increase of 3.3% in people aged 15 to 64 years, and an increase of 8.3% in children aged under 15 years (ONS, June 2022). Demographic changes will shape the type and size of accommodation necessary over the Local Plan period.

Deprivation

2.5 Chelmsford is ranked as one of the least deprived local authorities in England with one of the lowest average proportion of households in poverty within Essex. However, there are pockets of deprivation across Chelmsford including within the wards of Marconi, Patching Hall and St Andrews within Chelmsford Urban Area.

Regional context

Ambitions for Growth across Essex

2.6 Chelmsford is located in the heart of the county. Essex, including Southend and Thurrock, is a thriving and prosperous area, home to over 1.86 million people and nearly 90,000 businesses (ONS Census 2021). Essex has seen significant growth in new homes and jobs in recent years and this trend is forecast to continue.

2 - About Chelmsford

2.7 Essex has an excellent strategic location adjacent to London with good links to Europe, as well as other key economic locations such as Cambridge. These and other strengths have allowed Essex to be a significant driver of the UK economy - generating £44.7bn Gross Value Added (GVA) (ONS, 2021). Essex also benefits from international links through its airports (Stansted and Southend) and ports (Harwich, London Gateway and the Port of Tilbury). The creation of Thames Freeport is expected to generate a substantial level of economic activity driving the need for labour and employment floorspace particularly for South Essex authorities and across the wider area extending into mid Essex along key transport corridors. Much of the Essex economy is focused along four key corridors, following major transport routes:

- The A12 & Great Eastern Mainline Corridor (Brentwood-Chelmsford-Colchester)
- The A120 Haven Gateway Corridor (Harwich-Colchester-Braintree-Stansted)
- The M11 Corridor (London-Harlow-Stansted-Cambridge), and
- The A127 Corridor (London-Basildon-Southend-Thurrock-Canvey Island).

2.8 The Essex economy currently supports around 756,000 jobs (BRES 2023) and is predicted to need around 100,000 new jobs by 2041, representing growth of 11% (Cambridge Econometrics, EEFM, 2019). Due to its strategic position along the A12 corridor, existing strong local economy and highly educated population, Chelmsford is expected to accommodate a major share of the forecast new employment and retail growth.

North and Central Essex

2.9 The north and central part of Essex comprises the local authorities of Chelmsford, Colchester, Braintree and Tendring. This part of Essex is forecast to experience significant new growth and change over the coming decades.

2.10 These authorities and their partners in north and central Essex wish to respond to the opportunity of future growth by planning positively for the area as a whole. Working together to address some of the key strategic issues in this part of Essex will achieve the best outcomes for current and future communities. In particular, it will help to deliver sustainable development that respects local environments and provides new jobs and the necessary new or upgraded infrastructure to support this growth.

2.11 The influences of population and economic growth do not stop at administrative boundaries. Settlement patterns, migration flows, commuting and strategic infrastructure needs all have significant influences within and between local authority areas. Working together in a strategic approach will demonstrate how the authorities are meeting the requirements of the Duty to Co-operate to engage constructively, actively and on an on-going basis in the preparation of plans involving cross-boundary impacts.

2.12 Braintree, Colchester and Tendring Councils have prepared a shared strategic plan. This forms a joint Part 1 of their relevant Local Plans for the period to 2033. Due to a mismatch in timetables, Chelmsford is not covered by this shared strategic plan. However, all authorities are collaborating on strategic cross-boundary issues and the alignment of strategic investment priorities in support of sustainable growth. Therefore, wherever appropriate, aspects of the Part 1 shared strategic plan have been included within objectives, policies and allocations of Chelmsford's Local Plan.

2.13 Past under-investment in transport infrastructure and increased demand for road and rail use has placed significant strain on the transport network. Future planned growth provides the opportunity to address these infrastructure needs as well as to ensure that active and sustainable travel modes are promoted, although significant challenges in funding will need to be addressed. Further evidence on future infrastructure requirements is provided in the Infrastructure Delivery Plan (IDP).

2.14 Against this background, the key strategic objectives the authorities will address collaboratively are:

- **Providing New and Improved Transport and Communication Infrastructure** - To make efficient use of existing transport infrastructure and to ensure sustainable transport opportunities are promoted to support new and existing communities. Where additional capacity is required in the form of new or upgraded transport infrastructure (whether this be active travel, sustainable or highways infrastructure) to support new development, ensuring that this is delivered in a phased and timely way to minimise the impact of new development. To ensure this is provided alongside the development. To ensure that enabled communication is provided as part of new developments as enabled communication is essential for modern living and broadband infrastructure and related services will be essential for business.
- **Providing Sufficient New Homes** - To provide for a level and quality of new homes to meet the needs of a growing and ageing population in North Essex; to achieve this by ensuring the availability of developable land in appropriate locations and that the market delivers a suitable mix of housing types and tenures.
- **Fostering Economic Growth** - To strengthen and diversify local economies to provide more jobs; and to achieve a better balance between the location of jobs and housing, which will reduce the need to travel and promote sustainable growth.
- **Addressing Education and Healthcare Needs** – To provide good quality educational opportunities as part of a sustainable growth strategy, including practical vocational training and apprenticeships linked to local job opportunities. To work with partners in the Mid and South Essex Integrated Care Board, Public Health and local health partnerships to ensure adequate provision of healthcare facilities to support new and growing communities.
- **Ensuring High-Quality Outcomes** – To promote greater ambition in planning and delivering high-quality sustainable new communities. Overall, new development must secure high standards of urban design and green infrastructure which creates attractive and sustainable places where people want to live and spend time. New development needs to be informed by an understanding of the historic environment resource gained through the preparation of Historic Impact Assessments (Historic Statements in Chelmsford), and to conserve and enhance the significance of heritage assets including any contribution made to their significance by their settings.

2.15 The authorities and Essex County Council, are working together to promote sustainable growth with the necessary supporting infrastructure and to address the strategic priorities across the wider geographical area. A 'Memorandum of Co-operation: Collaboration on Strategic Priorities in North and Central Essex' (MOU) is also in place between the authorities.

Local context

2.16 There are a number of key local issues which help to define and shape Chelmsford. In addition to the context above, these key issues have helped to shape the Strategic Priorities of the Local Plan.

Jobs, Business and Economy

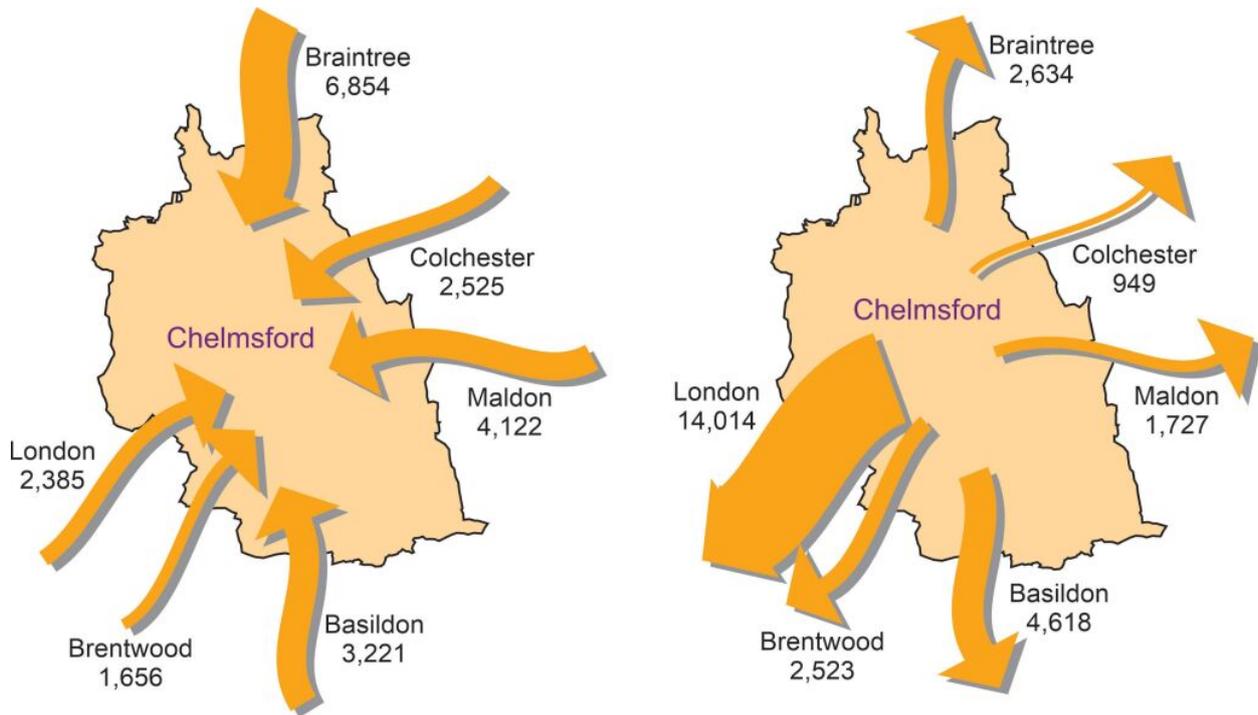

Figure 4 : Jobs, Business and Economy

2.17 Chelmsford's economy and employment base is strong and continues to grow in line with its role as a regional administrative and commercial centre. Chelmsford supports around 103,000 jobs, the second highest of any local authority area in Essex, and there are around 9,000 businesses.

2.18 Over 50% of Chelmsford's working population both live and work in Chelmsford. Around 20% of workers commute to London. Other popular destinations for Chelmsford residents to work are Basildon, Maldon, Brentwood and Braintree, where some 16% commute to work. Around 36% of Chelmsford's workforce lives outside the area with significant commuting across North Essex, with over 13,000 people commuting from Braintree, Colchester and Maldon each day to work in Chelmsford. This reflects the functional economic geography which Chelmsford shares with Braintree, Maldon and Colchester districts. Inward and outward commuting flows are shown in Figure 5, using the non-covid affected data from 2011.

Figure 5 : Main commuting flows into and out of Chelmsford

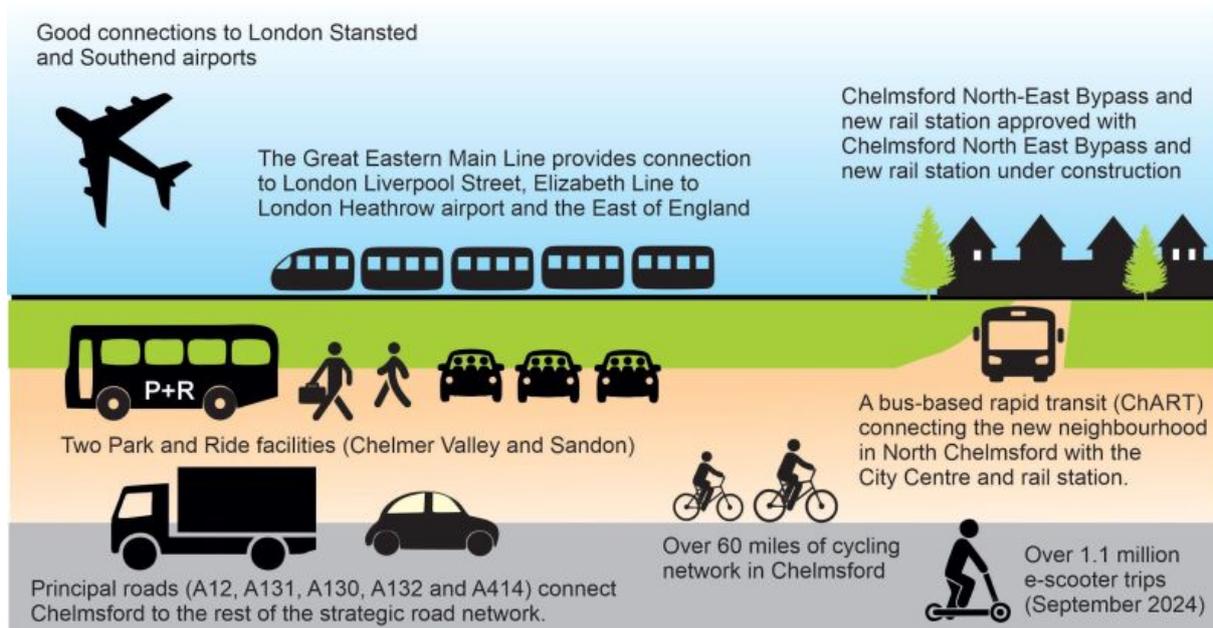

Source: ONS (2011)

2.19 The economy of Chelmsford is mixed. Between 2022 and 2041 forecasts indicate that the number of jobs in office, industrial and distribution based sectors across Chelmsford will increase by around 2,800. This would represent a growth of 8.9% when measured against the number employed in those sectors in 2022. Across all economic sectors the growth in jobs is expected to amount to around 12,400 which would be an increase in new jobs of 12.5%. In overall terms construction, residential and social care, food and beverage and health care are expected to be the sectors with the highest growth in the Local Plan period (Cambridge Econometrics 2022).

2 - About Chelmsford

Transport

Figure 6 : Transport

2.20 High car ownership and high levels of vehicle movements and commuting cause traffic congestion on main roads across Chelmsford at peak times. The high cost of local housing also results in some workers living a significant distance from their workplace.

2.21 Chelmsford has a wide influence on its surrounding area. The principal roads that connect Chelmsford to the rest of the strategic road network are the A12, A131, A130, A132 and A414. These roads together with the rail network are heavily used, particularly given the proximity to and connectivity with London. The transport modelling evidence base reveals that all the principal roads and many local roads through Chelmsford are at, or near to, capacity during peak periods. The first phase of the Chelmsford North East Bypass (CNEB) is programmed for delivery in 2026. The CNEB has a safeguarded corridor and will provide when fully complete a new 4.6km single carriageway bypass from the A12 in the south to the A131 in the north.

2.22 Chelmsford is well served by a range of urban and inter urban bus services between key centres in Essex. Chelmsford also has two Park and Ride facilities (Chelmer Valley and Sandon) with frequent connections to the City Centre for commuters and shoppers. North Chelmsford is also served by a bus-based rapid transit (ChART) connecting the new neighbourhood with the City Centre and rail station.

2.23 The Great Eastern Main Line provides rail services between London Liverpool Street and the East of England, as far as Norwich, including Chelmsford. It also carries freight traffic to and from Harwich International Port, which handles container ships and freight transport to the rest of the UK. The Elizabeth Line (Crossrail) provides services commencing just south of Chelmsford in Shenfield providing additional capacity and quicker journeys to a wider choice of destinations. Beaulieu Park Rail Station will provide Chelmsford with an additional railway station and access with regular connections to London, with services taking around 40 minutes. The new station is programmed to be operational from the end of 2025. The

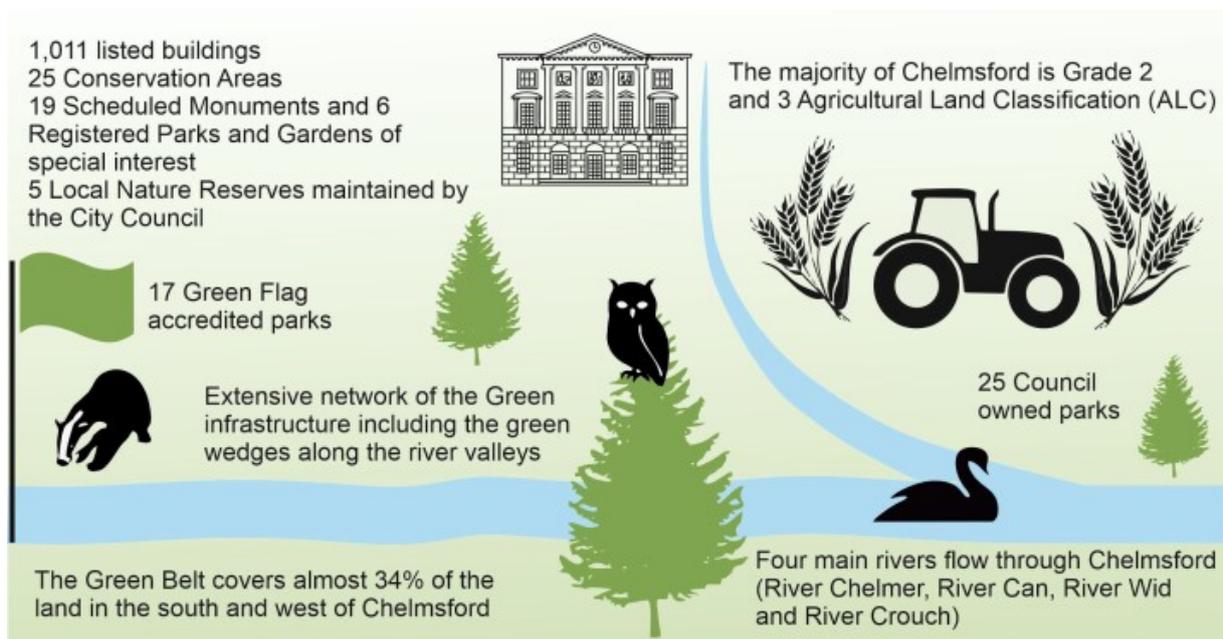

Elizabeth Line and the new main line rail station at Beaulieu Park in north east Chelmsford will contribute to the continued attractiveness of Chelmsford as a place to live and to do business. Chelmsford also has good connections to London Stansted and Southend airports, as shown in Figure 7.

Figure 7 : Chelmsford's Connectivity

Environment

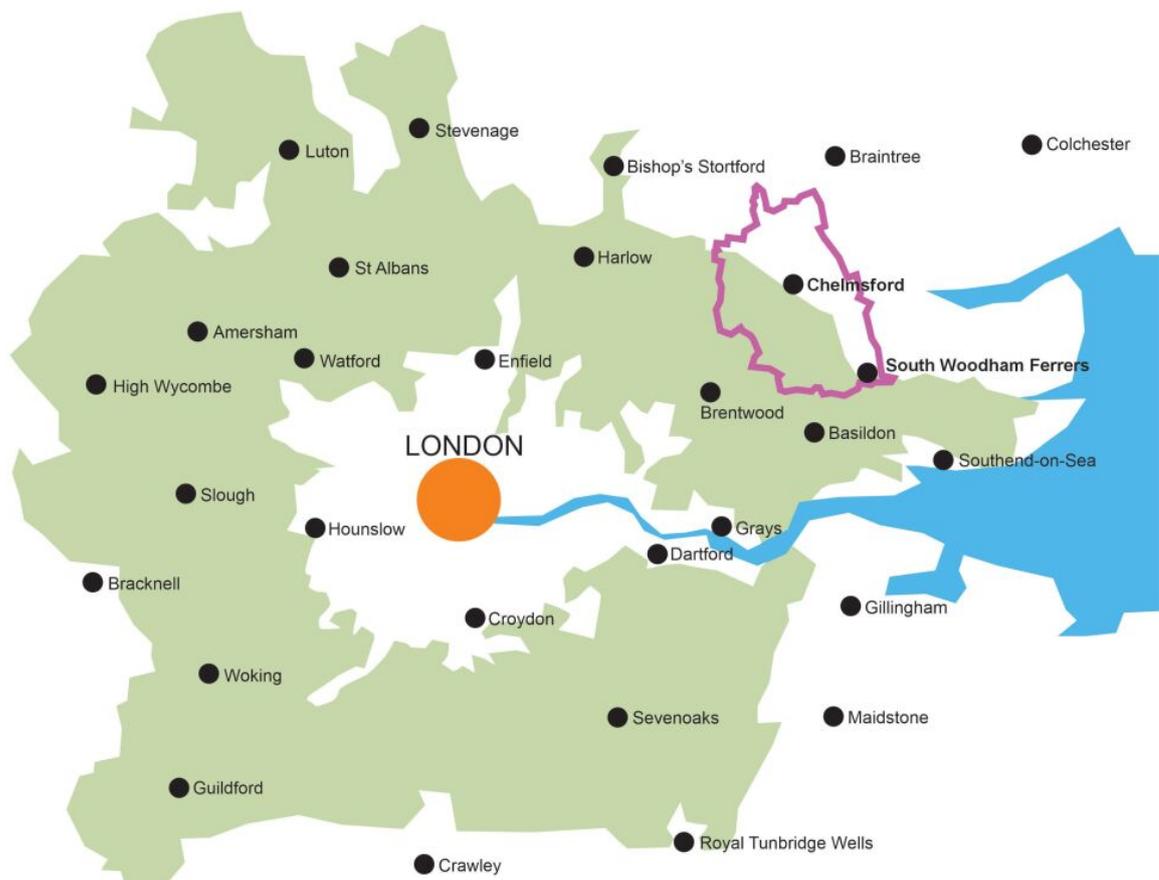

Figure 8 : Environment

2 - About Chelmsford

2.24 Chelmsford enjoys a very high-quality environment with 700 hectares of recreational space, including 17 Green Flag accredited parks³, complemented by an extensive network of the Green Wedge, gardens and nature reserves. The Green Wedge covers 3% of the land in the whole of the Chelmsford area. Many major cities in the UK have an area of open land around their built-up area which is designated as Green Belt. This is designed to prevent the unrestricted sprawl of these cities. The Green Belt in Chelmsford is part of London's Green Belt often referred to as the Metropolitan Green Belt. There are four main rivers that flow through Chelmsford and a range of habitats and high levels of biodiversity including sites of local, national and European importance. The Green Belt covers almost 34% of the land in the south and west of Chelmsford, shown in Figure 9.

Figure 9 : London's Green Belt

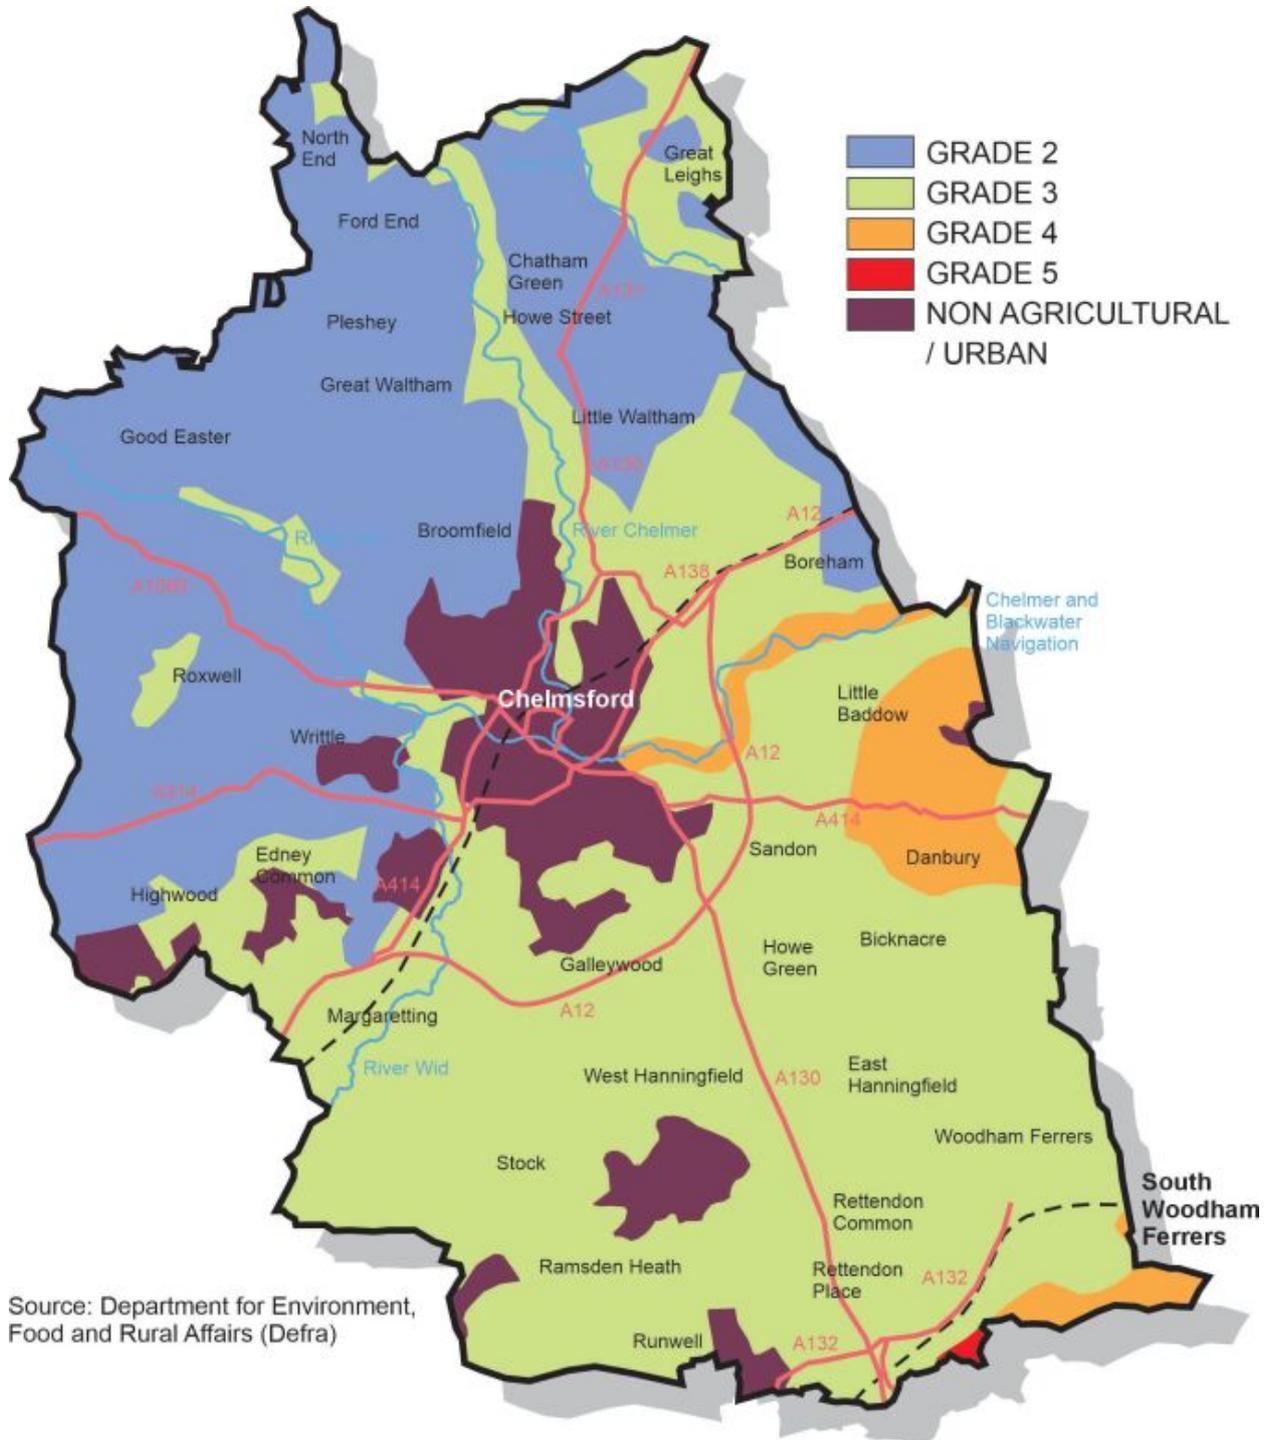

2.25 There are large areas of agricultural land in Chelmsford which provides an important natural resource. Land quality varies from place to place and the Agricultural Land Classification (ALC) provides a method for assessing the quality of agricultural land. Figure 9, showing Natural England's Agricultural Land Classification of Chelmsford, sets out that most of this is classified as agricultural Grades 2 and 3 (incorporating 3a and 3b) (very good and good-to-moderate quality). The remainder is Grade 4 or 5 (poor quality). There is no land classified as Grade 1 (excellent) with the majority of Grade 2 land in the north and west of Chelmsford. The Best and Most Versatile Land is defined as Grade 1, 2 and 3a. Figure

³ [Love Your Chelmsford 2022](#)

10 represents a generalised pattern of agricultural land classification grades and does not show the subdivisions of Grade 3 which are normally mapped in more detail.

Figure 10 : Agricultural Land Classification

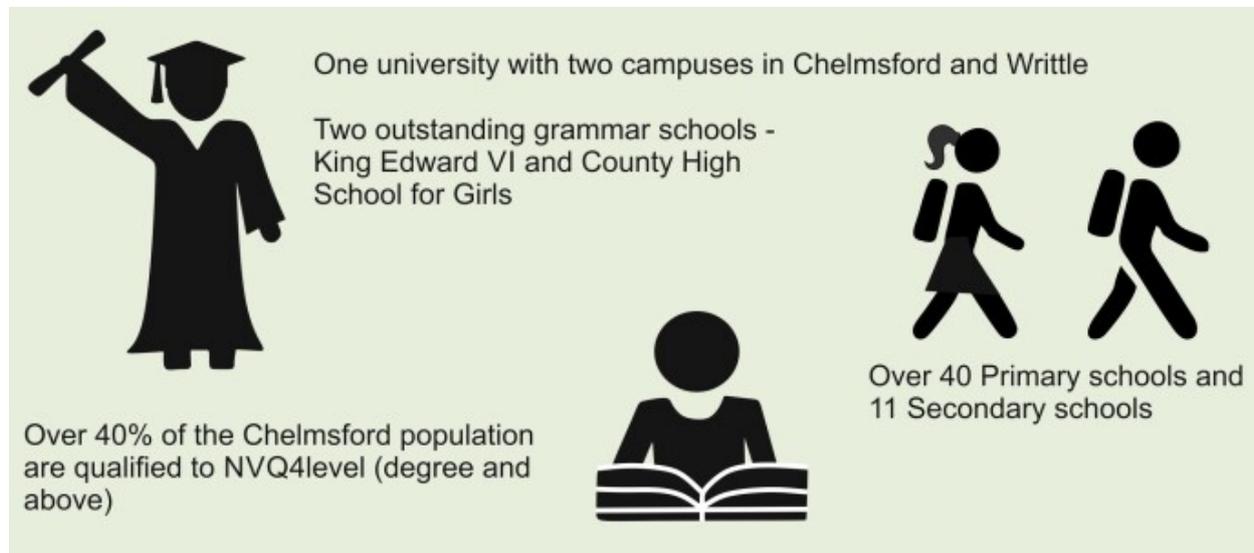

2.26 Chelmsford has some areas which are at risk from flooding. These are largely around the rivers and river valleys, as well as low lying land and coastal areas to the south eastern corner of Chelmsford.

2 - About Chelmsford

2.27 Chelmsford is also rich in history, with over 1,000 listed buildings, 25 Conservation Areas, 19 Scheduled Monuments and 6 Registered Parks and Gardens of Special Interest. Its historic landscape contains many archaeological sites dating back to pre-historic times.

Education and skills

Figure 11 : Education and Skills

2.28 Chelmsford has a well-educated and highly skilled workforce. Over one third of the workforce hold a NVQ4 level (degree and above). Chelmsford has a significantly lower percentage of people leaving education without any qualification compared to regional and national averages. There are a wide range of public and private schools and higher and further education establishments including Anglia Ruskin University (ARU), and Chelmsford College.

2.29 Anglia Ruskin University is one of the largest and fastest growing universities in the UK. It has campuses in Chelmsford and Writtle following its merger with Writtle University College in 2024. The University provides a range of research and consultancy services to businesses, working in partnership to add value to their business and is therefore an important driver of the local economy. In addition, Chelmsford College has specialisms in engineering, science and technology working in partnership with the University.

Community Facilities and Services

2.30 As well as extensive community services at a neighbourhood level, such as places of worship, community centres, local shopping parades, health and social care, Chelmsford provides many county-wide services. These include Broomfield Hospital, Chelmsford Diocese, key educational institutions, Essex County Council, Essex Police Headquarters and Magistrates, Crown and County Courts.

Figure 12 : Health and Social Wellbeing

2.31 The health of Chelmsford's population is generally good with life expectancy for both men and women higher than the average for England. Despite an overall positive picture of health, some inequalities in health do exist. For example, life expectancy is 6.3 years lower for men and 4.3 years lower for women in the most deprived areas of Chelmsford than in the least deprived areas.

2.32 Healthcare provision in Chelmsford includes Broomfield Hospital (which includes Accident and Emergency services) and a range of private and NHS healthcare providers. There are also two private hospitals in Chelmsford. New healthcare facilities are proposed as part of the major new development currently taking place to the north east of the City Centre at Beaulieu and North of Broomfield.

Current and future role of Chelmsford

Chelmsford's Evolution

2.33 From its Roman and medieval roots, Chelmsford has grown substantially since 1945. All the previous Plans for Chelmsford have included the release of greenfield land for housing and employment. As an example, the Plan of 1964 saw the building of large new areas on greenfield sites, including what we now know as North Springfield, from Old Springfield up to White Hart Lane, Chelmer Village, Newlands Spring, the large Meadgate and Barnard Road Estates, the Tile Kiln area and most of Moulsham Lodge, amongst others. Much of South Woodham Ferrers was built in the 1970s and 1980s. Plans from the 1990s have seen the development of Beaulieu Park and Chancellor Park in the Springfield area, and most recently North East Chelmsford.

2.34 Chelmsford was awarded City status in 2012 and as the County Town it provides many administrative, legal and civic functions for the whole of Essex. This underpins Chelmsford's role as the Capital of Essex. The influence of Chelmsford extends not just across Essex, but also across the wider region where it is one of the most successful areas,

2 - About Chelmsford

with a strong and diverse local economy, attractive new housing areas and substantial investment taking place on vital new infrastructure.

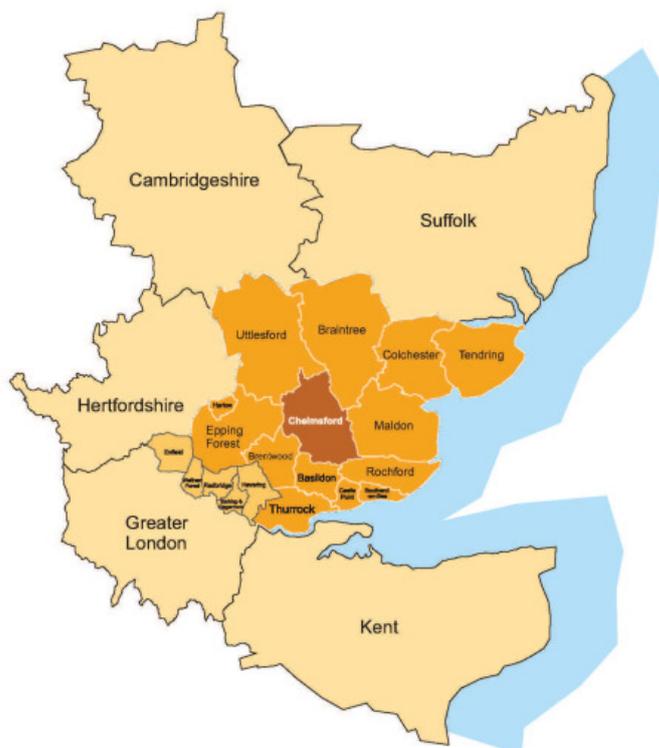

2.35 The strategy of the Council's previously adopted Local Plan was to focus development on previously developed sites in Chelmsford City Centre, sustainable urban extensions around Chelmsford and South Woodham Ferrers, and development around Key Service Settlements outside the Green Belt. The previously developed sites included the development of the former Royal Mail premises in Victoria Road and the Car Park to the West of County Hotel, Rainsford Road, both of which are now built.

2.36 Chelmsford is already an attractive place, comprising the City of Chelmsford, the town of South Woodham Ferrers, numerous villages and a rich and diverse natural and historic environment. In many respects, the growth that has taken place, particularly during the past 25 years, has helped shape Chelmsford to be the successful place it is now. Vital new infrastructure has been delivered alongside new homes, jobs, shops and leisure opportunities. Chelmsford's economy has been transformed from one being dominated by manufacturing industry to one with strengths across many sectors, but especially finance, health and education.

Chelmsford – Present Day to 2041

2.37 Chelmsford is at the very heart of Essex, being centrally located within the County and adjoined by seven neighbouring local authorities (Figure 13). The Green Belt covers almost 34% of the land in the south and west of Chelmsford.

Figure 13 : Map of Planning Authorities that surround Chelmsford

2.38 Taking into account the projected population increase, the Council is determined to ensure that future growth continues to take place in a sustainable way. This will bring further improvements to the quality of life for residents and much needed new community and transport infrastructure whilst at the same time protecting and enhancing the natural and historic environment.

2.39 The Council is working, and will continue to work, with its many partners in both the public and private sectors to deliver positive change for its communities. The Local Plan through its Strategic Priorities, Spatial Principles, policies and proposals provides the key planning framework to guide such change until 2041. It provides an exciting opportunity to ensure that Chelmsford continues to be at the forefront of creating sustainable new communities, contributing to its future success.

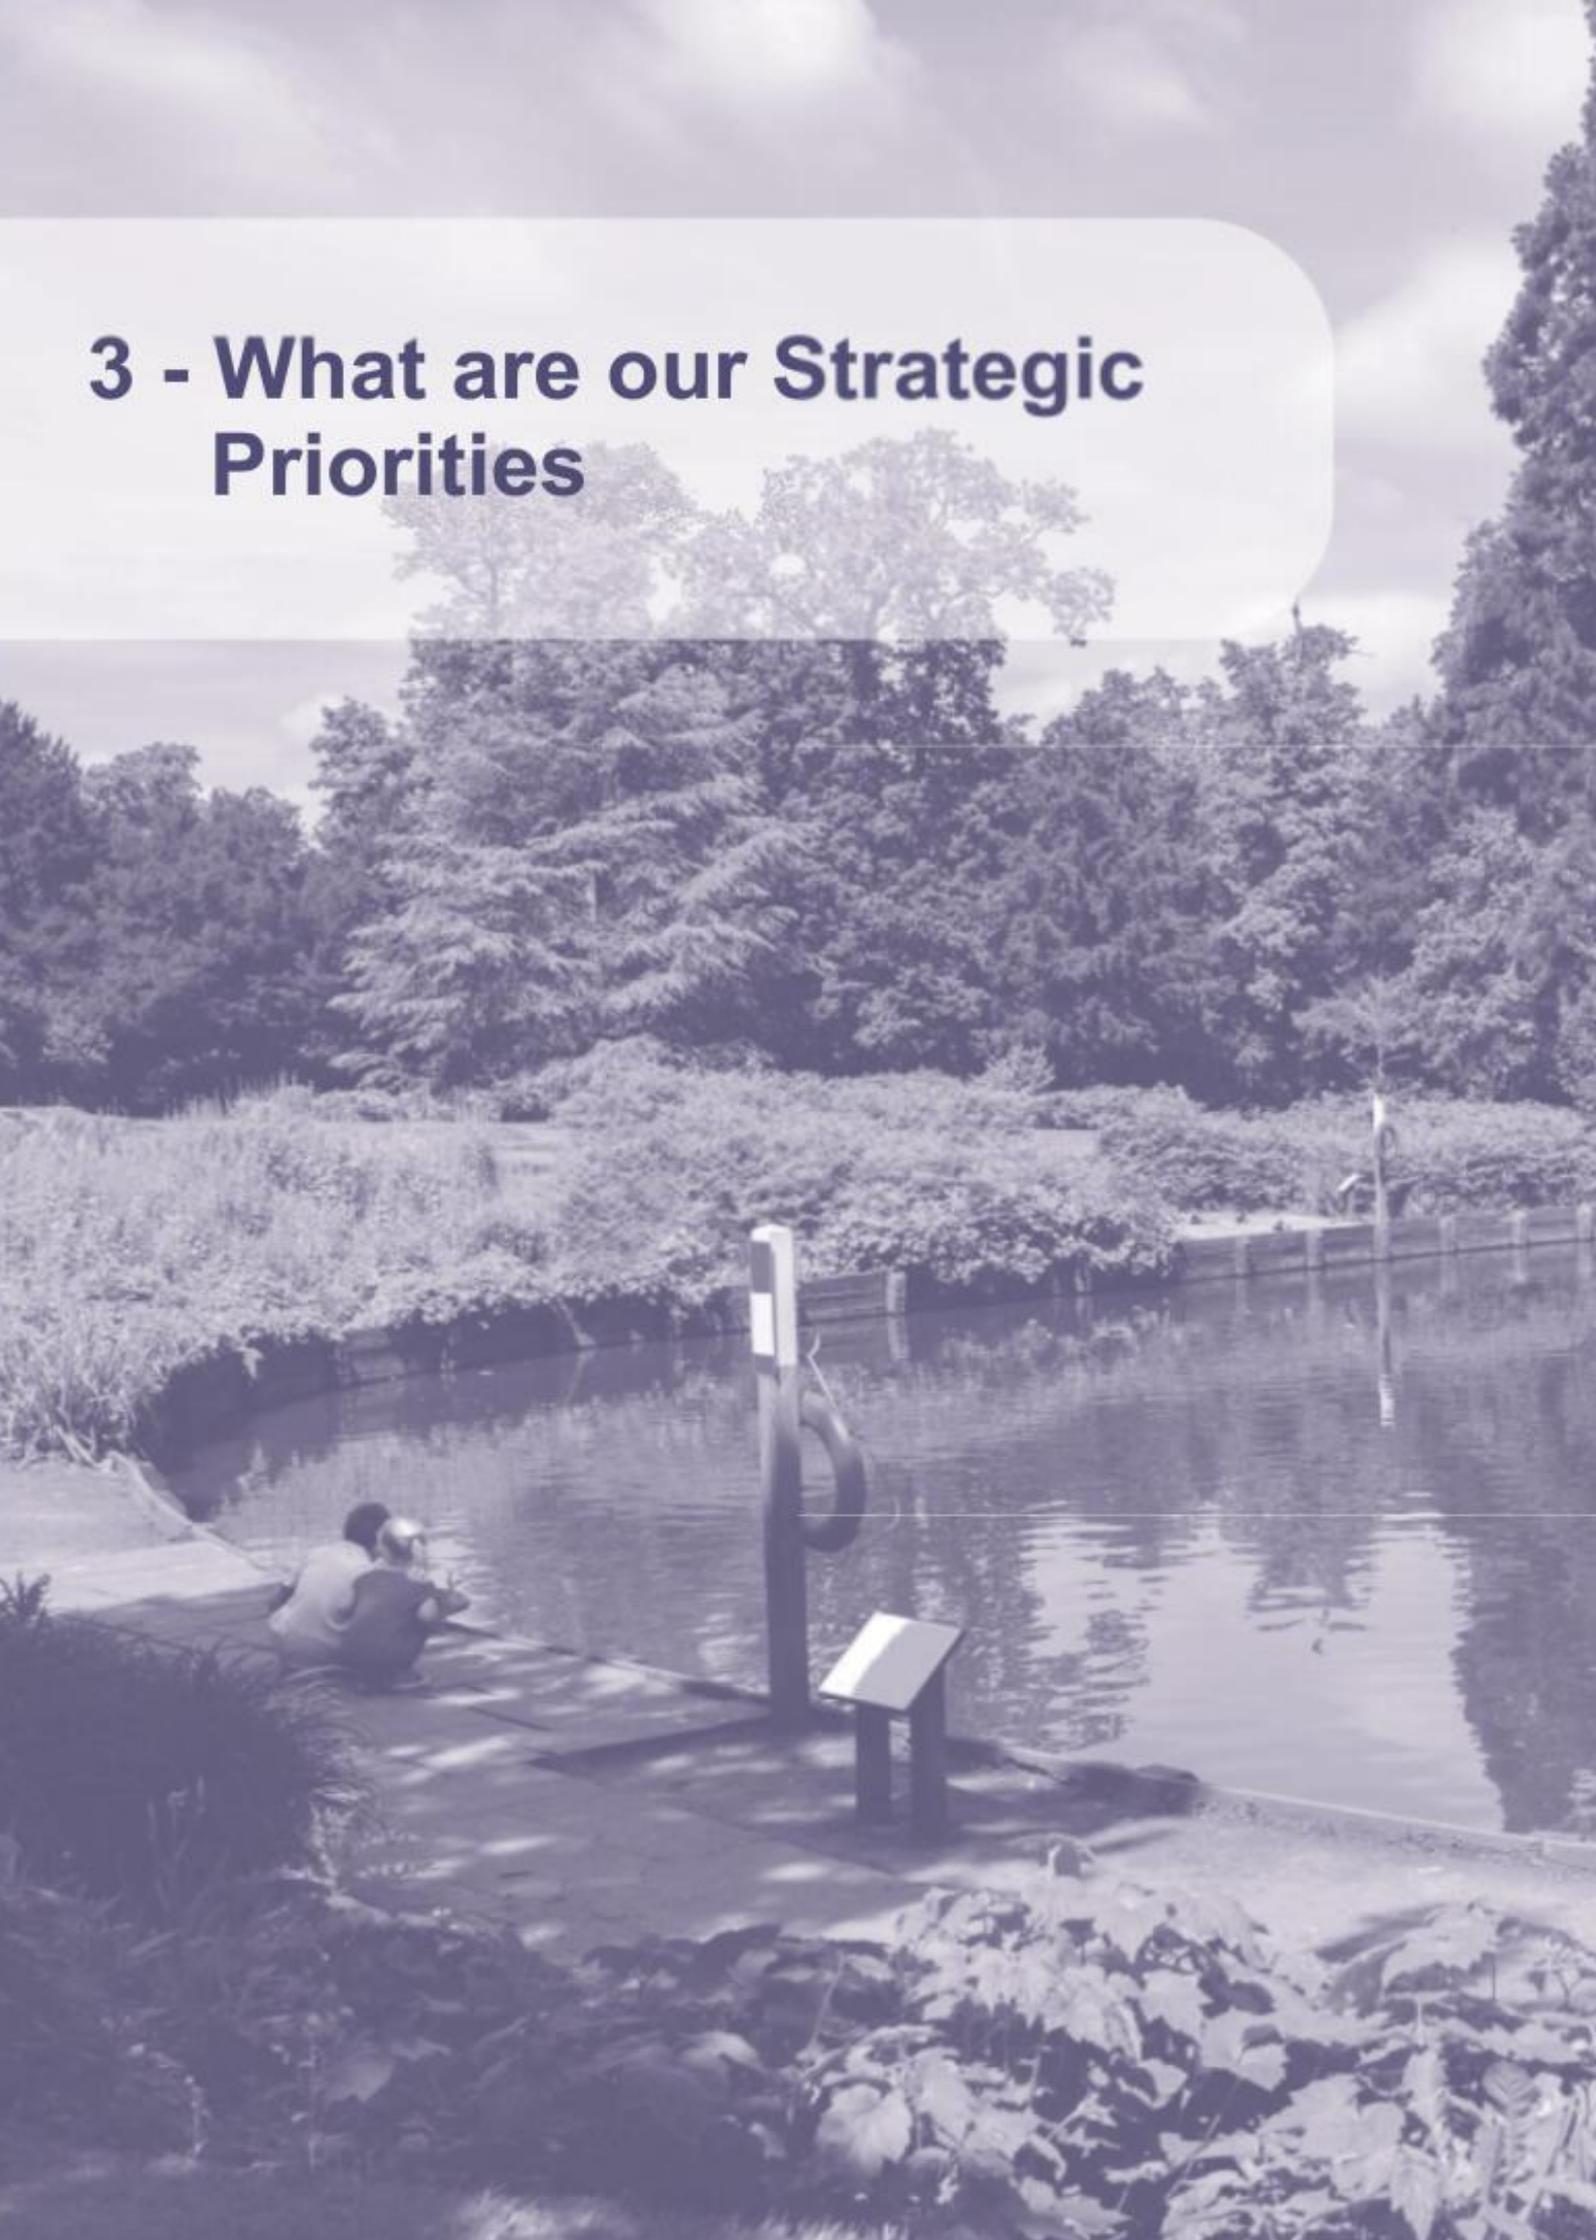

Chelmsford 2041 – 2050

2.40 The Council wants to ensure that development plans post-2041 can build on the success of previous Plans and the area's strengths to ensure that Chelmsford can further develop as an attractive and accessible place in which to live, work and socialise.

2.41 Chelmsford's success means that it is inevitable that it will remain a focus for growth and change in the County well into the 21st Century. Our growth agenda beyond 2041 to the period to 2050 could replicate the housing and employment numbers in the Local Plan period to 2041. Planning for the long-term increases certainty and provides a strategic framework to maximise the potential for infrastructure funding.

2.42 The need to deliver more housing, employment, improved active and sustainable travel, new and improved infrastructure, tackle climate change, improve health and wellbeing and protection of the environment, will continue to remain fundamental objectives of the Council and future development plans. To achieve this, the Local Plan will be forward looking, shaping the sustainable planning of Chelmsford's development and infrastructure needs not just in the foreseeable future but also providing a longer-term framework.

3 - What are our Strategic Priorities

Our Strategic Priorities

3.1 This Section sets out the Strategic Priorities for Chelmsford that will be addressed through the Local Plan. In particular, it looks at what Chelmsford is like today, how things are changing, what issues need to be addressed and what opportunities will be created. This will ensure that the Local Plan recognises Chelmsford’s spatial characteristics in planning for its future development.

3.2 The Strategic Priorities have been grouped into themes, to clearly demonstrate the links between them:

Priorities for climate	Priorities for growth	Priorities for place
1. Addressing the Climate and Ecological Emergency	4. Ensuring sustainable patterns of development and protecting the Green Belt	7. Creating well designed and attractive places, and promoting the health and social wellbeing of communities
2. Promoting smart, active travel and sustainable transport	5. Meeting the needs for new homes	8. Delivering new and improved strategic and local infrastructure
3. Protecting and enhancing the natural and historic environment, and support an increase in biodiversity and ecological networks	6. Fostering growth and investment and providing new jobs	9. Encouraging resilience in retail, leisure, commercial and cultural development

Strategic Priority 1 – Addressing the Climate and Ecological Emergency

3.3 There is a need to address climate change globally and locally to anticipate, mitigate, adapt and be resilient to climate change, reduce carbon emissions and minimise flood risk.

3.4 There is scope within the Local Plan to contribute to achieving these priorities through the location of development and the design of buildings and places within new and existing development. Key aims of the Council’s Climate and Ecological Emergency Action Plan include reducing carbon emissions, lowering energy consumption, reducing waste and pollution, improving air quality, greening Chelmsford, increasing biodiversity and encouraging active and sustainable travel.

3.5 All development needs to contribute towards addressing these priorities, whilst also improving the environment around us. To achieve this the Local Plan requires development to deliver net-zero carbon emissions and provide other measures which meet the key aims, such as integrated and stand-alone renewable generation, and energy and water efficiency. Future climate risks will be considered when allocating development sites to ensure risks and vulnerabilities are understood over the development’s lifetime.

3.6 Flood risk management which supports climate resilience will need to keep pace with projections of climate change. The Local Plan has been subject to a Strategic Flood Risk Assessment (SFRA). Some sites in areas of existing flood risk have also been subject to a more detailed assessment, including sequential and exception tests. Nature based solutions such as Sustainable Drainage Systems (SuDS) and tree planting will form a key part of mitigation, to provide a dual role in water storage and delivering multifunctional benefits for the built, natural and historic environment. In addition, the Essex Local Nature Recovery Strategy will provide priorities and identify areas for nature recovery to help address the ecological emergency and climate change. The Council has made a commitment to a 10

3 - What are our Strategic Priorities?

year tree planting campaign which aims to plant one tree for every resident and at least three for every new home built, with a target of 175,000 new trees including for woodland expansion. Street trees are also encouraged in new developments to help meet this target.

Strategic Priority 2 – Promoting smart, active travel and sustainable transport

3.7 The Local Plan seeks to bring about a significant change in how people make their journeys towards more active and sustainable travel choices. A number of recent initiatives will contribute towards achieving this aim, and these have informed policy (e.g. Essex County Council's Safer Greener Healthier campaign).

3.8 There continues to be a need for development to provide mitigation measures on the local road network, and the need for more sustainable modes of travel is required to assist in adapting to climate change, as well as ensuring development is able to accommodate the latest transport technologies.

3.9 Consideration will also be given to development layouts within major new developments which contribute to creating walkable neighbourhoods, where everyday facilities such as schools, shops, workplaces, community and sports facilities, and open spaces are easily accessible by walking or cycling in 15-20 minutes. This initiative is already being rolled out in Chelmsford Garden Community.

3.10 Collectively, such measures should improve the way people move around with an emphasis on active and sustainable modes of transport and reducing current reliance on fossil fuelled vehicles.

3.11 Support will be given to the provision of strategic transport infrastructure to enable a future for efficient alternatives to fossil fuelled vehicles. Development layouts should be future proofed to accommodate future bus infrastructure and dedicated bus routes, and emerging new technologies such as autonomous vehicles, mobility hubs and on-demand transport. This includes a requirement for electric charging points for all new non-residential development.

3.12 Securing local transport infrastructure is key to creating the conditions for active and sustainable travel locally, such as electric charging points for all new houses, accessible cycle and footpaths, multifunctional greenways, secure cycle parking, and provision of or subscription to car clubs.

Strategic Priority 3 - Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks

3.13 Chelmsford has a wide range of national and local planning and environmental designations such as Sites of Special Scientific Interest (SSSIs), local wildlife habitats and woodlands providing biodiversity and ecological benefits. Chelmsford's historic environment is also important with a range of Scheduled Monuments, Listed Buildings, Conservation Areas, Registered Parks and Gardens and non-designated heritage assets. All of these contribute towards the local distinctiveness of the area and need to be protected and enhanced at the same time as achieving the growth required.

3.14 The Local Plan policies will seek to achieve a net gain for biodiversity by providing new spaces including high quality green/blue infrastructure built into the designs and masterplans of new development.

3.15 The river valleys are an important local asset which not only offer natural flood protection but contribute significantly to the local landscape and character of the area and have a role in accommodating active travel corridors. In addition, the water quality of the rivers is an important factor in maintaining diverse natural habitats.

3.16 The Local Plan will also protect and enhance local distinctiveness and plan positively for the creation, protection, enhancement and management of multifunctional green/blue infrastructure networks and habitats to ensure a net gain for biodiversity and green infrastructure in line with the Council's Green Infrastructure Strategic Plan and Natural England's Green Infrastructure Framework.

3.17 The Local Plan seeks to minimise the loss of the best and most versatile agricultural land to ensure future food production. However, to meet our development needs it is inevitable that some agricultural land will be lost. This will need to be balanced against the relative scale of the loss and other planning factors such as sustainability and general suitability for development of the location.

3.18 High quality green infrastructure will be used to protect, enhance and create wildlife corridors to maintain ecological connectivity when greenfield land will be lost. In line with the Spatial Principles (Policy S1), the Local Plan will also maximise the use of suitable previously developed land (brownfield land), provided that it is not of high environmental value and represents a sustainable location.

Strategic Priority 4 - Ensuring sustainable patterns of development and protecting the Green Belt

3.19 National planning policy includes a presumption in favour of sustainable development requiring Local Plans to plan positively to meet local development needs. In line with national policy and the Evidence Base, the policies and allocations in the Local Plan will ensure that new development takes place in a sustainable way by balancing the key economic, social and environmental dimensions.

3.20 The Local Plan will follow the national planning policy approach of sustainable development to ensure that appropriate development can be approved without delay. A sustainable development should meet the needs of the present, without comprising the ability of future generations to meet their own needs. A balance needs to be struck between the need for, and positive benefits of, development against its impacts. This is tested through separate Sustainability Appraisals.

3.21 The Local Plan will ensure that Chelmsford can accommodate its future growth requirements and minimise the effect on the environment for example by promoting development of previously developed land in Chelmsford Urban Area and elsewhere, and accommodating some of the housing requirement on smaller sites of 1ha or less in sustainable locations.

3.22 The Green Belt is a national designation which restricts the types of new buildings, extensions and land uses in the area it covers. The Green Belt covers around 34% of the Council's area. Development allocations will be focused at settlements outside the Green Belt, informed by a Settlement Hierarchy to select sustainable locations. Other policies will provide continued protection to prevent the encroachment of growth into undeveloped areas and the coalescence of existing built-up areas.

3 - What are our Strategic Priorities?

3.23 Appropriate waste management and the supply of minerals is provided for within Essex County Council's Waste and Minerals Plans. These plans, alongside partnership working with the County Council, have informed the Local Plan process and will ensure that there is appropriate management of waste and that any mineral reserves are not sterilised by future development where the development is not necessary, and their prior extraction is practical and environmentally feasible. The Local Plan will also be consistent with the requirements of the South-East Inshore Marine Plan. Regard should also be had to relevant waste management Government guidance such as the Waste Development Industry Code of Practice (DoWCoP).

Strategic Priority 5 - Meeting the needs for new homes

3.24 Chelmsford is a largely affluent area where average house prices and rents are high, sustained by high demand. As with much of the South East of England, this creates an affordability issue as the cheapest homes are less affordable to those on lower incomes.

3.25 There is significant demand for affordable housing (particularly rented affordable) or first homes for first time buyers or those on lower incomes. There is also demand for specialist residential accommodation. The Local Plan will need to ensure the provision of sufficient and appropriate housing to meet local housing needs and the requirements identified through the Gypsy and Traveller Accommodation Assessment (GTAA) and for Travelling Showpeople plots and Gypsy and Traveller pitches. The ageing population also means that the Local Plan needs to provide the right type of homes, including independent living accommodation for older people (55+), supported housing for adults with learning or other disabilities and appropriate support services as well as sufficient healthcare facilities to support both older residents and the population as a whole in the period to 2041.

Strategic Priority 6 - Fostering growth and investment and providing new jobs

3.26 The economic vitality of Chelmsford and the success of its businesses are fundamental to improving the prosperity and quality of life of local residents. The Local Plan needs to ensure that Chelmsford's businesses thrive, continue to innovate and can be even more productive and resilient; and that Chelmsford fosters new economic growth and new jobs to meet forecast local needs generated by the growing population.

3.27 Unemployment is low in Chelmsford, which also has a higher proportion of managerial and professional workers compared to regional and national averages. However, Chelmsford does have a skills shortage in some sectors including healthcare, and some workers are unable to afford homes close to work. This creates additional pressure to make sure that adequate provision is made for housing in line with Chelmsford's role as a regional and sub-regional centre.

3.28 The Local Plan will seek to ensure a flexible rolling supply of employment land over the Local Plan period. Where appropriate, it will support the retention of existing designated employment areas to maintain supply and choice of employment floorspace and rural employment development opportunities, and support the growing green economy and the creative sector.

3.29 The Council will also continue to support local businesses outside the Local Plan process through its business support services and by delivering the Chelmsford Economic Strategy, to encourage a circular economy.

Strategic Priority 7 - Creating well designed and attractive places, and promoting the health and social wellbeing of communities

3.30 The Local Plan policies will seek to promote the health and wellbeing of communities for example by requiring development to contribute to creating an inclusive built and natural environment, to provide new green spaces including high quality green infrastructure and access to the countryside, to provide sport and recreation facilities and to promote active and healthy lifestyles through the enhancement of active and sustainable travel routes.

3.31 New development will need to ensure that the integrity of communities is maintained and social cohesion is promoted. New development can also help to provide new primary health services where they are most needed.

3.32 The Local Plan will also seek to ensure that all new development meets the highest standards of design. The high-quality design of new development is essential to making places more attractive, sustainable, safe and accessible. Good design can also help mitigate the impacts of climate change and air pollution, promote healthier lifestyles and build a sense of civic pride. This includes public realm improvements to create attractive places where people want to live, work and visit.

3.33 The Local Plan will further require the use of masterplans for Strategic Growth Sites and encourage design codes where appropriate for strategic scale developments.

3.34 Large scale developments involve long term project development and management which should involve the new community. Community involvement is key to the success of new communities and could include management of community facilities, creation of gardens or orchards, and land trusts, as has been successfully demonstrated at Chelmsford Garden Community. Provision and management of well-supported community facilities will assist in ensuring sustainable and energy efficient development which is fit for the future.

Strategic Priority 8 - Delivering new and improved strategic and local infrastructure

3.35 The continued growth and popularity of Chelmsford is placing pressure on existing strategic infrastructure. This includes pressure on transport infrastructure, the potential for increased flood risk and greater pressure on resources such as water and waste services.

3.36 In parts of Chelmsford, existing local infrastructure such as schools and healthcare facilities are at, or near to, capacity. Much existing infrastructure therefore has little spare capacity to cope with population growth and new housing and employment development.

3.37 The Local Plan will seek to ensure that necessary new or upgraded strategic and local infrastructure and facilities are provided alongside the development of new residential communities including education, police, ambulance and fire and rescue, primary healthcare provision, recycling facilities and appropriate drainage, as well as community facilities such as halls and places of worship. It will also ensure that appropriate levels of open space, sports and leisure provision, such as multi-use facilities, are provided as part of development to meet the needs of residents.

3.38 The Strategic Growth Site policies within the Local Plan set out the local infrastructure required to support the identified growth. To support this the Infrastructure Delivery Plan (IDP) identifies the infrastructure needed to support the planned development and contains details regarding its phasing and costing.

3 - What are our Strategic Priorities?

3.39 One of the most challenging strategic infrastructure requirements is ensuring the transport network is sufficient to accommodate future growth. Many of the existing roads in the City Centre are at, or near to, capacity. Much existing transport infrastructure therefore has little spare capacity to cope with population growth and new housing and employment development. However, capacity to transport people exists on sustainable and active travel networks such as bus, walking and cycling. Subsequently, capacity in certain areas may come about from promoting a change in behaviour, for example in how people choose to travel.

3.40 Consultants, Ringway Jacobs, through Essex County Council has undertaken transport modelling to help support the proposals in the Local Plan. The Local Plan evidence base comprises a series of traffic modelling reports including a specific report on this review of the Local Plan. The traffic modelling report follows on from earlier assessments of the adopted Local Plan and this current review. The modelling outputs indicate that the patterns and severity of congestion across Chelmsford would remain broadly consistent regardless of differences in Local Plan development allocations and the mitigation measures identified. Further work is being undertaken to consider the likely traffic impact on local junctions most affected by the allocation sites and the mitigation measures to help to improve the performance at the junctions. The results of this additional modelling work will inform the review of the Local Plan.

3.41 The Council has worked alongside Essex and Suffolk Water and Anglian Water to produce a Water Cycle Study to ensure there is sufficient capacity for water supply and waste water management, and identify any gaps in capacity.

3.42 Some parts of Chelmsford are also without access to high-speed broadband. Throughout the Local Plan period the Council will work with stakeholders to help promote gigabit broadband communications in all new developments, where it is viable to do so.

3.43 The Council will use Community Infrastructure Levy (CIL) (and/or its successor) receipts and planning conditions or legal agreements to ensure the provision of infrastructure. The Council will also work with infrastructure providers to facilitate the timely provision of infrastructure needed to support development. Where necessary this will involve suitable phasing of development and forward funding of its supporting infrastructure. Working in partnership with other councils in Essex which are promoting strategic levels of growth, there are opportunities to maximise future investment for strategic infrastructure funding.

Strategic Priority 9 – Encouraging resilience in retail, leisure, commercial, and cultural development

3.44 Jobs in retail are focused in Chelmsford City Centre, South Woodham Ferrers Town Centre and Principal Neighbourhood Centres. Chelmsford City Centre attracts shoppers and visitors from well beyond the Council's area boundary.

3.45 Chelmsford City Centre is by far the largest centre within the Local Plan area, and as such provides a range of functions, services and facilities. Chelmsford City Centre has recently seen a significant expansion through the development of the Bond Street centre on former car parks to the east of the High Street comprising 27,900sqm of new retail and leisure floorspace.

3.46 Developments such as the new Bond Street development, Bus Station, former Marconi Site, former Anglia Ruskin University Central Campus, and the Cricket Club have assisted

3 - What are our Strategic Priorities?

the City Centre in being a vibrant place both during the day and in the evening. As well as a wide range of residential development in the City Centre there is a focus for shopping, major employment, civic and administrative functions, arts, culture and leisure and a centre of excellence for education and healthcare. The Council will continue to encourage investment in major new infrastructure, retail, office, arts, leisure and cultural facilities to build upon past success.

3.47 Comprehensive leisure services are provided by the Council and through the private sector. These include a wide range of sports and recreation facilities, including two cinemas, Chelmsford City Racecourse, a large variety of sports facilities and extensive improvements to the flagship Riverside Ice and Leisure Centre.

3.48 There is evidence that the retail offer of South Woodham Ferrers Town Centre could benefit from enhancements and investment to meet the requirements of customers, businesses and visitors.

3.49 The Council will continue to support new and enhanced retail, leisure and commercial development through protecting existing assets and supporting appropriate growth in these sectors.

3.50 The Council is keen to ensure that all parts of Chelmsford are vibrant and successful with continued new facilities and by encouraging investment in Chelmsford's arts and culture. To this end the Council has also developed a vision to promote integrated enhancement of the West End quarter of Chelmsford City Centre. This area has a diverse mix of uses, acts as an important transport interchange and includes important civic functions, yet parts of the area have a rundown appearance and feel severed from the City Centre. The vision for the West End makes recommendations for enhancements in the future to provide an attractive and distinctive quarter. Culture Chelmsford, an independent charity, has also been established to work in partnership with the Council to strengthen Chelmsford's cultural identity. Through close engagement with the public and stakeholders, the mutual objective is to inspire participation in the arts and culture, to build awareness of Chelmsford's historic heritage and to ignite interest in developing creative and cultural legacies for the future. The Trust has led on developing a shared Cultural Strategy to implement a 10-year vision for the whole of the Council's area.

3.51 Work is also continuing on implementation of the Plan for Improving Rivers and Waterways in and around Chelmsford, to improve the appearance, attractiveness and recreational use of Chelmsford's rivers and waterways, and some of its ambitions have been translated into policy.

4 - Our Vision and Spatial Principles

4.1 Taking into account the Strategic Priorities, this Section sets out the long-term Vision and Spatial Principles for managing and accommodating growth within Chelmsford up to 2041 and beyond.

Vision for Chelmsford

4.2 Our Vision for Chelmsford sets out the kind of place we want to be in 2041:

Guiding Chelmsford's growth towards a greener, fairer and more connected community.

Through the Vision, by 2041, Chelmsford will continue to:

- be an area for significant growth, achieving sustainable housing and employment development and providing new homes and jobs to meet a range of needs
- support a strong and expanding economy including supporting the growth of the construction, clean energy, advanced manufacturing and engineering, digi-tech, life sciences and health and care, and professional and support sectors
- have a City Centre which continues to be a leading shopping and leisure destination, with an enhanced mix of vibrant and successful cultural, retail, leisure and residential use
- revitalise South Woodham Ferrers Town Centre by enhancing its retail, cultural and leisure offer
- be a place with an improving transport system offering enhanced connectivity for all through active and sustainable travel leading to modal shift
- support sustainable new development including the new Beaulieu Park Rail Station, expanded Park and Ride sites, capacity improvements to the Army and Navy Junction and strategic highway improvements
- move towards a net zero carbon future for Chelmsford seeking to mitigate and adapt to climate change and to promote the sustainable use of natural resources
- maximise opportunities for active and sustainable transport by providing increased opportunities for active and sustainable travel including walking, cycling and public transport
- provide new and expanded infrastructure, services and facilities to support new development, including the provision of new education, healthcare and police facilities and multifunctional green/blue infrastructure
- deliver Biodiversity Net Gain and wider environmental net gains, that forms an important component of nature recovery
- have residents benefiting from healthier, more inclusive and active lifestyles, in healthy living environments which reduce health inequalities
- deliver developments that respect the character and local distinctiveness of the area and that are well designed
- protect and enhance the rich and diverse built, historic and natural environment including the coast
- maximise the conservation value and enjoyment of Chelmsford's unique Green Wedge, riverbanks, canals and waterways including Sandford Mill
- be a centre of excellence for education and skills development with high-performing schools, University and a School of Medicine

4 - Our Vision and Spatial Principles

- achieve the urban renewal and regeneration of Chelmsford Urban Area and City Centre
- support the rural economy with vibrant and sustainable rural areas
- build on success and facilitate the sustainable growth of the area
- facilitate the provision of gigabit broadband
- be a vibrant, attractive and a desirable place to live, work, visit and study in.

Spatial Principles

4.3 The following Spatial Principles will guide how the Strategic Priorities and Vision will be achieved. They will underpin spatial planning decisions and ensure that the Local Plan focuses growth in the most sustainable locations. In particular, they will also contribute to delivering the Council's response to the declared climate and ecological emergency, focus on health and wellbeing, and secure the enhancement and extension of the City's Green Infrastructure Resource.

STRATEGIC POLICY S1 – SPATIAL PRINCIPLES

The Council will require all new development to accord with the following Spatial Principles where relevant:

- a Locate development at well-connected and sustainable locations**
- b Protect the Green Belt from inappropriate development**
- c Promote the use of suitable previously developed land for development**
- d Continue the renewal and enhance the vitality of Chelmsford City Centre and its Urban Area**
- e Focus development at the higher order settlements outside the Green Belt and respect the development pattern and hierarchy of other settlements**
- f Respect the character and appearance of landscapes and the built environment, and preserve or enhance the historic and natural environment and biodiversity**
- g Locate development to avoid or manage flood risk and reduce carbon emissions**
- h Ensure development is served by necessary infrastructure and encourage innovation**
- i Locate development to utilise existing and planned infrastructure effectively**
- j Ensure development is deliverable.**

Reasoned Justification

4.4 The Council has assessed its development requirements for the period to 2041. This development growth needs to be managed to ensure sustainable development is achieved. Therefore, to manage this change, a series of Spatial Principles have been established. The Spatial Principles are not listed in order of preference or priority but are all interrelated and when considered together will shape the Council's Spatial Strategy. They will be applied as relevant to all development proposals and related applications.

a) Locate development at well-connected and sustainable locations

4.5 Development will be focused at well-connected locations for example along strategic transport corridors, close to existing local services and in areas with a good level of existing or proposed transport infrastructure including active and sustainable transport opportunities. This will help reduce the need to travel and encourage the use of non-car modes.

4.6 Creating development that is accessible by different modes of transport, especially walking and cycling and the use of public transport is essential in promoting sustainable development as it reduces car dependency. An important policy tool to achieve this is the modal hierarchy (a prioritised list of transport modes). All major development should follow the modal hierarchy by providing access for all of the following:

- i Walking and providing access for people with mobility impairment
- ii Cycling
- iii Public transport
- iv Powered two wheelers
- v Commercial vehicles including taxis
- vi Car sharing
- vii Private cars.

b) Protect the Green Belt from inappropriate development

4.7 The extent of the Green Belt in Chelmsford is already established in the Council's adopted Local Plan and national planning policy is clear that the boundaries should only be altered in exceptional circumstances. The Green Belt will be protected as it provides the strongest possible planning policy to prevent the encroachment of urban growth into open undeveloped areas and the coalescence of existing built-up areas. Inappropriate development is harmful to the Green Belt and should not be approved except in very special circumstances, as set out in the NPPF.

c) Promote the use of suitable previously developed land for development

4.8 In order to make the best use of land and to ensure that new development is located in sustainable locations, there is a need to make the most of previously developed land, provided that it is not of high environmental value and represents a sustainable location.

4.9 By their very nature, previously developed sites in urban areas can be well served by existing infrastructure but they may also be subject to constraints related to their precise uses or surroundings. These can include sites being in multiple ownership, the high cost of land, demolition of existing buildings and site remediation works. As such, redevelopment of some previously developed land can take a long time to become deliverable. There are a number of previously developed sites in the Chelmsford Urban Area which will be suitable for redevelopment over the Local Plan period. This reflects changes in the national and local economy resulting in land becoming derelict, under-used or no longer viable.

4.10 Encouraging the effective re-use of suitable previously developed sites will only meet a limited proportion of our overall needs for new homes and jobs and will not necessarily deliver significant infrastructure improvements. Where appropriate and viable, development on sustainable previously developed sites should be optimised, including the use of higher densities, particularly near public transport interchanges. However, there remains a need to allocate significant new development on greenfield sites to meet future development needs.

4 - Our Vision and Spatial Principles

d) Continue the renewal and enhance the vitality of Chelmsford City Centre and its Urban Area

4.11 To ensure the continued urban renaissance and renewal of Chelmsford City Centre and its surrounding Urban Area, previously developed sites will be allocated for new development including new residential, employment and mixed use developments. This will assist in urban regeneration by re-using derelict and other urban land in Chelmsford, which together with the promotion of city greening through the Green Infrastructure Strategic Plan, will help it transform into an even more vibrant and successful place.

e) Focus development at the higher order settlements outside the Green Belt and respect the existing development pattern and hierarchy of other settlements

4.12 Strategic development will be focused in accordance with a Settlement Hierarchy by directing the new development growth in or around Chelmsford City Centre/Urban Area, some Key Service Settlements and other sustainable settlements outside the Green Belt. The existing settlement pattern should be respected so development does not sprawl into nearby settlements undermining their distinct and separate identities, and to prevent more isolated development which is severed or with poor connectivity.

f) Respect the character and appearance of landscapes and the built environment, and preserve or enhance the historic and natural environment and biodiversity

4.13 Chelmsford contains a number of rich and varied landscapes and new development proposals will need to respect their character and appearance and their role for wildlife and increasing biodiversity. The river valleys where they permeate into Chelmsford Urban Area have a unique role and function and are identified as the Green Wedge. New development proposals will also need to respond to the character and appearance of the built environment in particular to preserve or enhance the historic environment.

g) Locate development to avoid or manage flood risk and reduce carbon emissions

4.14 The Local Plan will seek to reduce the risk to people and the built and natural environment from flooding by discouraging inappropriate development in areas at known risk from flooding. The Council will apply a sequential risk-based approach to new development in line with national policy and the Strategic Flood Risk Assessment. New development will be focused in areas where there is no or low risk of flooding. Where this is not possible, then the Sequential Test will be applied as outlined in the NPPF, followed if necessary by the Exception Test. New development should also ensure that it does not exacerbate or create flood risk elsewhere. It should demonstrate it will be safe for its lifetime. The Sequential Test and (Exception Test where applicable) have been undertaken for Local Plan site allocations. The location of development and its proximity to existing or proposed services and community facilities will make an important contribution to reducing carbon emissions.

h) Ensure development is served by necessary infrastructure and encourage innovation

4.15 The provision of infrastructure, services and facilities that are identified to serve the needs arising from new development, should be provided in a timely and, where appropriate, phased manner to serve their occupants and users. This will include maximising the efficient use of existing infrastructure and securing forward-funded infrastructure that supports new development such as the provision of new schools and innovative solutions for active and sustainable travel.

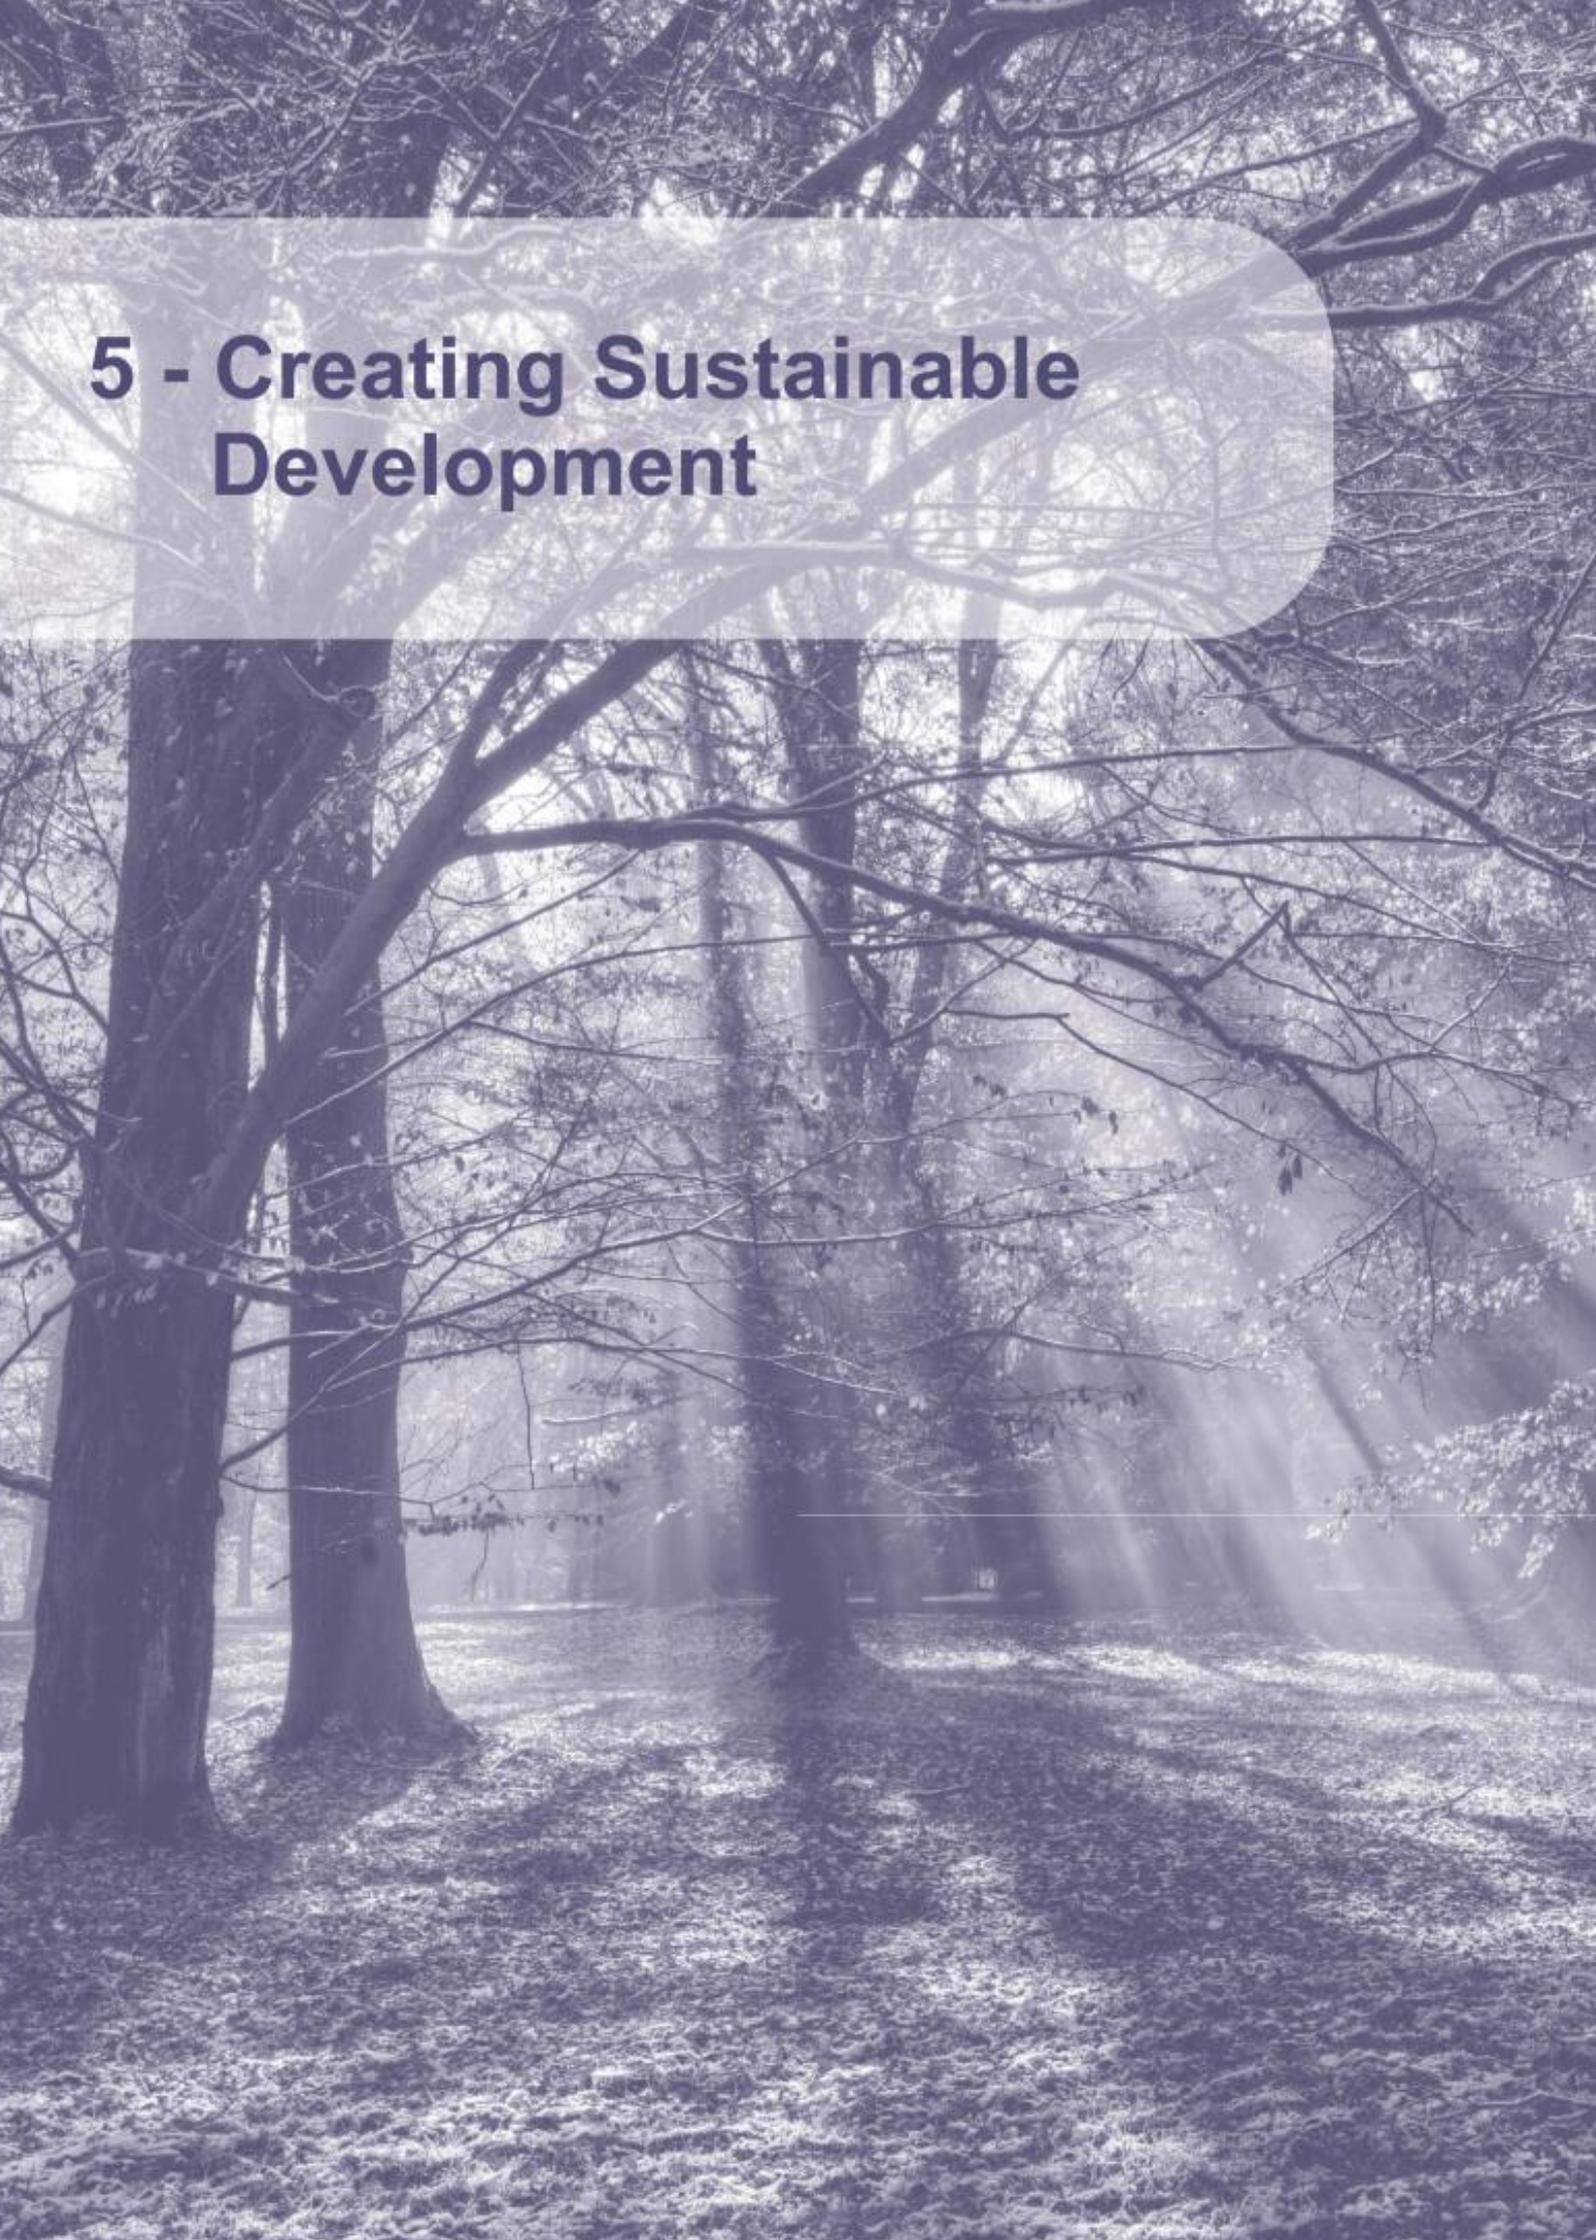

i) Locate development to utilise existing and planned infrastructure effectively

4.16 The Council will actively engage with partners to maximise the opportunities presented through new development to help fund and deliver new and improved infrastructure necessary to mitigate the impact that arises from new development, especially where significant new greenfield housing development is required. Infrastructure includes roads and other transport facilities, education and healthcare facilities, flood defences, open spaces and cultural and recreational facilities.

j) Ensure development is deliverable

4.17 The Local Plan as a whole including supporting infrastructure must be deliverable and viable. The Council will also need to demonstrate a five-year supply of deliverable housing land, in accordance with national policy.

5 - Creating Sustainable Development

5.1 This Section sets out the Strategic Policies that underpin and guide the Council's Spatial Strategy by addressing climate change, promoting social inclusion, conserving and enhancing the historic and natural environment and safeguarding community assets. New Strategic Policies have been added, numbered S14 to S17. However, they have been shown in the order they will appear, and all the Strategic Policies will be renumbered in the final plan.

Addressing sustainability

5.2 The achievement of sustainable development is at the heart of the planning system. Through its policies and proposals, the Council will secure new development that fulfils the three dimensions of sustainable development: economic, social and environmental.

5.3 In addition, the need to address climate change and ensure that new development contributes towards improved quality of life and wellbeing are important structuring elements. There is a need to balance these objectives with the amount of new development which is proposed within the Local Plan period.

STRATEGIC POLICY S2 – ADDRESSING CLIMATE CHANGE AND FLOOD RISK

The Council, through its planning policies and proposals that shape future development, will seek to mitigate and adapt to climate change. In addressing the move to a net zero carbon future for Chelmsford, the Council will seek new development that:

- Reduces greenhouse gas emissions
- Results in net zero carbon emissions and exceeds Building Regulations Parts F and L in accordance with Policy DM31
- Promotes the efficient use of natural resources including use of integrated water management techniques
- Reduces the need to travel and provides for active and sustainable transport modes
- Provides opportunities for renewable and low carbon energy technologies and schemes
- Provides opportunities for decentralised energy and heating systems
- Encourages design and construction techniques which contribute to climate change mitigation and adaptation
- Minimises impact on flooding and over-heating
- Protects and provides opportunities for well-connected multifunctional green and blue infrastructure including city greening, woodland creation, tree planting, and new habitat creation
- Assists the delivery of Biodiversity Net Gain that will deliver mitigation and adaptation benefits.

5 - Creating Sustainable Development

The Council will require that all development is safe, taking into account the expected life span of the development, from all types of flooding and appropriate mitigation measures are identified, secured and implemented. New development should not worsen flood risk elsewhere.

Reasoned Justification

5.4 The global climate is changing and the NPPF makes it clear that mitigating and adapting to climate change is a core planning principle to the achievement of sustainable development. Greenhouse gas emissions from human activity is widely believed to be the main cause of climate change, especially carbon dioxide and nitrogen oxides being emitted from the burning of fossil fuels such as oil, gas and coal. There has been a global increase in temperature and episodes of severe and sustained rainfall and increased river flows which are likely to affect the nature and frequency of flooding. This is consistent with projections of climate change.

5.5 The Council declared a Climate and Ecological Emergency on 16 July 2019. Essentially this declaration represents a commitment to take appropriate action to make the Council's activities net-zero carbon by 2030. In January 2020, the Council agreed a Climate and Ecological Emergency Action Plan with an initial focus on fifteen key areas of activity. It is aimed at:

- reducing carbon emissions
- lowering energy consumption
- reducing waste and pollution
- improving air quality
- greening Chelmsford
- increasing biodiversity
- encouraging more active and sustainable travel choices.

5.6 Essex as a whole has been identified as a large area of water stress by the Environment Agency. Given that the southern part of the East of England has been earmarked for extensive development, this will generate increased demand for water resources adding pressure on an already dry area.

5.7 To mitigate the impacts of climate change, the Climate Change Act 2008, as amended, commits the UK to reducing the UK's greenhouse gas emissions by 100% below 1990 levels, to achieve 'net zero' by 2050. This is a very challenging target and local plans present an obvious opportunity to help meet this target e.g. decarbonisation of transport, promoting green infrastructure including city greening, and by shaping the location and design of new development, including measures to promote renewable and low carbon energy developments, water and energy efficiency such as insulation, living walls/roofs, passive solar design, tree planting, Sustainable Drainage System (SuDS) and providing resilient ecological networks. Such measures will also assist in minimising over-heating in developments.

5.8 Essex County Council set up the Essex Climate Action Commission (ECAC) to advise on Essex's response to climate change. The commission published its report '[Net-Zero: Making Essex Carbon Neutral](#)' in July 2021, and this set out a comprehensive plan to:

- reduce the county's greenhouse gas emissions to net zero by 2050, in line with UK statutory commitments
- make Essex more resilient to climate impacts such as flooding, water shortages and overheating
- enhance biodiversity and the natural environment by creating natural green infrastructure across 30 per cent of all land in Essex by 2040.

5.9 Essex County Council is working alongside the Council to secure the highest standards required to address climate change and net carbon zero development. The Chelmsford Council Water Cycle Study (February, 2024) recommends the use of integrated water management techniques to address the challenge of water stress in the Council's administrative area.

5.10 Areas of flood risk include risk from all sources of flooding - including from rivers and the sea, directly from rainfall on the ground surface and rising groundwater, overwhelmed sewers and drainage systems, and from reservoirs, canals and lakes and other artificial sources.

5.11 The Council will require that development is protected from flooding and that appropriate measures are implemented to mitigate flood risk both within the development boundary and off-site in all flood zones, and to ensure that the development remains safe throughout its life. In line with Policy DM18, development within areas of flood risk will be required to provide a safe dry refuge above 0.1% (1 in 1000) AEP with an allowance for climate change and a safe means of access or suitably manage risk through some other means. At a development site level, mitigation measures can include SuDS, the use of permeable hardstanding materials and landscaping. At a strategic level, to reduce flood risk within Chelmsford City Centre, the Council will work with the Environment Agency to put in place strategic flood defence measures upstream from Chelmsford Urban Area on the Rivers Can and Wid (the Future Flood Resilience scheme) and, in appropriate circumstances, local flood protection measures within development sites. Developments should accord with latest technical guidance, or as updated and amended, including The Environment Agency's Approach to Groundwater Protection; The CIRIA C753 SUDS Manual; and Sustainable Drainage Systems: Non-Statutory Technical Standards.

5.12 In considering proposals for development the Council will follow a sequential risk-based approach, including the application of the "exception test" where some continuing development is necessary for wider sustainable reasons. The Sequential Test should consider flood risk from all sources, when considering whether development in that location is appropriate.

5.13 Climate change including sea level rise is likely to increase pressure on the management of coastal habitats and coastal communities along Chelmsford's coastal fringe around South Woodham Ferrers. The current Essex and Suffolk Shoreline Management Plan aims to reduce the threat of flooding and erosion to dwellings, key infrastructure and tourism facilities. This and other relevant policies in the Local Plan help to support the implementation of the Essex and Suffolk Shoreline Management Plan.

5 - Creating Sustainable Development

5.14 The Marine Management Organisation (MMO) adopted its South East (Inshore) Marine Plan in June 2021. It includes land to the south of South Woodham Ferrers. The Marine Plan's jurisdiction overlap with the Council's responsibilities (which extend to mean low water) and due regard must be given to the Marine Plan. The South East (Inshore) Marine Plan, must be considered alongside the Local Plan, to provide a consistent approach for planning on land, and within the inter-tidal and marine environment.

STRATEGIC POLICY S14 – HEALTH AND WELLBEING

The Council is committed to improving the health and wellbeing of our residents and communities, promoting more active and healthier lifestyles, creating healthy living environments and reducing health inequalities through high quality placemaking.

The Council will achieve this by ensuring that new development:

- **Contributes towards the strategic priorities of the Chelmsford Health and Wellbeing Plan to help reduce inequalities including health**
- **Has good access to services and facilities to support daily life and provide for the needs of their communities including education, employment, retail, public transport, healthcare, social, community and greenspace**
- **Is well designed to create safe, inclusive and accessible places for all users and encourage social interaction and wellbeing**
- **Creates opportunities for healthy and active lifestyles including access to and the provision of new multifunctional green and blue infrastructure, spaces for play, recreation and sports, and better active travel including provision for safe, attractive and well-connected pedestrian and cycle routes**
- **Provides good quality housing both externally and internally, to provide a healthy living environment now and in the future**
- **Supports the provision of cultural infrastructure and public art to create a sense of place and identity**
- **Is climate resilient and as sustainable and energy efficient as possible to promote healthy environments**
- **Provides opportunities for access to nature to support physical and mental health**
- **Provides appropriate mitigation to avoid harmful health impacts/emissions.**

In addition to the above, all new strategic scale residential development (defined as development for 100 or more units) will be required to demonstrate how they have considered the following in their place making objectives:

- **Opportunities for community involvement in the long-term management and stewardship of the new development**
- **Opportunities for growing food such as allotments, community gardens and orchards to improve access to local healthy food**
- **Creation of walkable neighbourhoods to support people to live healthy lifestyles having regard to the Essex Design Guide - a New Development Model for Essex**
- **Livewell Development Accreditation Scheme**

- **Creation of a physical environment where people have the resilience to cope with life's changes such as a dementia friendly environment**
- **Incorporation of Sport England and National Design Guide Active Design principles**
- **Provision of a mix of uses on site that support daily life including education, employment, retail, public transport, healthcare, social, community and greenspace**
- **Opportunities to make a significant positive contribution to health and wellbeing.**

For development of 50 or more residential units and non-residential development in excess of 1,000 sqm (excluding agricultural buildings) a Health Impact Assessment will be required to assess the likely positive and negative impacts on the health and wellbeing of different groups in the population and on existing health services and facilities. The assessment should include recommendations on how positive health impacts could be maximised and negative impacts on health and inequalities avoided or mitigated. The Council will require Health Impact Assessments to be prepared having regard to the most up to date advice and best practice for such assessments. Where significant impacts are identified, planning permission will be refused unless measures to meet the health service requirements of the development are mitigated.

Developments which will have an unacceptable significant adverse impact on health and wellbeing which cannot be mitigated, or that fail to offer reasonable provisions, will be refused.

Reasoned Justification

5.15 Spatial planning and health and wellbeing are intrinsically linked. The health and wellbeing of individuals and communities is affected by a wide range of factors. Health and wellbeing can be encouraged and improved through high quality planning, design and management of the environment providing convenient local healthcare services; public and open spaces and natural environments to encourage people to be physically active encouraging community participation; ensuring developments embody the principles of lifetime neighbourhoods and promote independent living; promoting access to healthy and locally sourced food; and encouraging active travel, most particularly cycling and walking for healthy lifestyles.

5.16 The Chelmsford Health and Wellbeing Plan has identified five key health and wellbeing priorities. These are to reduce excess weight and obesity and increase physical activity in adults and children, alleviate loneliness and social isolation, improve poor housing, enabling people to age well in Chelmsford and to reduce alcohol, substance misuse and behavioural addictions. These can all impact our physical and mental health.

5.17 The Council will work to improve the health and wellbeing of residents and communities by working in partnership with the NHS and Public Health to ensure residents and communities can access high quality primary and secondary health care services and that new and improved services are put in place, where appropriate, to serve the growing population; particularly for vulnerable groups and communities. The Council will also monitor the wider health and wellbeing outcomes using the Thriving Places Index.

5 - Creating Sustainable Development

5.18 The design and masterplanning of development proposals will embrace the role they can play in supporting healthy lifestyles by facilitating participation in sport and physical activity. All development proposals should embed the Sport England and National Design Guide Active Design principles. There should be particular regard to the sections relating to local identity and distinctiveness, mixture of housing type and tenure, internal and external layouts and walkable neighbourhoods with good access to a mix of uses and facilities.

5.19 The NPPF recommends that local authorities should consider opportunities to support people to live healthy lifestyles including planning for an environment that helps promote active travel and physical activity. Good quality infrastructure encourages active travel and the use of public transport. Improved active travel corridors and access to public transport makes it easier for our residents and communities to use healthier travel choices which help prevent excess weight and obesity. All new and improved walking and cycling routes should be designed to ensure they are coherent, direct, safe, comfortable and attractive.

5.20 Climate change impacts health directly through extreme weather conditions and events. In the UK, the effects of climate change will not be felt equally and are likely to increase health inequalities. There are significant health opportunities in the response to climate change. Many of the solutions to address climate change, such as promoting more sustainable and active travel and healthy sustainable diets are interventions that also bring benefits to health. Climate change is increasing global temperatures by increasing the periods and frequency of high temperatures. Buildings can be kept cool during hot weather either through passive building design or energy-intensive methods to control internal temperatures. There are a number of negative health impacts caused by high indoor temperatures and overheating. High quality buildings are comfortable and healthy and should be both cool in the summer and warm in the winter. The buildings should have good fresh air ventilation and circulation, good levels of natural light and be protected from climate impacts such as flooding and overheating. Well-designed homes and buildings provide high quality functional, accessible and sustainable internal and external spaces for their residents and users positively promoting health and wellbeing. More information about the creation of sustainable buildings can be found in the National Design Guide, Making Places SPD and the Essex Design Guide.

5.21 Investment in cultural buildings, places and spaces, the arts and public art and its associated infrastructure can provide improved and new cultural experiences for our residents and communities improving their health and wellbeing. Collaboration between the Council, local health providers, voluntary sector and key stakeholders will help embed culture into new and existing communities across Chelmsford.

5.22 Community allotments, gardens and orchards provide learning opportunities about how to grow food and eat local fresh produce when it is in season. They also help to improve physical and mental health and wellbeing by being outdoors. More information about healthy eating and improving access to good quality food is set out in the Chelmsford Food Plan, adopted by the Council in 2023.

5.23 Walkable neighbourhoods are designed to prioritise walking and cycling enabling access to facilities and services without needing to use the private car. The co-location and concentration of retail, community and associated uses to support linked trips should be promoted as they would result in creating multiple reasons to visit a destination, minimising the number and length of trips and increasing the awareness and convenience of opportunities to participate in leisure, sport and physical activity. Development proposals should have

regard to the Essex Design Guide and supplementary guidance (A New Development Model for Essex, October 2023).

5.24 The built and natural environment also has an important role to play in maintaining people's health, wellbeing and independence and their resilience to cope with life's changes including those with dementia. The local environment is a fundamental factor contributing to the quality of life of all people, which can either be enabling or disabling. Having access to amenities like local shops, doctors, post offices and banks within easy, safe and comfortable walking distances helps people feel connected. For people with dementia, it can also help them to live independent and fulfilling lives for longer. It is also important to consider the significant role that consistency and familiarity plays in giving people confidence and helping them to feel safe, especially older people and those with dementia. This can be as simple as the purpose of a building being obvious or having clear lines of sight through a development. Other design principles which developers should adhere to include ensuring that developments are accessible to those with both visible and hidden disabilities including dementia including familiarity, legibility, distinctiveness, accessibility, comfort and safety.

5.25 Developers are encouraged to apply for their developments to be awarded Livewell Development Accreditation. The scheme encourages developers to promote the physical and mental health of residents when designing and building new developments. The voluntary scheme recognises the wider factors that impact on health and wellbeing including access to healthier food, support for local employment and education facilities and inclusive communities.

5.26 Residents and the users of new development will have an impact upon the health services and facilities that are provided in the Council's administrative area. Likewise, through the design of new development, healthy living can be promoted. The extent of these impacts needs to be assessed to ensure that adequate health services continue to be provided for the community as a whole. For development of 50 or more units and non-residential development in excess of 1,000 sqm (excluding agricultural buildings) which have relatively little impact upon health and wellbeing and health services, a rapid or desktop assessment may be sufficient to satisfy the requirements of this policy. For larger scale developments and developments where a rapid or desktop assessment indicates more significant impact upon health and wellbeing and health services, a comprehensive Health Impact Assessment (HIA) will be required. A comprehensive HIA can include matters such as housing quality and design, access to healthcare services and other social infrastructure, access to open spaces and the natural environment, air quality and noise impact, accessibility and travel options, crime reduction and community safety, access to healthy food, social cohesion and minimising the use of resources. Early engagement with the Council's and Essex County Council's public health officers is recommended prior to commencement of an HIA to help ensure that the HIA can inform proposals effectively. The Council will liaise with the Mid and South Essex Integrated Care System and Essex County Council Health and Wellbeing Services when assessing the scope and scale of likely impacts. A HIA should be prepared following the current best practice advice and reflect the most up to date evidence. Further details on preparing HIAs can be found in the Health Impact Assessment section of the Essex Design Guide.

STRATEGIC POLICY S15 – CREATING SUCCESSFUL PLACES

Development that is designed to be attractive, high quality, accessible, inclusive and safe will be supported.

Reasoned Justification

5.27 High quality design of new development is essential to making places more attractive, sustainable, safe and accessible, and should be at the heart of every development. New development is not only about the buildings, but how they fit together, the spaces between them, and how the development is experienced. This sense of place does not arise by accident, but by careful application of all aspects of high quality, beauty and sustainability. Good design can also help to mitigate the impacts of climate change, promote healthier lifestyles and build a sense of civic pride.

5.28 Masterplans will be required for Strategic Growth Sites, and they may also be appropriate for constrained or sensitive sites. Masterplans are separate from the planning application process. An approved masterplan must be in place for the relevant site prior to the determination of any planning application, and should set out the development principles and supporting evidence. Some allocated sites have existing masterplans/design briefs. The Council will review and consider whether they are relevant and/or still up-to-date to determine whether further masterplanning is required and whether the masterplan process can be adapted to take account of them. The use of planning briefs or design coding may be required for smaller sites to provide a framework for development and clear guidance for design requirements.

5.29 Development proposals should have regard to the National Design Guide and National Model Design Code (September 2019) which offers general guidance on achieving high quality places and spaces. In addition, regard should be had to the Council's Making Places SPD. Making Places offers detailed guidance on achieving the required policy standards within the Local Plan and sets out local design guidance relevant to Chelmsford – in particular for the natural environment, movement, public spaces, built environment, sustainable design and construction, and adaptable buildings. Development proposals should also have regard to the Essex Design Guide which provides key design principles and advice across a wide range of topics to inform the plan making and planning application decision making process.

5.30 The Council encourages developments to be inclusive to accommodate all users, placing people at the heart of the design process.

5.31 Development is not only about creating a successful new place, but also securing its long- term future. New large Strategic Growth Sites should have long-term place keeping arrangements which involve community engagement and involvement in the management and enhancement of public spaces and community assets so residents are at the heart of the community, alongside developer commitment to creating and maintaining a legacy for future generations.

STRATEGIC POLICY S3 – CONSERVING AND ENHANCING THE HISTORIC ENVIRONMENT

The Council will conserve and where appropriate enhance the historic environment recognising the positive contribution it makes to the character and distinctiveness of Chelmsford through the diversity and quality of heritage assets. This includes wider social, cultural, economic and environmental benefits.

The Council will designate and keep under review Conservation Areas in order to preserve or enhance their special architectural or historic interest with an emphasis on retaining and where appropriate improving the buildings and/or features that make a positive contribution to their character or appearance.

The Council will conserve or enhance the significance (including any contribution made by its setting) of Listed Buildings, Scheduled Monuments and Registered Parks and Gardens with an emphasis on preserving and where appropriate enriching the social, cultural, economic and environmental benefits that these heritage assets provide.

The Council will seek the protection, conservation, and where appropriate and important to their significance, re-use and/or enhancement of historic places and sites on the Heritage at Risk Register and the local buildings at risk register.

When assessing applications for development, the Council will place great weight on the preservation or enhancement of designated heritage assets and their setting. The Council will encourage applicants to put heritage assets to viable and appropriate use, to secure their future preservation and where appropriate enhancement, as appropriate to their significance. Policy DM13 sets out how the Council will consider proposals affecting the different types of designated heritage assets and their significance.

The Council will seek to conserve and where appropriate enhance the significance of non-designated heritage assets and their settings, which includes buildings, structures, features, gardens of local interest and protected lanes. Policy DM14 sets out the Council's approach to the protection and retention of these assets.

Chelmsford contains a number of sites of archaeological importance. As set out in Policy DM15, the Council will seek the preservation and where appropriate enhancement of sites and their setting of archaeological interest.

Reasoned Justification

5.32 Chelmsford has a rich and diverse heritage. It has many heritage assets which are worthy of protection for their significance and for their contribution to the special character of Chelmsford. Within Chelmsford's administrative area there are 1,011 listed buildings. There are also 25 Conservation Areas, 19 Scheduled Monuments, and 6 Registered Parks and Gardens all of which are shown on the Policies Map. With the exception of Conservation Areas, these designated heritage assets are identified within the National Heritage List for England.

5 - Creating Sustainable Development

5.33 Buildings are listed on the basis of their special architectural or historic interest. These buildings are subject to special planning controls over their demolition, partial demolition, alteration or extension in any manner which affects their special character. Within Chelmsford there are a high number of timber frame buildings from the 14th-17th centuries reflecting the prosperity of the area in this period and displaying vernacular building techniques, notably within the rural areas and village centres, such as Stock, Writtle, Boreham and Great Waltham. The survival of vernacular buildings across the administrative area contributes to its distinctiveness. There are 63 Grade I and II* listed buildings, including medieval parish churches, structures at Pleshey Castle, Henry VIII's palace at New Hall, country houses (such as Langleys, Leez Priory and Boreham House) and exceptionally complete timber frame buildings.

5.34 Conservation Areas are designated under the Planning (Listed Building and Conservation Areas) Act 1990. Conservation Areas are defined and designated by the Council. They are areas of special architectural or historic interest where the Council has a statutory duty to preserve or enhance their character or appearance. The Council will produce character appraisals and management plans for its Conservation Areas. 5 Conservation Areas cover the City Centre, 17 historic village centres, St John's Hospital and John Keene Memorial Homes and are designated for their special character.

5.35 The Chelmer and Blackwater Navigation is also designated as a Conservation Area. This historic waterway, which extends through Braintree and Maldon districts, resulted in Chelmsford's expansion and development as an industrial centre from the late eighteenth century. It is significant for its structures, including 13 locks, landscape character, leisure and recreational value.

5.36 There are 6 Registered Parks and Gardens, including an 800m long Avenue at New Hall, the rare 'canal' water feature at Boreham House and the Humphry Repton landscape at Hylands Park. The public parks at Hylands and Danbury have an important role in the distinctness of Chelmsford and social wellbeing. They also contribute to the local economy through organised events and formal and informal recreation. The Council recognises that Registered Parks and Gardens should be protected.

5.37 Archaeological and/or historical features represent a finite and non-renewable resource that are vulnerable to damage and destruction. Any works to Scheduled Monuments require the consent of the Secretary of State. There are 19 Scheduled Monuments, including a number of moated sites, Roman villas, the Iron Age Hillfort at Danbury, the late twelfth century earthwork castle at Pleshey and medieval salt works at South Woodham Ferrers. The Essex Site and Monument Record records over 2,500 archaeological sites in Chelmsford.

5.38 In addition to designated heritage assets, Chelmsford has many non-designated assets which are worthy of protection and conservation for their architectural, townscape, landscape or historic interest. The Council will continue to update a list of heritage assets which have local value. This is titled Register of Buildings of Local Value and includes buildings, structures or features of local architectural or historic interest which make a positive contribution to their locality. 564 buildings are included on the current Register of Buildings of Local Value, and 12 sites are identified on the Inventory of Design Landscapes of Local Interest prepared by the Essex Gardens Trust. Both the designated and non-designated heritage assets reflect the expansion of Chelmsford as a manufacturing and technology

centre in the early twentieth century, when Hoffmann, Marconi, and Crompton were located in the town.

5.39 A Heritage at Risk programme has been implemented by Historic England. It protects and manages the historic environment so the number of 'at risk' historic places and sites across England is reduced. The Heritage at Risk Register identifies those sites that are most at risk of being lost as a result of neglect, decay or inappropriate development.

5.40 The Council also maintains a buildings at risk register (including designated and non-designated heritage assets) and proactively works to seek their protection and conservation. Sustaining appropriate uses is part of a strategy to ensure their conservation and their economic contribution. The 2022 Buildings at Risk Register includes 12 entries. In determining planning applications, the Council will take account of the desirability of sustaining and promoting opportunities to enhance the significance of both designated and non-designated assets and their settings.

5.41 There are a number of country lanes and byways which are of historic and landscape value, and which make an important contribution to the rural character of certain areas, as set out in the Essex County Council Protected Lanes Studies. The Council intends to protect these lanes and byways by preserving, as far as possible, the trees and hedgerows, banks, ditches and verges which contribute to their character, and by resisting development proposals which have a detrimental effect upon them.

5.42 The role of historic assets can also contribute towards the area's wider green infrastructure network, to local character and distinctiveness, and the economy. The Council will seek opportunities to promote the local distinctiveness of Chelmsford through heritage interpretation, blue plaques and public art.

STRATEGIC POLICY S4 – CONSERVING AND ENHANCING THE NATURAL ENVIRONMENT

The Council is committed to the conservation and enhancement of the natural environment through the protection of designated sites and species, whilst planning positively for biodiversity networks and minimising pollution. All projects should have regard to reducing the impacts of climate change and respond to the ecological emergency, delivering multiple benefits in terms of but not exclusive to habitats, carbon storage and Natural Flood Management.

The Council will plan for a well-connected multifunctional network of green and blue infrastructure which protects, enhances and restores ecosystems and allows nature recovery across the Council's area. The garden community developments will be required to deliver 20% Biodiversity Net Gain, other qualifying new development will be required to deliver a minimum 10% Biodiversity Net Gain. The needs and potential of biodiversity will be considered together with those of natural, historic and farming landscapes, the promotion of health and wellbeing, sustainable travel, water management including water resources, and climate change adaptation.

5 - Creating Sustainable Development

The Council will ensure that new development does not contribute to water pollution and, where possible, enhances water quality, and demonstrates the advancement of biodiversity and amenity interests through the provision of a range of greenspaces. Management, mitigation and compensation measures will be secured through planning conditions/obligations where necessary. Developers will need to demonstrate that sufficient waste water treatment capacity is available ahead of occupation to ensure no deterioration in the quality of receiving waters.

The Council will ensure that, where appropriate, new development seeks to improve water-related biodiversity taking account of Water Framework Directive objectives and River Basin Management Plan actions.

The Council will ensure that new development maximises opportunities for the preservation, restoration, enhancement, and connection of natural habitats in accordance with the Local Nature Recovery Strategy or future replacements.

The Council will seek to minimise the loss of the best and most versatile agricultural land (Grades 1, 2 and 3a) to major new development.

Contributions from qualifying residential developments within the Zones of Influence, as defined in the adopted Essex Recreational disturbance Avoidance and Mitigation Strategy (RAMS), will be secured towards mitigation measures identified in the RAMS.

Reasoned Justification

5.43 The Council has a duty to protect sites of international, national, regional and local nature conservation importance. The importance of these sites across the Council's area is reflected in the range of designations and reflects the specific importance of particular habitats. Designated sites include Ramsar Sites, Special Protection Areas, Special Areas of Conservation (SACs), Sites of Special Scientific Interest (SSSIs), Ancient Woodlands, Local Nature Reserves and Local Wildlife Sites. Proposals likely to have an adverse effect on sites designated for their international, European and national importance to nature conservation will require a full assessment in line with European legislation. Appropriate weight will also be given to sites pending designation.

5.44 The Environment Act, 2021, brought mandatory Biodiversity Net Gain (BNG) into law. This means that all new developments will be required to deliver a minimum 10% increase in biodiversity.

5.45 Essex Local Nature Partnership (LNP) was set up in response to the 2021 Environment Act requirement for the development of Local Nature Recovery Strategies (LNRS). Its goal is to develop a LNRS that has cross sectoral support, as well as nature recovery, resulting in more nature across Essex in the future, as mandated by the 2021 Environment Act. The LNRS will set out in detail a strategy for delivering this mandate, but overall the principle is that there is a need for better connectivity and scale to achieve nature recovery across Essex.

5.46 New development should minimise pollution of the natural environment including potential light pollution from glare and spillage on intrinsically dark landscapes and nature conservation.

5.47 The Council's 'Improvement Plan for Rivers and Waterways in and around Chelmsford' sets out opportunities to improve the appearance, attractiveness, and recreational use of these assets and to promote schemes and activities that enhance their habitat, ecological and biodiversity value.

5.48 The area's nature conservation assets form the basis for a City-wide network of green infrastructure which meets the needs and potential of biodiversity, recreation, habitat creation, amenity and sustainability (notably in respect of travel, water management and climate change) together.

5.49 The Council has developed a Green Infrastructure Strategic Plan which sets out the aspirations and opportunities to establish a green infrastructure network across the City and to promote city greening. This will include both green and blue spaces (such as, hedgerows, woodlands, parks, rivers and water courses). Objectives, standards and guidelines for its implementation aim for a City which is more ecologically diverse and robust, better connected and can meet the needs and expectations of its residents, workers and visitors.

5.50 The expansion of the City's natural assets and green infrastructure network will be secured through:

- Protecting, enhancing and restoring green infrastructure assets of all kinds, as part of a multifunctional network which reflects the needs and potential of biodiversity, natural and historic landscapes, sense of place, sport and recreation, water management, productive and healthy farming landscapes, climate change adaptation, sustainable movement, and community health and wellbeing
- Facilitating greater appreciation and use of the City's green infrastructure assets, promoting a sense of place and ownership
- Realising greater connectivity across the City through a network of high quality and accessible green spaces and corridors
- At the landscape and local scales planning and managing networks of natural and cultural assets to conserve, enhance and restore ecosystem function and human wellbeing
- Securing a step-change in environmental quality and performance to meet the goals of sustainable development, quality of life enhancement and climate change adaptation
- Where appropriate planning positively for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure.

5.51 New development in particular will be expected to incorporate multifunctional greenspaces which provide for biodiversity, recreation and sustainable travel, whilst helping to reduce pollution through the use of Sustainable Drainage Systems (SuDS). In addition, new development should seek to improve water-related biodiversity taking account of Water Framework Directive objectives and River Basin Management Plan actions. Appropriate mitigation measures will be required on sites where protected species are impacted by development.

5.52 Provision will include new strategic greenspaces which will be of City-wide importance including three new Country Parks in East Chelmsford, East Chelmsford Garden Community (Hammonds Farm) and North East Chelmsford and areas for future recreation use/SuDS to support strategic site allocations in Great Leighs, East Chelmsford, East Chelmsford Garden Community (Hammonds Farm), North East Chelmsford and West Chelmsford. As part of the original masterplan for Chelmer Village, an area of open land was also identified for informal

5 - Creating Sustainable Development

strategic recreation. These and other green infrastructure allocations are shown on the Policies Map.

5.53 All development proposals must comply with current requirements and best practice for measurable biodiversity net gain and Nature Recovery Strategies and Networks. As a minimum, 10% biodiversity net gain is required or as otherwise indicated in policy and legislation. This is in addition to the requirement to follow the mitigation hierarchy. Biodiversity net gain requirements must not undermine the existing range of protections, in planning policy and legislation, for irreplaceable habitats and protected sites. As part of the planning process a calculation in line with the latest Natural England Biodiversity Metric should be submitted and strict adherence to the mitigation hierarchy should be used to ensure harm is avoided in the first instance, that provision for a minimum 10% measurable net gain in biodiversity is made onsite wherever possible and that offsite compensation with a long-term management plan is used as a last resort.

5.54 Residential development proposed within the Local Plan has the potential to result in an increase in recreational disturbance on the Essex Estuaries Special Area of Conservation (SAC) and Crouch and Roach Estuaries Special Protection Areas (SPA). This issue was further considered in an Appropriate Assessment which identified the need to prepare a Recreational Avoidance and Mitigation Strategy (RAMS). Following consultation with Natural England, an Essex-wide RAMS was prepared to cover the Essex Estuaries SAC and Crouch together with the Roach Estuaries SPA and the Colne and Blackwater Estuaries SPAs and Ramsar sites.

5.55 The Essex Coast Recreational disturbance Avoidance and Mitigation Strategy (RAMS) Strategy Document was adopted in 2019 and the SPD was adopted in 2020. The Essex Coast RAMS, which has the brand name Bird Aware Essex Coast, aims to deliver the mitigation necessary to avoid adverse effects on the integrity of habitats sites from the in-combination impacts of residential development in Essex. The Essex Coast RAMS identifies a detailed programme of strategic avoidance and mitigation measures which are to be funded by developer contributions from all qualifying residential development within the Zones of Influence as defined in the adopted RAMS or, in exceptional circumstances, identify and implement bespoke mitigation measures to ensure compliance with the Habitats Regulations. Major developments (defined as sites of 10 or more dwellings) may also be required to provide or contribute towards additional recreational mitigation measures to address alone impacts of the proposal as identified in paragraph 8.139 of DM16. This will be informed by a review of the RAMS and SPD which is expected to be complete in late 2025 and/or project level HRAs.

5.56 The Council recognises the importance of the best and most versatile agricultural land. This is defined as Grades 1, 2 and 3a, within the NPPF, and is recognised as a natural resource for the future. Effective use of brownfield land of low environmental value will be encouraged to minimise the loss of higher quality agricultural land. Furthermore, the Council will seek the provision of high quality green infrastructure that will protect, enhance and create wildlife corridors to maintain ecological connectivity when greenfield land will be lost.

STRATEGIC POLICY S5 – PROTECTING AND ENHANCING COMMUNITY ASSETS

The Council recognises the important role that community facilities have in existing communities including health, police, education, social, sports and leisure, parks and green spaces, arts and cultural facilities. They are also an integral part of any proposals for new residential and employment development. New or extended facilities will be accessible to the communities they serve and by a range of active and sustainable transport. They will be secured by a range of funding measures including planning obligations, Community Infrastructure Levy (CIL), and/or its successor, and other relevant funding streams. Existing community assets will also be protected from inappropriate changes of use or redevelopment.

Reasoned Justification

5.57 Community assets are an important part of the fabric of communities. To ensure that new places are sustainable and create developments where people want to live, work and enjoy, there is a need to ensure that community facilities are provided as part of larger developments.

5.58 An important element of sustainable development and creating safe, cohesive and sustainable communities is the provision and protection of community uses such as schools, health, police and recreation, education, community halls, pavilions, scout huts, places of worship and other cultural buildings at locations that are readily accessible. Schools are specifically identified on the Policies Map. These uses are predominately within Use Class F1/F2 of the Use Classes Order 1987 (as amended). In addition, and especially outside the urban areas, facilities such as public houses, post offices, local shops and petrol stations and other community facilities can perform a vital function in terms of the economic and social welfare of such areas, and to help ensure the continued vitality of village and rural communities.

5.59 As community assets are not immune from development pressures, the Council will seek to protect its existing community assets through relevant Local Plan policies.

5.60 Existing indoor and outdoor recreation facilities represent important assets serving the communities in which they are located, and in some instances the wider area. This importance relates to their function and also the amenity value and the contribution the outdoor facilities have in providing a 'green lung' and visual break in the built environment. Where appropriate, and especially in the context of the new residential neighbourhoods, local and strategic open space such as country parks should form part of the masterplan for these areas. When considering proposals, the Council will have regard to the changing needs or demands for such facilities.

6 - How will Future Development Growth be Accommodated?

6.1 This Section sets out the requirements for development for the period up to 2041 and the Council's Spatial Strategy. It also presents a number of strategic policies including policies related to securing infrastructure and delivering growth. New Strategic Policies have been added, numbered S16 and S17. However, they have been shown in the order they will appear, and all the Strategic Policies will be renumbered in the final plan. Strategic Growth Sites, providing 100 or more new homes, have an accompanying policy which sets out the expectations for their delivery. Growth Sites, providing less than 100 new homes, also have specific policies where appropriate.

Development requirements

STRATEGIC POLICY S6 – HOUSING AND EMPLOYMENT REQUIREMENTS

The Council will make provision for the following new development requirements:

A. HOUSING

In order to meet the transitional arrangements for assessed housing need calculated using the Standard Method, provision is made for a minimum of 22,990 net new homes at an average annual rate of 1,210 net new homes per year.

In order to meet the identified need of 40 new permanent pitches for Gypsies and Travellers, sites providing a total of 30 permanent pitches for Gypsies and Travellers, as defined by national planning policy, will be allocated with the remainder of the need to be met through windfall applications using the criteria of Policy DM3.

In order to meet the identified need of 38 new permanent plots for Travelling Showpeople, sites providing a total of 28 permanent plots for Travelling Showpeople, as defined by national planning policy, will be allocated with the remainder of the need to be met through windfall applications using the criteria of Policy DM3.

B. EMPLOYMENT

A minimum of 162,646sqm of new employment floorspace (Use Classes E(g)(i-ii), B2 and B8), in addition to existing employment development commitments, is identified to be delivered over the Plan period through flexible employment site allocations.

Reasoned Justification

New Homes

6.2 The Council is committed to plan positively for new homes and to help significantly boost the supply of housing to meet the needs of the area. To meet the requirements of national planning policy there is a need to establish the number and type of new homes.

6.3 The Strategic Housing Needs Assessment (SHNA) report published in August 2023 uses the Standard Method relevant at the time for calculating housing need and follows a four-step process leading to a housing need for 955 dwellings per year.

6 - How will future development growth be accommodated?

6.4 An addendum note to the SHNA 2023 was published in November 2024 and partially updates it. The key reason for the 2024 addendum note was to review the implications of moving from housing delivery at the Standard Method of 955 dwellings per year up to a figure of 1,206 dwellings per year – the proposed transitional figure associated with a local housing needs figure of 1,406 per year calculated using the Standard Method published as part of the proposed reforms to the NPPF consulted on during July – September 2024.

6.5 With the higher housing number, it is projected that net in-migration to the Council area would increase and there would be stronger population growth, which in turn could impact on a range of housing needs, including the need for affordable housing, the mix of housing and housing for older people.

6.6 The City Council declared a housing crisis in Chelmsford in February 2022 and levels of homelessness continue to rise. Taking into account the range of housing needs identified in the SHNA 2023 and 2024 addendum note, the Council proposes a Housing Requirement figure of 1,210 homes per annum for the plan period 2022 – 2041. This equates to 83% of the local housing needs figure of 1,454 per year calculated using the Standard Method published in the December 2024 NPPF.

6.7 The Council will review housing numbers regularly in accordance with national policy requirements, and will have regard to the housing market area when consulting on any strategic matters that apply, including any housing needs that cannot be met within neighbouring areas.

Housing Supply

6.8 To help significantly boost housing supply, the Council proposes to allocate development sites in the Local Plan to provide 1,210 homes per annum.

6.9 Provision is made for a total of 23,326 new homes in the period 2022 - 2041. When considering existing housing completions (1,837), existing sites with planning permission (3,016), existing Local Plan allocations to 2036 (11,867) and Windfall Projection to 2041 (2,373), the residual new Local Plan Allocations for the period to 2041 is 4,233 new homes.

Table 1 :Housing supply

Housing supply as at 2022/23 base date	Net new homes
Completions 2022 -2023	1,837
Sites with planning permission (excludes existing Local Plan allocations)	3,016
Existing Local Plan allocations	11,867
New Local Plan Review Allocations	4,233
Windfall allowance (2027-2041)	2,373
TOTAL SUPPLY	23,326

6 - How will future development growth be accommodated?

6.10 Based on past delivery records, windfall sites will also make an important contribution to the Spatial Strategy. These are sites expected to come forward throughout the Local Plan period and as such are taken into account when determining the residual housing requirement. The Council has assessed the contribution of windfall sites on past housing supply in Chelmsford. The evidence shows that around 196 new homes have been built on windfall sites per year. For future housing supply, a windfall allowance of 175 new homes a year is considered robust and represents a modest contribution to overall supply.

6.11 Housing completions will be assessed annually against the housing trajectory to monitor performance and determine whether any action is required to improve delivery rates. This will be reported in the Authority Monitoring Report (AMR). It is important that a range of house types and sizes are provided as part of new residential developments. The requirements for the size and type of housing are contained in Policy DM1, and for affordable housing in Policy DM2.

Gypsy and Travellers and Travelling Showpeople

6.12 In accordance with the National Planning Policy for Traveller Sites (PPTS) the Council in partnership with other Essex Local Authorities undertook a Gypsy and Traveller Accommodation Assessment in 2023. This identified those Gypsies, Travellers and Travelling Showpeople which should be planned for in accordance with the PPTS, and those which should otherwise have their specific cultural needs of living accommodation met in accordance with the Equalities Act 2010, the Children's and Families Act 2014 and the Human Rights Act 1998, and where the PPTS does not apply. The Local Plan needs to consider the accommodation needs of all Gypsies, Travellers and Travelling Showpeople. For those Gypsy and Travellers that do not meet the PPTS definition their needs will be considered through the provisions for specialist housing covered by Policy DM1 Cii.

6.13 The findings of the Gypsy and Traveller Accommodation Assessment (GTAA) that covers the period 2023 to 2041 identifies a requirement for 40 permanent Gypsy and Traveller pitches and 38 permanent Travelling Showpeople plots to be developed by 2041 within Chelmsford for households that meet the definition of Gypsies and Travellers in the PPTS at the time the GTAA was published.

6.14 The Council will expect to see Gypsy and Traveller Pitches and/or Travelling Showpeople accommodation provided on all suitable large strategic development allocations, the detail of which are set out in separate strategic site policies. The remaining need will be met through regularisation of existing pitches/plots and windfall applications where appropriate.

New Employment Floorspace

6.15 National policy requires Local Plans to proactively drive and support sustainable economic development to deliver the jobs that the country needs. The Council wants Chelmsford's economy to develop further and for businesses to be even more successful and productive. To achieve this, the Local Plan will ensure that there is an appropriate quantity and range of employment land to enable the local economy to function efficiently. The Local Plan will also assist in the creation of new jobs and inward investment by less direct means, for example, by supporting the expansion of education and training, facilitating improvements to transport and telecommunications and maintaining an attractive environment through the protection of the landscape and heritage assets.

6 - How will future development growth be accommodated?

6.16 Chelmsford's economy and employment base is strong and continues to grow in line with its role as a regional administrative and commercial centre. Chelmsford supports around 87,000 jobs – the highest of any district in Essex and there are around 9,300 businesses.

6.17 The economy of Chelmsford is mixed with high numbers of jobs in the retail sector, social and health work sector, professional and scientific sector and the administration support sector. The Essex Sector Development Strategy (2022) identifies growing employment sectors that are set to create new jobs over the next 30 years including construction, clean energy, advanced manufacturing and engineering, digi-tech, life sciences, and health and care, and professional and support sectors.

6.18 The Employment Land Review 2023 (and Focused Update 2024), and the Retail Capacity Study Update 2023 have informed the amount and type of employment and retail floorspace that will be required within the Local Plan period.

6.19 The Local Plan allocates 162,646sqm of new employment floorspace to accommodate economic growth and employment requirements. This is informed by forecasts in the Employment Land Review 2023 (and Focused Update 2024) and seeks to meet job growth forecasts over the plan period. This new supply is in addition to extant planning permissions. As a result, the Local Plan exceeds the recommended minimum employment space requirements over the period to 2041. The Council will monitor employment development growth alongside housing delivery through subsequent reviews of the Local Plan to ensure that new employment space broadly matches the future growth of the resident workforce in Chelmsford.

The Spatial Strategy

6.20 In order to meet identified development needs, the Spatial Strategy sets out the scale and distribution of new development across Chelmsford during the Local Plan period up to 2041. It is based on a number of considerations including national planning policy, the Local Plan's Strategic Priorities, Vision and Spatial Principles, environmental constraints, and the availability and viability of land for development.

STRATEGIC POLICY S7 – THE SPATIAL STRATEGY

The Spatial Strategy applies the Spatial Principles to focus new housing and employment growth to the most sustainable locations by making the best use of previously developed land in Chelmsford Urban Area; new garden communities to the north east and east of Chelmsford; sustainable urban extensions around Chelmsford and South Woodham Ferrers; expansion of existing employment sites; and development around Key Service and Service Settlements outside the Green Belt in accordance with the Settlement Hierarchy set out below:

6 - How will future development growth be accommodated?

Settlement Hierarchy

Category	Settlement	
1. City or Town	Chelmsford*, South Woodham Ferrers	
2. Key Service Settlements	Outside Green Belt	Within Green Belt
	Bicknacre, Boreham, Broomfield, Danbury and Great Leighs	Galleywood, Runwell, Stock and Writtle
3. Service Settlements	Outside Green Belt	Within Green Belt
	East Hanningfield, Ford End, Great Waltham, Little Waltham, Rettendon Place and Woodham Ferrers	Highwood, Margaretting, Ramsden Heath/Downham, Roxwell and West Hanningfield
4. Small Settlements	Outside Green Belt	Within Green Belt
	Chatham Green, Good Easter, Howe Green, Howe Street, Little Baddow, Rettendon Common and Sandon	Edney Common

*Chelmsford includes its Urban Area such as Chelmer Village, Great Baddow and Springfield.

In addition, at any of the Settlement categories, new growth sites which are in accordance with the Local Plan Spatial Principles and Strategic Policies can be allocated through relevant Neighbourhood Plans.

New development allocations will be focused on the three Growth Areas of Central and Urban Chelmsford, North Chelmsford, and South and East Chelmsford using the distribution set out in the Key Diagram (Figure 14), Policies Map, and the table below:

Spatial Strategy – Development Locations and Allocations

Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Growth Area 1 – Central and Urban Chelmsford					
Site/Location					
1	Previously developed sites in Chelmsford Urban Area	3,013			4,000sqm Use Class E(g)(i-ii)
2	West Chelmsford	880		5	

6 - How will future development growth be accommodated?

3a	East of Chelmsford - Manor Farm	360			
3b	East of Chelmsford - Land North of Maldon Road				5,000sqm Office/Business Park
3c	East of Chelmsford - Land South of Maldon Road	109			
3d	East of Chelmsford - Land North of Maldon Road	65			
4	Land North of Galleywood Reservoir	24			
5	Land surrounding Telephone Exchange, Ongar Road, Writtle	25			
Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Area Total		4,476		5	9,000sqm
Growth Area 2 – North Chelmsford					
Site/Location					
6	North East Chelmsford (Chelmsford Garden Community)	5,569	10		56,946sqm Office/Business Park
7a	Great Leighs - Land at Moulsham Hall	750		5	
7b	Great Leighs - Land East of London Road	250			

6 - How will future development growth be accommodated?

7c	Great Leighs - Land North and South of Banters Lane	100			
8	North of Broomfield	512			
9a	Waltham Road Employment Area				3,500sqm B2/B8
14b	Land south of Ford End Primary School, Ford End	20			
15	Little Boyton Hall Farm Rural Employment Area				6,000sqm B2/B8
Area Total		7,201	10	5	66,446sqm
Development Allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Growth Area 3 – South and East Chelmsford					
Site/Location					
16a	East Chelmsford Garden Community (Hammonds Farm)	3,000	20	13	43,000sqm Business Space
16b	Land adjacent to A12 Junction 18				43,000sqm Business Space
10	North of South Woodham Ferrers	1,220		5	1,200sqm Business Space
11b	Land at Kingsgate, Bicknacre	20			
11c	Land west of Barbrook Way, Bicknacre	20			
12	St Giles, Bicknacre	32			
13	Danbury	100			

6 - How will future development growth be accommodated?

17a	Land North of Abbey Fields, East Hanningfield	11			
17b	Land east of Highfields Mead, East Hanningfield	20			
Area Total		4,423	20	18	87,200sqm
Total Local Plan Allocations		16,100	30	28	162,646sqm
Windfall Allowance 2027-2041		2,373			
TOTAL		18,473	30	28	162,646sqm

There will also be opportunities for Exception Sites providing affordable homes and community-led development in some locations where there are policies of constraint.

Windfall sites are further expected to be a reliable source of housing supply during the period of the Local Plan.

New employment growth will be delivered as part of mixed used development on appropriate previously developed sites in Chelmsford Urban Area. Strategic employment growth is directed to strategic site allocations at North East Chelmsford (Chelmsford Garden Community), a new garden community to the east of Chelmsford (Hammonds Farm), Land adjacent to A12 Junction 18, East Chelmsford, and as extensions to Little Boyton Hall Farm Rural Employment Area and Waltham Road Employment Area.

All development allocations will be located to ensure existing settlements maintain their distinctive character and to avoid coalescence between them. Beyond the main settlements the Council will support diversification of the rural economy and the conservation and enhancement of the natural environment.

New development will be delivered in a manner that ensures the timely provision of necessary supporting infrastructure. Strategic Growth Sites will be delivered in accordance with masterplans to be approved by the Council.

Where there are large and established mainly institutional uses within the countryside, Special Policy Areas will be used to support their necessary functional and operational requirements. The Special Policy Areas are defined on the Policies Map at Chelmsford City Racecourse, Broomfield Hospital, Hanningfield Reservoir Treatment Works, RHS Hyde Hall Gardens, Sandford Mill and ARU Writtle.

6 - How will future development growth be accommodated?

Figure 14 : Key Diagram

6 - How will future development growth be accommodated?

Reasoned Justification

The General Principles

6.21 The amount and type of new development provides the starting point for the formulation of the Spatial Strategy, which is then shaped by the Vision, Spatial Principles and the need to secure sustainable development. This includes the protection of the Green Belt and Green Wedge. The Spatial Strategy avoids new development in areas of high flood risk, or ensures that any flood risk is managed for development at highly sustainable locations in Chelmsford City Centre.

6.22 National Planning Policy requires councils to identify land in local plans to accommodate ten percent of their housing requirement figure on sites no larger than one hectare, unless it can be demonstrated that this target cannot be achieved. Allocated small sites are often built out relatively quickly and need to be identified separately from the supply generated through small windfall sites. Having a good mix of site sizes helps to maintain a diverse housing supply. Residential development on private residential gardens contributes to Chelmsford's housing delivery on small windfall sites. In accordance with the NPPF, these will be supported where development would not cause harm to the local area and where they are in accordance with other relevant policies of the plan including Policy DM23.

6.23 The Local Plan focuses new development, including housing and employment growth, leisure, office, cultural and tourist facilities, retail and mixed use development at the most sustainable locations that meet the Local Plan Vision and Spatial Principles. It does this first through making the best use of previously developed land within Chelmsford Urban Area. As this area is unable to accommodate all of the new development needed, the Local Plan also allocates land for development in the following areas:

- Sustainable urban extensions of Chelmsford, Great Leighs and South Woodham Ferrers for new housing and employment
- Two new garden communities to the north east of Chelmsford (Chelmsford Garden Community) and east of Chelmsford (Hammonds Farm) underpinned by the TCPA Garden City Principles
- Expansion of existing established employment sites (Little Boyton Hall Farm and Waltham Road).

6.24 The Spatial Strategy sets out the need to balance sustainable development against a number of different issues including the loss of agricultural land, particularly the Best and Most Versatile agricultural land. The majority of the agricultural land in Chelmsford is either Grade 2 or 3. However as the identified development needs cannot be accommodated solely on previously developed land, the loss of some agricultural land to development is inevitable. Most agricultural land lost as a result of new development will be Grade 3. This will lead to a loss of approximately 864 hectares of Grade 3 agricultural land and approximately 244 hectares of Grade 2 land. This equates to around 2.4% of the total Grade 2 land and around 4.3% of the total Grade 3 land in Chelmsford's administrative area.

6 - How will future development growth be accommodated?

6.25 The Settlement Hierarchy ranks settlements according to their size, function, characteristics and sustainability. The City of Chelmsford and Town of South Woodham Ferrers are at the top of the hierarchy. These are considered the most sustainable as they have the most functions and the best services and facilities including transport links and employment opportunities. They also have the most potential to provide new infrastructure. Accordingly, most new development over the Local Plan period is proposed in and around these settlements.

6.26 Key Service Settlements provide a range of services and facilities for their residents. These include primary school provision, local employment opportunities, convenience shopping facilities, community facilities, good links by public transport to higher order settlements, good access to the strategic road network, and in most cases primary healthcare provision. These Key Service Settlements will be the focus for housing provision outside Chelmsford and South Woodham Ferrers, with a higher level of growth due to their higher level of services, facilities and economic activity. Growth in Key Service Settlements aims to increase their self-containment and enhance their service role, reflecting the aspirations of national policy in promoting stronger communities.

6.27 Service Settlements have more limited services and facilities but typically include primary schools, convenience shopping facilities and community facilities making them suitable for a more limited scale of development. Growth in Service Settlements outside the Green Belt will reinforce their role as a provider of services to the local rural area and reflect the aspirations of national policy in promoting stronger communities.

6.28 Small Settlements have the least services and facilities and transport links which means they are bottom of the Settlement Hierarchy. These are considered the least sustainable. There may be limited opportunities for small-scale development growth within these areas through affordable housing exception sites, or other development promoted through Neighbourhood Plans.

6.29 Settlement boundaries are drawn around settlements identified in the Settlement Hierarchy on the Policies Map. Settlement boundaries in the Green Belt have been drawn around existing consolidated areas of development. Smaller villages and hamlets within the Green Belt which because of their open character make an important contribution to the openness of the Green Belt are retained within the Green Belt.

6.30 For the avoidance of doubt the use of the words 'area total' and 'total' contained within the tables in Strategic Policy S7 are not intended to create a ceiling for housing or employment floorspace. They are simply a sum of the housing numbers and floorspace contained within each of the site allocation policies. Strategic Policy S6 makes it clear that the overall housing provision is a minimum number.

6.31 The Council recognises the importance of social and economic services and facilities; and the impact this has on the quality of people's lives and wellbeing. The Council will consider favourably proposals which support and strengthen local services, with a particular focus on encouraging development that improves existing deficiencies and weaknesses in services or facilities.

6.32 The Council, in partnership with other stakeholders, will seek to reduce levels of social and economic deprivation. This will be achieved by coordinating planning and other relevant strategies to ensure that improved services, community facilities and infrastructure are

6 - How will future development growth be accommodated?

provided particularly in those areas where indices of deprivation require targeted improvements. Sport England and Public Health England's Active Design guidance and incorporation of the National Design Guide's Active Design Principles are ways in which a more healthy lifestyle can be achieved through design. The use of masterplans for strategic new development can help ensure the integration of new and existing communities, as well as creating attractive places to live. Green infrastructure can also provide opportunities for the focus for community engagement, at various levels from Neighbourhood Plans to local interest groups. Strategic Policy S14 will also ensure that new development improves the health and wellbeing of our residents and communities.

6.33 Neighbourhood Plans will play an important role in implementing the Local Plan. They will enable local communities to influence the detailed policies to promote community inclusion and proposals at the neighbourhood level within the strategic framework set out in the Local Plan, and help shape new developments in their area. The Council supports neighbourhood plan groups in the preparation of their plans and has published guidance within the adopted Statement of Community Involvement.

The Growth Areas

6.34 Taking the above considerations into account, the Spatial Strategy identifies three broad geographic areas where new development growth will be accommodated. This comprises:

- Growth Area 1 - Central and Urban Chelmsford
- Growth Area 2 - North Chelmsford
- Growth Area 3 - South and East Chelmsford

6.35 Strategic Growth Sites and other types of sites allocated for development are defined at Table 3 in the Local Plan.

6.36 Where identified under the relevant Strategic Growth Site Policies, the Council will expect a masterplan for each site to be submitted for approval. The masterplans will cover the details of how sites will satisfy the requirements of the respective Site Policies. The Council will consider the use of Planning Briefs and Design Codes on other site allocations. Some of the sites have existing masterplans/design briefs. The Council will review and consider whether they are relevant and/or still up-to-date to determine whether further masterplanning is required and whether the masterplan process can be adapted to take account of them.

Growth Area 1

6.37 A key objective for development in the Chelmsford Central and Urban Growth Area is to focus on the regeneration of previously developed sites in Urban Chelmsford to help to continue its renewal as an important centre for employment, shopping, public services, leisure and cultural facilities. Around 3,000 new homes and 4,000sqm of new employment floorspace will be provided within Chelmsford Urban Area over the plan period.

6.38 In addition, the Local Plan makes provision for around 1,400 new homes and 5,000sqm of new employment floorspace focused at sustainable new neighbourhoods on the edge of Urban Chelmsford linked to the City Centre by public transport, cycling and walking. These new neighbourhoods are located close to the Green Wedge in order to maximise opportunities

6 - How will future development growth be accommodated?

for cycling and walking into the City Centre. The remainder of new homes will be located on predominately previously developed sites within Chelmsford Urban Area.

Growth Area 2

6.39 North Chelmsford will continue to be the location for significant new development growth.

6.40 The Council's former Local Development Framework allocated a minimum of 3,200 new homes and 64,000sqm of commercial floorspace at North East Chelmsford known as Beaulieu and Channels. Outline planning permission has been granted for 4,350 new homes, 40,000sqm floorspace business park and a new rail station. Construction work commenced on the scheme in 2014. The phased delivery of this allocation will continue into the late 2020s and future detailed planning applications will be considered in accordance with the approved masterplan and Landscape and Design Management Plan which were informed by the relevant sections of the North Chelmsford Area Action Plan (NCAAP). This includes the approved heritage compensatory measures for the protection of the Grade I listed New Hall School and Registered Park and Garden.

6.41 Subsequently, the Council's Local Plan adopted in May 2020 allocated a further 3,000 new homes and 45,000sqm of office/business park floorspace at North-East Chelmsford as an extension to Beaulieu and Channels and known as Chelmsford Garden Community. The plan also identified that the wider allocation may have potential for a further 2,500 new homes post-2036 as part of a plan review. This allocation has an approved masterplan and outline planning permissions have now been submitted for 6,250 homes and around 57,000sqm of new employment floorspace – see Location 6. This development will be underpinned by Garden City principles developed by the Town and Country Planning Association (TCPA) (e.g. comprehensively planned, enhance the natural environment and provide high quality homes).

6.42 Alongside other developments at Great Leighs (Location 7) and North of Broomfield (Location 8), this allocation will help to deliver strategic infrastructure including Section 1a of the Chelmsford North East Bypass.

6.43 In addition, a small allocation in the Service Settlement of Ford End (Location 14) will help to support the services and facilities in this village and help to maintain a diverse housing supply.

6.44 New employment development will also be provided through extensions to the existing Little Boyton Hall Farm Rural Employment Area (Location 15) and Waltham Road Employment Area in Boreham (Location 9a). Expansion of these well-established sites will provide further rural inward investment opportunities and reflect the aspirations of national policy to support the sustainable growth and expansion of business in rural areas.

Growth Area 3

6.45 This area will see significant change with both one new Garden Community and a strategic employment site alongside an extension to the town of South Woodham Ferrers.

6.46 A new garden community to the east of Chelmsford based on Garden City Principles will be provided at Hammonds Farm (Location 16a). This site lies adjacent to the A12 and A414 and will create a new sustainable, comprehensively planned, landscape-led garden

6 - How will future development growth be accommodated?

community of 3,000 new homes and 43,000sqm of new employment floorspace over the Local Plan period. The wider allocation has the capacity for a further 1,500 new homes to be developed post-2041. The timing and delivery of further development would need to be considered as part of a review of this Local Plan.

6.47 In addition, a new strategic employment site for around 43,000sqm is proposed at Land adjacent A12 Junction 18 (Location 16b), adjacent to the East Chelmsford Garden Community (Hammonds Farm). This strategic stand-alone employment site will provide for a mix of employment uses including office, light industrial, general industrial and distribution uses in a sustainable location close to the strategic road network. The development will make an important contribution to the delivery of employment and jobs in the City Council's area over the plan-period.

6.48 Small allocations in the Key Service Settlements of Bicknacre and Danbury and the Service Settlement of East Hanningfield will help to support the services and facilities in these villages and help to maintain a diverse housing supply.

6.49 The Growth Area will also deliver a sustainable new extension to the north of the existing town of South Woodham Ferrers. This will support and strengthen South Woodham Ferrers' important local role and help deliver improvements to the A132 corridor.

Phasing and Delivery of Site Allocations

6.50 These new developments will be phased according to deliverability and identified need. Development at the North East Chelmsford Garden Community, East Chelmsford Garden Community (Hammonds Farm) and Land adjacent to A12 Junction 18 will accommodate a substantial amount of the housing and employment growth planned for Chelmsford within the Local Plan period and beyond in a sustainable way. It is anticipated that existing commitments will provide the majority of supply in the first five years alongside smaller windfall sites. The delivery and phasing of development sites is set out in the Development Trajectories at Appendix C. The new Local Plan allocations will deliver the majority of new development from 2030 onwards with a five-year land supply maintained before that through existing commitments. Monitoring the delivery of sites against the Development Trajectories will enable the Council to consider whether rephasing is necessary, for example to address under-delivery on specific sites.

6.51 Housing delivered on windfall sites will also make an important contribution to the Spatial Strategy. These are sites expected to come forward throughout the Local Plan period and as such are taken into account in determining the residual housing requirement. The Council will strongly resist development on unallocated greenfield sites where they would conflict with other relevant Local Plan policies.

Other Housing Needs

6.52 Small-scale developments providing affordable and community-led homes on rural exception sites will be supported where they accord with other relevant Local Plan policies. The Local Plan also includes policies to support the rural economy including tourism related development and farm diversification schemes whilst protecting the countryside.

6.53 The findings of the Gypsy and Traveller and Travelling Showpeople Accommodation Assessment for Chelmsford that covers the period 2023 to 2041 identifies a requirement for 40 Gypsy and Traveller pitches and 38 Travelling Showpeople plots for households that meet

6 - How will future development growth be accommodated?

the Planning Policy for Traveller Sites definition to be developed by 2041. The Council will expect to see Gypsy and Traveller and Travelling Showpeople accommodation provided on large strategic development allocations.

Special Policy Areas

6.54 Special Policy Areas will be defined within and around existing facilities and institutions to enable their operational and functional requirements to be planned in a strategic and phased manner as they are within locations where policy would ordinarily be one of constraint:

- Chelmsford City Racecourse is being developed as a major racecourse and equestrian centre with supporting entertainment facilities
- Broomfield Hospital is an important regional hospital and the largest employer in the Council's area, and will require room for expansion and upgrading of facilities
- ARU Writtle is one of the UK's leading institutions for land-based studies which is seeking to expand and broaden its educational facilities and opportunities
- Hanningfield Reservoir Treatment Works is a major site containing water treatment facilities, and will need to cater for the long-term provision of water supplies and related business functions
- Sandford Mill is located within the Chelmer River Valley and comprises a former water treatment works and associated facilities. It has been recognised as an opportunity for a mixed-use development incorporating a range of leisure development in conjunction with usage of the Chelmer and Blackwater Navigation
- The RHS Gardens at Hyde Hall are nationally important landscape scale gardens. There has been significant investment at Hyde Hall in the recent past, with a new visitor centre and associated development, and the RHS have plans for continued investment in the gardens.

6.55 The Council will consider development proposals within each Special Policy Area in the context of an approved masterplan for each site.

STRATEGIC POLICY S8 – DELIVERING ECONOMIC GROWTH

In determining planning applications, the Council will ensure that development on the flexible and market-responsive employment land allocations will enable balanced job and housing growth and allow further diversification of Chelmsford's economy, in particular nurturing and growing the construction, clean energy, advanced manufacturing and engineering, digi-tech, life sciences, health and care, and professional and support sectors. The Council will encourage links between business and the significant education sector in Chelmsford, in particular the roles of the Anglia Ruskin University as a major economic catalyst for economic growth. The Council will seek to improve local skills and access to employment opportunities through Employment and Skills Plans. The Council will assess development proposals against the following principles:

- Priority will be given to the use of previously developed land in sustainable locations and also focusing new employment at locations well-served by active and sustainable travel modes and existing or planned public transport provision

6 - How will future development growth be accommodated?

- Existing Employment Areas and Rural Employment Areas identified on the Policies Map will be safeguarded for employment uses, unless it can be demonstrated that there is no reasonable prospect of the allocated employment area being used for that purpose
- Support will be given to the sustainable growth and expansion of rural businesses
- Support will be given for regional growth sector priorities and clustering of economic activity
- Chelmsford City Centre and sites allocated for employment are the appropriate locations for large new office (E(g)(i)) and research and development (E(g)(ii)) provision
- New employment development will be a key component of growth within specific proposed new Strategic Growth Locations particularly the new Garden Communities in North East and East Chelmsford
- Improving local work and training opportunities from major development proposals through Employment and Skills Plans.

Reasoned Justification

6.56 The economic vitality of Chelmsford and the success of its businesses are fundamental to improving the prosperity, skills and quality of life of existing and future residents. There is a need to ensure that Chelmsford's businesses thrive, innovate and can be even more productive. The Local Plan will ensure that Chelmsford fosters new economic growth, creates new local employment opportunities to meet forecast local needs and further supports Chelmsford's economic success. The overall approach will promote flexible employment floorspace providing opportunities to support a wide range of businesses and business sizes including start-ups, growing businesses (e.g. through grow-on space) and larger companies. For the purposes of this policy, large new office, industrial and distribution (Use Classes E(g)(i-iii)/B2/B8) development will be developments of 1,000sqm gross floorspace or above.

6.57 To maximise opportunities for economic growth and development, the Council is working closely with the Greater Essex Business Board (GEBB) and the North Essex Economic Board (NEEB). More locally, the Council has also set up an Investors' and Developers' Network. The Council's Economic Strategy and Employment Land Review, alongside Essex County Council's Essex Sector Development Strategy and the Essex, Southend-on-Sea and Thurrock Local Skills Improvement Plan, provides the local evidence to support the relevant Local Plan policies.

6.58 The new employment growth allocations will ensure a flexible rolling supply of employment land. To support Chelmsford's economic diversity, it is important to retain existing designated employment areas, where appropriate, in order to maintain supply and choice of employment floorspace. This includes the provision of essential ancillary facilities close to places of employment and rural employment development opportunities which have seen significant growth in recent years.

6.59 Retention of existing employment areas is particularly necessary to enable balanced job and housing growth and to provide choices for businesses looking to expand or relocate. Existing employment areas will be protected through being designated as Employment Areas

6 - How will future development growth be accommodated?

or Rural Employment Areas. The acceptable uses on these sites will vary depending on their function, context and planning history.

6.60 Other relevant policies of the Local Plan provide the criteria for the detailed implementation of economic growth. These include policies for the protection of existing employment areas, and allocations containing new employment development including a 56,956sqm new office/business park floorspace as part of the new North East Chelmsford Garden Community and 43,000sqm employment floorspace as part of East Chelmsford Garden Community (Hammonds Farm). A further allocation for 43,000sqm of employment floorspace is proposed at Land Adjacent to the A12 Junction 18. Other policies also ensure that new employment developments will be of high quality design and incorporate sustainable design features.

6.61 The Council is seeking to enhance skills and access to new employment by local residents. The Council expects all strategic scale planning applications of 50 or more homes or employment space providing 2,500sqm (GIA) or more floorspace, to enter into an Employment and Skills Plan to provide employment and skills opportunities to benefit the local community. This may include apprenticeships, work experience, volunteering, careers information and training. In line with the ECC Developers Guide to Infrastructure Contributions (2023), the plan must be shared with and agreed by the LPA and ECC ahead of the S106 agreement being signed off. The plan should include options such as the direct delivery or skills and employability programmes, school / college engagement and work experience opportunities, or construction or workplace apprenticeship schemes for local residents. This will support the agenda to reduce skills disparities in Chelmsford. The plans will be secured through S106 agreements and further details will be set out in an updated Planning Contributions SPD. This will include a requirement to cover the Council's costs associated with the monitoring of the plans, with reports provided to the Council by developers for inclusion in the Authority Monitoring Report.

STRATEGIC POLICY S16 - CONNECTIVITY AND TRAVEL

The Council is committed to creating high quality, sustainable places which promote connectivity for all. Providing better access to modes of active and sustainable travel are key and will be achieved in the following ways.

A) New development must be designed to prioritise and maximise opportunities for active and sustainable transport and movement, through strategic and local sustainable measures:

- **Promote ease of movement within the site and improve connectivity to adjoining areas and key destinations**
- **Provide for attractive, safe, convenient, inclusive, high quality and well-designed walking and cycling networks with supporting facilities**
- **Give priority to the needs of pedestrians, cyclists, public transport users, car sharers and users of low and ultra-low emission vehicles**
- **Increase infrastructure to support active travel, including and where relevant in the Green Wedge in accordance with Strategic Policy S11**
- **Increase infrastructure to support the use of public transport and other active and sustainable modes of travel for all**

6 - How will future development growth be accommodated?

- Promote alternatives for commercial vehicles
- Promote the use of car clubs
- Reduce the reliance on private fossil fuelled vehicles
- Support the provision of strategic and local transport infrastructure to enable a future for alternatives to fossil fuelled vehicles
- Increase infrastructure provision for charging electric vehicles (EV)
- Promote innovations in transport including smart technology.

B) In addition to the above, all new strategic scale development (defined as development for 100 or more units and non-residential development in excess of 1,000 sqm) will be required to demonstrate how they have considered the following in their place making objectives:

- Achieving a significant modal shift to active and sustainable modes of travel
- Ensuring walkable neighbourhood principles within developments are achieved
- Provision of mobility hubs of appropriate scale at neighbourhood centres, public transport interchanges, park and ride, or other suitable locations, which are of high quality design and accessible
- Supporting technological advances and smarter sustainable transport options, including autonomous vehicles, micromobility (e-bikes, e-scooters), demand responsive public transport and smart EV charging.

Reasoned Justification

6.62 Reducing the need for journeys should be at the forefront of all development. Designing development with this in mind from the outset should be considered at the earliest of stages in preparing a scheme. Future proofing to take advantage of advances in technology e.g. automated vehicles and smart EV charging should also be considered to achieve the policy objectives.

6.63 Where journeys do need to be made, the provision and promotion of inclusive active and sustainable travel choices for all residents and visitors of Chelmsford is essential to reduce the reliance on fossil fuelled vehicles. This should include removing barriers to travel for the most vulnerable users, including individuals living with disabilities, limited mobility or long-term limiting health conditions and those within society who are disadvantaged.

6.64 Walkable Neighbourhoods are new neighbourhoods and streets designed to include a mix of uses, green spaces and local services and facilities that support the new development, within easy walking or cycling distance of home, reducing the need to travel. Development proposals should have regard to the Walkable Neighbourhood principles contained within the Essex Design Guide and supplementary guidance (A New Development Model for Essex, October 2023), and Sport England's Active Design guidance.

6.65 Links to the existing public transport network and improvements or new public transport provision, including new service provision and supporting infrastructure such as signage and wayfinding, are essential in offering residents and visitors real choices in how they travel, and help reduce reliance on private vehicles.

6.66 Smarter sustainable transport options, such as micromobility (e-bikes, e-scooters), demand responsive public transport and use of electric vehicles offer a further option to those

6 - How will future development growth be accommodated?

who have limited access to public transport. Supporting technological advances such as autonomous vehicles and smart EV charging should also help reduce the impact of vehicles on pollution and climate change, although the main objective is to reduce the number of trips by all private vehicles and replace these with trips by active and sustainable travel.

6.67 There are opportunities to further enhance active travel routes through Chelmsford, including within its Green Wedge, by creating multifunctional greenways. Their design will depend on their location and function (recreational, commuting), and the need to balance sustainable and active travel movements with biodiversity enhancements.

6.68 Ease of movement within any site and improved connectivity to adjoining areas and key destinations to support daily life is essential in achieving a reduction of private vehicles trips and increased uptake of active and sustainable transport options. For the purposes of this policy key destinations include, but are not limited to, City/Town/Village Centres, transport hubs, schools and post 16 education, medical facilities, shops, community facilities (including sport and leisure services), places of worship and places of work.

6.69 New routes for active travel should be designed with the appropriate surface to suit the needs of users (i.e. commuter or leisure). They should be accessible in all weathers and for people with mobility impairments, those in wheelchairs, use for leisure and fitness pursuits such as skateboarding and rollerblading, for commuting journeys to work and to school and to provide new leisure opportunities from development into the countryside. Where possible these routes should be funded by developers where they directly relate to development.

6.70 The two Garden Communities are required to achieve a 60% modal shift to sustainable and active modes of travel. This percentage or above should be considered as 'significant' in respect of this policy.

6.71 Any design of new cycle routes should be consistent with LTN 1/20 – Cycling infrastructure design (2020) or any subsequent guidance. Any new cycle route will need to consider the following key principles in that they are:

- Coherent - allow people to reach day to day destinations easily in a way that is easy to navigate, avoiding arrangements that are unintuitive or taking cyclists away from the obvious route
- Direct – to be as direct, if not more direct, than the routes available to motor vehicles
- Safe - as well as being safe, emphasis is given to the need for infrastructure to feel safe
- Comfortable - quality maintained surfaces, proper widths and favourable gradients are crucial
- Attractive - should contribute positively to the urban realm, and naturally be attractive to use.

6.72 Local Cycling and Walking Infrastructure Plans (LCWIPs), as set out in the Government's Cycling and Walking Investment Strategy, are a strategic approach to identifying cycling and walking improvements required at the local level. Essex County Council has identified new strategic corridors within the Chelmsford LCWIP. These are new strategic routes identified to help make it easier and safer for residents to walk or cycle, reduce traffic congestion, cut air pollution, and improve residents physical and mental wellbeing. New development should look to either provide contributions to deliver sections of these routes if they are in the vicinity, or provide active travel connections to them.

6 - How will future development growth be accommodated?

6.73 Alternatives for commercial vehicles may include last mile local deliveries by e-cargo bikes and on foot. The use of parcel lockers, other infrastructure and community mobility hubs help further reduce the need for travel.

6.74 Proposals for local and strategic infrastructure which provide and support the use of active and sustainable modes of transport will be supported. The provision of safe, attractive, and user-friendly routes and supporting facilities, such as secure storage facilities/lockers and changing facilities and other supporting infrastructure, assist in the population making more sustainable travel choices. These can be private, public and business facilities. Where appropriate such facilities will be secured through relevant site allocations.

6.75 The need for electric charging facilities for vehicles will be secured through relevant site allocations and design policies having regard to the Essex Parking Standards – design and good practice 2009, or as subsequently amended.

6.76 Placemaking for all development is at the heart of achieving well connected and sustainable communities. Connectivity via active and sustainable travel should be considered at the earliest stages of masterplanning and design codes in strategic scale developments to ensure they complement the objectives of the site. Supporting safe direct active travel routes to schools and promoting public transport hubs at new developments should be considered.

6.77 The adopted Making Places Supplementary Planning Document (SPD) seeks to promote and secure high-quality sustainable new development. It is aimed at all forms of development, from large strategic developments, public spaces and places, to small extensions to individual homes. It sets out detailed guidance for the implementation of the policy requirements set out in the new Local Plan and provides practical advice to help with schemes from single house extensions to strategic sites and their masterplans. It also provides good practice examples on how development can go beyond planning policy requirements to create the most sustainable and environmentally friendly development possible.

6.78 The SPD offers further detailed guidance on principles to consider which promote sustainable travel alternatives to the private car as well as detailed guidance on electric charging points and car clubs.

STRATEGIC POLICY S9 – INFRASTRUCTURE REQUIREMENTS

Priorities for infrastructure provision or improvements are also contained within relevant Strategic Policies and Site Allocation policies.

New development must be supported by the provision of infrastructure, services and facilities that are identified as necessary to serve its needs.

Transport and Highways

New development must be supported by active and sustainable means of transport to serve its need including walking, cycling and public transport modes. New highway infrastructure should help to reduce congestion, link new development and provide connections in the strategic road network. These include but are not limited to:

6 - How will future development growth be accommodated?

- **New Beaulieu Park Rail Station**
- **Chelmsford North East Bypass**
- **An additional new Northern Radial Distributor Road in North East Chelmsford**
- **Safeguarded land for the expansion of Chelmer Valley and Sandon Park and Ride sites**
- **Additional Park and Ride facilities will be considered in West Chelmsford and North East Chelmsford within the broad locations shown on the Policies Map**
- **Improvements to the Army and Navy Junction and routes connecting to the junction as part of a sustainable transport package**
- **Improvements to A131 (Essex Regiment Way) and A1016 (Essex Regiment Way)**
- **New foot/cycle bridge across A131 (Essex Regiment Way)**
- **Junction improvements on the A12 and other main roads to reduce congestion**
- **Capacity improvements to the A132 between the Rettendon Turnpike and South Woodham Ferrers, including necessary junction improvements to be brought forward as early as possible in tandem with the delivery of development to mitigate its impact**
- **New and improved active and sustainable travel routes and bridges both within development sites and to provide connections to centres and hubs of activity such as transport nodes, City, Town and Neighbourhood Centres, strategic areas of recreation and employment areas, education and health centres**
- **A new active and sustainable route and bridge over the A12 from East Chelmsford Garden Community to connect close to Sandon Park and Ride**
- **A new multi-modal vehicular bridge over the River Chelmer to connect East Chelmsford Garden Community to Junction 19 of the A12 (Boreham Interchange)**
- **Bus service, bus priority schemes and rapid transit measures**
- **Improvements to inter-urban public transport**
- **Transport links between new neighbourhoods and Chelmsford City Centre and employment areas**
- **Improved road infrastructure aimed at reducing congestion and providing more reliable journey times.**

Flood Risk Management

New development must be safe from all types of flooding and not make flood risk worse elsewhere. Suitable strategic and site level measures will need to provide appropriate flood risk management. These include but are not limited to:

- **Strategic flood defence measures on the Rivers Chelmer, Can and Wid to protect Chelmsford City Centre**
- **Local flood mitigation measures within or as part of development sites including the use of SuDS**
- **Provision of new lock and replacement of weir gates at Chelmer Waterside**

6 - How will future development growth be accommodated?

Community Facilities

Infrastructure necessary to support new development must provide a range of community infrastructure to ensure that it is served by the essential education, health and community services and facilities. These include but are not limited to:

- Early years, primary and secondary, and post-16 education provision
- Essential primary, acute and community healthcare provision
- Health and wellbeing facilities and measures
- Sport, leisure and recreational facilities
- Community buildings and space
- Provision of serviced moorings along the River Chelmer
- Cultural facilities and public art
- Police, ambulance, and fire and rescue facilities
- Cemetery space and crematorium provision
- Municipal waste/recycling facilities.

Green Infrastructure and Natural Environment

Infrastructure necessary to support new development must provide or contribute towards ensuring a range of multifunctional green, blue, and natural infrastructure, nature recovery, net gain in biodiversity and public realm improvements. These include but are not limited to:

- Provision of a wide range of open space within development sites to meet amenity, recreational and functional needs
- Provision of a multifunctional network of green and blue infrastructure to enhance biodiversity
- Provision of areas for nature recovery
- Provision of new public realm and enhancements at key centres of activity
- Contributions towards recreation disturbance avoidance and mitigation measures for European designated sites as identified in the Essex Recreational disturbance Avoidance and Mitigation Strategy
- Contributions towards addressing cumulative recreational pressure on SSSIs.

Historic Environment

Infrastructure necessary to support new development must seek to preserve or enhance the historic environment and mitigate any adverse impacts on nearby heritage assets and their settings.

Utilities

Infrastructure necessary to support new development must include appropriate utility infrastructure. This includes but is not limited to:

- Utility infrastructure including electricity and gas distribution and supply, water supply, foul drainage and waste water treatment, telecommunications and gigabit broadband
- Opportunities for appropriate renewable, low and zero carbon or district-scale energy production.

6 - How will future development growth be accommodated?

Reasoned Justification

6.79 New development can place additional demands upon existing infrastructure and services including the local and strategic transport network, healthcare, open spaces and education provision. These will be identified by the relevant infrastructure provider for example Essex County Council as Highways and Transportation Authority and lead authority for Education and NHS England and the Mid and South-Essex Integrated Care Board as healthcare providers. Some existing infrastructure in Chelmsford has little or no spare capacity to cope with population growth and new development. Therefore new development proposals must contribute to improvements in infrastructure capacity to cater for the additional needs they generate. Infrastructure improvements can be in the form of new, co-located or expanded facilities. The Council's Infrastructure Delivery Plan (IDP) sits alongside the Local Plan. This assesses the current status of infrastructure across Chelmsford and identifies what new infrastructure investment is required to support the Local Plan growth, when it is needed, and funding sources.

6.80 The Council will work with local landowners and partners to bring forward the infrastructure required to facilitate the development set out within the Local Plan.

6.81 Proposals for new developments or expansion of existing properties should be capable of receiving gigabit speed and reliable 5G mobile and broadband connectivity.

6.82 Policy S10 outlines how the delivery of infrastructure will be secured for example, by planning condition and/or planning obligation, or through other infrastructure funding sources. The scale and type of new development will affect the infrastructure, services and facilities required to serve the needs arising from it.

6.83 Residential developments proposed within the Local Plan have the potential to result in a significant increase in recreational disturbance to the Essex Estuaries Special Area of Conservation (SAC) and Crouch and Roach Estuaries Special Protection Areas (SPA). Measures required to mitigate the impacts of recreational disturbance on European Sites will be delivered as detailed in the Essex Coast Recreational disturbance Avoidance and Mitigation Strategy (RAMS).

6.84 Any residential development that is within the Zone of Influence of the Essex coast European Sites, will be required to either contribute financially towards mitigation measures in accordance with the adopted RAMS and Supplementary Planning Document, or subsequent revisions, or in exceptional circumstances, identify and implement bespoke mitigation measures to ensure compliance with the Habitats Regulations. Major developments (defined as sites of 10 or more dwellings) may also be required to provide or contribute towards additional recreational mitigation measures to address alone impacts of the proposal as identified in paragraph 8.139 of DM16. This will be informed by a review of the RAMS and SPD which is expected to be complete in late 2025 and/or project level HRAs.

6.85 The Chelmsford Flood Resilience Partnership will identify strategic flood defence measures required to protect Chelmsford City Centre.

6.86 Residential developments proposed within the Local Plan have the potential to result in increased recreational pressure on SSSIs in their vicinity. Relevant sites will be required to assess, and where appropriate mitigate the impacts of recreational disturbance.

6 - How will future development growth be accommodated?

Transport and Highways Infrastructure

6.87 The route for the Chelmsford North East Bypass and the location for the new Beaulieu Park Rail Station are allocated on the Policies Map and those areas will be safeguarded from development. Areas of search for additional Park and Ride sites in West Chelmsford and North East Chelmsford are shown on the Policies Map as indicative broad locations for new Park and Ride facilities which support Essex County Council's strategy.

6.88 New development will inevitably create demand for additional road, cycle and rail use and therefore generate a need for new and upgraded transport infrastructure. Planned growth allocated within the Local Plan will provide the opportunity to address future transport infrastructure needs.

6.89 Given high levels of commuting, the relative prosperity of Chelmsford and ongoing demand for services and facilities, transport infrastructure is already under pressure. A significant change in how people make their journeys towards more active and sustainable travel choices is necessary. The Local Plan seeks to improve transport infrastructure and ensure that new development is accessible by sustainable forms of transport. All major development should also follow the modal hierarchy by providing access as set out in the Spatial Principles.

6.90 The new Beaulieu Park Rail Station is fully funded through the Housing Infrastructure Fund and will provide access to the Great Eastern Main Line (GEML). Trains will be able to pass each other at the new station to make the whole line more reliable. It will relieve crowding at Chelmsford railway station and act as a transport interchange to encourage sustainable travel by bus, cycle, electric vehicles and on foot to strategic and local housing development, including the new Chelmsford Garden Community. Detailed planning permission was granted in June 2022 and construction commenced in early 2023. The target opening date is by the end of 2025.

6.91 Measures designed to encourage people to make other sustainable travel choices such as better public transport provision, car clubs, electric vehicle charging points and provision of cycle and walking routes will also be required to achieve such a change. The use of Travel Plans and Transport Assessments will help identify specific interventions. The Local Plan traffic modelling evidence base is supported by Essex County Council, as Highways and Transportation Authority, and National Highways. The junction modelling report assesses the likely impacts of planned growth on the highway network in the Chelmsford area. This has included a high-level analysis of cross boundary traffic flows on key corridor routes including A12, A130, A131, A414, A1060, B1007 and B1008. More detailed analysis of traffic impacts and mitigation options testing will be required through the preparation of Transport Assessments/Statements as part of future planning applications.

6.92 A number of transport improvement schemes are proposed across Chelmsford, which will help relieve congestion or provide connections to new developments. The Local Plan safeguards or allocates suitable land for these schemes which are in addition to strategic highway improvements including on the A12 and A120.

6 - How will future development growth be accommodated?

6.93 The Chelmsford North-East Bypass (CNEB) will be delivered in stages with the first stage (Section 1a) being funded by the Housing Infrastructure Fund (HIF). When complete, Section 1a and 1b of the Chelmsford North-East Bypass will provide a new 4.6km single carriageway route between Beaulieu Parkway and the A131 at Chatham Green with the existing A131 becoming dual carriageway to the Deres Bridge junction south of Great Leighs.

6.94 Under the staged approach Section 1a of the single carriageway (the southern section) will be delivered first, connecting with Beaulieu Parkway in the south and providing connectivity to the A12 at Boreham Interchange via the newly opened Generals Lane Connector Bridge. To the north, the CNEB will join with a new east-west link (i.e. the Northern Radial Distributor Road) which is due to be delivered as part of the planned North East Chelmsford Garden Community and will connect through to the Wheelers Hill roundabout on the A131 Essex Regiment Way.

6.95 To the north of Beaulieu Parkway, a new conveyor bridge will allow the existing mineral quarry at Bulls Lodge to continue to operate during construction and operation of the bypass. Once the quarrying is complete, the conveyor bridge will be upgraded by the North East Chelmsford Garden Community developers to provide a new east-west pedestrian, cycle and vehicle route. This will provide connectivity for local residents between the two areas of the Garden Community either side of the CNEB. Section 1a and the Northern Radial Distributor Road are planned to be delivered by March 2026.

6.96 Section 1b of the CNEB will be single carriageway and connect the bypass north to the A131 at Chatham Green, and Section 2 will dual the A131 between Chatham Green and Deres Bridge roundabout. It is anticipated that these sections will be subject to a future round of DfT/Major Road Network funding combined with potential developer contributions and will be delivered at a later date. The safeguarded route for the bypass is shown on the Policies Map.

6.97 The Army and Navy junction in Chelmsford is a key gateway into and out of the city. The junction is operating over capacity during the morning and evening peak times suffering severe congestion and delays for bus passengers, pedestrians, cyclists and drivers. This also results in it being a poor-quality environment for all road users.

6.98 The [Army and Navy Sustainable Transport Package](#) was approved by Essex County Council in March 2022. It includes the redesign of the junction in the form of a 'hamburger' roundabout; improved walking and cycling facilities at the junction and on approaches; improved bus priority/bus lanes on Parkway; extension to Essex Yeomanry Way bus lane; and a 350 space expansion of Sandon Park and Ride and 500-spaces at Chelmer Valley Park and Ride. Funding has been agreed in principle through the Government's Major Road Network (MRN) alongside funding from Essex County Council and Chelmsford City Council via CIL.

6.99 Planning applications were submitted in early 2024 and a Final Business Case is anticipated to be submitted to the Department for Transport in late 2024, with construction scheduled to start in Spring 2025 and open to traffic in early 2028.

6.100 Route-based strategies are prepared and delivered by Essex County Council for strategic road corridors, in consultation with local authorities. Route-based strategies have been prepared in Mid Essex for consideration of delivery post 2023/24 for the A414 from Chelmsford to Maldon and the A132 at South Woodham Ferrers. Their key objective is to

6 - How will future development growth be accommodated?

identify options that will support economic growth. Improvements include short, medium and long term options, but funding to deliver these improvements needs to be secured. Development which will result in increased traffic along these corridors should consider making contributions to improve these key corridors, or delivery of improvements where they directly impact on the corridor.

6.101 Essex County Council's vision is for Chelmsford's Future Transport Network to become 'best in class' offering enhanced connectivity and access to opportunities for residents, commuters, visitors and businesses to support the sustainable economic growth of the City. The overarching approach of Essex County Council is to develop three strategic zonal focuses (see Table 2 below):

Table 2 : Strategic Zonal Focuses

Zone	Aim
Outer	<ul style="list-style-type: none"> • Remove as much traffic as possible from the outskirts of the City and beyond • Utilise the existing and potential future Park and Rides (Park and Ride Strategy) • Encourage rail use to access Chelmsford (Rail Strategy) • Efficient utilisation of the strategic route network to direct people onto the most appropriate routes into the City Centre (Network Management Strategy)
Mid	<ul style="list-style-type: none"> • Encourage trips originating within Chelmsford to be made by sustainable modes (Bus Strategy and Cycling Strategy)
Central	<ul style="list-style-type: none"> • Improve the pedestrian environment for walking trips and shoppers and visitors (Public Realm Strategy and Walking Strategy) • Utilise the network to its best advantage by directing trips onto the most appropriate route (Network Management Strategy) • Direct the remaining car trips to the most appropriate car park (working with Chelmsford City Council)

6.102 Essex County Council's Local Transport Plan (LTP) sets out a transport policy for Essex, and how Essex County Council will deliver and manage a full range of transport services. LTP4 will reflect and formally incorporate the revised policy framework contained within Net Zero: Making Essex Carbon Neutral (ECAC) and the Transport East: Transport Strategy. These place a greater emphasis upon the provision and use of sustainable transport and the decarbonisation of the transport network. LTP4 will cover the period up to 2050 and be based on the following three strategic themes:

- Supporting People: Health, Wellbeing and Independence
- Creating Sustainable Places and Communities
- Connecting People, Places and Businesses.

6.103 The Council will continue to work with Essex County Council as LTP4 evolves and include any further infrastructure requirements as necessary.

STRATEGIC POLICY S10 – SECURING INFRASTRUCTURE AND IMPACT MITIGATION

Infrastructure must be provided in a timely and, where appropriate, phased manner to serve the occupants and users of the development.

Permission will only be granted if it can be demonstrated that there is sufficient appropriate infrastructure capacity to support the development or that such capacity will be delivered by the proposal. It must further be demonstrated that such capacity as is required will prove sustainable over time both in physical and financial terms.

Where a development proposal requires additional infrastructure capacity, to be deemed acceptable, mitigation measures must be agreed with the Local Planning Authority and the appropriate infrastructure provider. Such measures may include (not exclusively):

- **Financial contributions towards new or expanded facilities and their maintenance**
- **On-site provision (which may include building works)**
- **Off-site capacity improvement works, and/or**
- **The provision of land.**

Infrastructure will be secured through the use of planning condition and/or planning obligation and/or financial contribution through the Community Infrastructure Levy or its successor.

Developers and land owners must work positively with the Council, neighbouring Local Planning Authorities and other infrastructure providers throughout the planning process to ensure that the cumulative impact of development is considered and then mitigated, at the appropriate time, in line with adopted policies and published guidance.

In negotiating planning obligations, the Council will take into account local and strategic infrastructure needs and financial viability set out in the Local Plan Infrastructure Delivery Plan (IDP) and Local Plan Viability Assessment.

Reasoned Justification

6.104 The new housing, employment and other development proposed in the Local Plan will increase demands on physical infrastructure such as roads and sewers, social infrastructure such as health, police and education facilities, and green infrastructure such as open spaces. The Council will work with partners such as the Highways and Transportation Authority, National Highways, the lead authority for Education, the Environment Agency, utility companies, Mid and South Essex Integrated Care System, emergency services and Sport England to bring forward the necessary infrastructure and facilities that are required in order to deliver the Spatial Strategy.

6 - How will future development growth be accommodated?

6.105 For the purposes of this policy the widest reasonable definition of infrastructure and infrastructure providers will be applied. The term infrastructure can include any structure, building, system facility and/or provision required by an area for its social and/or economic function and/or wellbeing including (but not exclusively): footways, cycleways, bridleways and highways; public transport; drainage, SuDs and flood protection; waste recycling facilities; education and childcare; healthcare; sports, leisure and recreation facilities; community and social facilities; cultural facilities, including public art; emergency services; green and blue infrastructure; open space; affordable housing; live/work units and lifetime homes; broadband; and facilities for specific sections of the community such as younger people or the elderly.

6.106 It should be recognised that infrastructure improvements may be provided in various ways including new infrastructure, improvements to existing facilities/services or as co-located or expanded services/facilities. In particular co-located facilities are likely to become a growing trend where there is limited funding available and, in more urban locations such as central Chelmsford, a lack of land to provide all the requirements individually. When infrastructure cannot be provided within, or is not appropriate to be located on, the development site itself, developers will be expected to make a contribution to the cost to provide the infrastructure elsewhere.

6.107 In negotiating planning obligations, the Council will require a fully transparent open book viability assessment to demonstrate full mitigation cannot be afforded and that all possible steps have been taken to minimise the residual level of unmitigated impacts. Developers may be required to enter into obligations that provide for appropriate additional mitigation in the event that viability improves prior to completion of the development.

6.108 Some infrastructure providers will fund and deliver infrastructure themselves. Other infrastructure will be funded by developers and landowners, secured by planning obligations or the Community Infrastructure Levy (CIL) or its successor as part of the planning permission. On-site infrastructure provision will usually be secured by planning conditions or legal agreements. Off-site provision will usually be secured by legal agreements and through other financial contributions.

6.109 The Council will work with infrastructure providers through the CIL and planning obligations to facilitate the timely provision of infrastructure needed to support development. This may involve suitable phasing of development in order to ensure that essential infrastructure is in place when needed. The CIL funds from developments within Chelmsford may be pooled, allowing the forward-funding of vital infrastructure required to support a particular development. The Council will pass a proportion of CIL receipts to Parish/Town Councils in line with legislation and local policy. The Government is currently considering changes to CIL and it may be that contributions are secured under other provisions in the future.

6.110 The site allocation policies in the Local Plan identify infrastructure needed to support new developments. The Council will require masterplans for larger development sites to provide an indicative development layout, and a phasing and implementation plan to help ensure the timely delivery of infrastructure.

6.111 The Council has prepared an Infrastructure Delivery Plan (IDP) to inform the Local Plan which identifies the main items of infrastructure needed to support the planned development. The IDP is a 'living' document, where assessments of costs, funding, delivery, indexation and phasing will continue to be updated, in conjunction with further work being

6 - How will future development growth be accommodated?

undertaken with site promoters, ECC and funding partners. This ongoing review ensures the best and most up-to-date information is available, particularly to inform the more detailed planning application process. The site allocation policies also identify key pieces of site specific infrastructure needed to support the development. The Council will ensure that the cumulative impact of planning policy, standards and infrastructure requirements do not render the majority of sites and development identified in the Local Plan unviable and therefore undeliverable.

6.112 In addition to developer funding, where necessary the Council will collaborate with partners to lobby central Government and funding partners for additional funding sources for key large strategic infrastructure projects.

6.113 Applicants should consult the Council's Planning Obligations Supplementary Planning Document for more guidance. Essex County Council's Developer's Guide to Infrastructure Contributions sets out ECC's standards for the receipt of relevant infrastructure funding.

STRATEGIC POLICY S11 – THE ROLE OF THE COUNTRYSIDE

When determining planning applications, the Council will carefully balance the requirement for new development within the countryside to meet identified development needs in accordance with the Spatial Strategy, and to support thriving rural communities whilst ensuring that development does not have an adverse impact on the different roles and character of the countryside. All new development within the countryside will be considered within this context and against the specific planning objectives for each of the following areas:

A) Green Belt

The openness and permanence of the Green Belt will be protected and opportunities for its beneficial use will be supported where consistent with the purposes of the Green Belt. Inappropriate development will not be approved except in very special circumstances.

B) Green Wedge

The Green Wedge has an identified intrinsic character and beauty and is a multi-faceted distinctive landscape providing important open green networks, which have been instrumental in shaping the City's growth, character and appearance.

These networks prevent urban sprawl and settlement coalescence and provide for wildlife and nature, flood storage capacity, leisure and recreation, and active travel, which allows for good public access which will be further improved through the requirements of development allocated in the Local Plan.

Development which materially harms the role, function and intrinsic character and beauty of the Green Wedge will not be approved.

6 - How will future development growth be accommodated?

C) Rural Area

The countryside outside of the Urban Areas and Defined Settlements, not within the Green Belt, is designated as the Rural Area. The intrinsic character and beauty of the Rural Area outside of the Green Belt, and not designated as the Green Wedge, will be recognised, assessed and development will be permitted where it would not adversely impact on its identified character and beauty.

The relevant Development Management Policies set out what development is appropriate in each of the above areas and provide detailed criteria by which development proposals will be assessed.

Reasoned Justification

6.114 The spatial role and function of land in Chelmsford beyond the Urban Areas and Defined Settlements is wide-ranging and encompasses different national and local planning designations. For the purposes of implementing this Policy, this wider area across Chelmsford is defined as countryside and includes Green Belt, Green Wedge and Rural Area.

6.115 Within the countryside there are areas protected for their value for ecology and wildlife, heritage, and functional requirements such as flood zones, open spaces and areas safeguarded for important infrastructure. The countryside also has a role as part of the green infrastructure network by providing connectivity between the countryside and the Urban Areas and preventing settlement coalescence.

6.116 Over one third of the Council's area falls within the Green Belt. Although much of the Green Belt forms attractive landscapes, it is not designated for its character or beauty. It is a national policy designation to ensure that the openness and permanence of the Green Belt is maintained to prevent urban sprawl. As such, the NPPF defines the purposes of the Green Belt and provides the limited circumstances where new development could be acceptable.

6.117 The countryside outside of the Urban Areas and Defined Settlements, not within the Green Belt, is designated as the Rural Area. Within this designation, a detailed landscape assessment of the areas around the main river valleys has been undertaken for the Council which identifies these areas as having distinctive landscape qualities and an important multifunctional role. These areas are locally designated as the Green Wedge.

6.118 Where the main river valleys permeate into the existing or proposed built-up areas of Chelmsford, the role and value of these areas is amplified and development pressure is at its greatest. The unchecked erosion of open land in these sections of the river valleys would be harmful to the character and function of these areas and therefore it should be afforded greater protection. The Green Wedge designation within the river valleys reflects this multi-faceted green network.

6.119 The designation of Green Wedge on the Policies Map is in addition to the underlying notation of either Green Belt or Rural Area. As the Green Belt is a national planning policy designation, development proposals will need to accord with both Green Belt policies and relevant policies covering the Green Wedge in the Local Plan. Where this is the case within the Rural Area, development proposals will need to accord with the relevant Green Wedge

6 - How will future development growth be accommodated?

and Rural Area policies. Any development in the Green Wedge should not adversely affect the identified character and function of these distinctive landscapes.

6.120 Any development in the Rural Area must be suitable and compatible with its character, as set out in other relevant policies in the Local Plan. Development will be supported provided it does not adversely impact the identified intrinsic character and beauty of the Rural Area and complies with other relevant policies of the Local Plan as well. The Council will use its Landscape Character Assessments, Historic Landscape Characterisation Study, Sensitivity and Capacity Assessments, alongside any other appropriate and relevant evidence which could include that being prepared to support a Neighbourhood Plan, to assess the character of the area and its sensitivity to change.

6.121 The Council's Green Infrastructure Strategic Plan provides a framework for the planning and management of Chelmsford's green and blue infrastructure resources including parks, river valleys, green spaces and gardens, some of which are within the countryside. In addition, the Local Nature Recovery Strategy provides priorities and identifies areas for nature recovery in the Green Belt, Green Wedge and Rural Areas within the Council's administrative area, through the creation and improvement of habitats, including provision for biodiversity net-gain.

STRATEGIC POLICY S12 – ROLE OF CITY, TOWN AND NEIGHBOURHOOD CENTRES

The Council will promote through its planning policies and proposals, the continued strengthening of the following Designated Centres in their varied roles and functions to positively contribute towards the viability, vitality, character and structure of these centres. New main town centre uses and development will be directed to the appropriate Designated Centres as set out below:

Chelmsford City Centre

Chelmsford and in particular the City Centre will be the main focus for shopping, major employment, civic and administrative functions, arts, culture and leisure and a centre of excellence for education and healthcare. Major new retail, office, leisure and cultural facilities will be directed here to build on Chelmsford's past success.

Within the City Centre retail development is concentrated within the Primary Shopping Area. The City Centre and Primary Shopping Centre are defined on the Policies Map.

South Woodham Ferrers Town Centre

South Woodham Ferrers Town Centre will be a focus for shopping, business, education, and leisure. The Town Centre will continue to provide an important role for the residents of South Woodham Ferrers and the surrounding area.

Within the Town Centre retail development is concentrated within the Primary Shopping Area. The Town Centre and Primary Shopping Area are defined on the Policies Map.

6 - How will future development growth be accommodated?

Principal Neighbourhood Centres

The larger neighbourhood centres will be a focus of more localised retail, commercial and community facilities and services that reduce the need to travel and contribute towards more sustainable and neighbourhood-scale living. These larger neighbourhood centres are defined on the Policies Map as Principal Neighbourhood Centres. The Vineyards Principal Neighbourhood Centre contains a Primary Shopping Area which is defined on the Policies Map.

Local Neighbourhood Centres

Smaller Local Neighbourhood Centres play an important retail, business and community role, especially in areas more remote from the larger centres. Local Neighbourhood Centres are shown on the Policies Map.

Retail and leisure development outside Designated Centres

Retail proposals above 500sqm gross floorspace outside of Primary Shopping Areas and leisure proposals above 500sqm gross floorspace outside of City/Town Centre boundaries will be required to undertake an impact assessment in line with the requirements of the NPPF.

Reasoned Justification

6.122 The NPPF requires that centres are designated and placed in a hierarchy which are defined in Local Plans. The NPPF defines main town centre uses as being retail development (including warehouse clubs and factory outlet centres); leisure, entertainment and more intensive leisure and recreation uses (including cinemas, restaurants, drive-through restaurants, bars and pubs, night-clubs, casinos, health and fitness centres, indoor bowling centres, and bingo halls); offices; and arts, culture and tourism development (including theatres, museums, galleries and concert halls, hotels and conference facilities).

6.123 Chelmsford City Centre is by far the largest centre in the Council's administrative area, and as such provides a range of functions, services and facilities. The primary shopping area in Chelmsford saw a significant expansion through the development of the Bond Street centre on former car parks to the east of the High Street comprising 27,900sqm of new retail and leisure floorspace.

6.124 South Woodham Ferrers is the second largest settlement in Chelmsford and its town centre performs an important role providing more local services and facilities. The Chelmsford Retail Capacity Study 2023 did not consider it necessary for the Local Plan to include provision for additional convenience or comparison goods floorspace in Chelmsford or South Woodham Ferrers.

6.125 The Principal Neighbourhood Centres have been identified as they provide a wider mix of services and facilities such as retail, commercial and community uses and tend to have a wider catchment. The Principal Neighbourhood Centres are:

- The Vineyards, Great Baddow, Chelmsford
- Gloucester Avenue, Moulsham Lodge, Chelmsford
- Dickens Place, Newlands Spring, Chelmsford
- Village Centre, Chelmer Village, Springfield, Chelmsford
- Beaulieu Neighbourhood Centre, Chelmsford Garden Community.

6 - How will future development growth be accommodated?

6.126 Local Neighbourhood Centres will often be a small parade of shops providing local convenience shopping and services.

6.127 The NPPF states that when assessing applications for retail, office and leisure development outside Designated Centres which are not in accordance with an up-to-date local plan, local planning authorities should require an impact assessment if the development exceeds a proportionate, locally-set floorspace threshold or a default threshold of 2,500sqm.

6.128 The Chelmsford Retail Capacity Study 2023 found that retail (convenience and comparison) and leisure developments of less than the default national threshold of 2,500sqm could have an impact on existing centres outside Designated Centres and recommends that a 500sqm gross threshold should apply across the whole of the Council's administrative area (for retail proposals outside of designated Primary Shopping Areas and for leisure proposals outside of City/Town Centre boundaries). This threshold is considered necessary as it will enable the Council to monitor and maintain the overall vitality and viability of the centres which are generally more vulnerable to proposals for edge and/or out-of-centre stores.

6.129 The Chelmsford Retail Capacity Study 2023 also concluded that with a trend for the development of smaller discount stores and the rise in popularity for convenience goods stores, even smaller foodstore proposals can have a harmful impact on designated centres, particularly those which are anchored by an existing foodstore. Therefore, a 500sqm gross threshold is also applied to development proposals for convenience goods floorspace over this amount.

6.130 Where retail and leisure proposals are not located within Designated Centres in accordance with policy, an impact assessment will be required. These will be assessed on a case by case basis depending on the scale, location and format of the new retail and leisure development proposals. Applicants will be required to demonstrate how the impact assessment will be addressed and provide justification for the extent of the catchment area for each particular proposal. The Council will be pragmatic as to the level of evidence required in support of such proposals as this should be proportionate to the nature of the proposal under consideration.

6.131 Development proposals below the 500sqm gross threshold will still need to comply with the other requirements of national policy, in particular the sequential approach.

STRATEGIC POLICY S17 – FUTURE OF CHELMSFORD CITY CENTRE

Development proposals within Chelmsford City Centre that help create a diverse mix of retail, food and drink, leisure and entertainment, cultural, community, business and residential uses will be supported where they positively contribute towards increased footfall, activity and vibrancy and they accord with the Local Plan's Strategic Priorities.

The Council will place significant weight on the contribution that proposals in the City Centre can make to achieving the following key principles:

6 - How will future development growth be accommodated?

A. ECONOMY

Proposals which increase footfall and encourage visitors to enjoy the City Centre for longer by visiting a number of venues and events which cater for all their needs will be supported, including growth intended to complement the evening economy with more family friendly venues and activities.

Proposals should:

- Provide opportunities and a suitable range of venues to support uses which encourage people to visit and to increase dwell-time and spending in the City Centre
- Prioritise retaining, reusing and enhancing existing buildings for suitable uses which complement and strengthen their locality
- Retain and create active frontages to ground floors in Designated Centres
- Make positive use of upper floors of properties, and on underused and vacant space away from commercial frontages
- Contribute to the creation of circular routes linking living, shopping and leisure sectors to encourage footfall
- Promote innovation and ambition
- Encourage business links to the university and wider education sector
- Encourage pop-up or temporary uses in advance of more comprehensive redevelopment
- Provide and/or secure the future management of free publicly accessible toilets and 'Changing Places' toilets.

B. CULTURE AND HERITAGE

Proposals which celebrate Chelmsford's rich history will be supported. The City has Roman and medieval origins, expanding as a prosperous market town. The legacy of its historic role as County town of Essex, and granting of City status in 2012, means that Chelmsford is still a key centre for the religious, cultural, and civic life of the City Centre; with strong reminders of its heritage of science and engineering innovation.

Proposals should:

- Promote opportunities for new functions such as markets, community, cultural or creative activity to broaden the mix of activity in the City Centre, where that is compatible with wider objectives
- Ensure improved streetscape, such as through minimising street clutter, use of high-quality materials, well-designed street furniture, public art and interpretation, retention of important gaps and key views, enhancement of street frontages, and use of sympathetic shopfronts and signage.

C. LIVING IN THE CITY CENTRE

The City Centre offers opportunities for housing development through changes of use, redevelopment of empty buildings and better use of upper floors, or regeneration of wider building clusters. Some sites are allocated in the Local Plan, but proposals for other sites are likely to be welcomed where they contribute to activity, complement surrounding uses, and support the City Centre economy.

Proposals should:

- **Ensure the introduction of residential uses into City Centre in ways that do not harm the wider functions of the area**
- **Ensure the efficient use of urban land is balanced with high-quality place-making**
- **Provide areas of functional open space on major developments**
- **Improve existing green spaces to encourage increased usage by City Centre residents**
- **Demonstrate how active and sustainable travel will be promoted**
- **Demonstrate how public safety has been considered.**

D. CLIMATE AND SUSTAINABILITY

Proposals should contribute towards sustainable options for accessing the City Centre, whether on foot, two wheels, by bus or by rail, reducing reliance on private vehicles to reduce carbon emissions and congestion.

Proposals should:

- **Provide connectivity to the wider City and Urban Area through improved public realm and multifunctional green routes and gateways**
- **Take a balanced approach to car parking provision, that acknowledges the sustainability of the City Centre and its walking, cycling, bus (including Park and Ride) and rail connections**
- **Create new or improve existing multifunctional green infrastructure including tree planting and improved wildlife habitat.**

E. WATERWAYS

Proposals alongside Chelmsford's waterways – the River Can, River Chelmer, and Chelmer and Blackwater Navigation – should seek to provide significant improvements to the environmental quality, attractiveness and recreational potential of the waterways and their associated green spaces.

Proposals should:

- **Capitalise on the waterway network to enhance the visibility, access and recreational use of the rivers and Navigation, as appropriate**
- **Demonstrate innovative and sustainable approaches to dealing with flood defences and flood management, where necessary, whilst protecting biodiversity and the river environment**
- **Complement the river environment through greening and softening of engineered features**
- **Promote development that enhances the habitat, ecology and biodiversity value of the river corridors**
- **Improve active travel movement along river corridors**
- **Consider incorporating green/renewable energy initiatives**
- **Have regard to the Plan for Improving the Rivers and Waterways in and around Chelmsford.**

6 - How will future development growth be accommodated?

F. SITE SPECIFIC PRINCIPLES:

The sites listed below will make a key contribution to delivering City Centre vitality, vibrancy and success.

Shire Hall

Shire Hall is a significant landmark, closing views at the top of the High Street and a focus for Tindal Square, which provides a traffic-free setting to the iconic Grade II* listed building. It is uniquely suited for a range of cultural uses.

Proposals will be subject to the requirements of Part A and Part B above, and the following additional criteria:

- Promote public access and a sense of community ownership, where possible
- Promote active use which adds to the vitality of the High Street
- Deliver the re-use of the building with a range of uses such as community, cultural or other uses, whilst protecting the historic and cultural significance of the building and its setting
- Remain sympathetic to the setting of St. Mary's Cathedral.

Chelmer Waterside

Chelmer Waterside comprises a number of brownfield land parcels between the City Centre and the waterside meadows and is a key regeneration area within the City Centre. Although individual site areas may come forward at different times, they should contribute towards the wider regeneration aims of creating a vibrant and dynamic new quarter for Chelmsford and as such must demonstrate how they have had regard to the adopted Chelmer Waterside Development Framework Document.

Proposals on sites CW1a, CW1c, CW1d, CW1e and CW1f will be subject to Part A to Part E above, and should also meet the requirements of Strategic Growth Site 1a - Chelmer Waterside.

The Meadows

The Meadows under-cover shopping centre opened in 1992, but is now the focus of a significant area of change. A number of shops in the existing shopping centre have closed including an anchor department store which occupied the largest retail space in the centre. There is now potential to re-imagine the centre to secure resilience for the future, through development ranging from small scale reconfiguration of units up to large scale redevelopment for a mixed-use scheme, whilst capitalising on the waterside location.

Proposals on this site will be subject to Part A to Part E above and should also meet the requirements of Strategic Growth Site Policy 1w - Meadows Shopping Centre and Meadows Surface Car Park.

G. OPPORTUNITY CORRIDORS:

Certain areas linking the City Centre to the wider Urban Area are key corridors along which residents and visitors access the City Centre, contributing to how the City Centre is perceived overall, experienced and enjoyed.

6 - How will future development growth be accommodated?

In the opportunity corridors listed below and illustrated on Figure 15, the Council will:

- **Encourage proposals which provide an opportunity for improvement in appearance, public realm quality, urban greening and accessibility**
- **Take a flexible approach to changes of use which may otherwise constrain development which creates positive activity and encourages innovation and investment in line with the function of those opportunity corridors.**

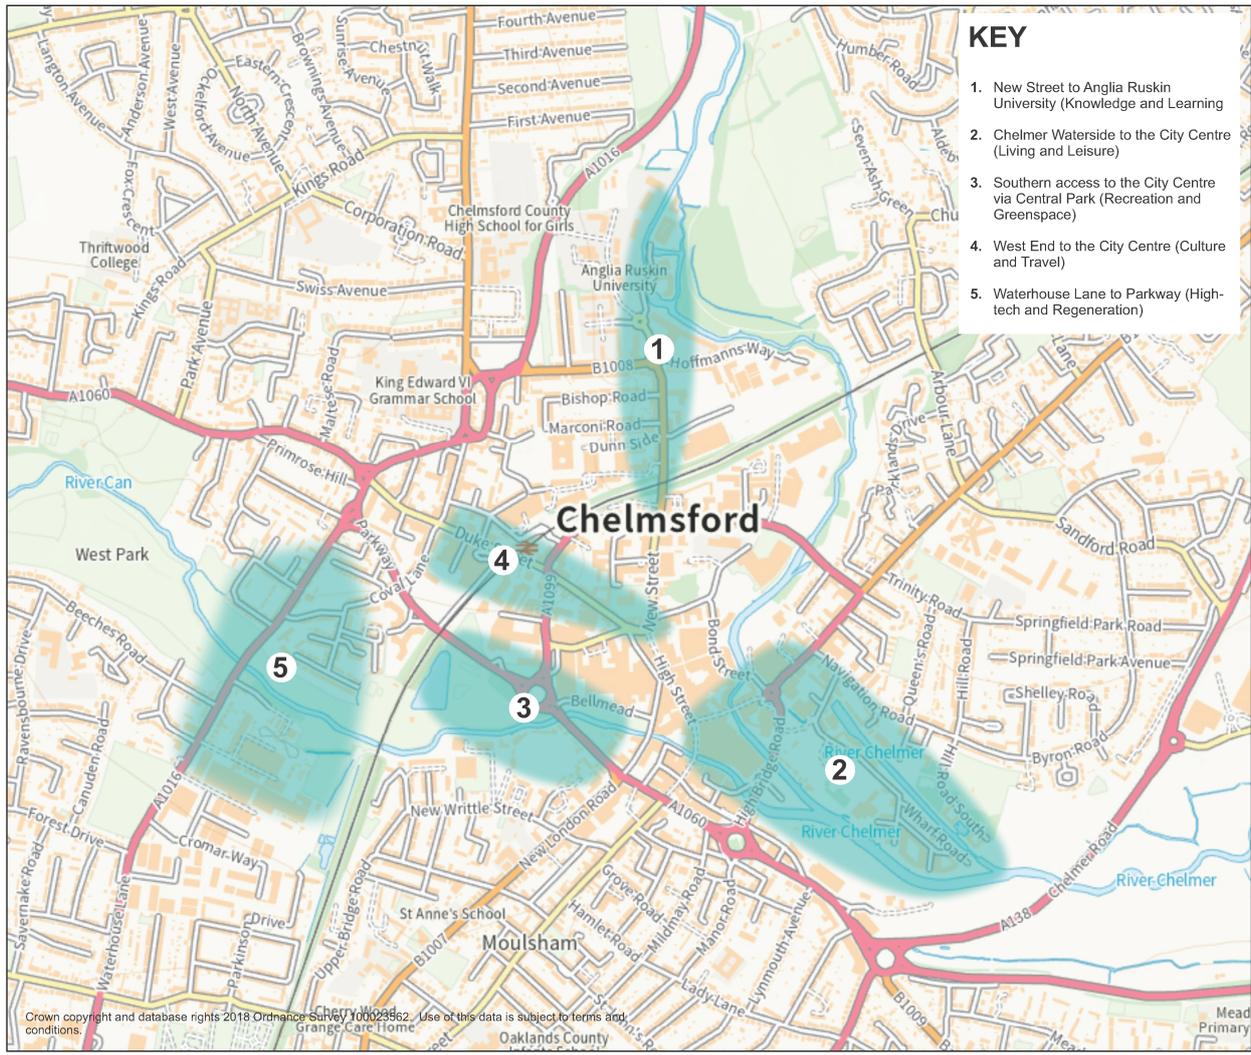

The opportunity corridors are:

- **New Street to Anglia Ruskin University (Knowledge and Learning)**
- **Chelmer Waterside to the City Centre (Living and Leisure)**
- **Southern access to the City Centre via Central Park (Recreation and Greenspace)**
- **West End to the City Centre (Culture and Travel)**
- **Waterhouse Lane to Parkway (High-tech and Regeneration)**

The Council proposes to prepare a detailed City Centre strategy to guide development, informed by consultation and backed by evidence. This will be vital to bring focus to identifying and building opportunities for diversification, start-ups and community activity.

6 - How will future development growth be accommodated?

Figure 15 : Opportunity Corridors

6 - How will future development growth be accommodated?

Reasoned Justification

6.132 The City Centre is the heart of a thriving community which provides services close to where people live, creating a City-living atmosphere and experience which is also enjoyed by those who work, visit and study here.

6.133 The City Centre is continually adapting, and although there have been changes in retail habits, in part due to the downturn in the economy, the impacts of the Covid-19 pandemic, and the growth in online shopping, retail use will remain a core function of the City Centre alongside complementary uses.

6.134 Some large and small chain operated stores have recently closed, leaving obvious gaps in shopping areas, but retail has remained resilient in Chelmsford despite those losses. The food and drink sector has been affected to a lesser extent, remaining buoyant and reflecting the national trend of centres moving towards a greater focus on leisure and entertainment.

6.135 This provides an opportunity to celebrate the City Centre's success, encourage and support a range of functions to contribute to the existing vibrancy of the City Centre, and to help future-proof it for another generation. Although this will mainly be reliant on private investment, forward-thinking planning policy can be used to create conditions for resilience to future change, and enable evolution and innovation, not only in retail but leisure and entertainment, wider commercial and cultural development too.

6.136 This policy aims to encourage, in appropriate locations, a mixed-use approach for a diverse range of uses, with flexibility for a mix of uses to happen side by side, or at different times of the day.

6.137 One development sector for potential growth is family leisure and entertainment, which would complement both day-time and evening economies, with more family friendly venues and activities to attract and maintain dwell-time in the City Centre, alongside the traditional restaurants and bars. Proposals that provide for events such as markets or cultural activity will also be welcomed to broaden the mix of activity on offer and encourage visitors to enjoy the City Centre for longer by visiting a number of venues which cater for all their needs.

6.138 Proposals for innovative uses will also be welcomed, such as for creative services, design and art studios, software or gaming development, fashion, marketing, entertainment and performance. These sectors have seen a faster recovery post pandemic and can provide invaluable support to other local businesses and contribute towards a circular economy.

6.139 There is a wider priority to encourage development to revitalise cultural places and spaces, and create conditions for a dynamic cultural scene recognising innovation, heritage and sustainability as core values aligned with the Council's vision for Chelmsford. The vision for the cultural future of Chelmsford, which proposals should have regard to, is set out in the Chelmsford Cultural Strategy (March 2023).

6.140 The rivers and navigable waterways generate many of the green spaces in the City Centre and enable active travel routes. Physical changes should work with nature to help minimise the long term impact of climate change, whilst maintaining or strengthening waterside character, improving the connection to river edges and routes, and revealing the watersides as the City's key asset.

6 - How will future development growth be accommodated?

6.141 Whilst some City Centre brownfield sites are allocated for residential or mixed-use development, the City Centre still offers many opportunities for new development, changes of use, redevelopment of empty buildings, or regeneration of wider building clusters, including in the opportunity corridors identified. These will come forward at their own pace due to market forces and the time taken to assemble land. They will benefit from greater flexibility of future uses but are less easy to predict, making them unsuitable for allocation in the Plan.

6.142 Improvements along opportunity corridors can reinforce or create character or identity, and by taking a more flexible approach to uses and encouraging investment the Council hopes to achieve a balanced mix of uses whilst improving the surroundings and complementing the core functions of the City Centre. Improvements could include street furniture, public art, and lighting, enhancement of existing buildings or high quality redevelopment, solutions to physical barriers to movement, and enhanced legibility.

6.143 Proposals being assessed against this policy will be expected to comply with requirements of other Local Plan policies, but particular emphasis on place, streetscape, heritage, regeneration and access will be applied through the criteria in this policy.

STRATEGIC POLICY S13 – MONITORING AND REVIEW

The Council will monitor the implementation of the policies and proposals of the Local Plan using the key indicators and targets set out in the Local Plan Monitoring Framework. A full or focused formal review of the Local Plan will commence two years after its adoption.

Reasoned Justification

6.144 There is a need to ensure that the Local Plan's policies and proposals are effective in delivering the objectives of the Local Plan and maintain a sufficient supply of housing sites to meet need. The Council will produce an annual Authority Monitoring Report (AMR) to measure the overall effectiveness of the Local Plan and a Housing Implementation Strategy to set out how a five-year supply of housing land will be maintained.

6.145 The Council will review the Local Plan every five years. On the basis that it takes around three years to formally complete this process, a formal review, including a formal Regulation 18 consultation, will commence two years after the adoption of the Local Plan. This is envisaged to be in 2027/28.

7 - Where Will Development Growth be Focused?

7 - Where will development growth be focused?

7.1 To implement the Spatial Strategy, new development will be directed to sustainable locations within the three Growth Areas - (1) Central and Urban Chelmsford, (2) North Chelmsford, (3) South and East Chelmsford, and will be supported by necessary infrastructure and facilities including health and education, new roads and sewers and green infrastructure, such as open spaces. This will ensure the future success of Chelmsford as a great place to live, work, visit and invest in.

7.2 This section provides the site policies for delivering the Spatial Strategy. The sites that are allocated for development in the three Growth Areas vary in scale and type and are categorised as shown in Table 3 below.

Table 3 :Types of Site Allocations

Site Type	Threshold	Commentary
Strategic Growth Sites	Housing and/or mixed use sites for 100 or more new homes	These include both previously developed and greenfield sites
Growth Sites	Residential sites of less than 100 new homes	Smaller previously developed, or other small sites
Employment Sites	No threshold	Employment uses for Use Classes E(g)(i-iii), B2 and B8

7.3 The site policies are set out in the sections dealing with each Growth Area with a policy for each site allocation. These policies set out the amount and type of development expected to be provided within each of the site allocations. They also set out what specific supporting infrastructure, facilities and other requirements are needed for each site. In many cases the Council expects the amount of new homes stated in residential site policy allocations to be a minimum. This is indicated by the use of 'around' housing figures in relevant policies and will ensure an adequate supply of land is allocated for residential development to meet local needs and is supported by the Local Plan evidence base. The use of 'around' housing figures allows for an appropriate degree of flexibility in provision and also allows higher density development to be brought forward where this conforms with other policies in the Plan as a whole.

7.4 Each site policy contains the key requirements for that site and the 'Reasoned Justification' which follows sets out the detail of those requirements.

7.5 In addition, the Strategic Policies and the more detailed policies found in Section 8 and 9 apply to all sites.

7.6 Within each Growth Area, site policies for the Local Plan allocations appear first, followed by site policies for the 'Special Policy Areas'. These cover specific existing facilities or institutions which are in locations where development would otherwise be constrained. Where new Site Policies have been added they have been shown in the order they will appear, and will be renumbered in the final plan.

Growth Area 1 - Central and Urban Chelmsford

7.7 New development will be focused at multiple locations including Chelmsford Urban Area (Location 1), West Chelmsford (Location 2) and East of Chelmsford (Location 3), Together these allocations will deliver around 4,476 new homes, five Travelling Showpeople plots and 9,000sqm of new employment floorspace.

7.8 Development in these areas will deliver a number of benefits including green infrastructure and city greening, new employment, enhanced bus services, unlock access into the Sandford Mill Special Policy Area, enhanced Park and Ride to serve eastern road corridors into the City and improvement to the Army and Navy junction. The sites at West Chelmsford (Location 2) and East of Chelmsford (Location 3) will also maximise opportunities for active travel (cycling and walking) into the City Centre through the Green Wedge. This provides sustainable locations for new development.

7.9 New development on previously developed land within Chelmsford (Location 1 sites 1a-1cc) will also meet the Council's objectives for strengthening and expanding the City as a major residential, employment and retail centre to build upon its past success. The largest of the housing sites and a key driver for City Centre regeneration is Chelmer Waterside (Strategic Growth Site 1a). This will deliver a significant amount of new growth and contribute to the continued urban renaissance of the City Centre.

7.10 West Chelmsford (Location 2) and East of Chelmsford (Location 3) will provide integrated sustainable new residential-led neighbourhoods and a new high-quality business park East of Chelmsford (Site 3b). Provision is also made for five Travelling Showpeople plots in West Chelmsford.

7.11 In addition, smaller development at two sustainable Key Service Settlements of Galleywood and Writtle will provide 24 homes and 25 homes respectively, alongside opportunities to contribute towards and enhance existing facilities and services of the villages.

7 - Where will development growth be focused?

Figure 16 : Growth Area 1 – Central and Urban Chelmsford

|  GREEN BELT |  AREA CONSIDERED FOR ADDITIONAL PARK AND RIDE FACILITIES |
|  GREEN WEDGE |  PARK AND RIDE |
|  RURAL AREA |  MAJOR ROADS |
|  CITY/TOWN |  A12 IMPROVEMENTS |
|  KEY SERVICE SETTLEMENT |  ARMY AND NAVY JUNCTION IMPROVEMENTS |
|  SMALL SETTLEMENT |  RIVER |
|  BEAULIEU PARK RAIL STATION | |

Location 1 – Chelmsford Urban Area

7.12 Sites in the City Centre and Urban Area make the best and most efficient use of previously developed land. They are often vacant or underused areas where there is an opportunity for more significant development and change to support sustainable growth patterns. Development will be expected to unlock these areas, remove dereliction and contamination, continue City Centre regeneration, promote city greening and create high quality new developments that maximise the opportunities for active and sustainable travel.

STRATEGIC GROWTH SITE POLICY 1a – CHELMER WATERSIDE

To the east of the City Centre is Chelmsford's largest previously developed opportunity area in a river landscape setting fronting the River Chelmer and the Chelmer and Blackwater Navigation. Development proposals will accord with the Chelmer Waterside Development Framework to provide:

Amount and type of development:

Strategic Growth Site Policy 1a, as shown on the policies map, comprises five sites (CW1a and CW1c to CW1f) with a potential total residential capacity of around 880 new homes, including affordable housing, along with an element of non-residential development. The final amount of new homes will be confirmed through the planning application process. Sites at Chelmer Waterside have been assessed individually and can come forward independently, as sites become available.

Site 1a – Chelmer Waterside Allocations	Number of homes	Main vehicular access
CW1a Former Gas Works	Around 450	Wharf Road
CW1c Lockside	Around 130	Navigation Road
CW1d Baddow Road Car Park and Land to the East of the Car Park	Around 190	Baddow Road
CW1e Travis Perkins	Around 75	Navigation Road
CW1f Navigation Road Sites	Around 35	Navigation Road/Sandringham Place

Supporting on-site development:

- New homes of a mixed size and type, including affordable housing
- Supporting commercial uses including Use Classes E(a) – E(f), E(g)(i), F1 and F2
- Improvements to Chelmer and Blackwater Navigation waterway infrastructure
- Site CW1a – Commercial interface with Primary Shopping Area and River Chelmer
- Site CW1a – Provide new or improved premises for water-based clubs
- Site CW1d – Re-provision of public car parking.

7 - Where will development growth be focused?

Site masterplanning principles:

Movement and access

- Development that maximises opportunities for active and sustainable travel
- New or improved pedestrian and cycle connections.

Historic and natural environment

- Preserve and where appropriate enhance the setting of designated and non-designated heritage assets and protect key views
- Conserve and enhance biodiversity and avoid adverse effects on the Chelmer Valley Riverside and Chelmsford Watermeadows Local Wildlife Sites
- Undertake a pre-application Archaeological Assessment
- Provide suitable SuDS and flood risk management.

Design and layout

- Layout which contributes towards the distinct identity of Chelmer Waterside and encourages use of the waterways and their environs
- Provide public art which contributes towards place creation
- Ensure layout maintains a generous waterside margin free of buildings to create desirable and attractive spaces, active travel routes, enable access to water, and maximise waterway function, recreation and habitat connectivity. Waterside edges will be agreed on an individual site basis with the Local Planning Authority
- Ensure existing sites occupied by water users are incorporated or re-provided within development to support those functions and benefit the development and diversity of City Centre uses
- Layout to incorporate abundant street and tree planting and other multifunctional green infrastructure to include natural flood risk and surface water management measures
- Maintain, enhance and create new landscaped site edges with a network of dense planting belts and buffers to mitigate the visual impact of the development, safeguard the historic environment, and provide suitable wildlife connections.

Site infrastructure requirements:

- Appropriate mitigation, compensation and enhancements to the local and strategic road network as required by the Local Highways and Transportation Authority
- Enhancement of existing pedestrian and cycle routes within the site including widening and realignment, surfacing, drainage, signage and lighting
- Sites CW1a and CW1c to CW1e – Provide a new vehicular access to serve Strategic Growth Site 1a through proportionate contributions. Physical provision of the new vehicular access route shall be delivered through development of sites CW1a and CW1d (both currently Council owned sites)
- Site CW1f – Safeguard land for Springfield Road junction improvement
- Appropriate measures to promote and enhance active and sustainable modes of transport

7 - Where will development growth be focused?

- Provide, or make financial contributions, to facilitate, sustain and enhance car club facilities for residents and businesses within the site
- Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities including contributions towards works to improve Hill Road Allotments
- Site CW1c – New 56 place stand-alone early years and childcare nursery (Use Class E(f) on 0.13 hectares of suitable land allocated for education and childcare use
- Financial contributions to early years, primary and secondary education provision
- Financial contributions and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities
- Provide enhancements to waterways to provide improved access, supporting facilities and services to facilitate more active use of the waterways and navigation, moorings and landings, lighting, and environmental and natural enhancements
- Financial contributions towards provision of new lock and replacement of weir gates at Chelmer Waterside.

Reasoned Justification

7.13 Chelmer Waterside comprises large areas of previously developed land between the River Chelmer and the Chelmer and Blackwater Navigation. These sites will deliver a significant amount of new growth and contribute to the continued urban renaissance of the City Centre. The sites have been grouped together as they provide an opportunity to complete the overall regeneration of this part of the City Centre. They will accommodate higher-density residential development and commercial uses making the most of the waterside setting. Proposals for these sites should have regard to planning guidance contained in the Chelmer Waterside Development Framework (October 2021), which sets out details of how the development requirements may be met.

7.14 This area is a past industrial landscape established around the waterways which were once used for transit of goods and raw materials. Development will be expected to deliver a comprehensive remediation strategy to address any outstanding historic contamination issues to enable development, which may include use of voids, membranes or capping if necessary.

7.15 The Council will take a flexible approach to uses on these sites which support positive activity and encourage innovation and investment, in accordance with Policy S17. Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.16 Affordable, self-build and custom-build, appropriately accessible and adaptable housing, and other types of specialist housing should be provided in accordance with the Council's policy requirements. Opportunities should be taken to include flexible units for integrated residential and commercial uses, to enhance sustainable and economic growth.

7.17 Good pedestrian and cycle connections are expected between Strategic Growth Site 1a and nearby shops and bus stops in Navigation Road and Byron Road, the primary school

7 - Where will development growth be focused?

at Trinity Road, the City Centre, water meadows and the Green Wedge. There should also be good connection between adjacent sites to create strong east-west links.

7.18 Improved accessibility to Chelmer Waterside and the local area is being provided by a wide range of infrastructure across different scales, including the following major schemes:

- Chelmer Waterside new access road and bridge enabling enhanced walking, cycling and restricted vehicle access linking to Wharf Road and Parkway
- Army and Navy Sustainable Transport Package (see paragraphs 6.98 and 6.99)
- Upgrades to the Springfield Road/Navigation Road junction as part of the planning agreement for the Peninsula site.

7.19 Residential travel plans will be required for developments to include a package of measures to ensure active and sustainable means of travel are available to all new residents, to promote the benefits of sustainable transport, reduce the need to travel, and encourage the use of non-car modes.

7.20 A car club can provide a viable alternative to car ownership. Chelmer Waterside is an ideal location for a car club given that it is within easy walking distance of the City Centre.

7.21 The sites making up Strategic Growth Site 1a are highly-visible and prominent within local streetscape and wider townscape aspect. The development is an extension of the City Centre so must respect the character of Chelmsford, be sympathetic to the character and appearance of the Chelmer and Blackwater Navigation Conservation Area whilst establishing its own legible identity. There are also two Local Wildlife Sites in the area. Development shall make the most of the waterside setting, with buildings presenting active faces and uses to the water and where possible introducing water-related uses to fully integrate development areas and functional use of the water. Development should generally be set in excess of 10 metres from the water's edge to provide opportunity for high quality of placemaking around waterside areas, allow for leisure activity, conserve and enhance habitat connectivity, allow access for maintenance by the Environment Agency and other bodies, and facilitate public access to the water. This access will be managed on a site-by-site basis.

7.22 Site CW1a contains high pressure gas transmission pipelines and a gas pressure reduction compound. These could significantly constrain the amount of development that can be placed on this area. However, proposals are underway to relocate the gas pressure reduction compound and the high pressure gas pipelines, which will increase the site's capacity potential.

7.23 There is a large bore sewer running beneath sites CW1a, CW1c and CW1d which will constrain the amount of development that can be placed on these areas as maintenance easements must be retained along the length of the pipeline.

7.24 Across Strategic Growth Site 1a, owing to current and historic uses, contamination is highly likely, or known to be present. Development will be expected to deliver a remediation strategy to address any outstanding contamination on site to enable development.

7.25 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

7.26 Chelmer Waterside, the adjacent water meadows and the Chelmer and Blackwater Navigation all the way through to Heybridge Basin, have Conservation Area status. In addition,

there are small parts of the allocated sites that fall within the Green Wedge. Development within these areas must ensure land use retains the integrity of the Conservation Area, and the Green Wedge and habitat is protected or enhanced, whilst sustainably utilising the opportunities to deliver City Centre development.

7.27 Strategic Growth Sites in the Urban Area will collectively need to deliver other forms of local infrastructure required to support growth. Provision of facilities and/or financial contributions will be required to meet infrastructure needs generated by new development, including education, health, police, ambulance, and fire and rescue facilities, transport, access and sports/leisure facilities.

STRATEGIC GROWTH SITE POLICY 1w – MEADOWS SHOPPING CENTRE AND MEADOWS SURFACE CAR PARK

Land at the Meadows Shopping Centre and the Meadows Surface Car Park, east of the High Street, as shown on the Policies Map, is allocated for a mixed-use development to regenerate and diversify this existing City Centre site to deliver a rejuvenated City Centre focused development. This site will be used to test the effectiveness, in practice, of greater car-reduction in a volume mixed-use development.

Amount and type of development:

- Around 757 new homes of a mixed size and type including affordable housing and specialist residential accommodation. The final amount of new homes will be confirmed through the planning application process.

Site development principles:

Movement and access

- Development to prioritise opportunities for active and sustainable travel and provide excellent connectivity with surrounding networks
- Reduced on-site parking quantum to be mitigated by appropriate means
- Loss of existing City Centre public car parking must demonstrate capacity in existing car parks and sufficient enhancement to alternative sustainable modes of travel to/from the City Centre
- Vehicular access to and from the site must be compatible with wider highway network and not undermine active travel or place-making principles
- Delivery routes and service provision must be fit for purpose and adhere to place-making principles
- Provide three replacement bridges to support cycle connectivity on and off this peninsula site.

Historic and natural environment

- Preserve or enhance the character or appearance of the three conservation areas relating to this site and their respective settings
- Preserve or enhance the setting of the adjacent designated and non-designated heritage assets
- Protect wider historic environment and townscape and important viewpaths

7 - Where will development growth be focused?

- **Conserve and enhance biodiversity and avoid adverse effects on the Chelmer Valley Riverside Local Wildlife Site**
- **Development to include abundant street and tree planting and other multifunctional green infrastructure**
- **Provide suitable SuDs and flood risk management.**

Design and layout

- **Design and layout to contribute towards distinct identity and function of the site and its relationship to both Chelmsford City Centre and Chelmer Waterside**
- **Provide open spaces and routes fronted by active and complementary uses at street level**
- **Development design and layout to mitigate the impact of High Bridge Road**
- **Layout, scale, massing and architecture to respond to and respect heritage, contextual townscape and waterside location**
- **Ensure layout maintains a generous waterside edge free of buildings to create desirable places and active travel routes, enable access to water, and maximise waterway function, recreation and habitat connectivity. Waterside edges will be agreed on an individual site basis with the Local Planning Authority**
- **Appropriate safeguarding of suitable access for the maintenance of foul and surface water drainage infrastructure**
- **Layout should have regard to a wastewater pumping station within the site boundary**
- **Provide public art which contributes towards place creation.**

Site infrastructure requirements:

- **Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Enhancement of existing pedestrian and cycle routes within the site including widening and realignment, surfacing, drainage, signage and lighting**
- **Appropriate measures to promote and enhance active and sustainable modes of transport, including provision of a local mobility hub**
- **Enhancement of bus services to support resident, employee and visitor travel without reliance on private vehicles**
- **Financial contributions towards provision of new lock and replacement weir gates at Chelmer Waterside**
- **Financial contributions to early years, primary and secondary education provision**
- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities**
- **Provide on-site local open space**
- **Financial contributions and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board, and Police, ambulance and fire and rescue facilities.**

Reasoned Justification

7.28 The Meadows Shopping Centre and associated Meadows Surface Car Park provide an opportunity to regenerate and diversify the site, as shown on the Policies Map, to provide around 757 new homes and reconfigured City Centre offer between 2029 and 2035.

7.29 The Meadows Shopping Centre is an undercover centre which first opened in 1992. With entrances from the High Street, Backnang Square, Meadows Surface Car Park and Meadows Walk it is an integral part of the City Centre network. A number of shops have closed in this particular shopping centre including an anchor department store, and its offer continues to decline, which is in contrast to wider City Centre retail resilience. This provides an opportunity for an innovative scheme to reimagine the City Centre offer that this site and associated surface car park can make to support and enhance city centre functions and create a new City Centre destination for residents and visitors.

7.30 This development is a stand-alone test case for reviewing the effectiveness of alternative sustainable travel modes and other measures aimed at reducing dependence on car usage in new development in the City Centre. The level of vehicle parking provision that will be considered for this site will not set a precedent for other development in the City Centre or elsewhere, but the Council will use this experience to help review its policies and standards in future Local Plan making. This approach to the redevelopment of this site will only be acceptable where the Council is satisfied that the scheme has sufficient alternative provision to meet occupier demands and that there is adequate resilience to the development proposals to prevent parking overspill from this development site.

7.31 In considering the parking priorities the Council will also take into account:

- The development's approach to reducing greenhouse gas emissions by reducing the need to travel
- Provision of a local mobility hub, improvements to existing foot/cycle connections including at river crossings, increasing foot/cycle connections, improving access to car clubs, introducing new schemes for shared sustainable mobility (e.g. shopmobility, bike and e-scooter hire), active travel, wayfinding and environmental enhancement to sustainable travel corridors
- Resilience measures to ensure the approach to parking is sustainable and will not give rise to issues of overspill parking
- Provision of Travel Plans to ensure active and sustainable means of transport are available to all new residents, to promote the benefits of sustainable travel, to monitor travel needs, reduce the need to travel, and encourage the use of non-car modes
- Commitment to development-wide management of parking controls and advance information for residents on the lack of access to vehicle parking in this development
- Provision of essential parking and servicing.

7.32 Vehicular access to the site for servicing, emergencies and parking shall be integrated into a layout that promotes sustainable travel as a priority. The layout shall deliver a positive destination experience in relation to City Centre functions, waterside interface, and high quality place-making that is compatible with the wider City Centre.

7.33 Development will result in a reduction in the amount of retail-specific floorspace available on this site. The proposals should seek to retain an equivalent amount of commercial floorspace compared to the existing shopping centre within a reconfigured layout, and explore

7 - Where will development growth be focused?

the potential for providing a range of leisure, entertainment, cultural and social facilities which complement, rather than compete with, the existing City Centre offer. The mix of uses should create a new destination for residents and visitors, including outside of normal business hours. Flexible workspace such as offices and spaces for creative services, should also be provided. The Council will take a flexible approach to uses on this site which support positive activity and encourage innovation and investment, in accordance with Strategic Policy S17.

7.34 The development will deliver sustainable housing in the heart of the City Centre. Development should provide a mix of size and types of homes. Affordable, appropriately accessible, and other types of specialist housing should be provided in accordance with the Council's policy requirements.

7.35 The site is bordered by waterways on two sides, forming a peninsula between the Rivers Can and Chelmer. Development should seize this unique opportunity for waterside-facing development and creation of space for water-based activity, to fully integrate development areas and functional use of the water. Use of the watersides for active travel connections between the site, the High Street, and the wider active travel network is key to ensuring the site is well-connected to the rest of the City Centre and beyond. This will include replacing three existing bridges to bring them up to shared pedestrian and cycle standard, whilst providing enough head height for waterway navigation beneath. Layout should also safeguard suitable access for the maintenance of foul and surface water drainage infrastructure, and have regard to a sewer pumping station which is located within the site boundary.

7.36 The layout, scale, massing and architecture should respond positively to the site's central waterside location, High Street interface, wider townscape and conserve or enhance heritage assets and their settings. The site lies partly within the Chelmer and Blackwater Conservation Area, Chelmsford Central Conservation Area, and the Baddow Road and River Can Conservation Area. There are a number of listed buildings close to the site including the Grade II listed Stone Bridge, 56-59 High Street, buildings at Grays' Brewery Yard, and 37 Baddow Road; and local listed buildings at 1 to 4, and 222 to 225 Moulsham Street, 36 to 38 High Street, and the Springfield Basin Feeder Channel.

7.37 Design and architecture should be of high quality and respond to the significance of the site in delivering a destination role within the City Centre network, without compromising wider City Centre function or character.

7.38 In addition to the policies of the Local Plan, development should have regard to the principles and guidance set out in the Chelmer Waterside Development Framework 2021. In addition, the waterside margins and rivers fall within the Green Wedge and are designated as a local wildlife site (LOWS). Development must ensure that the integrity of the Green Wedge, the LOWS, and their biodiversity and habitat is protected or enhanced. Development should introduce urban greening which creates landscape-led environments and spaces, and promotes natural cooling and general wellbeing.

7.39 The elevated section of High Bridge Road crosses the site creating an artificial boundary, which will need to be carefully incorporated into the site layout with mitigation considered for the support piers and areas of lower height where it meets the ground. Buildings developed near to the bridge structure will need to achieve an acceptable remoteness and relationship for building users and ground level areas beneath and around the bridge.

7.40 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10. Local open space is required on this site to make an important contribution to the health and wellbeing of the local community. In particular, there is a lack of children's play and youth facilities in the City Centre and Urban Area, which this site could help to provide. Financial contributions may also be required towards strategic open space. Strategic Growth Sites in the Urban Area will collectively need to deliver other forms of local infrastructure required to support growth. Provision of facilities and/or financial contributions will be required to meet infrastructure needs generated by new development, including education, health, police, ambulance, and fire and rescue facilities, transport, access and sports/leisure facilities.

STRATEGIC GROWTH SITE POLICY 1b – FORMER ST PETER'S COLLEGE, FOX CRESCENT

Land off Langton Avenue, formerly St Peter's College and playing fields, as shown on the Policies Map, is allocated for residential, specialist education uses, and community uses. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development

- **Around 185 new homes of a mixed size and type including affordable housing. The final amount of new homes will be confirmed through the planning application process**
- **Non-residential uses of up to 7,500 sqm comprising extra care/independent living accommodation (around 60 units). The final amount will be confirmed through the planning application process**
- **Two new schools providing for Special Needs and Disabilities (SEND).**

Supporting on-site development:

- **Provision of linked publicly accessible open spaces, in line with local standards, for intensive recreation activities for sport, educational and diverse community use**
- **Equipped play provision for children and teenage users**
- **New or relocated community facilities to meet evidenced needs**
- **Integration of flexible workspace facilities.**

Site masterplanning principles:

Movement and access

- **Development that maximises opportunities for active and sustainable travel**
- **Main vehicle access will be from Fox Crescent**
- **Provide pedestrian and cycle connections**
- **New/improved vehicle access into the site.**

Design and layout

- **Adapt existing buildings for new uses where practicable, and reuse key elements that contribute to character**

7 - Where will development growth be focused?

- **Adaptable building types which offer opportunities for small workspaces**
- **Landscape focused on a public open space network**
- **Retention and enhancement of existing natural features to create distinctive landscape character, that contributes to the wider green infrastructure and nature recovery networks**
- **Provide public art which contributes towards place creation.**

Site infrastructure requirements:

- **Appropriate mitigation, compensation and enhancements to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Two new schools providing for Special Needs and Disabilities (SEND) (Use Class F1(a)) located on around 2.5 hectares of suitable land allocated for education and childcare use**
- **Financial contributions to early years, primary and secondary education provision**
- **Financial contributions and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities**
- **Provide rationalised/retained formal/informal open space**
- **Provide a play area with particular emphasis on children and teenage users**
- **Provide, or make financial contributions to new or enhanced sport, leisure and recreation facilities.**

Reasoned Justification

7.41 The former St Peter's College is in the Melbourne area of Chelmsford, located north west of the City Centre. The neighbourhood is focused on Melbourne Avenue shops, health facilities and local services. The allocation is for around 185 new homes between 2025 and 2029, along with up to 7,500 sqm non-residential uses comprising extra care/independent living accommodation (around 60 units) and other community facilities to bring significant benefits not only to the site's residents but the wider community. The site has an approved masterplan (21/00002/MAS) and a planning application has been submitted (Ref: 24/00228/OUT) Owing to the timing of the submission of the application and the fact the precise number and type of residential uses is still to be determined through the planning application process, the 60 specialist residential homes are not yet reflected in the April 2024 Housing Site Schedule. The site capacity will be updated in the final version of the Plan. If this proposal is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit.

7.42 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.43 The development should provide a mix of size and types of homes. Affordable, self-build and custom-build, appropriately accessible and adaptable housing, and other types of specialist housing should be provided in accordance with the Council's policy requirements. Opportunities should be taken to include flexible units for integrated residential and commercial uses, to enhance sustainable and economic growth.

7 - Where will development growth be focused?

7.44 Land at the southern part of the allocated site is required by the Local Education Authority for provision of two new special schools providing for Special Needs and Disabilities (SEND) for age 7-16 pupils, one for autistic spectrum condition, and one for social, emotional and mental health needs. The schools will be funded by the Education and Skills Funding Agency, and Essex County Council.

7.45 The site contains open space comprising former school playing fields, as shown on the Policies Map. Notwithstanding the provisions of Policy DM21 a commuted sum will be secured in lieu of the loss of any open space, as agreed with the County Council which owns the land. The scale of financial contributions should be at least that required to provide an equivalent replacement playing field (including essential ancillary facilities). If the playing fields are to be retained or replaced on-site the development will be required to enhance the open space (including essential ancillary facilities) and to facilitate its sustainable community use.

7.46 An evidence-based study should be provided to show how existing open space and play deficiencies in the locality can be remedied, and how the needs generated by development on site will be accommodated, with the advice of Sport England. Development is expected to provide a number of linked open spaces for different uses, which will define the character of the area, and which could include formal or informal sports areas, semi-natural green space, play areas and community gardens. Natural features, such as existing trees, hedges and a pond, shall be used to shape spaces and contribute to character.

7.47 Development will need to provide enhanced and new pedestrian and cycle connections to all directions from the site including Melbourne Avenue, Hobart Close and Highfield Road, facilitating easy access to shops, community and sports facilities, as well as bus services and the existing pedestrian/cycle route network. A residential travel plan will be required to include a package of measures to ensure active and sustainable means of travel are available to all new residents, to promote the benefits of sustainable transport, reduce the need to travel, and encourage the use of non-car modes.

7.48 The Council would welcome the reuse of key built features on-site including the main entrance building. This would enable retention of a distinctive building in the area, and provide a lead for new character.

7.49 In addition, Strategic Growth Sites in the Urban Area will collectively need to deliver other forms of local infrastructure required to support growth. Provision of facilities and/or financial contributions will be required, to meet infrastructure needs generated by new development, including education, health, police, ambulance, and fire and rescue facilities, transport, access and sports/leisure facilities.

7.50 The site is located within a Critical Drainage Area (CDA). This development may have the potential to impact on the CDA in respect of surface water flooding. As a result of this the site is likely to require an individually designed mitigation scheme to address this issue.

7.51 Development proposals are being progressed with the involvement of local community representatives, through collaborative working between the landowner, the Council and the community. The Council has adopted a Planning Brief to guide the future development of this site.

STRATEGIC GROWTH SITE POLICY 1d – RIVERSIDE ICE AND LEISURE LAND, VICTORIA ROAD

The Riverside Ice and Leisure Centre was redeveloped during 2017-2019 to provide improved replacement facilities. As part of these proposals, the site as shown on the Policies Map has potential for residential, parking and commercial development.

Amount and type of development:

- Around 150 new homes of a mixed size and type including affordable housing. The final amount of new homes will be confirmed through the planning application process
- Food/drink and/or retail units
- Decked car parking.

Supporting on-site development:

- Enhanced pedestrian and cycle route links, including contributions towards improvements to Mallard Bridge
- Enhancement of existing pedestrian and cycle routes within and adjacent to the site including width and alignment, surfacing, drainage, signage and lighting improvements as appropriate
- Integration of flexible workspace facilities.

Site development principles:

Movement and access

- Development that maximises opportunities for active and sustainable travel
- Main vehicle access will be from Waterloo Lane
- Provide safe and convenient pedestrian and cycle connections.

Historic and natural environment

- Preserve or enhance the character or appearance of the adjoining Chelmsford Central Conservation Area and its setting
- Generous waterside margin to enable maintenance, recreation and habitat connectivity
- Provide suitable SuDs and flood risk management.

Design and layout

- Ensure key public open spaces and routes are fronted by active and complementary uses at street level
- Ensure new development makes the most of the waterside location
- Layout should have regard to a wastewater pumping station within the development boundary
- Appropriate safeguarding of suitable access for the maintenance of foul and surface water drainage infrastructure
- Provide public art which contributes towards place creation.

Site infrastructure requirements:

- **Appropriate mitigation, compensation and enhancements to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Financial contributions to primary and secondary education provision**
- **Financial contributions and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities**
- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities**
- **Provide or make financial contributions to facilitate, sustain and enhance car club facilities for scheme occupiers**
- **Financial contribution towards improvements to Mallard Bridge**
- **Financial contributions towards provision of new lock and replacement of weir gates at Chelmer Waterside.**

Reasoned Justification

7.52 The site lies close to Chelmsford City Centre, and the transport hub of railway and bus stations. Redevelopment of the swimming pool site has released former leisure centre land and parking areas for development. It is well-located for a residential development of around 150 new homes between 2026 and 2028.

7.53 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.54 The development should provide a mix of size and types of homes. Affordable, appropriately accessible and adaptable housing, and other types of specialist housing should be provided in accordance with the Council's policy requirements.

7.55 Ground floor non-residential uses in residential blocks will be encouraged to strengthen the life of the neighbourhood north of the main shopping area. This may include a wide range of business or community uses including food, drink and retail. These will be particularly appropriate in buildings facing public routes through the site. Opportunities should also be taken to include flexible units for integrated residential and commercial uses, to enhance sustainable and economic growth.

7.56 Proposals should include measures to rationalise existing public car parking on the site, which may be achieved by relocating existing parking provision. A residential travel plan will be required to include a package of measures to ensure active and sustainable means of travel are available to all new residents, to promote the benefits of sustainable transport, reduce the need to travel, and encourage the use of non-car modes. Provision or contributions to facilitate, sustain and enhance car club facilities for scheme occupiers will also be required. Provision of a car club will provide a viable alternative to car ownership and can reduce the need for land devoted to car parking.

7.57 Links should be made with pedestrian and cycle routes to/from the site and the University, City Centre, bus and railway stations and the wider cycle/footpath network. There

7 - Where will development growth be focused?

are also opportunities to enhance access across the River Chelmer, including financial contributions to help secure improvements to the existing Mallard Bridge.

7.58 Practical design considerations, such as service yards, utility related plant, etc. must be effectively designed to sustain a high quality approach to streetscape. Where residential uses meet the street, units must be designed to offer suitable privacy to those units without harm to the streetscene – potentially through duplex residential or live-work units. The development layout should also have regard to this a wastewater pumping station which is located within the site boundary.

7.59 Although there are no heritage assets on the site, development should preserve or enhance the character or appearance of the adjoining Chelmsford Central Conservation Area and its setting.

7.60 The southern edge of the site faces the River Chelmer, and development should make the best use of the waterside setting, with buildings facing the water, across waterside margins of at least 10 metres which will allow access for maintenance by the Environment Agency (EA), recreation and habitat connectivity. Advice should be sought from the EA as to whether Environmental Permit Regulations will apply. Layout should also safeguard suitable access for the maintenance of foul and surface water drainage infrastructure.

7.61 Strategic Growth Sites in the Urban Area will collectively need to deliver other forms of local infrastructure required to support growth. Provision of facilities and/or financial contributions will be required to meet infrastructure needs generated by new development, including education, health, police, ambulance, and fire and rescue facilities, transport, access and sports/leisure facilities.

STRATEGIC GROWTH SITE POLICY 1e – CIVIC CENTRE LAND, FAIRFIELD ROAD

Chelmsford Civic Centre land, as shown on the Policies Map, is suitable for city-scale residential development, with supporting commercial uses.

Amount and type of development:

- **Around 100 new homes of a mixed size and type including affordable housing. The final amount of new homes will be confirmed through the planning application process**

Supporting on-site development:

- **Parking for residential elements to be provided separately from public parking provision**
- **Integration of flexible workspace facilities.**

Site development principles:

Movement and access

- Development that maximises opportunities for active and sustainable travel
- Retained vehicular access from Coval Lane/Fairfield Road for Civic Centre operational uses, with potential access from Viaduct Road for residential uses
- Provide safe and convenient pedestrian and cycle connections.

Historic and natural environment

- Preserve and where appropriate enhance the setting of the Grade II listed War Memorial, conserve and where appropriate enhance the setting of the locally listed Civic Centre entrance building, and preserve and enhance the character or appearance of the West End Conservation Area and its setting.

Design and layout

- Layout to provide appropriate street frontage to Marconi Plaza, Coval Lane and Viaduct Road
- Opportunity for landmark buildings
- Enhanced landscaping to the site's boundary with Parkway
- Appropriate safeguarding of suitable access for the maintenance of foul and surface water drainage infrastructure
- Provide public art which contributes towards place creation.

Site infrastructure requirements:

- Appropriate mitigation, compensation and enhancements to the local and strategic road network as required by the Local Highways and Transportation Authority
- Financial contributions to primary and secondary education provision
- Financial contributions and/or onsite provision of community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board
- Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities
- Financial contribution to facilitate, sustain and enhance car club facilities for scheme occupiers.

Reasoned Justification

7.62 The site is located south of Duke Street adjacent to the City's transport hub of railway and bus stations, with excellent pedestrian and cycle links to the main shopping and business area, but also close to Central Park and with links to the wider area through the Green Wedge. This justifies intensive use of part of the site for City Centre living at a city scale (i.e. taller, higher-density buildings) for around 100 new homes between 2035 and 2036, while retaining the majority of public car parking on site.

7 - Where will development growth be focused?

7.63 The Council will take a flexible approach to uses on this site which support positive activity and encourage innovation and investment, in accordance with Policy S17. Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.64 The development should provide a mix of size and type of homes. Affordable, appropriately accessible and adaptable housing, and other types of specialist housing should be provided in accordance with the Council's policy requirements.

7.65 This allocation focuses on residential development of an area currently used for Council staff and public surface car parking, with other existing land uses remaining on-site. There is also scope for alternative land uses across the wider site including cultural or entertainment uses, offices, specialist workspace or retail, to complement residential uses. Opportunities should also be taken to include flexible units for integrated residential and commercial uses, to enhance sustainable and economic growth.

7.66 Development on the wider site should preserve the setting of the Grade II listed War Memorial on Duke Street, conserve the setting of the locally listed Civic Centre main entrance building, and preserve or enhance the character or appearance of the adjoining West End Conservation Area and its setting. The West End Conservation Area is on the Heritage at Risk Register in 2023. The Council will support development that provides opportunities to enhance the Conservation Area.

7.67 Provision of an improved pedestrian and cycle link is expected, linking Coval Lane to Fairfield Road, to safely accommodate people accessing the railway and bus stations from surrounding business and residential premises. Improved links shall also be facilitated under the railway viaduct to the subway entrance to Central Park, and to new development east of the railway line.

7.68 A residential travel plan will be required to include a package of measures to ensure active and sustainable means of travel are available to all new residents, to promote the benefits of sustainable transport, reduce the need to travel, and encourage the use of non-car modes. Provision or contributions to facilitate, sustain and enhance car club facilities for scheme occupiers will also be required. Provision of a car club will provide a viable alternative to car ownership and can reduce the need for land devoted to car parking.

7.69 Development is expected to include high quality architecture responding to its prominent City location, with the potential for landmark buildings in key positions. Where appropriate, ground floor commercial uses in residential blocks will be encouraged to strengthen the commercial facilities around the transport hub. These will be particularly appropriate in buildings facing Marconi Plaza and public routes through the site.

7.70 Public realm improvements are expected, particularly to the southern edge of the site where it fronts Parkway, and to extend Marconi Plaza northwards along Fairfield Road to improve the theatre environs. Layout should also safeguard suitable access for the maintenance of foul and surface water drainage infrastructure.

7.71 Strategic Growth Sites in the Urban Area will collectively need to deliver other forms of local infrastructure required to support growth. Financial contributions will be required to meet infrastructure needs generated by new development, including education, health, transport, access and sports/leisure facilities.

STRATEGIC GROWTH SITE POLICY 1f – EASTWOOD HOUSE CAR PARK, GLEBE ROAD

Land adjacent to Eastwood House, Glebe Road, as shown on the Policies Map, is allocated for well-connected residential development.

Amount and type of development:

- 197 new homes of a mixed size and type including affordable housing.

Supporting on-site development:

- Retain vehicular access to office building
- Sufficient parking for the office use should be retained to ensure future operations are not jeopardised by development of surface parking areas
- Integration of flexible workspace facilities.

Site development principles

Movement and access

- Development that maximises opportunities for active and sustainable travel
- Main vehicle access will be from Glebe Road
- Provide safe and convenient pedestrian and cycle connections.

Historic and natural environment

- Preserve or enhance the character or appearance of the adjoining West End Conservation Area and its setting.

Design and layout

- Create new built edges to Glebe Road and Marconi Road
- Enhance the setting of Eastwood House
- Landscape design incorporating tree planting, flood risk and surface water management and other multifunctional green infrastructure, that contributes to the wider green infrastructure and nature recovery networks
- Appropriate safeguarding of suitable access for the maintenance of foul and surface water drainage infrastructure
- Provide public art which contributes towards place creation.

Site infrastructure requirements:

- Appropriate mitigation, compensation and enhancements to the local and strategic road network as required by the Local Highways and Transportation Authority
- Financial contributions to primary and secondary education provision
- Financial contributions and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, Ambulance and fire and rescue facilities

7 - Where will development growth be focused?

- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities**
- **Provide or make financial contributions to facilitate, sustain and enhance car club facilities for scheme occupiers.**

Reasoned Justification

7.72 Eastwood House is an office building with a large surface parking area and undercroft parking. The surface parking area has full planning permission (Ref: 19/01618/FUL) for 197 homes. Development is expected to be delivered between 2026 and 2027. If this permission is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit.

7.73 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.74 The development should provide a mix of size and types of homes. Affordable, appropriately accessible and adaptable housing, and other types of accessible housing should be provided in accordance with the Council's policy requirements. Opportunities should be taken to include flexible units for integrated residential and commercial uses, to enhance sustainable and economic growth. There is also scope for alternative land uses across the wider site including cultural or entertainment uses.

7.75 The office building itself is designated as an Employment Area. Vehicular access will need to be retained for the office use and its undercroft parking. In addition, sufficient parking should be retained for the office use to ensure its future use is not compromised by lack of parking provision.

7.76 Development will be expected to deliver a remediation strategy to address any outstanding historic contamination issues on the site to enable development, which may include use of voids, membranes or capping if necessary.

7.77 The site is very close to the transport hub of bus and railway stations, Anglia Ruskin University, and the City Centre. Safe and convenient connections should be provided from the site into the pedestrian and cycle network to ensure sustainable access, including to the Marconi quarter and railway station to the south-east.

7.78 A residential travel plan will be required to include a package of measures to ensure active and sustainable means of travel are available to all new residents, to promote the benefits of sustainable transport, reduce the need to travel, and encourage the use of non-car modes.

7.79 Development is expected to include high quality architecture responding to its prominent central City location. Opportunities to include attractive, flexible use units in the development will be encouraged to enable live/work use, which can provide small business premises in City Centre locations adding to sustainability of the developments and vitality of the local community.

7 - Where will development growth be focused?

7.80 Although there are no heritage assets on the site, development should preserve or enhance the character or appearance of the adjoining West End Conservation Area and its setting. The West End Conservation Area is on the Heritage at Risk Register in 2023. The Council will support development that provides opportunities to enhance the Conservation Area.

7.81 The setting of Eastwood House should be enhanced with suitable planting and landscaping to provide a separation between the office building and residential development. Landscaping may also provide an opportunity for surface water management solutions. Layout should also safeguard suitable access for the maintenance of foul and surface water drainage infrastructure.

7.82 Strategic Growth Sites in the Urban Area will collectively need to deliver other forms of local infrastructure required to support growth. Provision of facilities and/or financial contributions will be required to meet infrastructure needs generated by new development, including education, health, police, ambulance, and fire and rescue facilities, transport, access and sports/leisure facilities.

STRATEGIC GROWTH SITE POLICY 1y – LAND BETWEEN HOFFMANNS WAY AND BROOK STREET (MARRIAGE’S MILL)

Land between Hoffmanns Way and Brook Street, as shown on the Policies Map, is suitable for residential development, with supporting commercial uses.

Amount and type of development:

- **Around 100 new homes of a mixed size and type including affordable housing. The final amount of new homes will be confirmed through the planning application process.**

Supporting on-site development

- **Integration of flexible workspace facilities**
- **Equipped play provision for children and teenage users.**

Site development principles

Movement and access

- **Development that maximises opportunities for active and sustainable travel**
- **Main vehicle access will be from Hoffmanns Way**
- **Provide pedestrian and cycle connections to both Hoffmanns Way and Brook Street**
- **Widening of pedestrian/cycle route adjoining the site which links to routes to the east.**

7 - Where will development growth be focused?

Historic and natural environment

- Retain and re-use the historic buildings and remove modern buildings
- Conserve and where appropriate enhance the setting of the locally listed Chelmer Mill building and retain visual link with the Grade II listed Marconi Building on New Street
- Preserve and where appropriate enhance the setting of the former Hoffmann works
- Undertake a Minerals Infrastructure Impact Assessment given its proximity to Chelmsford Rail Sidings.

Design and layout

- Retain and reuse existing non-designated heritage assets for new uses where practicable, and reuse other key buildings that contribute to character
- Landscape design incorporating tree planting, flood risk and surface water management and other multifunctional green infrastructure, that contributes to the wider green infrastructure and nature recovery networks
- Retain key views of Chelmer Mill
- Layout to provide appropriate street frontage to both Hoffmanns Way and Brook Street
- Respect the setting of the adjacent green space and riverside to the north
- Provide public art which contributes towards place creation
- Financial contributions to Brook Street public realm.

Site infrastructure requirements:

- Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable modes of transport
- Provide or make financial contributions to facilitate, sustain and enhance car club facilities for scheme occupiers
- Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities
- Financial contributions to early years, primary and secondary education provision
- Financial contributions and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.

Reasoned Justification

7.83 The site lies close to the City Centre, and the railway and bus station transport hubs. As such, it is well located for a residential development of around 100 new homes between 2035 and 2036.

7 - Where will development growth be focused?

7.84 The Council will take a flexible approach to uses on this site which support positive activity and encourage innovation and investment, in accordance with Policy S17. Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.85 The development should provide a mix of size and types of homes. Affordable, self-build and custom-built, appropriately accessible and adaptable housing, and other types of specialist housing should be provided in accordance with the Council's policy requirements. Opportunities should be taken to include flexible units for integrated residential and commercial uses, to enhance sustainable and economic growth.

7.86 Links should be made with active and sustainable travel routes close to the site, particularly with the adjacent Anglia Ruskin University, and towards the City Centre, the bus and railway station hubs, and to the riverside pedestrian/cycle route network. A residential travel plan will be required to ensure active and sustainable means of travel are available to all new residents to promote the benefits of sustainable travel, reduce the need to travel and encourage the use of non-car modes. Some local improvements are needed to adequately connect this site into the pedestrian and cycle network which this development would need to resolve.

7.87 The site is highly visible and prominent within the local streetscape and from the mainline railway approach to Chelmsford. The development is close to the City Centre in an area of change which has included redevelopment of the former Marconi site, and new university buildings, which have an impact on the future character of this site. The scale, massing and finer design details must remain appropriately sympathetic to that context. Practical design considerations, such as service yards, utility related plant etc, must be effectively designed to sustain a high quality approach to streetscape. Where residential use meets the street, units must be designed to offer suitable privacy to those units without harm to the streetscene.

7.88 The Council requires the protection of the non-designated heritage asset on site, consisting of Chelmer Mill (c.1901) with its distinctive tower, as set out in the *Register of Local Buildings of Value in Chelmsford (2009)*. The Mill should form a central focal feature for the development, and consideration also given to retaining the single storey building range to the southwest of the Mill. This may involve reuse or sympathetic alteration of the buildings in relation to the context, including use of the historic fabric, attention to design detail, and high quality of any new materials. Views towards the Mill from outside the site should also be retained where possible.

7.89 Public realm improvements are expected, particularly to Brook Street, to improve safety and connectivity for cyclists and pedestrians and improve the streetscene.

7.90 Site landscaping should incorporate tree planting as well as other biodiversity enhancements and should seek to make linkages to the nearby local wildlife site. The site lies within a Minerals Consultation Area. The developer will be required to undertake a Minerals Infrastructure Assessment to ensure the proposed development would not compromise the nearby mineral infrastructure site.

7 - Where will development growth be focused?

7.91 Local open space is required on this site to make an important contribution to the health and wellbeing of the local community. In particular, there is a lack of children's play and youth facilities in the City Centre and Urban Area, which this site could help to provide. Financial contributions may also be required towards strategic open space.

7.92 Strategic Growth Sites in the Urban Area will collectively need to deliver other forms of local infrastructure required to support growth. Provision of facilities and/or financial contributions will be required to meet infrastructure needs generated by new development, including education, health, police, ambulance, and fire and rescue facilities, transport, access and sports/leisure facilities.

STRATEGIC GROWTH SITE POLICY 1cc – ANDREWS PLACE, LAND WEST OF RAINSFORD LANE

Land at Andrews Place, as shown on the Policies Map, is allocated for residential redevelopment, comprising comprehensive regeneration for 100% affordable housing.

Amount and type of development:

- **Around 250 new affordable homes (183 net new affordable homes) of a mixed size and type to include specialist residential accommodation for older people. The final amount of new homes will be confirmed through the planning application process.**

Site development principles:

Movement and Access

- **Development to prioritise opportunities for active and sustainable travel and provide excellent connectivity with surrounding networks**
- **Provide active travel infrastructure into Admirals Park and to the City Centre**
- **Main vehicular access will be from Andrews Place via Rainsford Lane**
- **Maintain vehicular and pedestrian access to the allotments west of the site.**

Historic and natural environment

- **Have regard to existing townscape feature and setting of Chelmsford Fire Station tower which is a non-designated heritage asset**
- **Conserve and enhance biodiversity and avoid adverse effects on the Admirals Park Local Nature Reserve**
- **Provide suitable SuDS and flood risk mitigation and management.**

Design and layout

- **Provide a distinctive and high-quality development recognising the site's location as an important gateway into the City Centre**
- **Layout, scale, density and massing of the development to reflect the site's close proximity to the City Centre and Admirals Park**
- **Layout to provide appropriate street frontages to Rainsford Lane and Andrews Place/Cramphorn Walk**

- Ensure that the continuing use of the existing allotments west of the site are not compromised
- Provide public art which contributes towards place creation and celebrates notable past residents.

Site Infrastructure requirements:

- Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable modes of transport including improvement of existing active travel route along the western boundary of the site
- Appropriate on-site flood protection, mitigation measures and SuDS
- Provide or make financial contributions to facilitate, sustain and enhance car club facilities for scheme occupiers
- Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities
- Financial contributions to early years, primary and secondary education provision
- Financial contributions and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.

Reasoned Justification

7.93 The site lies close to the City Centre, and the railway and bus transport hubs. As such it is well located for a residential redevelopment of around 250 new affordable homes (183 net new units) for delivery between 2026-2031. The site currently accommodates 69 low density affordable bungalows occupied by older people and is owned and managed by Chelmer Housing Partnership (CHP).

7.94 The redevelopment of the site will provide a significant increase in the number of affordable homes and contribute towards the regeneration of this important corridor into the City Centre as identified in Strategic Policy S17.

7.95 A consultation and engagement exercise has been undertaken by CHP with the existing tenants. This is to ensure that existing residents can help shape the development proposals and their future needs are considered.

7.96 The development should provide a mix of size and type of new affordable homes and accommodate specialist housing for older people.

7.97 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7 - Where will development growth be focused?

7.98 If the site is to gain maximum benefit from its sustainable location, links should be made with active and sustainable travel routes close to the site, particularly towards the City Centre, the bus and railway station hubs, and to the riverside pedestrian/cycle route network. A residential travel plan will be required to ensure sustainable and active and sustainable means of travel are available to all new residents to promote the benefits of sustainable transport, reduce the need to travel and encourage the use of non-car modes.

7.99 The site is highly visible and prominent within the local streetscape particularly from the south on Waterhouse Lane (A1016) and closer to the site on Rainsford Lane (A1016) which acts a key corridor into the City Centre.

7.100 The site is close to the City Centre in an area of change. The arrangement of routes and blocks within the development should address the site's proximity to the City Centre. Therefore, relationships within the site could have a tighter grain, enabled in part by the highly sustainable location with good links to public transport and the City Centre itself. The scale and massing of the development should address the site's proximity to the City Centre and the opportunities afforded by the southern aspect to Admirals Park and the River Can. Practical design considerations, such as service areas, utility related plant and refuse / recycling storage etc, must be effectively designed to sustain a high-quality approach to streetscape. Where residential use meets the street, units must be designed to offer suitable privacy to those units without harm to the streetscene.

7.101 Although there are no heritage assets on the site, development should have regard to the townscape feature and setting of Chelmsford Fire Station tower, to the south-east of the site, which is a non-designated heritage asset. Within the site, at number 14 Andrews Place, is a blue plaque for Florence Attridge, a former Marconi employee who was awarded the British Empire Medal for her contribution to the World War II effort. The bungalow does not possess sufficient architectural or historic interest to warrant retention, but the blue plaque should be retained and/or Florence Attridge celebrated, such as through public art.

7.102 Public realm improvements will be required, particularly along the Rainsford Lane frontage. The development will be required to provide appropriate habitat mitigation and creation, and appropriate buffers to avoid adverse impact on the adjacent Admirals Park Local Nature Reserve.

7.103 Due to site's location next to Admirals Park a financial contribution towards the improvement of existing local open space will be appropriate. The layout of the new development should include suitable landscaping and shared circulation spaces between blocks. Financial contributions will be required towards strategic open space.

7.104 Strategic Growth Sites in the Urban Area will collectively need to deliver other forms of local infrastructure required to support growth. Provision of facilities or financial contributions will be required to meet infrastructure needs generated by new development, which could include education, health, police, ambulance, and fire and rescue facilities, transport, access and sports/leisure facilities.

Growth Sites in Chelmsford Urban Area

7.105 Growth Sites 1g to 1bb share common features due to their central position in the urban area and are all subject to Policy GR1 as well as infrastructure requirements in Policy S9. Financial contributions will be sought in accordance with Policy S10. Additional policy requirements and phasing information are listed in individual site-specific policies.

POLICY GR1 – GROWTH SITES IN CHELMSFORD CITY CENTRE/URBAN AREA

Allocated Growth Sites in the City Centre and Chelmsford Urban Area are shown on the Policies Map.

Growth Sites 1g to 1bb will be required to provide the following type of development and site infrastructure requirements, and take into consideration the site development principles. In addition, the relevant infrastructure requirements of Policy S9 also apply to these sites. Additional policy requirements and phasing information are then listed in individual site-specific policies. These new developments will be planned carefully using the following principles and with the use of Planning Briefs or Design Codes where appropriate.

Type of development:

- New homes of a mixed size and type, including affordable housing, where applicable. The final amount of new homes will be confirmed through the planning application process.

Supporting on-site development:

- Integration of proportionate workspace, employment and community facilities.

Site development principles:

Movement and access

- Development that maximises opportunities for active and sustainable travel
- Provide safe and convenient pedestrian and cycle connections
- Ensure good access to bus services and bus stops.

Historic and natural environment

- Conserve and where appropriate enhance designated and non-designated heritage assets and their settings
- Preserve or enhance the character or appearance of Conservation Areas
- Provide suitable SuDS and flood risk management.

Design and layout

- Ensure design and layout supports commercial function, where applicable
- Landscape design incorporating tree planting, flood risk and surface water management and other multifunctional green infrastructure, that contributes to the wider green infrastructure and nature recovery networks.

7 - Where will development growth be focused?

Site infrastructure requirements:

- **Appropriate mitigation, compensation and enhancements to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Appropriate measures to promote and enhance active and sustainable modes of transport**
- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities**
- **Financial contributions to early years, primary and secondary education provision**
- **Financial contributions towards provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.**

Reasoned Justification

7.106 Growth Sites are smaller sites which will accommodate less than 100 new houses, but which will collectively contribute to regeneration objectives and securing sustainable development. Policy GR1 sets out requirements for Growth Sites 1g to 1bb. These sites share common features in that they make the best and most efficient use of previously developed land, are often vacant or underused areas where there is an opportunity for sustainable growth patterns, are in locations which will allow good connections with their local neighbourhoods and the City Centre, and will regenerate unused or underused previously developed land.

7.107 Where a site has a planning permission that is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit.

7.108 Infrastructure requirements for Growth Sites 1g to 1bb are in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10. Further site-specific policy information is set out in the site-specific policies which follow.

7.109 These sites have been allocated to create high quality, sustainable new developments, covering a capacity range from around 10 to around 90 homes. Exact site capacity will depend on site specific considerations including local context and appropriate scale. The Council will consider the use of Planning Briefs and Design Codes on Growth Sites where appropriate in line with Policy DM24.

7.110 Development should provide a mix of size and types of homes as listed in the site-specific policies which follow. Affordable, self-build and custom-build, appropriately accessible and adaptable housing, and other types of specialist housing should be provided in accordance with the Council's policy requirements.

7.111 The Council will take a flexible approach to uses on sites within the Opportunity Corridors which support positive activity and encourage innovation and investment, in accordance with Policy S17. Opportunities to include attractive, flexible use units in developments will be encouraged to enable employment or community uses. Where appropriate, live-work units should be provided to ensure developments are as sustainable as possible. Combining work and home in a single unit will help to reduce the need to travel,

7 - Where will development growth be focused?

reduce traffic levels and related air quality impacts. It will also promote new economic development. Other uses may include retail, hotels, or cultural facilities.

7.112 Previously developed sites in the City Centre are often highly-visible and prominent within local streetscape or wider townscape aspect. New development is expected to complement Chelmsford's character and respect designated and non-designated heritage assets, but also create a distinctive sense of place and comfortable living environment through high-quality design, architecture and materials, excellent public realm, enhanced connectivity and contribution to townscape. Existing buildings and spaces which contribute to the character of an area should be retained and reused. Practical design considerations, such as service yards and utility related plant and sub-stations must be effectively integrated within the overall design.

7.113 Whilst sites within the Urban Area mostly benefit from better transport access, it will be necessary or desirable to enhance connections between the site and transport infrastructure, or the infrastructure itself, to meet growing demand. Residential travel plans may be required for developments to include a package of measures to ensure active and sustainable means of travel are available to all new residents, to promote the benefits of sustainable transport, reduce the need to travel, and encourage the use of non-car modes.

7.114 Allocated Growth Sites in the Urban Area will collectively need to deliver other forms of local infrastructure required to support growth. Financial contributions will be required to meet infrastructure needs generated by new development, including education, early years, health, police, ambulance, and fire and rescue facilities, transport, access and sports/leisure facilities.

GROWTH SITE POLICY 1g – CHELMSFORD SOCIAL CLUB, SPRINGFIELD ROAD

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- **Around 29 new homes. The final amount of new homes will be confirmed through the planning application process**
- **Enhanced route links from Riverside Ice and Leisure to Springfield Road, including financial contributions towards improvements to Mallard Bridge**
- **Main vehicle access will be from Springfield Road**
- **Preserve and where appropriate enhance the setting of nearby Grade II listed buildings at 73-75 and 80 Springfield Road**
- **Generous waterside margin to enable maintenance, recreation and habitat connectivity**
- **Ground floor active frontages for residential blocks where appropriate, fronting public routes**
- **New development making the most of the waterside location**
- **Potential to retain community use in new layout.**

7 - Where will development growth be focused?

GROWTH SITE POLICY 1h – ASHBY HOUSE CAR PARKS, NEW STREET

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- Around 80 new homes. The final amount of new homes will be confirmed through the planning application process
- Main vehicle access from Brook Street
- Conserve and where appropriate enhance the setting of the locally listed Globe House and Marriage's Mill
- New built frontage to Brook Street
- Opportunity to extend Ashby House for residential use
- Avoid adverse impacts on the Chelmer Valley Local Nature Reserve
- Financial contributions towards improvements to Brook Street public realm.

GROWTH SITE POLICY 1i – RECTORY LANE CAR PARK WEST

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- Around 75 new homes. The final amount of new homes will be confirmed through the planning application process
- Potential for student accommodation, due to its proximity to Anglia Ruskin University
- Main vehicle access will be from Broomfield Road/Elms Drive
- Improved level pedestrian/cycle connection to two existing road crossing points to the south
- Conserve and where appropriate enhance the setting of the nearby locally listed King Edward VI School, and preserve or enhance the character or appearance of the adjoining John Keene Memorial Homes Conservation Area and its setting
- High quality architectural design to enhance the gateway location of the site
- Layout to retain some public parking provision
- Layout to respect neighbouring frontages on Elms Drive
- Enhanced landscaped edge to Broomfield Road, Parkway and Chelmer Valley Road.

GROWTH SITE 1z – GRANARY CAR PARK, VICTORIA ROAD

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- Around 50 new homes. The final amount of new homes will be confirmed through the planning application process
- Main vehicle access will be from Victoria Road
- Provide safe and convenient pedestrian and cycle access to Victoria Road
- Link to the existing pedestrian and cycle network
- Preserve and where appropriate enhance the setting of the adjacent Grade II listed Springfield Water Mill and Springfield Mill House buildings
- Retain the former bridge piers and railings currently on Victoria Road, either in situ or relocated elsewhere on site, due to their local heritage value
- Layout to provide appropriate street frontage to Victoria Road with this block having an appropriate set back and height to reduce visual impact on the setting of Grade II listed Springfield Water Mill complex of buildings. The built form should be articulated with a variety of high quality materials to break up massing
- Development layout should maintain the privacy of existing adjacent homes at Riverside to the east
- Protect the purpose of including land within the Green Wedge
- Retain or reprovide Public Open Space with equivalent or better
- Provide onsite, or make a financial contributions towards, improvements to the pedestrian/cycleway to the east
- New development making the most of the waterside location
- Generous waterside margin to enable maintenance, recreation and habitat connectivity
- Retain natural landscaping to enhance the setting
- Avoid adverse impacts on the adjacent Chelmer Valley Local Nature Reserve
- Drainage and flood risk management to address partial location in Flood Zones 2 and 3.

GROWTH SITE POLICY 1k – FORMER CHELMSFORD ELECTRICAL AND CAR WASH, BROOK STREET

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- This site has a planning application submitted (Ref: 22/02263/FUL) for 41 new homes. This number is reflected in the 5 year Housing Sites Schedule April 2024. If this permission is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit
- Provision of a 3.5m widened cycle/footway along the New Street frontage, in accordance with Local Highways and Transportation Authority requirements

7 - Where will development growth be focused?

- **Main vehicle access will be from Brook Street/New Street**
- **Preserve and where appropriate enhance the setting of the Grade II listed Marconi 1912 building, and conserve and where appropriate enhance the setting of the locally listed Globe House and Marriage's Mill**
- **Layout to provide appropriate street frontage to both New Street and Brook Street**
- **Ground floor non-residential uses and active frontages for residential blocks, fronting public routes**
- **Financial contributions towards improvements to Brook Street public realm.**

GROWTH SITE 1aa – COVAL LANE CAR PARK

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- **Around 40 new homes. The final amount of new homes will be confirmed through the planning application process**
- **Main vehicle access will be from Coval Lane**
- **Character, scale and layout to have regard and respond to the site's surrounding context**
- **Development layout should respect neighbouring rear boundaries**
- **Preserve and where appropriate enhance the setting of the non-designated heritage asset at Chelmsford Fire Station**
- **Retain or reprovide the existing natural landscaping across the site to enhance the setting.**

GROWTH SITE POLICY 1I – BT TELEPHONE EXCHANGE, COTTAGE PLACE

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- **Around 30 new homes. The final amount of new homes will be confirmed through the planning application process**
- **Financial contributions to improve Church Street/Cottage Place public realm**
- **Main vehicle access from Cottage Place**
- **Preserve and where appropriate enhance the setting of the nearby Grade II listed Imperial House and The Wheatsheaf, conserve and where appropriate enhance the setting of the locally listed Cathedral Court, and preserve or enhance the character or appearance of the adjoining Chelmsford Central Conservation Area**
- **Adaptation or redevelopment of existing buildings**
- **Consideration of security to remainder of BT premises building.**

GROWTH SITE POLICY 1m – RECTORY LANE CAR PARK EAST

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- Around 23 new homes. The final amount of new homes will be confirmed through the planning application process
- Potential for student accommodation, due to its proximity to Anglia Ruskin University
- Main vehicle access to be taken from Chelmer Valley Road
- Improved level pedestrian/cycle connection to existing road crossing point to the south
- Conserve and where appropriate enhance the setting of the adjacent locally listed Cemetery Gatehouse and Lodge on Rectory Lane
- Character and scale determined by adjacent residential development
- Layout shaped by utility easements
- Enhanced landscaped edge to Rectory Lane and Chelmer Valley Road.

GROWTH SITE POLICY 1n – WATERHOUSE LANE DEPOT AND NURSERY

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- Around 20 new homes. The final amount of new homes will be confirmed through the planning application process
- An accessible, alternative Parks Depot will need to be in place prior to development to allow continuity of service
- Main vehicle access will be from Waterhouse Lane
- Maintain wide grass verge and trees to Waterhouse Lane road frontage
- Development layout should ensure sensitive treatment to the allotments' boundary and the preservation of the setting of the nearby Grade II listed barn.

GROWTH SITE POLICY 1p – BRITISH LEGION, NEW LONDON ROAD

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- Around 15 new homes. The final amount of new homes will be confirmed through the planning application process
- Alternative provision of the community use should be secured prior to development
- Main vehicle access from New London Road

7 - Where will development growth be focused?

- Development should preserve or enhance the character or appearance of the New London Road Conservation Area, preserve and where appropriate enhance the setting of the Grade II listed Southborough House and conserve and where appropriate enhance the setting of the adjacent locally listed building at 176 New London Road
- Retain natural landscaping to enhance the setting.

GROWTH SITE POLICY 1q – REAR OF 17 to 37 BEACH’S DRIVE

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- This site has full planning permission (Ref: 23/00116/FUL) for 18 new homes. This number is reflected in the 5 year Housing Sites Schedule April 2024. If this permission is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit
- Main access will be from Beach’s Drive
- Safe and convenient pedestrian and cycle access should be created into Admirals Park at the south-east of the site to connect to safe pedestrian/cycle routes to the City Centre to the east and wider countryside to the west
- Character and scale determined by adjacent residential development
- Development layout should respect neighbouring rear boundaries
- Layout should have regard to a wastewater pumping station within the development boundary.

GROWTH SITE POLICY 1r – GARAGE SITE, ST NAZAIRE ROAD

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- Around 12 new homes. The final amount of new homes will be confirmed through the planning application process
- Main vehicle access will be from St Nazaire Road
- New safe and convenient pedestrian link to the existing pedestrian/cycle route network
- Maintain the green setting and mature trees
- Enhanced built edge and frontage to existing footpath
- Development layout should maintain the privacy of existing adjacent homes
- Drainage and flood risk management led by SuDs to address location in a Critical Drainage Area.

GROWTH SITE POLICY 1bb – GLEBE ROAD CAR PARK

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- This site has full planning permission (Ref: 22/02196/FUL) for 12 new homes. This number is reflected in the 5 year Housing Sites Schedule April 2024. If this permission is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit
- Main vehicle access will be from Glebe Road
- Conserve and where appropriate enhance the setting of the locally listed buildings at The White Horse PH and 3 – 24a Townfield Street, and preserve or enhance the character or appearance of the West End Conservation Area and its setting
- Character, scale and layout to have regard and respond to the site's surrounding context and heritage which is 2-3 storey
- Services such as parking, amenity and refuse areas to be screened from the streetscene.

GROWTH SITE POLICY 1s – GARAGE SITE AND LAND, MEDWAY CLOSE

- This site has full planning permission for 6 new homes (Ref: 23/00195/FUL). This number is reflected in the 5 year Housing Sites Schedule April 2024. If this permission is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit
- Improved main vehicle access will be from Medway Close
- Natural boundaries should be retained as an edge to development
- Character and scale determined by adjacent residential development
- Drainage and flood risk management led by SuDs to address partial location in a Critical Drainage Area.

7 - Where will development growth be focused?

GROWTH SITE POLICY 1t – CAR PARK R/O BELLAMY COURT, BROOMFIELD ROAD

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- **Around 10 new homes. The final amount of new homes will be confirmed through the planning application process**
- **Main vehicle access will be from Broomfield Road**
- **Preserve and where appropriate enhance the setting of the Grade II listed Coval Hall to the west, and preserve or enhance the character or appearance of the adjoining West End Conservation Area and its setting.**

GROWTH SITE POLICY 1v – RAILWAY SIDINGS, BROOK STREET

Development will be permitted at this site subject to meeting the requirements of Policy GR1, and the following site-specific criteria:

- **Intensification of business or industrial use**
- **Safe and convenient pedestrian and cycle routes**
- **Avoid adverse impacts on the Chelmer Valley Local Nature Reserve**
- **Safeguarded access for minerals/aggregates rail freight area**
- **Financial contributions to improve Brook Street public realm**
- **Main vehicle access will be from Brook Street**
- **Appropriate mitigation, compensation and enhancements to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Financial contributions to supporting infrastructure, depending on uses.**

Location 2 – West Chelmsford

STRATEGIC GROWTH SITE POLICY 2 – WEST CHELMSFORD

Land to the west of Chelmsford and north of Roxwell Road, as shown on the Policies Map, is allocated for a high-quality comprehensively planned new sustainable neighbourhood that maximises opportunities for sustainable travel. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- 880 new homes of mixed size and type to include affordable housing. The final amount of new homes will be confirmed through the planning application process
- Travelling Showpeople site for 5 serviced plots.

Supporting on-site development:

- Neighbourhood Centre
- Provision of a new primary school with co-located early years and childcare nursery.

Site masterplanning principles:

Movement and Access

- Main vehicular access to the site will be from Roxwell Road (A1060)
- Provide safe and convenient pedestrian and cycle connections
- New dedicated pedestrian and cycle links to the existing urban area
- Provide well-connected and integrated internal road layouts which allow good accessibility for bus services.

Historic and Natural Environment

- Mitigate the visual impact of the development
- Create a network of multifunctional green infrastructure
- Provide suitable SuDs and flood risk management
- Ensure appropriate habitat mitigation and creation is provided
- Undertake an Archaeological Assessment.

Design and Layout

- Provide a coherent network of public open space, formal and informal sport, recreation and community space within the site.

Site infrastructure requirements:

- A new primary school (Use Class F1(a)) with co-located early years and childcare nursery (Use Class E(f)) on 2.1 hectares of suitable land allocated for education and childcare use
- Appropriate improvements to the local and strategic road network as required by the Local Highways and Transportation Authority

7 - Where will development growth be focused?

- **Appropriate measures to promote and enhance active and sustainable modes of transport**
- **New and enhanced cycle routes, footpaths, Public Rights of Way and, where appropriate, bridleways**
- **Multi-user crossing of Roxwell Road**
- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities**
- **Financial contributions to secondary education as required by the Local Education Authority**
- **Financial contributions to, and/or onsite provision of, other community facilities such as healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.**

Reasoned Justification

7.115 The boundary of this Strategic Growth Site allocation is defined on the Policies Map and comprises a site for new housing and land allocated for future recreation use.

This site is adjacent to Chelmsford Urban Area and in close proximity to a range of services and facilities in the City Centre and Melbourne. As such it represents an opportunity for a landscape-led sustainable urban extension that maximises opportunities for travel by sustainable modes. The site has an approved masterplan (Ref: 18/00001/MAS) for 800 new homes and outline planning permission submitted for up to 880 new homes (Ref:21/01545/OUT). This number is reflected in the 5 Year Housing Sites Schedule April 2024. If this proposal is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit. Development is expected to be delivered between 2025 and 2041. The development should provide a mix of size and types of homes. Affordable, self-build and custom-build, appropriately accessible and adaptable housing, and other types of specialist housing should be provided in accordance with the Council's policy requirements.

7.116 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.117 As this is a Strategic Growth Site and in order to achieve a mixed and balanced new community, a Travelling Showpeople site for 5 plots will be required within the Strategic Growth Site allocation. The location of these plots has been determined through the masterplanning process. This site will be serviced i.e. provided with services such as water, waste disposal and electricity. It is expected that 0.2 hectares per plot should be provided. Easy and convenient access to the site for heavy good vehicles is essential.

7.118 Although the development quantum and extent of the allocation is set out in the Local Plan, the site is located in the Parish of Writtle where there is a 'made' (adopted) Neighbourhood Plan. It is envisaged that the Neighbourhood Plan will help to shape this site allocation. Through the Neighbourhood Plan, Writtle Parish Council will also receive 25% of the CIL receipt for this development and any other in its area.

7.119 Given the scale of the development, a wide range of new community services and facilities including a new primary school, open spaces, recreation, sport and play facilities and neighbourhood centre are required. These services and facilities should be of an

7 - Where will development growth be focused?

appropriate scale to serve the new communities and located where they will be easily accessible by walking, cycling and public transport to the majority of residents in the development. The neighbourhood centre will need to make provision for community facilities and health care, and a main unit for convenience food shopping not exceeding 500sqm gross floorspace.

7.120 The scale of development in this location will require a primary school with co-located 56 place early years and childcare nursery. The developer will be expected to provide the land and costs towards the physical schemes provision with delivery through the Local Education Authority.

7.121 The development will take its main vehicular access from Roxwell Road and be expected to adequately mitigate its likely impacts on the performance of the local road and strategic road network including around Writtle village and the A1060 corridor into the City Centre. These will be expected to include appropriate improvements to the junctions of Roxwell Road/Chignal Road and Roxwell Road/Lordship Road.

7.122 Opportunities for active and sustainable transport modes should be maximised to create neighbourhoods where alternative forms of transport to the private car (walking, cycling and public transport) are prioritised. The Council will approve a sustainable masterplan that creates a place where walking, cycling and public transport is given priority over the private car. The development will provide good accessibility for bus services and bus priority measures within the site.

7.123 The development will be expected to improve connections for walking and cycling into and through the Green Wedge and to services and facilities that will serve the development in Melbourne, Writtle and the City Centre including schools, jobs, ARU Writtle, shops and Chelmsford rail station. This should include cycleway connections into the Chignal Road cycle route and National Cycle Network 1, via Lawford Lane. The site is well located to provide access via these modes to the City Centre. The development will also be required to provide a safe multi-user crossing across Roxwell Road.

7.124 A site-wide travel plan will be expected to incorporate strategic measures which reduce the need to travel and encourage people to make sustainable travel choices. Household travel plans will tailor those strategies to households and will include limited-term access to subsidised bus services to all new residents, to promote the benefits of sustainable transport and secure a modal shift from the private car.

7.125 Layout should incorporate compensation measures for landscape impact from the development including lower dwelling densities, appropriate tree and hedge planting along countryside edges, and to protect important views into the site from the north and west. The design is also expected to ensure that the development achieves an attractive and well-planned gateway into Chelmsford. Layout should also positively use existing topographical, heritage, ecological and landscape site features such as shallow valleys, established field boundaries, mature trees and vegetation, and the nearby Local Wildlife Site. For these reasons, the land to the west of the site is allocated for future recreation use, as shown on the Policies Map.

7 - Where will development growth be focused?

7.126 The development is expected to promote the highest standards of design to ensure inclusive and high quality buildings and spaces. This shall include a comprehensive and coherent network of multifunctional green infrastructure, formal and informal recreation and community spaces.

7.127 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

Location 3 – East of Chelmsford

7.128 This broad location for growth, as shown on the Key Diagram (Figure 14), comprises the following three Strategic Growth Sites and one Growth Site:

- 3a: East of Chelmsford – Manor Farm
- 3b: East of Chelmsford – Land North of Maldon Road (Employment Site)
- 3c: East of Chelmsford – Land South of Maldon Road
- 3d: East of Chelmsford – Land North of Maldon Road (Residential Site)

STRATEGIC GROWTH SITE POLICY 3a – EAST OF CHELMSFORD - MANOR FARM

Land to the north of Great Baddow (Manor Farm) adjacent to Chelmsford Urban Area as shown on the Policies Map, is allocated for a landscape-led, high quality comprehensively planned new sustainable neighbourhood that maximises opportunities for active and sustainable travel as well as a new Country Park. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- 360 new homes of mixed size and type to include affordable housing. The final amount of new homes will be confirmed through the planning application process.

Supporting on-site development:

- A new Country Park to be primarily informal and natural in character
- New vehicular access road to the Country Park with a new pedestrian and cycle bridge connecting the Country Park to Sandford Mill.

Site masterplanning principles:

Movement and Access

- Main vehicular access to the site will be from a new junction at Maldon Road/Sandford Mill Lane
- Provide safe and convenient pedestrian and cycle connections
- Provide a well-connected internal road layout.

Historic and Natural Environment

- Preserve or enhance the character or appearance of the Chelmer and Blackwater Conservation Area
- Provide necessary mitigation to address the cumulative recreational pressure on SSSIs in proximity to the site by providing high quality alternative semi-natural greenspace for Location 3 in the form of a Country Park
- Protect and where appropriate enhance the nationally significant Bronze Age monument and its setting
- Protect important views into and through the site from across the Chelmer Valley
- Create a network of multifunctional green infrastructure
- Provide suitable SuDs and flood risk management
- Ensure appropriate habitat mitigation and creation is provided
- Retain the WWII pillbox in the eastern part of the site and provide interpretation boards
- Undertake a Mineral Resource Assessment
- Undertake an Archaeological Assessment.

Design and Layout

- Provide a coherent network of public open space, formal and informal sport, recreation and community space within the site
- Remove low voltage electricity lines from the site allocation and install electricity cables underground.

Site infrastructure requirements:

- Provision of a new Country Park with a landscape strategy and a delivery mechanism for long-term management and maintenance
- Financial contributions to a new Visitor Centre at Sandford Mill
- Heritage interpretation, including information boards and public art
- Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and sustain travel through active and sustainable transport
- Provide new and enhanced cycle routes, footpaths, Public Rights of Way within and between the site and the surrounding area to enable the development to integrate with existing and new development areas and to provide links into City Centre, and the wider countryside beyond
- Provision of a new northwest safe and convenient pedestrian/cycle link through the Country Park to provide a connection to future off-site cycle links
- Where appropriate and proportionate, financial contributions for the provision of new and enhanced off-site cycle routes connecting the development to the City Centre and the wider locality
- Financial contributions to early years, primary and secondary education provision as required by the Local Education Authority
- Financial contributions towards and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South

7 - Where will development growth be focused?

Essex Integrated Care Board and Police, ambulance and fire and rescue facilities

- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities**
- **Contributions towards addressing cumulative recreational pressure on SSSIs in proximity to the site.**

Reasoned Justification

7.129 The boundary of this Strategic Growth Site allocation is defined on the Policies Map and comprises the following notations:

- Site for new housing
- Proposed Country Park, and
- Proposed new connection into Sandford Mill.

7.130 The site has an approved masterplan (21/00003/MAS) and planning applications have been submitted (Refs:22/01732/FUL and 22/01732/OUT) for 360 homes. This number is reflected in the 5 Year Housing Site Schedule April 2024. If this proposal is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit. Development is expected to be delivered between 2025 and 2035. This location represents an opportunity for a landscape-led development that maximises opportunities for travel by sustainable modes. It is one of four development sites East of Chelmsford, adjacent to Chelmsford Urban Area and close to local services and facilities in Great Baddow and Sandon.

7.131 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.132 The development should provide a mix of size and types of homes. The development is expected to promote the highest standard of design with dwelling heights, density and massing of new development which responds positively to the historic environment and the local landscape context. Affordable, self-build and custom-build, appropriately accessible and adaptable housing, as well as other types of specialist housing should be provided in accordance with the Council's policy requirements.

7.133 The development will provide an opportunity to provide a high-quality residential development and new Country Park to the north of the residential development. It will also provide an opportunity to provide an improved access to Sandford Mill which is an important community asset and a focus for regeneration. This will be provided by a new road through the development to the Country Park and a pedestrian and cycle bridge connecting the Country Park to Sandford Mill. It is envisaged that the new Visitor Centre will be located at Sandford Mill.

7.134 The Country Park will be expected to provide a high quality context for the residential development and protect and enhance the character and appearance of the adjoining Green Wedge and Conservation Area, retain and improve habitats for wildlife and provide new and enhanced recreational opportunities for local people. This will include high quality semi-natural greenspace to be used in conjunction with the existing Public Rights of Way network to provide circular dog-walking routes of at least 2.3km. Natural England must be consulted during the planning application process on the design of the high quality semi-natural

7 - Where will development growth be focused?

greenspaces, to ensure that these provide an effective alternative space for recreation to the SSSIs. Appropriate and sustainable long-term management and maintenance arrangements for the new Country Park will also be required. Any further contributions to provide, or make financial contributions towards new or enhanced sport, leisure or recreation facilities will be considered having regard to the provision of the new Country Park.

7.135 Even with onsite provision of the Country Park, the development will have the potential to result in an increase in recreational pressure on Blakes Wood, Danbury Common, and Lingwood Common SSSIs, which are in close proximity to the site. Developers will work closely with relevant local stakeholders, such as Natural England and the SSSI site managers (National Trust and Essex Wildlife Trust) to assess recreational pressure and provide the necessary mitigation measures for the SSSIs. Any costs incurred will be covered by the developers of the site. These measures will be costed over the full lifetime of the development, i.e. in perpetuity (taken to be 80 years), rather than the plan period.

7.136 The development will be expected to promote the highest standards of design to ensure that it works in sympathy with the local landscape and provides a strong sense of place. The design and layout of proposals will need to incorporate landscape compensation measures including the provision of suitable planting belts and buffers, restricting dwelling heights to mainly two storeys, protection of key views, promoting non-standard housing types and requiring lower dwelling densities at the most visually sensitive locations. The layout of the development will also need to reflect and incorporate a safeguarded corridor around the high pressure gas line that crosses the eastern part of the site. It is expected that the electricity pylons and lines that also cross the eastern part of the site will be removed and installed underground.

7.137 These measures will help to protect important views into and across the site from the north-west. Robust tree and hedge planting will also be expected to include at least heavy standard appropriate native species. Development will be considered in the context of an approved masterplan.

7.138 Opportunities for active and sustainable transport should be maximised to create neighbourhoods where alternative forms of transport to the private car (walking, cycling and public transport) are prioritised.

7.139 The development will be expected to improve connections for cycling and walking including connections into the existing networks and providing links to the City Centre, Chelmer East Green Wedge and nearby services and facilities such as the Vineyards Neighbourhood Centre, The Sandon School and Baddow Hall Primary School. Cycle paths from the site should connect with National Cycle Network Route 1 to the north-east which connects with Chelmer Village, the City Centre and Hammonds Road.

7.140 The development will be required to provide direct, safe and convenient connections to and crossings at Maldon Road including to existing bus stops and other local services and facilities. In addition, where appropriate and in consultation with the Local Highways and Transportation Authority, the development is expected to provide a safe multi-user crossing at Maldon Road.

7.141 The area has a fragmented bridleway network but there are opportunities within the four site allocations in East Chelmsford to provide bridleway connections within and/or adjacent to the sites and the countryside beyond where safe and appropriate.

7 - Where will development growth be focused?

7.142 A residential travel plan will be required for the development to include a package of measures to ensure active and sustainable transport are available to all new residents, to promote the benefits of active and sustainable transport and secure a modal shift from the private car.

7.143 The southern part of the site contains the remains of a Bronze Age enclosure, in the area north of the Manor Farm shop. Although the remains are not scheduled, previous excavation has revealed evidence of Bronze Age and later use of the site and its environs. The feature is potentially of national importance and therefore in accordance with the NPPF (2023) it should be treated as if it were a Scheduled Monument. An appropriate buffer will be required around the site and a green link to the river valley maintained, which is fundamental to the setting of the monument. Other significant archaeological remains and their settings should also be identified through an archaeological evaluation, and protected.

7.144 The development should seek to protect and enhance heritage assets including retaining the WWII pillbox in the eastern part of the site. This is part of a group of WWII pillboxes which form part of the General Headquarters defence line running north-south and skirting the east side of Chelmsford, forming part of a stop line in the event of invasion. These are an interesting feature and contribute to the heritage of the area. It is, therefore, expected that the development should retain, protect and provide interpretation and information boards for the WWII pillbox.

7.145 The site lies within a Mineral Safeguarding Area. The developer will be required to undertake a Mineral Resource Assessment to assess if the site contains a viable minerals resource that would require extraction prior to development.

STRATEGIC GROWTH SITE POLICY 3b – EAST OF CHELMSFORD - LAND NORTH OF MALDON ROAD (EMPLOYMENT)

Land to the north of Maldon Road as shown on the Policies Map, is allocated for an office/business park. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- **Around 5,000sqm (net) new Use Class E(g) floorspace, or other appropriate B Use Classes**
- **Stand-alone early years and childcare nursery (Use Class E(f)).**

Site masterplanning principles:

Movement and Access

- **Main vehicular access to the site will be from a new junction at Maldon Road**
- **Provide a well-connected internal road network including safeguarding a north-south bus entry and egress through the site**
- **Provide safe and convenient pedestrian and cycle connections including access to the Sandon Park and Ride.**

Historic and Natural Environment

- Preserve or enhance the character or appearance of the Chelmer and Blackwater Conservation Area
- Protect important views into and through the site from across the Chelmer Valley
- Create a network of multifunctional green infrastructure
- Mitigate the visual impact of the development
- Provide suitable SuDs and flood risk management
- Undertake a Mineral Resource Assessment
- Undertake an Archaeological Assessment.

Design and Layout

- Provide a coherent network of public open space, formal and informal sport, recreation and community space within the site
- Layout to provide a strategy for responding to the National Grid Electricity Transmission overhead transmission lines present within the site.

Site infrastructure requirements:

- New 56 place stand-alone early years and childcare nursery (Use Class E(f)) on 0.13 hectares of suitable land allocated for education and childcare use
- Safeguard land for the future expansion of Sandon Park and Ride site
- Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and sustain travel through active and sustainable transport.

Reasoned Justification

7.146 The site has an approved masterplan (Ref:20/00003/MAS) and a planning application has been submitted for up to 5,000sqm of commercial floorspace and provision of a day care nursery (Ref:22/00916/FUL and 22/0916/OUT). The site is expected to be delivered between 2025 and 2031. As such this allocation will support Chelmsford's economic growth by providing new employment floorspace and jobs. This allocation is located to the east of Great Baddow and north of Sandon, close to local services and facilities in these locations. It is one of four development sites East of Chelmsford.

7.147 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.148 The site is adjacent to Sandon Park and Ride and well located to existing and proposed developments East of Chelmsford. It has excellent access to the strategic road network via the A12 and A414.

7.149 The development should provide a mix of type and range of sizes of Use Class E(g) employment units to help Chelmsford accommodate the predicted growth in economic development and identified need for new jobs which include the business sectors identified

7 - Where will development growth be focused?

in Policy S8. To ensure flexibility and market responsiveness, other complementary B2 and B8 Use Classes may also be appropriate as part of the allocation.

7.150 To serve the proposed employment site and the wider area including patrons of the Park and Ride, a new stand-alone early years and childcare nursery should form part of the development proposals. The nursery accommodation could be built by ECC, the developer or a private early years nursery operator. This will be considered, alongside the selection of early years provider at site masterplanning and planning application stages in consultation with ECC.

7.151 The development will be expected to promote the highest standards of design to ensure that the type, size, heights, density and massing of new development responds positively to the historic and natural environment and works in sympathy with the local landscape. The design and layout of proposals will need to incorporate landscape compensation measures including the provision of suitable planting belts and buffers to preserve the character or appearance of the Conservation Area. The development is also expected to provide significant new trees in line with Policy DM17.

7.152 These measures will help to protect important views into and across the site from the north-west. Robust tree and hedge planting will also be expected to include at least heavy standard appropriate native species. Development will be considered in the context of an approved masterplan to address the nature, form, density, massing, design and phasing of the new development.

7.153 The development will be required to safeguard land (circa 1.51ha) for the future expansion of Sandon Park and Ride. The land will facilitate an expansion to the west of the existing site, with the area to be agreed through discussions with Essex County Council. The development will be expected to improve routes for cycling and walking including connections into the existing networks and providing links to the City Centre and Chelmer East Green Wedge.

7.154 Cycle paths from the site should connect with National Cycle Network Route 1 to the north to encourage active modes of travel. This route connects with Chelmer Village, the City Centre and Hammonds Road. A safe and convenient cycle/footway should connect the site to Sandon Park and Ride to the east to maximise use of the existing Park and Ride site.

7.155 The development will be required to provide direct, safe and convenient connections to and crossings at Maldon Road including to existing bus stops. In addition, where appropriate and in consultation with the Local Highways and Transportation Authority, the development shall provide safe crossing points for links to services.

7.156 Strategic Growth Site 16a, the East Chelmsford Garden Community, is located to the east of the A12 and north of the A414 Maldon Road. This proposed garden community is required to provide new active and sustainable routes that connect with Sandon Park and Ride, the City Centre and growth Location 3 (East of Chelmsford). Given Site 3b's location there is an opportunity to facilitate a bus route through the site to encourage sustainable travel and maximise the benefit of both an important transport hub and links to the City Centre, including the dedicated bus lane on the A1114.

7.157 Although the development quantum and extent of the allocation is set out in the Local Plan, the 'made' (adopted) Neighbourhood Plan in Sandon could help shape this site allocation.

7.158 The site lies within a Mineral Safeguarding Area. The developer will be required to undertake a Mineral Resource Assessment to assess if the site contains a viable minerals resource that would require extraction prior to development.

7.159 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

STRATEGIC GROWTH SITE POLICY 3c – EAST OF CHELMSFORD - LAND SOUTH OF MALDON ROAD

Land to the south of Maldon Road as shown on the Policies Map, is allocated for a residential development. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- **109 new homes of mixed size and type to include affordable housing. The final amount of new homes will be confirmed through the planning application process.**

Site masterplanning principles:

Movement and Access

- **Main vehicular access to the site will be from a new junction at Maldon Road/Sandford Mill Lane**
- **Provide a well-connected internal road network**
- **Provide safe and convenient pedestrian and cycle connections which will include access to the Sandon Park and Ride, adjacent developments and The Sandon School**
- **Provide a Pegasus Crossing across Maldon Road.**

Historic and Natural Environment

- **Minimise the impact on Cross Wood, the tree belt that lines the site to the north and north west**
- **Create a network of multifunctional green infrastructure**
- **Mitigate the visual impact of the development including the electricity pylons and the sub-station to the east of the site**
- **Provide suitable SuDs and flood risk management**
- **Provide necessary mitigation to address the cumulative recreational pressure on SSSIs in proximity to the site**
- **Preserve or enhance the character or appearance of the Sandon Conservation Area**
- **Preserve and where appropriate enhance the setting of the Graces Cross listed building**
- **Retain the WWII pillbox to the east of the site and provide interpretation boards**

7 - Where will development growth be focused?

- Undertake a Mineral Resource Assessment
- Undertake an Archaeological Assessment.

Design and Layout

- Development should front onto Molrams Lane, Maldon Road and the open space to the east
- Provide a coherent network of public open space, formal and informal sport, recreation and community space within the site
- Remove low voltage electricity lines from within the site and install electricity cables underground.

Site infrastructure requirements:

- Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and sustain travel through active and sustainable transport
- Provide new and enhanced cycle routes, footpaths, Public Rights of Way and bridleways where appropriate
- Where appropriate and proportionate, financial contributions for the provision of new and enhanced off-site cycle routes connecting the development to the City Centre and the wider locality
- Financial contributions towards primary and secondary education and early years and childcare provision as required by the Local Education Authority
- Financial contributions towards and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities
- Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities
- Contributions towards addressing cumulative recreational pressure on SSSIs in proximity to the site.

Reasoned Justification

7.160 The boundary of this Strategic Growth Site allocation is defined on the Policies Map and comprises the following notations:

- New housing site, and
- Land allocated for future recreation use/or SUDS and/or biodiversity.

7.161 The site has an approved masterplan (Ref:20/00003/MAS) and a planning application has been submitted for up to 109 new homes (Ref:22/00916/FUL and 22/0916/OUT). This number is reflected in the 5 Year Housing Site Schedule April 2024. If this proposal is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit. Development is expected to be delivered between 2025 and 2029. This allocation is located to the east of Great Baddow and north of Sandon, close to local services and facilities in these locations. This allocation is one of four development sites East of Chelmsford.

7 - Where will development growth be focused?

7.162 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.163 The development should provide a mix of size and types of homes. The development is expected to promote the highest standard of design and place-making principles with dwelling heights, density and massing of new development which responds positively to the historic environment, local context, character and vernacular and landscaping principles. Affordable, self-build and custom-build, appropriately accessible and adaptable housing, as well as other types of specialist housing should be provided in accordance with the Council's policy requirements.

7.164 The site is adjacent to the edge of the built-up area. The development must respect the character of the location, by creating a generous landscaped edge to the eastern boundary and ensure that the open space in the south of the site maximises the separation of the development with Sandon village.

7.165 Cross Wood, the existing strong wooded boundary to the north and north west of the site is a result of a Forestry Commission grant from 1997. The trees are not protected by a Tree Preservation Order and a small section of Cross Wood will need to be removed to incorporate a vehicular access from Maldon Road. In accordance with a Forestry Commission obligation until 2027, if any trees are removed, parts of the grant will have to be repaid. Hedgerows on the site shall also be retained and strengthened where possible.

7.166 The development should conserve or enhance heritage assets including retaining the WWII pillbox (North of Sandon) to the east of the site. This is part of a group of WWII pillboxes which form part of the General Headquarters defence line running north-south and skirting the east side of Chelmsford, forming part of a stop line in the event of invasion. These are an interesting feature and contribute to the heritage of the area. It is, therefore, expected that the development should retain, protect and provide interpretation and information boards for the WWII pillbox.

7.167 The layout of the proposed development and proposed open space and landscaping should be used to minimise the visual impact of the new development and the electricity pylons to the east of the site. The layout of the development will also need to reflect and incorporate a safeguarded corridor for the high pressure gas line which crosses the site. For these reasons, the land to the east of the site is allocated for future SUDs to serve the site, as shown on the Policies Map.

7.168 The development will be expected to improve connections for cycling, walking and horse riding including connections into the existing networks and providing links to the City Centre, Chelmer East Green Wedge and nearby services and facilities such as The Sandon School, Baddow Hall Primary School and the Vineyards Neighbourhood Centre.

7.169 The development will be required to provide direct, safe and convenient connections to and crossings at Maldon Road including to existing bus stops. In addition, where appropriate and in consultation with the Local Highways and Transportation Authority, the development is expected to provide a safe multi-user crossing at Maldon Road.

7.170 The area has a fragmented bridleway network but there are opportunities within the four site allocations in East Chelmsford to provide bridleway connections within and/or adjacent the sites and the countryside beyond where safe and appropriate.

7 - Where will development growth be focused?

7.171 A residential travel plan will be required for the development to include a package of measures to ensure active and sustainable transport are available to all new residents, to promote the benefits of active and sustainable transport and secure a modal shift from the private car.

7.172 Through the provision of the Country Park at Strategic Growth Site 3a, a high quality semi-natural greenspace will be provided to meet Natural England's 8ha/1000 new population metric and minimum circular dog-walking route on or off site of 2.3km which make use of existing Public Rights of Way and/or highways. The residential developments in East Chelmsford (SGS3a, SGS3c and SGS3d), East Chelmsford Garden Community (SGS16a) and Danbury (SGS13) have the potential to result in an increase in recreational pressure on Blakes Wood, Danbury Common, and Lingwood Common SSSIs, which are in proximity to the site. Developers will work closely with relevant local stakeholders, such as Natural England and the SSSI site managers (National Trust and Essex Wildlife Trust) to assess recreational pressure and provide the necessary mitigation measures for SSSIs. Any costs incurred will be covered by the developers of the site. These measures will be costed over the full lifetime of the development, i.e. in perpetuity (taken to be 80 years), rather than the plan period.

7.173 Although the development quantum and extent of the allocation is set out in the Local Plan, the 'made' (adopted) Neighbourhood Plan in Sandon could help to shape this site allocation.

7.174 The site lies within a Mineral Safeguarding Area. The developer will be required to undertake a Mineral Resource Assessment to assess if the site contains a viable minerals resource that would require extraction prior to development.

7.175 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

GROWTH SITE POLICY 3d – EAST OF CHELMSFORD - LAND NORTH OF MALDON ROAD

Land to the north of Maldon Road as shown on the Policies Map, is allocated for a residential development. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- **65 new homes of mixed size and type to include affordable housing. The final amount of new homes will be confirmed through the planning application process.**

Site masterplanning principles:

Movement and Access

- **Main vehicular access to the site will be from a new junction at Maldon Road/Sandford Mill Lane**
- **Provide a well-connected internal road network**
- **Provide safe and convenient pedestrian and cycle connections which will include access to Sandon Park and Ride and adjacent developments.**

Historic and Natural Environment

- Preserve or enhance the character or appearance of the Chelmer and Blackwater Conservation Area
- Provide necessary mitigation to address the cumulative recreational pressure on SSSIs in proximity to the site
- Protect important views into and through the site from across the Chelmer Valley
- Create a network of multifunctional green infrastructure
- Mitigate the visual impact of the development
- Provide suitable SuDs and flood risk management
- Retain the WWII pillbox in the northern part of the site and provide interpretation boards
- Undertake a Mineral Resource Assessment
- Undertake an Archaeological Assessment.

Design and Layout

- Provide a coherent network of public open space, formal and informal sport, recreation and community space within the site.

Site infrastructure requirements:

- Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and sustain travel through active and sustainable transport
- Where appropriate and proportionate, financial contributions for the provision of new and enhanced off-site cycle routes connecting the development to the City Centre and the wider locality
- Provide new and enhanced cycle routes, footpaths, Public Rights of Way and bridleways where appropriate
- Financial contributions towards primary and secondary education and early years and childcare provision as required by the Local Education Authority
- Financial contributions towards and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities
- Contributions towards addressing cumulative recreational pressure on SSSIs in proximity to the site.

Reasoned Justification

7.176 The site has an approved masterplan (Ref:20/00003/MAS) and a planning application has been submitted for up to 65 new homes (Ref:22/00916/FUL and 22/0916/OUT). This number is reflected in the 5 Year Housing Site Schedule April 2024. If this proposal is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit. Development is expected to be delivered between 2025 and 2029. This allocation is located to the east of Great Baddow and north of Sandon, close to local services

7 - Where will development growth be focused?

and facilities in these locations. This allocation is one of four development sites East of Chelmsford.

7.177 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.178 The development should provide a mix of size and types of homes. The development is expected to promote the highest standard of design and place-making principles with dwelling heights, density and massing of new development which responds positively to the historic environment, local context, character and vernacular and landscaping principles. Affordable, self-build and custom-build, appropriately accessible and adaptable housing, as well as other types of specialist housing should be provided in accordance with the Council's policy requirements.

7.179 The development will be expected to promote the highest standards of design to ensure that it works in sympathy with the local landscape. The design and layout of proposals will need to incorporate landscape compensation measures including the provision of suitable planting belts and buffers.

7.180 These measures will help to protect important views into and across the site from the north-west. Robust tree and hedge planting will also be expected to include at least heavy standard appropriate native species. Development will be considered in the context of an approved masterplan to address the nature, form, density, massing, design and phasing of the new development.

7.181 The development will be expected to improve connections for cycling, walking and horse riding including connections into the existing networks and providing links to the City Centre, Chelmer East Green Wedge and nearby services and facilities such as the Vineyards Neighbourhood Centre, The Sandon School and Baddow Hall Primary School. Cycle paths from the site should connect with National Cycle Network Route 1 to the north which connects with Chelmer Village, the City Centre and Hammonds Road.

7.182 A safe and convenient cycle/footway should connect the site to Sandon Park and Ride to the east to increase the patronage of the Park and Ride buses. The development will also be required to provide direct, safe and convenient connections to and crossing at Maldon Road including to existing bus stops. In addition, where appropriate and in consultation with the Local Highways and Transportation Authority, the development is expected to provide a safe multi-user crossing at Maldon Road.

7.183 A residential travel plan will be required for the development to include a package of measures to ensure active and sustainable transport are available to all new residents, to promote the benefits of active and sustainable transport and secure a modal shift from the private car.

7.184 The area has a fragmented bridleway network but there are opportunities within the four site allocations in East Chelmsford to provide bridleway connections within and/or adjacent to the sites and the countryside beyond where safe and appropriate.

7.185 Through the provision of the Country Park at Strategic Growth Site 3a, a high quality semi-natural greenspace will be provided to meet Natural England's 8ha/1000 new population metric and minimum circular dog-walking route on or off site of 2.3km which make use of existing Public Rights of Way and/or highways. The residential developments in East

7 - Where will development growth be focused?

Chelmsford (SGS3a, SGS3c and SGS3d), East Chelmsford Garden Community (SGS16a) and Danbury (SGS13) have the potential to result in an increase in recreational pressure on Blakes Wood, Danbury Common, and Lingwood Common SSSIs, which are in proximity to the site. Developers will work closely with relevant local stakeholders, such as Natural England and the SSSI site managers (National Trust and Essex Wildlife Trust) to assess recreational pressure and provide the necessary mitigation measures for SSSIs. Any costs incurred will be covered by the developers of the site. These measures will be costed over the full lifetime of the development, i.e. in perpetuity (taken to be 80 years), rather than the plan period.

7.186 The development should conserve or enhance heritage assets including retaining the WWII pillbox (Hammonds Road) in the northern part of the site. This is part of a group of WWII pillboxes which form part of the General Headquarters defence line running north-south and skirting the east side of Chelmsford, forming part of a stop line in the event of invasion. These are an interesting feature and contribute to the heritage of the area. It is, therefore, expected that the development should retain, protect and provide interpretation and information boards for the WWII pillbox.

7.187 Although the development quantum and extent of the allocation is set out in the Local Plan, the 'made' (adopted) Neighbourhood Plan in Sandon could help to shape this site allocation.

7.188 The site lies within a Mineral Safeguarding Area. The developer will be required to undertake a Mineral Resource Assessment to assess if the site contains a viable minerals resource that would require extraction prior to development.

7.189 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

Location 4 – Galleywood

GROWTH SITE POLICY 4 – LAND NORTH OF GALLEYWOOD RESERVOIR

Land north of Galleywood Reservoir, as shown on the Policies Map, is allocated for residential development. Development will be expected to provide:

Amount and type of development:

- **24 new affordable homes of mixed size and type. The final amount of new homes will be confirmed through the planning application process.**

Site development principles:

- **Vehicular access will be from Pyms Road**
- **Retention of the existing access from Beehive Lane to the reservoir site**
- **Provide safe and convenient pedestrian and cycle connections**
- **Protect existing trees within the development site**
- **Provide soft landscaping around the new access junction**
- **Provide suitable SuDS and flood risk management**
- **Provide suitable multifunctional Green Infrastructure.**

7 - Where will development growth be focused?

Site infrastructure requirements:

- **New and enhanced cycle routes and footpaths**
- **On-site provision of new parking spaces that will be lost from Pyms Road**
- **Appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Financial contributions towards primary education and early years and childcare provision as required by the Local Education Authority**
- **Financial contributions towards provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities**
- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities.**

Reasoned Justification

7.190 Galleywood is a Key Service Settlement. This allocation is located within Galleywood Defined Settlement Boundary and close to local services and facilities in the village. It will provide a high quality residential development of 24 new affordable new homes expected to be delivered between 2025 and 2026. The site has outline planning permission (Ref: 22/00397/OUT). This number is reflected in the 5 Year Housing Sites Schedule April 2024. If this permission is not implemented and a new proposal comes forward, the site capacity will be considered on its own merit.

7.191 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.192 The development should provide a mix of size and types of homes. The development is expected to promote the highest standards of design with dwelling heights and massing that responds positively to the local context. Appropriately accessible and adaptable housing should be provided in accordance with the Council's policy requirements.

7.193 The development will take its main vehicular access from Pyms Road and be expected to adequately mitigate its likely impacts on the performance of the local and strategic road network. Additional safe and convenient pedestrian and cycle connections should also be provided between the site and the wider area.

7.194 The site allocation comprises a variety of existing land uses and there is potential to combine, in whole or in part, land occupied by garages, adjacent green space and the Essex and Suffolk Water depot (excluding reservoir) for new residential development.

7.195 Pyms Road currently experiences high demand from on street parking and the new access junction will lead to the loss of existing on-street parking spaces. Spaces lost will need to be reprovided on the allocation site.

7.196 The site is located within a Critical Drainage Area (CDA). Development may have the potential to impact on the CDA in respect of surface water flooding. As a result of this, the site is likely to require an individually designed mitigation scheme to address this issue.

7.197 The development will also be required to relocate the parking provided by existing garages within the development, either through new garages or the space used to provide general public parking.

7.198 The loss of the green space on the north-east of the site will need to be compensated by financial contributions towards new or enhanced formal open space/outdoor sports facilities and/or indoor leisure facilities to address priorities identified by the Council.

7.199 Archaeological deposits may exist within the site due to its vicinity with the Napoleonic Fort on Galleywood Common. Therefore, an archaeological assessment of the site will be required prior to development.

Location 5 – Writtle

GROWTH SITE POLICY 5 – LAND SURROUNDING TELEPHONE EXCHANGE, ONGAR ROAD, WRITTLE

Land surrounding the Telephone Exchange on Ongar Road, Writtle, as shown on the Policies Map, is allocated for residential development. Development will be expected to provide:

Amount and type of development:

- **Around 25 new homes of a mixed size and type to include affordable housing. The final amount of new homes will be confirmed through the planning application process.**

Site development principles:

- **Vehicular access to the site will be from Ongar Road and/or The Green**
- **Provide safe and convenient pedestrian and cycle connections**
- **Preserve or enhance the character or appearance of the Writtle Conservation Area and its setting**
- **Preserve and where appropriate enhance the setting of the listed buildings at 49 and 57 The Green**
- **Retain existing trees within the development site, unless tree removal can be justified through an arboricultural impact assessment**
- **Provide suitable SuDS and flood risk management**
- **Provide suitable multifunctional Green Infrastructure.**

Site infrastructure requirements:

- **Provide new and enhanced cycle routes and footpaths where appropriate**
- **Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Financial contributions towards primary education and early years and childcare provision as required by the Local Education Authority**

7 - Where will development growth be focused?

- **Financial contributions towards provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities**
- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities.**

Reasoned Justification

7.200 Writtle is a Key Service Settlement. This allocation is located within Writtle Defined Settlement Boundary and close to local services and facilities in the village. It will provide a high-quality residential development of around 25 new homes expected to be delivered between 2035 and 2036.

7.201 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.202 The development should provide a mix of size and types of homes. The development is expected to promote the highest standards of design with dwelling heights and massing that responds positively to the local context. A proportion of affordable housing and appropriately accessible and adaptable housing should be provided in accordance with the Council's policy requirements.

7.203 The development could take its main vehicular access from Ongar Road and/or The Green, although access from Ongar Road is narrow in parts and will require careful design. The development will be expected to adequately mitigate its likely impacts on the performance of the local and strategic road network. Additional pedestrian and cycle connections should also be provided between the site and the wider area.

7.204 The site contains a number of mature trees which could soften the built development and integrate the development into the area. Any existing trees of good quality should therefore be retained where possible.

7.205 A scheme layout should not preclude development opportunities on adjoining land to the east and west, with potential for a new access from The Green to the side of The Rose and Crown Public House.

7.206 Although the development quantum and extent of the allocation is set out in the Local Plan, the 'made' (adopted) Neighbourhood Plan in Writtle could help to shape this site allocation.

Growth Area 2 – North Chelmsford

7.207 The area to the north of Chelmsford is, and will continue to be, a significant area of change. This is due to its strategic location along key transport corridors which provides access into the wider North Essex strategic road network including the A120 corridor. There is significant new transport infrastructure planned for the A130/A131 corridor including a new Chelmsford North East Bypass (CNEB), new Beaulieu Park Rail Station and new Park and Ride. Development in this Growth Area, in particular in North East Chelmsford, represents a major opportunity to help deliver this infrastructure and create new strategic neighbourhoods and employment opportunities. There are also opportunities to maximise new infrastructure delivery given the close proximity of new development growth in Braintree District.

7.208 As shown in Figure 17, this growth area will focus new development growth at four locations – North East Chelmsford (Chelmsford Garden Community) (Location 6), Great Leighs (Location 7), North of Broomfield (Location 8) and North West Chelmsford (Little Boyton Hall Farm Rural employment Area). Together these will deliver around 7,200 new homes and around 66,500sqm of new employment floorspace. Provision is also made for 10 Gypsy and Traveller pitches and five Travelling Showpeople plots. These allocations will deliver a substantial number of new homes and employment over the Local Plan period, underpinned by a comprehensive package of new infrastructure including new schools, early years and childcare provision, green infrastructure and neighbourhood centres. The sites at North East Chelmsford (Chelmsford Garden Community) (Location 6) and North of Broomfield (Location 8) will also maximise opportunities for enjoyment of the Green Wedge and use for sustainable travel into the City Centre (cycling and walking).

7.209 The Council's previously adopted Development Plan Documents focused strategic greenfield growth in North Chelmsford. Further growth of around 5,569 new homes, and around 9ha of dedicated employment land are allocated in North-East Chelmsford (Chelmsford Garden Community) (Location 6) and will be delivered over the Local Plan period. Around 680 further homes will be delivered in the period beyond 2041. This will be a landscape-led development, utilising Garden City principles and well-connected by improved road and public transport links. It will accommodate the most significant amount of new housing and employment growth in the form of attractive well-designed communities, centred around open space/leisure facilities, a new Country Park/Destination Parks and a new Business/Science Park. Provision is made for 10 Gypsy and Traveller pitches and 15 Travelling Showpeople plots.

7.210 Development at Great Leighs (Location 7) will deliver around 1,100 new homes and North of Broomfield (Location 8) will deliver around 500 new homes, along with supporting infrastructure. These allocations will provide opportunities to contribute towards and enhance existing facilities and services in these villages.

7.211 New employment development will be provided through an extension to Little Boyton Hall Farm Rural Employment Area, North West Chelmsford (Location 15) and Waltham Road Employment Area, Boreham (Location 9a). Expansion of these well-established employment sites will provide rural inward investment opportunities and reflect the aspirations of national policy to support the sustainable growth and expansion of business in rural areas.

7 - Where will development growth be focused?

7.212 In addition, new homes are allocated at Ford End on a small sites no larger than one hectare in size (Locations 14b). This Service Settlement has a primary school, village hall and sports facilities making it suitable for limited scale development. New development will contribute towards and enhance existing facilities and services of the village.

Figure 17 : Growth Area 2 - North Chelmsford

Location 6 - North East Chelmsford (Chelmsford Garden Community)

STRATEGIC GROWTH SITE POLICY 6 – NORTH EAST CHELMSFORD (CHELMSFORD GARDEN COMMUNITY)

Land to the north-east of Chelmsford beyond the existing developments at Beaulieu and Channels including the former Boreham Airfield, as shown on the Policies Map, is allocated for a high-quality comprehensively planned new sustainable Garden Community that will provide a significant amount of new housing and employment development, and maximise opportunities for active and sustainable travel, in a landscaped setting. Development proposals will accord with the Stage 1 Development Framework Document (DFD) Masterplan approved by the Council (Ref: 22/00001/MAS) (or any subsequent approved revised Masterplan) to provide:

Amount and type of development:

- Around 5,569 new homes of mixed size and type to include affordable housing and specialist residential accommodation in the period to 2041. The allocated site is able provide a further 681 new homes in the period beyond 2041. The final amount of new homes will be confirmed through the planning application process
- Around 9ha or 56,946sqm of dedicated employment land
- Gypsy and Traveller site for 10 serviced pitches.

Supporting on-site development:

- Strategic scale open space including new Country Park/Destination Parks
- Safeguarded land for the single carriageway road (Section 1a) of the Chelmsford North East Bypass within the site boundary
- A vehicular Northern Radial Distributor Road from Essex Regiment Way to the Chelmsford North East Bypass
- Four new mixed use village centres incorporating provision for convenience food retail, community and healthcare provision
- Provision of a new all-through school (including primary with co-located early years and childcare nurseries, secondary and potential for a sixth form centre)
- Provision of up to three further new primary schools with co-located early years and childcare nurseries
- Provision of four new stand-alone early years and childcare nurseries
- Appropriate provision of community space and significant new multifunctional green infrastructure.

Site masterplanning principles:

Movement and Access

- Main vehicular access to the site will be from Essex Regiment Way, a new vehicular Northern Radial Distributor Road, and Beaulieu Parkway (RDR1)
- Additional access to the site will be from Chelmsford North East Bypass

7 - Where will development growth be focused?

- Provide well-connected internal road layouts which allow good accessibility for bus services and bus priority measures
- Provide an effective movement strategy within the site
- Provide safe and convenient pedestrian, cycle and where appropriate bridleway connections within the site and to the wider area including the Chelmer North Green Wedge, existing development in Chelmsford Garden Community, Beaulieu Park Rail Station and associated employment area, new Country Park and Destination Parks and development east of the Chelmsford North East Bypass
- Provide a dedicated car club for residents and businesses on site and available to the rest of Chelmsford Garden Community
- Provide safe multi-user crossings of the Northern Radial Distributor Road and the Chelmsford North East Bypass
- Measures to enable travel by active and sustainable modes and that offer travel choice for people by non-car modes including a network of mobility hubs to enable a 60% share for active and sustainable transport modes
- Extension of on-site Chelmsford Area Bus Based Rapid Transit (ChART) infrastructure
- Improvements to the local and strategic road network as required by the Local Highways and Transportation Authority.

Historic and Natural Environment

- Provide a network of multifunctional green infrastructure to mitigate any potential visual, biodiversity and heritage impacts of the development
- Preserve or enhance the character or appearance of the Little Waltham Conservation Area and its setting
- Preserve and where appropriate enhance the settings of the following listed buildings including New Hall, Old Lodge, Bulls Lodge, Belsteads Farmhouse and barn, Channels Farmhouse, Mount Maskells, Powers Farmhouse, Peverel's Farmhouse, Shoulderstick Hall, Hobbits, Shuttleworth, Pratts Farmhouse, Pratts Farm Cottages, and New Hall Registered Park and Garden
- Provide appropriate mitigation which may include a landscape buffer to mitigate any identified harm through detailed heritage assessments to preserve the settings of nearby designated and non-designated heritage assets including Powers Farm, Peverel's Farm, Park Farm, Channels, Belsteads and those on Wheelers Hill/Cranham Road
- Provide suitable SuDs and flood risk management
- Appropriate re-phasing of minerals extraction and revisions to the restoration and aftercare scheme, and Minerals Resource Assessment to enable the delivery of the proposed development, to be agreed with the Minerals and Waste Planning Authority
- Appropriate habitat mitigation and creation
- Undertake an Archaeological Assessment
- Provide a minimum of 20% biodiversity net gain above the ecological baseline, or in accordance with the DFD.

Design and Layout

- Development to be planned around a coherent framework of routes, blocks and spaces that deliver areas of distinct character
- Layout to provide a coherent network of public open space, formal and informal sport, recreation and community space within the site
- Integrate historic and landscape features into the surrounding rural and urban context
- Incorporate appropriate safeguarding of suitable access for the maintenance of foul and surface water drainage infrastructure
- Two tiers of design guidance will directly inform the preparation of the applications for approval of reserved matters (i) the Site Wide Principles Document (informative) and (ii) the Detailed Design Codes (prescriptive)
- The Site Wide Principles Document will describe the aspects of spatial co-ordination between different zones and development parcels and will accompany the outline planning applications
- The preparation and submission of Detailed Design Codes for approval will be a condition of each outline planning permission.

Site infrastructure requirements:

- A new all-through school (Use Class F1(a)), including secondary, primary and early years, on 12.15 hectares of suitable land allocated for education and early years and childcare use (Use Class E(f))
- Three further new primary schools (Use Class F1(a)) each with a co-located early years and childcare nursery (Use Class E(f)) with one site of 2.4 hectares and two of 2.1 hectares of suitable land allocated for education and childcare use
- Four new 56 place stand-alone early years and childcare nurseries (Use Class E(f)) on 0.13 hectares of suitable land allocated for education and childcare use
- Appropriate improvements to the local and strategic road network to include necessary works to Essex Regiment Way as required by the Local Highways and Transportation Authority
- A single carriageway road (Section 1a) of the Chelmsford North East Bypass and a new Northern Radial Distributor Road
- Appropriate measures to promote and enhance active and sustainable transport including an extension of Chelmsford Area Bus Based Rapid Transit (ChART) infrastructure and a cycle/footpath bridge over Essex Regiment Way
- New and enhanced cycle routes, footpaths, Public Rights of Way and bridleways where appropriate
- Financial contributions to the delivery of the Chelmsford North East Bypass (Section 1a) and new rail station
- Provide and/or financial contributions towards provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board, and Police, ambulance and fire and rescue facilities

7 - Where will development growth be focused?

- Provision of and financial contribution to facilitate and sustain car club facilities for use by residents and businesses within the site and the wider community
- Provide, or make financial contributions to, new or enhanced community space and facilities, sport, leisure and recreation facilities
- Provide strategic scale open space including new Country Park/Destination Parks with delivery mechanism to provide for their long-term management and maintenance
- New multifunctional green infrastructure including public open space, formal and informal recreation, outdoor sports facilities and community gardens and allotments
- Safeguarded land for the future extension of Chelmer Valley Park and Ride
- Appropriate flood risk management measures and SuDS.

The Council will encourage the appropriate development of renewable, low carbon and decentralised energy schemes on this site together with mass waste collection systems where they are deliverable, appropriate and do not give rise to adverse environmental or other amenity impacts.

The masterplan will need to be underpinned by Garden City Principles and address and respond to the protected route corridor of the proposed A131 Chelmsford North East Bypass.

Stewardship

- Establish a robust and sustainable stewardship structure early on in the planning and delivery process
- A Stewardship Statement to accompany the first outline planning application providing full details of a) the governance structure and methods of funding of the proposed stewardship vehicle, b) public spaces and community assets to be owned, managed and maintained by the proposed stewardship vehicle and c) an indicative programme for the establishment and operation of the proposed stewardship vehicle
- A Stewardship Strategy to be provided as part of the site specific agreement to include a) a robust governance strategy of the chosen stewardship vehicle, b) a full Business Plan for the chosen stewardship vehicle and c) arrangements for maintenance, management and monitoring of public spaces and community assets
- Stewardship activities are required to be in place in advance of the first housing occupations to ensure timely delivery of community development activities
- The Chelmsford Garden Community Council to have a defined remit in stewardship across the whole garden community area to foster collaboration, create accountability, provide consistency and ensure community engagement
- A single not-for-profit stewardship body to work in partnership with the Chelmsford Garden Community Council to provide a coordinating role to

stewardship, place making and community development and to deliver the garden community's vision

- **The Stewardship Body to make use of funding opportunities including income-generating assets and resident service charges, with the latter to be minimised and capped as appropriate.**

Reasoned Justification

7.213 The boundary of this Strategic Growth Site allocation is defined on the Policies Map and comprises the following notations:

- New Garden Community for major housing and employment development
- Proposed Country Park
- Proposed Northern Radial Distributor Road, and
- Existing open space.

7.214 The development will provide a large sustainable urban extension based around Garden City Principles for over 6,000 new homes, around 9ha or 56,946sqm of dedicated employment land, new Country Park/Destination Parks and safeguarded land for a single carriageway road for the new Chelmsford North-East Bypass. 5,569 of the new homes will be delivered in the period to 2041. The development has an approved Stage 1 Masterplan (Ref:22/00001/MAS) comprising three independent core documents: the Development Framework Document (DFD), the Infrastructure Delivery Plan (IDP), and the Planning Framework Agreement (PFA), and outline planning applications and a full application for the Northern RDR which have been submitted (Refs:22/01950/FUL, 22/01950/OUT (Zone 1), 23/00124/FUL, 23/00124/OUT (Zone 3), 23/00114/FUL (NRDR) and 23/01751/OUT (Zone 2)).

7.215 This site lies to the north-east of Chelmsford Urban Area, close to services and facilities in the existing and planned developments at Beaulieu and Channels. 6,250 homes is reflected in the 5 Year Housing Site Schedule April 2024. If these proposals are not implemented and new proposals come forward, the site capacity will be considered on its individual merit. The Garden Community is expected to be delivered between 2025 and 2044.

7.216 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.217 The development will provide a high-quality comprehensive garden community development underpinned by a series of interrelated principles which are based on the Town and Country Planning Association (TCPA) Garden City Principles. These include community and stakeholder involvement in the design and delivery of the garden community, promoting the highest quality of design, providing opportunities for employment, encouraging healthy and active lifestyles, meeting the housing needs of all local people, providing integrated and sustainable transport systems, and putting in place long-term governance and stewardship arrangements for the new community infrastructure and assets.

7.218 The establishment of a robust and sustainable stewardship structure early on in the planning and delivery process forms a key requirement of the development establishing a consistent approach to stewardship and place keeping across the Garden Community. The

7 - Where will development growth be focused?

expectation is that the newly formed Chelmsford Garden Community Council would have a defined remit in stewardship to foster collaboration, create accountability, provide consistency and ensure community engagement. A single not-for-profit Stewardship Body would be formed to work in partnership with the Garden Community Council to provide a co-ordinating role to stewardship, place making and community development and to deliver the vision for the Garden Community. The Stewardship Body could include additional roles for the Garden Community Council and could commission different facilitators to manage and maintain the public spaces and community assets within the Garden Community. The Stewardship Body is expected to be funded through a blend of income generating assets and resident service charges with the latter to be minimised and capped as appropriate. Where appropriate, other means of funding may also be identified.

7.219 A formal governance structure will be established with oversight for the whole Garden Community to ensure appropriate common collaborative arrangements are put in place.

7.220 The development should provide a mix of size and types of homes, to meet local needs and create a mixed and inclusive community. Affordable, self-build and custom-build, and appropriately accessible and adaptable housing should be provided in accordance with the Council's policy requirements. The development will also be expected to provide specialist residential accommodation which could include accommodation for frail elderly and homes for those with disabilities or support needs. This provision should be based on the latest assessment of need and in consultation with Essex County Council.

7.221 As this is a Strategic Growth Site and in order to achieve a mixed and balanced new community, the development will be required to provide a Gypsy and Traveller site for 10 pitches, within the Strategic Growth Site allocation, as shown on the Policies Map. The location of the site will be determined through the masterplanning process. The site will be serviced i.e. provided with services such as water, waste disposal and electricity. It is expected that the site will be delivered through a comprehensive approach, such as with a Registered Housing Provider.

7.222 The development will be required to provide around 9ha of dedicated employment land which could accommodate up to 56,946 sqm of employment floorspace. This is expected to contribute significantly to the City's economic growth by providing a mix of opportunities for accommodation for medium and large-sized businesses. The new development is expected to deliver two employment hubs with prospects for an Innovation Park of the highest design quality. This will be attractive to leading businesses in the Research and Development and High Technology sectors and could help place Chelmsford at the forefront of 21st century economic development in Essex and beyond. The new employment development will be in addition to existing commitments for significant new office/business floorspace in Chelmsford Garden Community at Beaulieu and Channels including Beaulieu XChange business park.

7.223 A wide range of new community services and facilities including a new all through school (including primary with co-located early years and childcare nurseries, secondary and potentially a sixth form centre), three new primary schools with co-located early years and childcare nurseries and at least four standalone nurseries, open spaces, recreation, sport and play facilities, community facilities and mixed use village centres will need to be provided on the site. These services and facilities should be of an appropriate scale to serve the new communities and located where they will be easily accessible by walking, cycling and public

7 - Where will development growth be focused?

transport to the majority of residents in the development and existing and planned neighbourhoods in Chelmsford Garden Community. The village centres will need to make provision for community and healthcare facilities, as required by the NHS Mid and South Essex Integrated Care Board, and a main unit for convenience food shopping not exceeding 500sqm gross floorspace. The planning and design of development is required to encourage healthy and active lifestyle, in line with Sport England Active Design guidance. Appropriate contributions will also need to be made for police, ambulance and fire and rescue facilities.

7.224 This site allocation will support Chelmsford's economic growth by providing new employment floorspace and jobs. Locations for office, employment and community space will need to be incorporated in a logical way to relate to local needs and maintain a balance of uses on the site and the adjoining Chelmsford Urban Area. The development should provide a mix of type and range of sizes of Use Class E(g) employment units to help Chelmsford accommodate the predicted growth in economic development and identified need for new jobs which include the business sectors identified in Policy S8. To ensure flexibility and market responsiveness, other complementary employment uses may also be appropriate as part of the allocation.

7.225 The all through school campus should be provided on a site of around 12 hectares of land. The developer will be expected to provide the education land and total cost of the physical education scheme provision with delivery through the Local Education Authority. Opportunities for dual use sports facilities within the new secondary school form part of the masterplan and will be secured in conjunction with the Local Education Authority through the outline planning application. Consideration should be given to Essex School Organisation Service's 'Garden Communities and Planning School Places' to ensure schools are appropriately planned and laid out to serve the Garden Community.

7.226 The development will take its main vehicular access from Essex Regiment Way, Beaulieu Parkway (RDR1) and a new vehicular access Northern Radial Distributor Road. Additional access to the site will be from Chelmsford North East Bypass. The development will be expected to adequately mitigate its likely proportionate impacts on the performance of the local and strategic road network. These will be expected to include:

- Appropriate improvements at Boreham Interchange, along Essex Regiment Way and other junctions on the A1016 and A131 main road corridors
- A new Northern Radial Distributor Road from the Chelmsford North East Bypass to Essex Regiment Way and to provide direct access into the employment hub.

7.227 The development will also be required to safeguard the preferred route corridor for the Chelmsford North East Bypass, and ensure that development is served with suitable junctions directly from this strategic route.

7.228 The development will be expected to provide additional and improved safe and convenient pedestrian, cycle and where appropriate bridleway connections within the site and to the wider area including the Chelmer North Green Wedge, existing development in Chelmsford Garden Community, Beaulieu Park Rail Station and associated employment area, Country Park/Destination Parks and development east of the Chelmsford North East Bypass, City Centre, surrounding countryside and the wider strategic network. Improved access must include safe multi-mode crossing points for Essex Regiment Way and the Chelmsford North East Bypass.

7 - Where will development growth be focused?

7.229 Site-wide travel plan(s) will be expected to incorporate strategic measures which reduce the need to travel and encourage people to make sustainable travel choices, and demonstrate a 60% modal share for active and sustainable transport. Household travel plans will tailor those strategies to households and will include limited-term access to subsidised bus services and access to car clubs. Provision of a car club will provide a viable alternative to car ownership and can reduce the need for land devoted to car parking. The development will be large enough to support its own car club and there will be alternative means of active and sustainable transport available to residents to complement it.

7.230 The development will be required to safeguard land for the future expansion of Chelmer Valley Park and Ride and to maximise opportunities for active and sustainable transport modes to be taken up to create neighbourhoods where alternative forms of transport to the private car (walking, cycling and public transport) are prioritised. The development will be required to provide good accessibility for bus services, including bus stop infrastructure as appropriate, along with bus priority measures within and related to the site to provide and maintain a quick and convenient local bus service and services to the wider area including Chelmsford City Centre. A network of mobility hubs will be provided across the Garden Community; these will allow for the interchange between active modes of travel and bus services and include the provision of cycle storage and facilities which align with non-car living, for example e-scooter hiring / parking / charging, cycle stands and a repair shop, car club parking, EV charging and bus stops.

7.231 The development will also be required to provide an appropriate extension of on-site Chelmsford Area Bus Based Rapid Transit (ChART). This is a direct, frequent bus service that will connect the new development with the City Centre and Chelmsford and Beaulieu Park Rail Stations. It is critical for enabling local, frequent travel without reliance on the private car. When Beaulieu Park Rail Station comes on line subsequent phases of ChART will create a link to serve the station. The masterplanning principle is to provide a choice of unimpeded route corridors within the developed area, able to carry bus services and enable convenient connections between residential areas, employment area, Beaulieu Park Rail Station and Chelmsford City Centre. Essex County Council will work with the developers to determine a preferred-routes through the development to serve residents and key locations.

7.232 The site will provide a high-quality development in a landscaped setting which works in sympathy with the local landscape and heritage assets. The development must promote the highest standards of design and provide high quality and inclusively designed buildings and public and private spaces planned around a coherent framework of routes, blocks and spaces.

7.233 Two tiers of design guidance will directly inform the preparation of any reserved matters the Site Wide Principles Document (informative) and the Detailed Design Codes (prescriptive). The Site Wide Design Principles Document will outline the aspects of spatial co-ordination between the different zones and development parcels and accompany the Strategic Parameter Plans. The preparation and submission of Detailed Design Codes (DDC) for approval will be a condition of each outline planning application. The DDC's will vary in their extent, tailored to the circumstances and scale of change in each place, allowing a suitable degree of variety but will be consistent in their objectives and in how they stipulate design quality, following a consistent structure and format as set out in the Stage 1 Masterplan documents. Development will follow a carefully design coded approach within which context it may be considered appropriate to remove permitted development rights.

7 - Where will development growth be focused?

7.234 Layout should incorporate compensation measures for impacts from the development on the landscape, preserve the setting of heritage assets and create a distinct new place. Compensation measures will include appropriate landscaped edges, tree and hedge planting along countryside edges and green buffers to respect the amenities of adjoining residential properties including those along Domsey Lane, Wheelers Hill and Drakes Lane.

7.235 The site includes an area of open space originally identified for existing and replacement golf holes. Due to its location, topography and ecology, this area will perform other important open space functions as one of the Destination Parks. It is expected that a significant portion of this area will form open space with the parameters having been decided through the masterplanning process. The site layout should also positively use existing topographical, heritage, ecological and landscape site features such as established vegetation and water bodies. The design is also expected to ensure that the development achieves an attractive and well-planned gateway into Chelmsford.

7.236 Development design and layout is expected to preserve or enhance the character or appearance of the Little Waltham Conservation Area and preserve the listed buildings and their setting on and close to the site. The masterplan process has established the detailed preservation and enhancement principles for this site.

7.237 The development is expected to ensure inclusive and high quality buildings and spaces. This shall include a comprehensive and coherent network of green infrastructure, formal and informal recreation and community spaces.

7.238 Practical design considerations, such as service yards and routing, utility related plant, etc. must be effectively designed to sustain a high quality approach to streetscape. Layout should also safeguard suitable access for the maintenance of foul and surface water drainage infrastructure.

7.239 A significant amount of multifunctional green infrastructure will be required including open spaces, habitat creation, allotments and community growing areas, and sports areas with associated facilities and play facilities. The precise uses of the multifunctional green and blue infrastructure will be defined through the masterplanning process which will include delineating specific areas where wildlife and ecological areas are prioritised. A new Country Park and Destination Parks will be expected to retain and improve habitats for wildlife and provide new and enhanced recreational opportunities. Appropriate and sustainable long-term management and maintenance arrangements for the new Country Park/Destination Parks will also be required in accordance with the established stewardship arrangements. Given the scale of the Garden Communities, the opportunity exists for these developments to seek to achieve 20% biodiversity net gain subject to site constraints. Development proposals will be considered in line with the DFD.

7.240 Flood risk management and on-site SuDS are necessary to ensure there is no increased flood risk on site, or to adjacent areas and to ensure a sustainable form of development. Such features should not limit or adversely overlap with the main function of public open spaces.

7.241 Given the scale and nature of the development, the Council will encourage the appropriate development of renewable, low carbon and decentralised energy schemes on the site, especially where there is a strong degree of community benefit, subject to deliverability and other planning considerations such as impacts on residential amenity.

7 - Where will development growth be focused?

7.242 As this is a major new development site, where appropriate the Council will encourage a move away from traditional wheeled bins to mass waste collection systems, such as an underground waste system. Advantages of hiding waste underground can include minimising the visual impact of bins on pavements and streets and managing odour and noise issues.

7.243 The allocation includes areas which have been consented for long-term minerals extraction. The masterplanned development will require careful phasing together with an application from the mineral operator to modify the phasing programme for mineral extraction, as well as the restoration and aftercare scheme to enable the Garden Community to be developed which would be determined by the Minerals and Waste Planning Authority.

7.244 The site lies within a Minerals Safeguarding Area. In line with the Minerals Planning Authority, the developer will be required to undertake a Minerals Resource Assessment to assess if further areas of the site contain a viable minerals resource that would require extraction prior to development.

7.245 The site may contain archaeological deposits within unquarried areas which will need to be considered by future development proposals, through an archaeological evaluation.

7.246 Chelmsford Garden Community is already an area of change arising from major new development allocated in the Council's previously adopted Local Development Framework which was subject of a detailed masterplan. Outline planning permission has been granted for 4,350 new homes and up to 62,300sqm of employment floorspace and the first phases are currently being developed.

7.247 In the event that the extant planning permission is not implemented in full, any subsequent planning applications will be required to adhere in full to the adopted Landscape Design and Management Plan.

7.248 The specific area where the New Hall Heritage Compensatory Measures should be implemented are shown on the Local Plan Policies Map.

Location 7 - Great Leighs

7.249 This broad location for growth, as shown on the Key Diagram (Figure 14), comprises the following Strategic Growth Sites:

- 7a: Great Leighs – Land at Moulsham Hall
- 7b: Great Leighs – Land East of London Road
- 7c: Great Leighs – Land North and South of Banters Lane.

7.250 Although this location is made up of three separate site allocations, the development across these sites should ensure a comprehensive development at Great Leighs. A comprehensive approach to connections to the sites, both vehicular and public routes will need to be demonstrated for each allocation. In addition, the phasing of all allocations will be interdependent on essential infrastructure coming forward at the appropriate time, especially in respect of the new primary school, neighbourhood centre and other community facilities.

STRATEGIC GROWTH SITE POLICY 7a – GREAT LEIGHS - LAND AT MOULSHAM HALL

Land to the west of the Key Service Settlement of Great Leighs, as shown on the Policies Map, is allocated for a high-quality comprehensively planned new sustainable neighbourhood that maximises opportunities for active and sustainable travel. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- Around 750 new homes of mixed size and type to include affordable housing. The final amount of new homes will be confirmed through the planning application process
- Travelling Showpeople site for 5 serviced plots.

Supporting on-site development:

- Neighbourhood Centre
- A new primary school (Use Class F1(a)) with co-located early years and childcare nursery (Use Class E(f)) on 2.1 hectares of suitable land allocated for education and child care use
- Co-locate the neighbourhood centre and primary school at a location close to existing links across/under the A131 to connect to Great Leighs.

Site masterplanning principles:

Movement and Access

- Main vehicular access to the site will be from Moulsham Hall Lane
- Provide safe and convenient pedestrian and cycle connections to the existing Village of Great Leighs
- Provide well-connected and integrated internal road layouts which allows good accessibility for bus services.

Historic and Natural Environment

- Preserve and where appropriate enhance the setting of the listed buildings at Moulsham Hall, Triceratops, Breams Farm, Creeds Twin/Hobby Croft, Chadwicks, Fortune Cottage, Stone Hall Cottage and Hump Cottage
- Create an enhanced parkland setting to Moulsham Hall
- Protect and enhance the River Ter Site of Special Scientific Interest (SSSI) to the south of the site ensuring any new development provides any required mitigation measures
- Ensure appropriate habitat mitigation and creation is provided
- Mitigate the visual impact of the development
- Create a network of multifunctional green infrastructure
- Provide suitable SuDs and flood risk management
- Undertake a Minerals Resource Assessment
- Undertake an Archaeological Assessment.

7 - Where will development growth be focused?

Design and Layout

- Provide a coherent network of public open space, formal and informal sport, recreation and community space within the site.

Site infrastructure requirements:

- A new primary school (Use Class F1(a)) with co-located early years and childcare nursery (Use Class E(f)) on 2.1 hectares of suitable land allocated for education and childcare use
- Appropriate improvements to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable transport
- New and enhanced cycle routes, footpaths, Public Rights of Way and bridleways where appropriate
- Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities
- Demonstrate that there is sufficient capacity for waste water treatment and disposal to serve the site, including any associated sewer connections and any required mitigation within the sewerage network
- Financial contributions to delivery of the Chelmsford North East Bypass (Section 1a)
- Financial contributions to early years and childcare, primary and secondary education as required by the Local Education Authority
- Financial contributions to, and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.

Reasoned Justification

7.251 The boundary of this Strategic Growth Site allocation is defined on the Policies Map and comprises the following notations:

- Site housing site
- Area for conservation/strategic landscape enhancement
- Land allocated for future recreation use/or SUDS and/or biodiversity
- Existing open space
- Local Wildlife Site, and
- New Travelling Showpeople Site.

7.252 This site is to the west of Great Leighs and is expected to be delivered between 2026 and 2035. The site has an approved masterplan (Ref:20/00002/MAS) and planning applications have been submitted for up to 800 new homes (Ref:23/01583/OUT and 23/01583/FUL). Owing to the timing of the submission of these applications this number is not yet reflected in the policy. The site capacity will be updated in the final version of the Plan. If this proposal is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit. The development will deliver a landscape-led high-quality sustainable new neighbourhood that maximises opportunities for travel by

7 - Where will development growth be focused?

sustainable modes. It will provide a mix of size and types of homes including affordable, self-build and custom-build, appropriately accessible and adaptable housing, as well as other types of specialist housing in accordance with the Council's policy requirements.

7.253 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.254 As this is a Strategic Growth Site and in order to achieve a mixed and balanced new community, the development will be required to provide a Travelling Showpeople site for 5 plots within the Strategic Growth Site allocation, as shown on the Policies Map. This site will be serviced i.e. provided with services such as water, waste disposal and electricity. It is expected that 0.2 hectares per plot should be provided. Easy and convenient access to the site for heavy goods vehicles is essential.

7.255 Given the scale of the development, a wide range of new community services and facilities including a new primary school, open spaces, recreation, sport and play facilities and neighbourhood centre are required. These services and facilities should be of an appropriate scale to serve the new communities and located where they will be easily accessible by walking, cycling and public transport to the majority of residents in the development. The neighbourhood centre will need to make provision for community and health care, and a main unit for convenience food shopping not exceeding 500sqm gross floorspace.

7.256 Great Leighs primary school is full, and this is likely to remain the case in most year groups. The scale of development in this location will require a new primary school with co-located early years and childcare provision. The developer will be expected to provide the land and cost of the physical scheme in line with the ECC Developers' Guide to Infrastructure Contributions. A comprehensive approach will be necessary to facilitate the option to deliver this new school early on in the development, and potentially ahead of development of site 7c: Great Leighs – Land North and South of Banters Lane. The nearest secondary schools to Great Leighs are located in Braintree town. The City Council together with Braintree District Council and Essex County Council (as Local Education Authority) have jointly considered the potential implications arising from both Chelmsford's and Braintree's adopted Local Plans, and the provision of secondary school places. Proposals for the future expansion of Notley High School in Braintree can provide secondary place capacity for this site allocation. Efforts should therefore be made to provide safe and direct walking and cycling routes between Great Leighs and Notley High School in Braintree.

7.257 The site is separated from Great Leighs village by the A131. Good connections exist via a pedestrian/cycle footbridge, a pedestrian/cycle underpass and School Lane. These should be utilised and improved by the new development.

7.258 The development will take its main vehicular access from Moulsham Hall Lane and will be expected to adequately mitigate its likely impacts on the performance of the local and strategic road network, both individually and collectively with the other allocations in Great Leighs. These will include appropriate improvements along roads serving new development including Moulsham Hall Lane, Main Road, London Road, the A131 and financial contributions towards the Chelmsford North East Bypass (Section 1a).

7 - Where will development growth be focused?

7.259 Opportunities for active and sustainable transport should be maximised to create neighbourhoods where alternative forms of transport to the private car (walking, cycling and public transport) are prioritised. New and enhanced pedestrian and cycle connections should be provided within the site and from and between Sites 7a, 7b and 7c. Additional safe and convenient pedestrian and cycle connections should also be provided between the site and the wider area, including Moulsham Hall Lane, School Lane and Dumney Lane to connect to Great Leighs village, Great Notley and Chelmsford City Racecourse.

7.260 A residential travel plan will be required for the development to include a package of measures to ensure active and sustainable means of travel are available to all new residents, to promote the benefits of sustainable transport and secure a modal shift from the private car. The development will be required to provide good accessibility for bus services and provide the necessary bus stop infrastructure within the site and surrounding area.

7.261 Layout should incorporate compensation measures for landscape impact from the development including lower dwelling densities, appropriate tree and hedge planting along countryside edges, and green buffers adjacent to existing residential properties including those along Dumney Lane, Moulsham Hall Lane and School Lane. Layout should also positively use existing topographical, heritage, ecological and landscape site features such as shallow valleys, established field boundaries, mature trees and vegetation, and on-site Local Wildlife Sites.

7.262 The development will be required to provide appropriate habitat mitigation and creation, and appropriate buffers to the adjacent Essex Wildlife Trust Nature Reserves, Phyllis Currie/Dumney Lane Woods. This may include financial contributions towards mitigating increased recreational impacts. The development will be required to provide appropriate mitigation to avoid adverse impacts to the River Ter Site of Special Scientific Interest (SSSI) located to the south of the site.

7.263 An area around the Grade II listed Moulsham Hall is allocated for conservation and strategic landscape enhancement, as shown on the Policies Map. The development is expected to preserve the setting of Moulsham Hall and to create an enhanced parkland setting.

7.264 The development is expected to promote the highest standards of design to ensure inclusive and high quality buildings and spaces. This shall include a comprehensive and coherent network of multifunctional green infrastructure, formal and informal recreation and community spaces. For these reasons, the land to the north west of the site is allocated for future recreation use.

7.265 Great Leighs Water Recycling Centre (WRC) does not currently have sufficient capacity to deal with the proposed growth at Great Leighs. Although this is not a barrier to new development growth, additional capacity will need to be provided by Anglian Water as part of their business planning process and subject to approval by the Environment Agency of any proposed increase of discharges to waterbodies which exceed current permit limits. Any increase in flows are subject to the provisions of the Water Framework Directive. Additional capacity could include improvements to the existing Great Leighs WRC and/or on-site wastewater treatment systems solutions.

7.266 The site lies within a Minerals Safeguarding Area. The developer will be required to undertake a Minerals Resource Assessment to assess if the site contains a viable minerals resource that would require extraction prior to development. In addition, consideration needs to be given to the neighbouring permitted mineral and waste activity to ensure appropriate phasing of the development to avoid impacts on these permitted and/or allocated minerals and waste activities.

7.267 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

STRATEGIC GROWTH SITE POLICY 7b - GREAT LEIGHS - LAND EAST OF LONDON ROAD

Land to the north east of the Key Service Settlement of Great Leighs, as shown on the Policies Map, is allocated for a high-quality comprehensively planned new sustainable extension to the settlement that maximises opportunities for active and sustainable travel, specifically for older persons. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- Around 250 new specialist residential homes for older persons to include affordable housing. The final amount of new homes will be confirmed through the planning application process.

Site masterplanning principles:

Movement and Access

- Main vehicular access to the site will be from London Road
- Provide safe and convenient pedestrian and cycle connections
- Provide a well-connected internal road layout.

Historic and Natural Environment

- Preserve and where appropriate enhance the setting of the listed buildings at Gubbions Hall and North Whitehouse
- Protect and where appropriate enhance the Gubbions Hall Scheduled Monument and its setting
- Protect and enhance the River Ter Site of Special Scientific Interest (SSSI) to the south of the site ensuring any new development provides any required mitigation measures
- Mitigate the visual impact of the development
- Create a network of multifunctional green infrastructure
- Provide suitable SuDs and flood risk management
- Ensure appropriate habitat mitigation and creation is provided
- Undertake a Minerals Resource Assessment
- Undertake an Archaeological assessment.

7 - Where will development growth be focused?

Design and Layout

- Provide a coherent network of public open space, formal and informal sport, recreation and community space within the site.

Site infrastructure requirements:

- Appropriate improvements to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable transport
- New and enhanced cycle routes, footpaths, Public Rights of Way and bridleways where appropriate
- Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities
- Demonstrate that there is sufficient capacity for waste water treatment and disposal to serve the site, including any associated sewer connections and any required mitigation within the sewerage network
- Financial contributions to delivery of the Chelmsford North East Bypass (Section 1a)
- Financial contributions towards and/or on site provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.

Reasoned Justification

7.268 This allocation is to the north of Great Leighs and will provide a high-quality sustainable development for around 250 homes for older persons. Part of the site has outline planning permission submitted for an integrated retirement community comprising 190 units (ref:21/02490/OUT). The remainder of the site is expected to accommodate around another 60 units. These numbers are reflected in the 5 Year Housing Sites Schedule April 2024. If this proposal is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit. Development is expected to be delivered between 2025 and 2030. The allocation will provide housing for people over retirement age, including the active, newly retired through to very frail elderly, including affordable housing. This housing need can encompass accessible, adaptable general needs housing for those looking to downsize from family housing and other specialised housing for those that require care. The specialist residential accommodation on this site does not negate the need for other types of specialist housing to be provided in accordance with the Council's policy requirements for sites 7a and 7c.

7.269 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.270 This part of the overall development at Great Leighs is in close proximity to the existing village and well-located to existing facilities including a shop/post office, public houses, village hall, employment area and Chelmsford City Racecourse. There is currently a good

7 - Where will development growth be focused?

frequency of bus services connecting into Chelmsford City Centre and Braintree, but any enhancements should be funded by the developer.

7.271 The development will take its vehicular access from London Road and will be expected to mitigate its impacts on the local and strategic road network, both individually and collectively with the other allocations in the Great Leighs location. These will be expected to include appropriate improvements along roads that will serve the new development including Main Road, Banters Lane, London Road, the A131, and financial contributions towards the Chelmsford North East Bypass (Section 1a).

7.272 Opportunities for active and sustainable transport should be maximised to create neighbourhoods where alternative forms of transport to the private car (walking, cycling and public transport) are prioritised. New and enhanced pedestrian and cycle connections should be provided within the site and from and between Sites 7a, 7b and 7c. Additional safe and convenient pedestrian and cycle connections should also be provided between the site and the wider area, including into the existing Great Leighs village, Great Notley and Chelmsford City Racecourse.

7.273 A residential travel plan will be required for the development to include a package of measures to ensure active and sustainable travel are available to all new residents, to promote the benefits of sustainable transport and secure a modal shift from the private car. The development will be required to provide good accessibility for bus services and provide the necessary bus stop infrastructure within the site and surrounding area.

7.274 Layout should incorporate compensation measures for landscape impact from the development including an appropriate green buffer between the site and the Rural Area beyond. The development will be required to provide appropriate habitat mitigation and creation, incorporate green buffers adjacent to existing residential properties including those along Banters Lane, and appropriate buffers to the adjacent Local Wildlife Site, Bushy Wood.

7.275 Layout should also positively use existing topographical, heritage, ecological and landscape site features such as established field boundaries, mature trees and vegetation, and nearby Local Wildlife Sites. Development design and layout should also take into consideration the setting of other heritage assets, including the nearby listed buildings North Whitehouse and Gubbions Hall and the Schedule Monument at Gubbions Hall and its setting. The development will be required to provide appropriate mitigation to avoid adverse impacts to the River Ter Site of Special Scientific Interest (SSSI) located to the south of the site.

7.276 The development is expected to promote the highest standards of design to ensure inclusive and high quality buildings and spaces. This shall include a comprehensive and coherent network of multifunctional green infrastructure, formal and informal recreation and community spaces.

7.277 The development will need to ensure that appropriate new healthcare facilities are provided and financial contribution to existing provision is made to meet the specific needs of an older community.

7 - Where will development growth be focused?

7.278 The site lies within a Minerals Safeguarding Area. The developer will be required to undertake a Minerals Resource Assessment to assess if the site contains a viable minerals resource that would require extraction prior to development. In addition, consideration needs to be given to the neighbouring permitted mineral and waste activity to ensure appropriate phasing of the development to avoid impacts on these permitted and/or allocated minerals and waste activities.

7.279 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

7.280 Great Leighs Water Recycling Centre (WRC) does not currently have sufficient capacity to deal with the proposed growth at Great Leighs. Although this is not a barrier to new development growth, additional capacity will need to be provided by Anglian Water as part of their business planning process and subject to approval by the Environment Agency of any proposed increase of discharges to waterbodies which exceed current permit limits. Any increase in flows are subject to the provisions of the Water Framework Directive. Additional capacity could include improvements to the existing Great Leighs WRC and/or on-site wastewater treatment systems solutions.

STRATEGIC GROWTH SITE POLICY 7c – GREAT LEIGHS – LAND NORTH AND SOUTH OF BANTERS LANE

Land to the north east of the Key Service Settlement of Great Leighs, as shown on the Policies Map, is allocated for a high-quality comprehensively planned new sustainable extension to the settlement that maximises opportunities for active and sustainable travel. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- **Around 100 new homes of mixed size and type to include affordable housing. The final amount of new homes will be confirmed through the planning application process.**

Site masterplanning principles:

Movement and Access

- **Main vehicular access to the site will be from a combination of entry points**
- **Provide safe and convenient pedestrian and cycle connections**
- **Provide a well-connected internal road layout.**

Historic and Natural Environment

- **Preserve and where appropriate enhance the setting of the listed buildings at Gubbions Hall, Blue Barnes Farm, The Cottage, Jasmine Cottage, Millers Cottage and Rose Cottage**
- **Protect and where appropriate enhance the Gubbions Hall Scheduled Monument and its setting**

- **Protect and enhance the River Ter Site of Special Scientific Interest (SSSI) to the south of the site ensuring any new development provides any required mitigation measures**
- **Mitigate the visual impact of the development**
- **Create a network of multifunctional green infrastructure**
- **Provide suitable SuDS and flood risk management**
- **Ensure appropriate habitat mitigation and creation is provided**
- **Undertake a Minerals Resource Assessment**
- **Undertake an Archaeological Assessment.**

Design and Layout

- **Provide a coherent network of public open space, formal and informal sport, recreation and community space within the site.**

Site infrastructure requirements:

- **Appropriate improvements to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Appropriate measures to promote and enhance active and sustainable transport**
- **New and enhanced cycle routes, footpaths, Public Rights of Way and bridleways where appropriate**
- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities**
- **Demonstrate that there is sufficient capacity for waste water treatment and disposal serve the site, including any associated sewer connections and any required mitigation within the sewerage network**
- **Financial contributions to delivery of the Chelmsford North East Bypass (Section 1a)**
- **Financial contributions to early years and childcare, primary and secondary education as required by the Local Education Authority**
- **Financial contributions to, and/or onsite provision of, community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.**

Reasoned Justification

7.281 This allocation will provide a high quality sustainable extension to Great Leighs for around 100 homes expected to be delivered between 2025 and 2028. It will provide a mix of size and types of homes including affordable, self-build and custom-build, appropriately accessible and adaptable housing, as well as other types of specialist housing in accordance with the Council's policy requirements.

7.282 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.283 This part of the overall development is in close proximity to the existing village and well-located to existing facilities including a shop/post office, public houses, village hall, employment area and Chelmsford City Racecourse. There is currently a good frequency of

7 - Where will development growth be focused?

bus services connecting into Chelmsford City Centre and Braintree, but any enhancements should be funded by the developer.

7.284 Given the scale of the development, a range of new community services and facilities including open spaces and recreation facilities are required. These services and facilities should be of an appropriate scale to serve the new communities and located where they will be easily accessible by walking, cycling and public transport to the majority of residents in the development.

7.285 Great Leighs Primary School does not currently have capacity to accommodate future pupil forecasts from this development. The scale of development proposed across Strategic Growth Location 7 will require a new two-form entry primary school with co-located 56 place early years and childcare nursery. The new school is proposed to be located on Site 7a: Great Leighs – Land at Moulsham Hall and Site 7c will contribute proportionately towards its provision. Whilst Site 7c may come forward prior to Site 7a in the event of there being sufficient capacity at Great Leighs Primary School and/or White Court Primary School to the north, commencement of both Sites 7a and 7c should otherwise be coincident to ensure viability of the primary school programmed to receive the pupils from both sites. However, in the event that Site 7a does not proceed on programme, as set out in the housing trajectory and Infrastructure Delivery Plan, and there remains insufficient places at Great Leighs Primary School, the developer of Site 7c will need to work with Essex County Council to agree an alternative strategy to mitigate the impact of their development on the availability of school places. Any such alternative strategy should not undermine the ability to deliver on new primary school provision in respect of Site 7a. The nearest secondary schools to Great Leighs are located in Braintree town. The City Council together with Braintree District Council and Essex County Council (as Local Education Authority) have jointly considered the potential implications arising from both Chelmsford's and Braintree's emerging Local Plans, and the provision of secondary school provision. Proposals for the future expansion of Notley High School in Braintree can provide secondary place capacity for this site allocation. Therefore, as part of site infrastructure requirements there is a need to provide connections from the site to the surrounding footpath and cycleway network to ensure safe and direct walking and cycling routes between Great Leighs and Notley High School and White Court Primary School in Braintree.

7.286 The development will take its vehicular access from a combination of entry points, and will be expected to mitigate its impacts on the local and strategic road network, both individually and collectively with the other allocations in Great Leighs. These will include appropriate improvements along roads that will serve the new development including Main Road, Banters Lane, London Road, the A131, and financial contributions towards the Chelmsford North East Bypass (Section 1a).

7.287 Opportunities for active and sustainable transport should be maximised to create neighbourhoods where alternative forms of transport to the private car (walking, cycling and public transport) are prioritised. New and enhanced pedestrian and cycle connections should be provided within the site and from and between Sites 7a, 7b and 7c. Additional safe and convenient pedestrian and cycle connections should also be provided between the site and the wider area, including into the existing Great Leighs village, Great Notley and Chelmsford City Racecourse.

7 - Where will development growth be focused?

7.288 A residential travel plan will be required for the development to include a package of measures to ensure active and sustainable means of travel are available to all new residents, to promote the benefits of sustainable transport and secure a modal shift from the private car. The development will be required to provide good accessibility for bus services and provide the necessary bus stop infrastructure within surrounding area.

7.289 Layout should also positively use existing topographical, heritage, ecological and landscape site features such as established field boundaries, mature trees and vegetation, and nearby Local Wildlife Sites. Layout should incorporate compensation measures for landscape impact from the development including lower dwelling densities, and appropriate tree and hedge planting along countryside edges. Development design and layout should also take into consideration the setting of nearby heritage assets. The development will be required to provide appropriate mitigation to avoid adverse impacts to the River Ter Site of Special Scientific Interest (SSSI) located to the south of the site.

7.290 The development will be required to provide appropriate habitat mitigation and creation, and appropriate buffers to the adjacent Essex Wildlife Trust Nature Reserve, Sandylay/Moat Woods. This may include financial contributions towards mitigating increased recreational impacts.

7.291 The development is expected to promote the highest standards of design to ensure inclusive and high quality buildings and spaces. This shall include comprehensive and coherent network of multifunctional green infrastructure, formal and informal recreation and community spaces.

7.292 The site lies within a Minerals Safeguarding Area. The developer will be required to undertake a Minerals Resource Assessment to assess if the site contains a viable minerals resource that would require extraction prior to development. In addition, consideration needs to be given to the neighbouring permitted mineral and waste activity to ensure appropriate phasing of the development to avoid impacts on these permitted and/or allocated mineral and waste activities.

7.293 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

7.294 Great Leighs Water Recycling Centre (WRC) does not currently have sufficient capacity to deal with the proposed growth at Great Leighs. Although this is not a barrier to new development growth, additional capacity will need to be provided by Anglian Water as part of their business planning process and subject to approval by the Environment Agency of any proposed increase of discharges to waterbodies which exceed current permit limits. Any increase in flows are subject to the provisions of the Water Framework Directive. Additional capacity could include improvements to the existing Great Leighs WRC and/or on-site wastewater treatment systems solutions.

Location 8 - North of Broomfield

STRATEGIC GROWTH SITE POLICY 8 – NORTH OF BROOMFIELD

Land to the north of Woodhouse Lane and west of Blasford Hill, as shown on the Policies Map, is allocated for a high quality landscape-led development that maximises opportunities for active and sustainable travel. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- 512 new homes of mixed size and type to include affordable housing. The final amount of new homes will be confirmed through the planning application process.

Supporting on-site development:

- Neighbourhood Centre, including a safeguarded area for a new healthcare facility
- Provision of a new stand-alone early years and childcare nursery located in the southern portion of the site.

Site masterplanning principles:

Movement and Access

- Main vehicular access to the site will be from Blasford Hill (B1008)
- Provide appropriate downgrading of Woodhouse Lane
- Provide safe and convenient pedestrian and cycle connections
- Provide well-connected and integrated internal road layouts which allows good accessibility for bus services.

Historic and Natural Environment

- Conserve and where appropriate enhance the setting of the listed buildings on Blasford Hill and the non-designated assets Wood House, the Coach House and Wood House Lodge adjoining the site
- Protect and where appropriate enhance the setting of the nearby Scheduled Monument to the north of the site
- Mitigate the visual impact of the development
- Enhance the historic environment
- Create a network of multifunctional green infrastructure
- Provide suitable SuDS and flood risk management
- Ensure appropriate habitat mitigation and creation is provided
- Undertake a Minerals Resource Assessment
- Undertake an Archaeological Assessment.

Design and Layout

- Provide a coherent network of public open space, formal and informal sport, recreation and community space within the site.

Site infrastructure requirements:

- **New 56 place stand-alone early years and childcare nursery (Use Class E(f)) on 0.13 hectares of suitable land allocated for education and childcare use**
- **Appropriate improvements to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Appropriate measures to promote and enhance active and sustainable transport**
- **New and enhanced cycle routes, footpaths, Public Rights of Way and bridleways where appropriate**
- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities**
- **Financial contributions to delivery of the Chelmsford North East Bypass (Section 1a), primary and secondary education as required by the Local Education Authority**
- **Financial contributions to, and/or onsite provision of, other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.**

Reasoned Justification

7.295 The development will provide a high quality sustainable urban extension. The site has an approved masterplan (Ref:20/0001/MAS) for around 450 new homes and outline planning permission submitted for 512 new homes (Ref:20/02064/OUT). This number is reflected in the 5 Year Housing Site Schedule April 2024. If this proposal is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit. Development is expected to be delivered between 2025 and 2035. This site is to the north of Broomfield and well-located in relation to existing community and educational facilities and areas of employment. Main Road (B1008) Broomfield is also a 'quality' bus corridor with a very good frequency of services connecting into Chelmsford City Centre. As such the allocation represents an opportunity for a landscape-led development that maximises opportunities for travel by sustainable modes.

7.296 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.297 The development should provide a mix of size and types of homes. Affordable, self-build and custom-build, appropriately accessible and adaptable housing as well as other types of specialist housing should be provided in accordance with the Council's policy requirements. The capacity of the site and mix of housing will need to reflect the available primary school places within the admissions area.

7.298 There is an emerging Neighbourhood Plan being prepared in Broomfield which it is envisaged will help shape this site allocation. However, it is considered that the development quantum and extent should be allocated through the Local Plan as a strategic site delivering a significant new neighbourhood. The site straddles the parish boundary shared between Broomfield and Little Waltham. Broomfield Parish Council will also receive 25% of the CIL

7 - Where will development growth be focused?

receipt for this development (and any other) in its area when the Broomfield Neighbourhood Plan is made (approved). Otherwise the rate will be 15%.

7.299 Given the scale of the development, a wide range of new community services and facilities including a new nursery, open spaces, recreation facilities and neighbourhood centre (including a safeguarded area for a new healthcare facility) are required. These services and facilities should be of an appropriate scale to serve the new communities and located where they will be easily accessible by walking, cycling and public transport to the majority of residents in the development and the wider area, reflecting the fact that this development is an extension of the existing village rather than a stand-alone settlement. The neighbourhood centre will need to make provision for community and health care. The health care facility should be an area safeguarded of sufficient size to mitigate the impact of the development proposed on this site and be sustainable as a practice.

7.300 The downgrading of Woodhouse Lane should be provided to manage local traffic flows and enhanced walking and cycling options.

7.301 The development will be expected to adequately mitigate its impacts on the performance of the local and strategic road network including appropriate road and junction alterations, improvements along the B1008 and Woodhouse Lane, and financial contributions towards the Chelmsford North East Bypass (Section 1a). The rural lane network to the south of the site is unfit for heavy traffic and measures to prevent intensification of use must be delivered as part of the development.

7.302 Opportunities for active and sustainable transport should be maximised to create neighbourhoods where alternative forms of transport to the private car (walking, cycling and public transport) are prioritised. New and enhanced pedestrian and cycle connections should be provided within the site and connecting to places such as Broomfield Hospital, Chelmer Valley High School, Little Waltham Primary School, Broomfield Primary School, City Centre, the Green Wedge, and surrounding countryside.

7.303 A residential travel plan will be required for the development to include a package of measures to ensure active and sustainable means of travel are available to all new residents, to promote the benefits of sustainable transport and secure a modal shift from the private car. The development will be required to provide good accessibility for bus services and provide the necessary bus stop infrastructure within the site and surrounding area.

7.304 Layout should incorporate compensation measures for landscape impact from the development including lower dwelling densities, appropriate tree and hedge planting along countryside edges, and green buffers. Green buffers will be required to protect the amenities of neighbours including adjoining residential properties, Farleigh Hospice and King Edwards Grammar School (KEGS) playing field. The nature conservation value of Puddings Wood Local Wildlife Site to the south of the development must be considered and form part of a strategic approach to conserving the natural environment and mitigating the impacts of development. The western boundary of the site should include a woodland buffer to provide habitat connection between Puddings Wood and Sparrowhawk Wood.

7.305 Layout should also positively use existing topographical, heritage, ecological and landscape site features such as established field boundaries, mature trees and vegetation, and on-site and nearby Local Wildlife Sites.

7 - Where will development growth be focused?

7.306 A Critical Drainage Area (CDA) has been identified in the Broomfield area. This site may have the potential to impact on the CDA in respect of surface water flooding. As a result of this, the site is likely to require an individually designed mitigation scheme to address this issue.

7.307 The development is expected to promote the highest standards of design to ensure inclusive and high quality buildings and spaces. This shall include a comprehensive and coherent network of multifunctional green infrastructure, formal and informal recreation and community spaces. The development is an extension of the existing village of Broomfield so must remain sympathetic to the character of that settlement and respond to its direct abutment to the open countryside.

7.308 The site lies within a Minerals Safeguarding Area. The developer will be required to undertake a Minerals Resource Assessment to assess if the site contains a viable minerals resource that would require extraction prior to development.

7.309 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

Location 9 - Boreham

GROWTH SITE POLICY 9a – WALTHAM ROAD EMPLOYMENT AREA

Land to the north of Waltham Road Employment Area as shown on the Policies Map, is allocated for new employment development. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- **Around 3,500sqm (net) new Use Class B2 and B8 floorspace along with other appropriate ancillary employment generating uses.**

Site development principles:

Movement and Access

- **Vehicular access will be from the existing employment area access from Waltham Road**
- **Provide a well-connected internal road layout**
- **Maximise opportunities for the provision of public transport and supporting infrastructure**
- **Provide safe and convenient pedestrian and cycle connections including to Boreham Village.**

Historic and Natural Environment

- **Provide a robust landscape buffer along the northern and eastern boundaries of the site**
- **Provide suitable SuDS and flood risk management**

7 - Where will development growth be focused?

- Undertake a Minerals Infrastructure Impact Assessment given its proximity to Bulls Lodge Quarry
- Undertake an Archaeological Assessment.

Design and Layout

- Ensure no adverse impact on the living conditions of existing adjoining residential development
- Retain and enhance existing boundary treatments including provision of new trees
- Landscape led approach to site layout which retains and enhances trees
- Make appropriate provision for parking and safe access
- Mitigate the visual impact of the development
- Conserve and enhance local landscape character
- Provide for a mix of building sizes and styles including building design measures to soften visual impact
- Provide new and accessible open space within the site.

Site infrastructure requirements:

- Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Provide safe and convenient pedestrian and cycle links.

Reasoned Justification

7.310 This site allocation will provide employment development of around 3,500sqm of new general industrial (Use Class B2) and storage and distribution (Use Class B8) floorspace as part of an extension to the existing Waltham Road Employment Area. Expansion of this well-established site will provide further rural inward investment opportunities and reflect the aspirations of national policy to support the sustainable growth and expansion of businesses in rural areas. Development is expected to be delivered by 2030 and will support Chelmsford's economic growth by providing new employment floorspace and jobs.

7.311 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.312 The development of the site will be subject of a masterplan agreed with the Council prior to the determination of a planning application.

7.313 The site is close to the existing Key Service Settlement of Boreham with good access to the strategic road network via the A12. The development should provide a mix of type and range of sizes of Use Class B2 and B8 employment units to help Chelmsford accommodate the predicted growth in economic development and identified need for new jobs which include the business sectors identified in Policy S8. To ensure flexibility and market responsiveness, other complementary B Use Classes may also be appropriate as part of the allocation.

7.314 The development will be expected to enhance existing connections for cycling and walking, including connections to Boreham and improvements to nearby bus stops/shelters where appropriate. A travel plan will be required to encourage the use of active and sustainable

7 - Where will development growth be focused?

means of travel for all new employees, to reduce the need to travel and encourage the use of non-car modes.

7.315 The Council will, in conjunction with the Local Highways and Transportation Authority and National Highways, seek appropriate contributions for enhancements to the local and strategic highway network including highway improvements to ensure highway safety, capacity, traffic management and to enable safe access to the site by active and sustainable travel modes.

7.316 The development will be expected to promote the highest standards of design to ensure that the type, size, form, height, scale, density, massing, materials and colour palette of the new development minimises its visual impact on the local landscape. The layout and position of buildings must avoid large scale buildings near to the northern boundary of the site and be set back from the landscape buffer to ensure that there is no unacceptable visual landscape impact and to ensure no impact upon the tree buffer.

7.317 The design and layout of proposals will also need to incorporate structural and buffer landscaping along the northern and western boundaries and provide landscape compensation measures. Landscape buffers should incorporate tree planting as well as other biodiversity enhancements and should seek to make linkages to the nearby local wildlife site, Boreham Road Gravel Pits, to the west of the site.

7.318 A significant amount of new trees to be planted in line with Policy DM17. The local wildlife site, Boreham Road Gravel Pits, to the west of the site shall be protected.

7.319 Some residential development lies to the north and east of the site. The development will be expected to provide suitable measures to ensure that the amenity of those residents is not adversely affected such as noise attenuation measures and boundary screening.

7.320 New open space to serve the employment site will be expected to be provided on-site. This must provide a positive contribution to the quality and character of the development and be accessible to site employees. It must also be multifunctional to deliver a range of benefits, for example, enhanced biodiversity, resilience to climate change and sustainable drainage.

7.321 The site lies within a Minerals Consultation Area. The developer will be required to undertake a Minerals Infrastructure Impact Assessment to ensure the proposed development would not prevent or compromise the possibility of mineral resources being extracted in the future from land within the nearby mineral extraction site at Bulls Lodge Quarry.

7.322 The site may contain archaeological deposits which will need to be considered in future development proposals, through an archaeological evaluation.

7.323 The site is located in the Parish of Boreham where a Neighbourhood Plan is being prepared. It is envisaged that the Neighbourhood Plan could help shape this site allocation.

Location 14 – Ford End

GROWTH SITE POLICY 14b – LAND SOUTH OF FORD END PRIMARY SCHOOL

Land south of Ford End Primary School, as shown on the Policies Map, is allocated for a residential development.

Amount and type of development:

- Up to 1 hectare of land to accommodate around 20 new homes including affordable housing. The final amount of new homes will be confirmed through the planning application process
- Provision of off-road parking area for use by Ford End Primary School.

Site development principles:

Movement and Access

- Vehicular access to the site will be from the B1008
- Provide safe and convenient pedestrian and cycle connections
- Ensure access to the school is maintained and enhanced
- Provide a well connected internal road layout.

Historic and Natural Environment

- Preserve the setting of Ford End Primary School by setting development back from Main Road (B1008) and restricting height of new development to two-storey
- Retain existing trees on the boundary of the site
- Ensure a defensible landscape buffer on the sites boundaries
- Provide suitable multifunctional Green Infrastructure
- Provide suitable flood risk management and Sustainable Drainage Systems (SuDS).

Design and layout

- Character, scale and layout to have regard and respond to the site's surrounding context.

Site infrastructure requirements:

- Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable modes of transport
- Financial contributions to new or enhanced sport, leisure and recreation facilities

- **Financial contributions to early years and childcare, primary and secondary education provision as required by the Local Education Authority**
- **Financial contributions towards other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.**

Reasoned Justification

7.324 The boundary of this Growth Site allocation is defined on the Policies Map and comprises the following notations:

- New housing site, and
- Area for Existing School, Further/Higher Education Establishment.

7.325 Land south of Ford End Primary School is adjacent to the Defined Settlement of Ford End. Development is expected to be delivered from 2030/2031 onwards. It is immediately adjacent to the primary school, and within walking distance of the recreation ground and existing public transport connections.

7.326 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.327 The development should provide an appropriate mix of size and types of homes appropriate to the surrounding character including affordable housing. The changes in levels between the site and the B1008 needs to be given careful attention to ensure the development is not overbearing on the character of the area. Affordable, accessible and adaptable housing should be provided in accordance with the Council's policy requirements.

7.328 Ford End Primary School was designed by local architect Frank Whitmore and built in 1873, comprising a school room and masters house, with a small tower, originally with a spire. The building has architectural interest and community value and is therefore considered to be a non designated heritage asset. Development should avoid harm to its setting.

7.329 A clear and defensible landscaped site boundary should be provided to the south and west boundary.

7.330 Appropriate active and sustainable travel connections should be provided within the site with links into the wider network, including the primary school. There is limited parking and drop-off at the primary school and future access arrangements into the development site could exacerbate this issue. Therefore, a small area of parking should be made available for the primary school's use adjacent to the site allocation. For these reasons, the land to the north of the site is allocated for new school parking to serve the site, as shown on the Policies Map. Speeding by vehicles on Main Road (B1008) is an issue, therefore traffic calming should be provided as part of the development including speed reduction measures.

Location 15 – North West Chelmsford

STRATEGIC GROWTH SITE POLICY 15 – LITTLE BOYTON HALL FARM EMPLOYMENT AREA

Land to the north of Little Boyton Hall Farm Rural Employment Area as shown on the Policies Map, is allocated for new employment development. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- Around 6,000sqm (net) new Use Class B2 and B8 floorspace along with other appropriate ancillary employment generating uses.

Site development principles:

Movement and Access

- Vehicular access will be via the existing site access road off the A1060
- Provide safe and convenient pedestrian and cycle connections
- Maximise opportunities for the provision of public transport and supporting infrastructure

Design and Layout

- Retain and enhance existing boundary treatments including provision of new trees
- Landscape led approach to site layout which retains and enhances trees
- Provision of structural landscaping to the perimeter of the site
- Make appropriate provision for parking and safe access
- Conserve and enhance local landscape character
- Mitigate the visual impact of the development
- Provide for a mix of building sizes and styles including building design measures to soften visual impact
- Provide new and accessible open space within the site.

Historic and Natural Environment

- Preserve and where appropriate enhance the setting of designated heritage assets Little Boyton Hall Grade II listed building
- Provide suitable SuDS and flood risk management
- Provide a robust landscape buffer along the boundaries of the site
- Create a network of multifunctional green infrastructure.

Site infrastructure requirements:

- New and enhanced pedestrian and cycle routes
- Provide appropriate improvements, as necessary, to the existing site access road and network, local and strategic road network as required by the Local Highways and Transportation Authority.

Reasoned Justification

7.331 This site allocation will provide employment development of around 6,000sqm of new general industrial (Use Class B2) and storage and distribution (Use Class B8) floorspace as part of an extension to the existing Little Boyton Hall Farm Rural Employment Area. Expansion of this well-established site will provide further rural inward investment opportunities and reflect the aspirations of national policy to support the sustainable growth and expansion of businesses in rural areas. Development is expected to be delivered by 2030 and will support Chelmsford's economic growth by providing new employment floorspace and jobs.

7.332 The development of the site will be subject of a masterplan agreed with the Council prior to the determination of a planning application.

7.333 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.334 The development will provide a mix of type and range of sizes of Use Class B2 and B8 employment units to help Chelmsford accommodate the predicted growth in economic development and identified need for new jobs which include the business sectors identified in Policy S8. To ensure flexibility and market responsiveness, other complementary B Use Classes may also be appropriate as part of the allocation.

7.335 The development will be expected to improve connections for cycling and walking, including connections to the existing networks and providing links to the A1060 to the south.

7.336 The Council will, in conjunction with the Local Highways and Transportation Authority and National Highways, seek appropriate works and contributions for enhancements to the local and strategic highway network including highway improvements to ensure highway safety, traffic management and to enable access to the site by sustainable and active travel modes. Suitable traffic control and calming measures will be required on the internal road network in particular where these are also public rights of way.

7.337 The development will be expected to promote the highest standards of design to ensure that the type, size, heights, density, and massing of new development works in sympathy with the local landscape. The design and layout of proposals will need to incorporate structural and buffer landscape compensation measures including the provision of suitable buffers along the site boundaries to help soften its visual impact on the local landscape and the setting of the listed building at Little Boyton Hall. The buffer should incorporate tree planting as well as other biodiversity enhancements and should seek to make linkages to the nearby local wildlife site and ancient woodland (Nightingale Wood). The layout and position of buildings must be set back from the landscape buffer to ensure that there is no unacceptable visual landscape impact and to ensure no impact upon the tree buffer.

7.338 Significant new trees planted in line with Policy DM17. The local wildlife site and Ancient Woodland (Nightingale Wood) shall be protected.

7.339 New open space to serve the employment site will be expected to be provided on-site. This must provide a positive contribution to the quality and character of the development and be accessible to site employees. It must also be multifunctional to deliver a range of benefits, for example, enhanced biodiversity, resilience to climate change and sustainable drainage.

7 - Where will development growth be focused?

Growth Area 3 - South and East Chelmsford

7.340 This Growth Area (see Figure 18) will deliver a high quality and comprehensively planned new Garden Community to the East of Chelmsford at Hammonds Farm (Location 16a). Alongside this will be further employment space at Land adjacent to A12 at Junction 18 (Location 16b) and a sustainable extension to the existing town at South Woodham Ferrers (Location 10). Development is also proposed on small sites around Bicknacre and East Hanningfield. Overall this Growth Area will deliver over 4,400 new homes, 87,200sqm of new employment floorspace, 18 Travelling Showpeople plots and 20 Gypsy and Traveller pitches.

7.341 A new Garden Community to the East of Chelmsford based on Garden City Principles will be provided at Hammonds Farm. This development, east of the A12 and north of the A414 will create a sustainable new neighbourhood of 3,000 new homes and 43,000sqm of new employment floorspace to be delivered in the Local Plan period. This will be a comprehensively planned, landscape-led development centred around distinctive neighbourhoods supported by transport, new schools and early years and childcare provision, health care, utility services and multifunctional green infrastructure together with retail, community, employment and leisure uses. Provision is also made for 20 Gypsy and Traveller pitches and 18 Travelling Showpeople plots. The wider allocation has the capacity for a further 1,500 new homes to be developed post-2041. The timing and delivery of further development would need to be considered as part of a review of this Local Plan.

7.342 A new strategic employment site of around 43,000sqm is allocated at Land adjacent to A12 Junction 18, south of East Chelmsford Garden Community (Hammonds Farm). This will provide for a mix of employment uses including office, light industrial, general industrial and distribution uses in a sustainable location close to the strategic road network. The development will make an important contribution to the delivery of employment land and jobs in the City Council's area over the Local Plan period.

7.343 The Garden Community at Hammonds Farm and Land adjacent to A12 Junction 18 will also maximise opportunities for enjoyment of the Green Wedge and active travel in the City Centre (cycling and walking). They will also provide new and enhanced bus services, enhanced connection to Sandon Park and Ride to serve eastern road corridors into the City and improvements to the Army and Navy junction.

7.344 The Growth Area will also deliver a sustainable new development for the existing town of South Woodham Ferrers which has a good range of services and facilities, and at the Key Service Settlements of Danbury and Bicknacre, both of which have a good level of services including primary schools, early years and childcare provision, convenience shopping facilities and primary healthcare facilities. It will also deliver sustainable new development on small sites in the Service Settlement of East Hanningfield which has a primary school, employment site and community facilities making it suitable for limited scale development.

7.345 These developments will provide opportunities to contribute to and enhance existing facilities and services. Development at South Woodham Ferrers will also offer wider benefits to the community by helping to deliver road improvements including to the A132/B1012 to the Rettendon Turnpike Junction.

7.346 Two sites in Bicknacre (Locations 11b and 11c) and both sites in East Hanningfield (Locations 17a and 17b) will be provided on small sites no larger than one hectare in size. Location 12 will deliver around 100 new homes within Danbury through the emerging Danbury

7 - Where will development growth be focused?

Neighbourhood Plan. Developments in these areas will provide opportunities to contribute towards and enhance existing facilities and services of the villages.

7.347 The Council's previously adopted Site Allocations Development Plan Document allocated the former Runwell Hospital as a Major Developed Site for housing-led development in the Green Belt (in accordance with Annex C of Planning Policy Guidance Note 2 at the time). Planning permission was granted in 2013 and the development (called St Luke's Park) is now nearly complete. The Area for the Former Runwell Hospital Major Developed Site is brought forward onto the Local Plan Policies Map.

Figure 18 : Growth Area 3 - South and East Chelmsford

Location 16 – East Chelmsford

7.348 This broad location for growth, as shown on the Key Diagram (Figure 14), comprises the following two Strategic Growth Sites:

- 16a: East Chelmsford Garden Community (Hammonds Farm)
- 16b: Land adjacent to A12 Junction 18 (Employment Site)

STRATEGIC GROWTH SITE POLICY 16a – EAST CHELMSFORD GARDEN COMMUNITY (HAMMONDS FARM)

East Chelmsford Garden Community comprises of land at Hammonds Farm. It is located to the east of the A12, north of the A414 Maldon Road, as shown on the Policies Map. The site is allocated for a high quality comprehensively planned new sustainable Garden Community that will provide a significant amount of new housing and employment development, and maximise opportunities for active and sustainable travel, in a landscape-led setting following TCPA Garden City Principles. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- Around 3,000 new homes of mixed size and type to include affordable housing and specialist residential accommodation in the period to 2041. The allocated site is able provide a further 1,500 new homes in the period beyond 2041. The final amount of new homes will be confirmed through the masterplanning and planning application process
- Around 43,000 sqm of dedicated employment floorspace
- Two Gypsy and Traveller sites, each for 10 serviced pitches
- Travelling Showpeople site for 13 serviced plots.

Supporting on-site development:

- A new Country Park to be primarily informal and natural in character
- New mixed use centres incorporating provision for convenience food and other retail, community uses, flexible employment and healthcare provision and opportunities for similar small non-residential uses throughout the development
- Provision of a co-located primary and secondary school with early years and childcare nursery (with potential for a sixth form)
- Provision of two further new primary schools with co-located early years and childcare nurseries
- Provision of three new stand-alone early years and childcare nurseries
- Appropriate provision of community space and significant new multifunctional green infrastructure.

Site masterplanning principles:

Movement and Access

- Main vehicular access to the site will be from a new junction on the A414 Maldon Road which will need to take account of new access to the employment site 16b - Land Adjacent to Junction 18 of the A12
- Additional access to the site will be from Junction 19 of the A12 (Boreham Interchange), to include a new multi-modal vehicular bridge over the River Chelmer with measures to deter use as a through-route
- Provide well-connected internal road layouts which allow good accessibility for bus services and bus priority measures
- Provide an effective movement strategy for all users within the site and beyond
- Provide and enhance pedestrian, cycle and where appropriate bridleway connections within the site including links to the River Chelmer Navigation and to the wider area including the Chelmer East Green Wedge, existing education locations, Chelmsford City Centre, Danbury, Little Baddow, Great Baddow and Sandon, Beaulieu Park Rail Station, and existing and proposed employment locations including SGS16b
- Provide a car club for residents and businesses on site
- Provide safe multi-user access routes under and over the A12 to connect to existing routes
- Provide a new active and sustainable route and bridge over the A12 to connect close to Sandon Park and Ride
- Measures to enable travel by active and sustainable modes that offer travel choice for people by non-car modes including a network of mobility hubs, to enable a 60% share for active and sustainable transport modes
- Provide Bus Based Rapid Transit infrastructure
- Improvements to the local and strategic road network as required by the Local Highways and Transportation Authority and National Highways to include necessary improvements to Junctions 18 and 19 of the A12, A414 and route enhancements to A1060 (Maldon Road) and A1114 (Essex Yeomanry Way)
- Traffic calming measures to deter traffic on local roads including Church Road, Plantation Road and Main Road in Boreham.

Historic and Natural Environment

- Provide a network of multifunctional green and blue infrastructure and reinstate historic landscape features to mitigate the visual, biodiversity and heritage impacts of the development
- Prepare a detailed Heritage Impact Assessment
- Preserve or enhance the character or appearance of the Chelmer and Blackwater Navigation Conservation Area and its setting, including landscape enhancement works and sensitively designed new bridge to mitigate harm
- Preserve or enhance the setting of Boreham and Danbury Conservation Areas
- Preserve and where appropriate enhance the listed buildings and structures and their settings including Cuton, Stonhams and Little Baddow Locks, Hammonds Farmhouse, Phillows Farmhouse, The Congregational Chapel and Manse, Yew Tree Cottage, St Mary's Church, Little Baddow Hall, Boreham

7 - Where will development growth be focused?

House, Generals, Water Hall, St Johns the Baptist Church Danbury, Little Graces, and Great Graces group of listed buildings. The Hammonds, Phillows and Rumbolds farmsteads which are within the site (the latter farmhouse being a non-designated heritage asset) should be provided with appropriate landscape buffers within the site to protect their settings

- Protect the setting of Danbury Park, Riffhams and Boreham Houses Registered Park and Gardens
- Protect and celebrate landmark views, including those to Danbury, Boreham, Little Baddow and Sandon Churches
- Retain the significance of Church Lane, Chapel Lane and New Lodge Chase Protected Lanes
- Retain the significance of Hurrells Protected Lane and Graces Walk which both go through the site by providing substantial linear landscape buffers
- The area to the east of Sandon Brook notated on the Policies Map for Future Recreation/SuDS/Biodiversity should focus on informal recreation, natural and semi natural green infrastructure uses rather than formal sports recreation requiring floodlighting or significant servicing
- Provide necessary mitigation to address the cumulative recreational pressure on SSSIs in proximity to the site
- Conserve and enhance biodiversity and avoid adverse effects on the River Chelmer, and Old Hare Wood local wildlife sites, Waterhall Meadows Essex Wildlife Trust Nature Reserve, and Long Spring Wood and Hall Wood ancient woodlands, and Blakes Wood, Danbury Common, and Lingwood Common SSSI
- Deliver heritage and ecological trails incorporating interpretation, public art, play trails and viewing corridors to recognise and celebrate the site's rich historic, social and natural history
- Provide suitable SuDs and flood risk management
- Undertake a Minerals Resource Assessment
- Undertake a Waste Infrastructure Impact Assessment
- Appropriate habitat mitigation and creation
- Undertake an Archaeological Assessment and conserve existing archaeological features
- Provide visual and acoustic screening to the A12 and minimise the impact of lighting in particular within the employment areas
- Provide a minimum of 20% biodiversity net gain above the ecological baseline in accordance with Policy DM16.

Design and Layout

- Development to be planned around a coherent framework of routes, blocks and spaces that deliver areas of distinct and varied character
- Layout to provide a coherent network of public open space, formal and informal sport, recreation and community space within the site
- Development on the eastern and northern margins of the site should be lower density and landscaped to reflect a transition to the open countryside beyond
- Provide public art which contributes towards place creation and celebrates the historic, social and environmental context of the site and the local area

- Integrate existing archaeological, historic and landscape features into development and reinstate lost historic features
- Site-wide design principles to be approved through the masterplanning process, followed by the preparation and submission of Detailed Design Codes for approval through the planning application process
- Layout to provide a strategy for responding to the National Grid Electricity Transmission overhead transmission lines present within the site
- Incorporate appropriate safeguarding of suitable access for the maintenance of foul and surface water drainage infrastructure.

Site infrastructure requirements:

- A new secondary school (Use Class F1(a)) on 10.1 hectares co-located with primary school (Use Class F1(a)) and early years and childcare nursery (Use Class E(f)) on 2.1 hectares of suitable land allocated for education and childcare use
- Two new primary schools (Use Class F1(a)) with co-located early years and childcare nursery (Use Class E(f)) each on 2.1 hectares of suitable land allocated for education and childcare use
- Three new 56 place stand-alone early years and childcare nurseries (Use Class E(f)) each on 0.13 hectares of suitable land allocated for education and childcare use
- Appropriate improvements to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance sustainable modes of transport including Bus Based Rapid Transit infrastructure, safe multi-user access routes under and over the A12 to connect to existing routes, and a new active and sustainable route and bridge over the A12 to connect close to Sandon Park and Ride
- New and enhanced cycle routes, footpaths, Public Rights of Way and bridleways where appropriate
- Provide and/or financial contributions towards provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities
- Provision of and financial contribution to facilitate and sustain car club facilities for residents and businesses with the site and for the use of the wider community
- Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities
- Provide a new Country Park with delivery mechanism to provide for its long-term management and maintenance
- New multifunctional green infrastructure including public open space, formal and informal recreation, outdoor sports facilities and allotments
- Appropriate flood risk management measures and SuDS
- Contributions towards addressing cumulative recreational pressure on SSSIs in proximity to the site.

7 - Where will development growth be focused?

The Council will encourage the appropriate development of renewable, low carbon and decentralised energy schemes on this site together with mass waste collection systems where they are deliverable, appropriate, and do not give rise to adverse environmental or other amenity impacts.

Stewardship:

- **Establish a robust and sustainable site-wide stewardship vehicle and governance early on in the planning and delivery process**
- **A Stewardship Statement to accompany the Masterplan providing full details of a) the governance structure and methods of funding of the proposed stewardship vehicle, b) public spaces and community assets to be owned, managed and maintained by the proposed stewardship vehicle and c) an indicative programme for the establishment and operation of the proposed stewardship vehicle**
- **A Stewardship Strategy to be provided as part of the planning application process to include a) a robust governance strategy of the chosen stewardship vehicle, b) a full Business Plan for the chosen stewardship vehicle and c) arrangements for maintenance, management and monitoring of public spaces and community assets**
- **Stewardship activities are required to be in place in advance of the first housing occupations to ensure timely delivery of community development activities.**

Reasoned Justification

7.349 The boundary of this Strategic Growth Site allocation is defined on the Policies Map and comprises the following notations:

- New Garden Community for major housing and employment development
- Proposed Country Park
- Areas allocated for future recreation use/or SUDS and/or biodiversity
- New bridges, and
- Area for Conservation/Strategic Landscape Enhancement.

7.350 The site lies around 4km to the east of Chelmsford City Centre with new infrastructure proposed to provide opportunities to increase connectivity through active and sustainable modes of transport to provide safe and convenient routes to key destinations by maximising the use of the Chelmer East Green Wedge.

7.351 The development will provide a large sustainable community for around 4,500 new homes and 43,000 sqm of dedicated employment floorspace, and a new Country Park. 3,000 of the new homes will be delivered in the period to 2041. The total extent of the site allocated is shown on the Policies Map and the entire development is expected to be delivered between 2030 and 2048.

7.352 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.353 The development will provide a high quality comprehensive garden community development underpinned by a series of interrelated principles set out in the Town and

7 - Where will development growth be focused?

Country Planning Association (TCPA) Garden City Principles. These include community and stakeholder involvement in the design and delivery of the garden community, promoting the highest quality of design, providing opportunities for employment, encouraging healthy and active lifestyles, meeting the housing needs of all local people, providing integrated and sustainable transport systems, and putting in place long-term governance and stewardship arrangements for the new community infrastructure and assets.

7.354 The site allocation is to be planned comprehensively in accordance with a masterplan approved by the City Council. This will include community and stakeholder involvement in the formulation of the masterplan, which will be required to set out how the TCPA Garden City Principles are to be achieved, and adapted for the special characteristics and features of this particular site.

7.355 The establishment of a robust and sustainable stewardship structure early in the planning and delivery process forms a key requirement of the development establishing a consistent approach to stewardship and place keeping across this new Garden Community. The expectation is that the local community would have a defined remit in stewardship across the whole Garden Community area to foster collaboration, create accountability, provide consistency and ensure community engagement. A single not-for-profit site-wide Stewardship Body would be formed to work in partnership with the community to provide a co-ordinating role to stewardship, place making and community development and to deliver the vision for the Garden Community. The Stewardship Body activities is expected to be funded through a blend of income generating assets and endowment. If resident service charges are required these should be minimised and capped.

7.356 A formal governance structure will be established with oversight for the whole Garden Community to ensure appropriate common collaborative arrangements are put in place.

7.357 The development should provide a mix of size and types of homes, to meet local needs and create a mixed and inclusive community. Affordable, self-build and custom-build, and appropriately accessible and adaptable housing should be provided in accordance with the Council's policy requirements. The development will also be expected to provide specialist residential accommodation which could include accommodation for frail elderly and homes for those with disabilities or support needs. This provision should be based on the latest assessment of need and in consultation with Essex County Council.

7.358 As this is a Strategic Growth Site and in order to achieve a mixed and balanced new community, the development will be required to provide two Gypsy and Traveller sites, each for 10 pitches, and a Travelling Showpeople site for 13 serviced plots within the Strategic Growth Site allocation, as shown on the Policies Map. The location of the sites will be determined through the masterplanning process. These sites will be serviced i.e. provided with services such as water, waste disposal and electricity. It is expected that the Gypsy and Traveller sites will be delivered through a comprehensive approach, such as with a Registered Housing Provider. It is expected that 0.2 hectares per plot should be provided for each Travelling Showpersons plot. Easy and convenient access to the site for heavy goods vehicles is essential for the Travelling Showpersons site.

7.359 The development will be required to provide around 43,000 sqm of dedicated employment. This is expected to contribute significantly to the City's economic growth by providing a mix of opportunities for accommodation for medium and large-sized businesses. It is expected that for every new home a new job should be created on site.

7 - Where will development growth be focused?

7.360 This site allocation will support Chelmsford's economic growth by providing new employment floorspace and jobs. Locations for office, employment and community space will need to be incorporated in a logical way to relate to local needs and maintain a balance of uses on the site and the adjoining Chelmsford Urban Area. The development should provide a mix of type and range of sizes of Use Class E(g)(i)-(iii) employment units to help Chelmsford accommodate the predicted growth in economic development and identified need for new jobs which include the business sectors identified in Policy S8. To ensure flexibility and market responsiveness, other complementary E Use Classes may also be appropriate as part of the allocation.

7.361 A wide range of new community services and facilities including a new co-located school (including primary with co-located early years and childcare nurseries, secondary and potentially a sixth form centre), two new primary schools with co-located early years and childcare nurseries and three standalone nurseries, open spaces, recreation, sport and play facilities, community facilities and mixed use centres will need to be provided on the site. These services and facilities should be of an appropriate scale to serve the new communities and located where they will be easily accessible by walking, cycling and public transport to the majority of residents in the development and existing and planned neighbourhoods in the East Chelmsford Garden Community. The centres will need to make provision for community and healthcare facilities, as required by the NHS Mid and South Essex Integrated Care Board, and a main unit for convenience food shopping not exceeding 500sqm gross floorspace. The planning and design of development is required to encourage healthy and active lifestyles, in line with Sport England and Public Health England's Active Design guidance. Appropriate contributions will also need to be made for police, ambulance, and fire and rescue facilities.

7.362 The co-located primary and secondary school should be provided on a site of around 12 hectares of land. The developer will be expected to provide the education land and a financial contribution. Opportunities for dual use sports facilities within the new secondary school will be considered through the masterplan and planning application process. Consideration should be given to Essex School Organisation Service's 'Garden Communities and Planning School Places' to ensure schools are appropriately planned and laid out to serve the Garden Community.

7.363 The development will take its main vehicular access from the A414 Maldon Road. Additional access to the site will be from Junction 19 Boreham Interchange. This is expected to be primarily for active and sustainable travel connections. The Council will, in conjunction with the Highway and Transportation Authority and National Highways, seek appropriate contributions for enhancements to the local and strategic highway network including highway improvements to ensure highway safety, capacity and traffic management and to enable safe access to the site by active and sustainable modes. As a minimum these will be expected to include:

- Bus Based Rapid Transit infrastructure
- Safe multi-user access routes under and over the A12 to connect to existing routes
- A new active and sustainable route and bridge over the A12 to connect close to Sandon Park and Ride.

7 - Where will development growth be focused?

7.364 The development will be expected to provide additional and improved safe and convenient pedestrian, cycle and where appropriate bridleway connections within the site and to the wider area including the Chelmer East Green Wedge, existing education locations, Chelmsford City Centre, Danbury, Sandon, Little Baddow, Great Baddow, Beaulieu Park Rail Station, existing and proposed employment locations, new Country Park, surrounding countryside and wider strategic network.

7.365 Site-wide travel plan(s) will be expected to incorporate strategic measures which reduce the need to travel and encourage people to make sustainable travel choices, and demonstrate a 60% modal share for active and sustainable transport. Household travel plans will tailor those strategies to households and will include limited-term access to subsidised bus services and access to car clubs. Provision of a car club will provide a viable alternative to car ownership and can reduce the need for land devoted to car parking. The development will be large enough to support its own car club and there will be alternative means of active and sustainable transport available to residents to complement it.

7.366 The development will be required to maximise opportunities for active and sustainable transport modes to be taken up to create neighbourhoods where alternative forms of transport to the private car (walking, cycling and public transport) are prioritised. The development will be required to provide good accessibility for bus services, including bus stop infrastructure as appropriate, along with bus priority measures within and related to the site to provide and maintain a quick and convenient local bus service and services to the wider area including Chelmsford City Centre. A network of mobility hubs will be provided across the Garden Community; these will allow for the interchange between active modes of travel and bus services and include the provision of cycle storage and facilities which align with non-car living, for example, e-scooter hiring / parking / charging, cycle stands and a repair shop, car club parking, EV charging and bus stops.

7.367 The development will also be required to provide an appropriate Bus Based Rapid Transit. This should be a direct, frequent bus service that will connect the new development with the City Centre and Chelmsford and Beaulieu Park Rail Stations. It is critical for enabling local, frequent travel without reliance on the private car. The masterplan should provide a choice of unimpeded route corridors within the developed area, able to carry rapid transit bus services and enable convenient connections between residential areas, employment areas, Beaulieu Park Rail Station and Chelmsford City Centre. Essex County Council will work with the developers to determine a preferred-route corridor through the development to serve residents and key locations.

7.368 The site will provide a high quality development in a landscaped setting which works in sympathy with the local landscape and heritage assets. This should be informed by landscape and heritage evidence, including the 2017 Landscape Sensitivity and Capacity Assessment and the Historic Environment Characterisation Project. The development must promote the highest standards of design and provide high quality and inclusively designed buildings and public and private spaces planned around a coherent framework of routes, blocks and spaces.

7.369 Two tiers of design guidance will be expected to be followed - Site Wide Principles Document (informative) and the Detailed Design Codes (prescriptive). The Site Wide Design Principles Document will outline the aspects of spatial co-ordination between the different zones and development parcels and accompany the Strategic Parameter Plans which should

7 - Where will development growth be focused?

accompany the Masterplan. The preparation and submission of Detailed Design Codes (DDC) for approval will be a condition of subsequent planning applications. The DDC's will vary in their extent, tailored to the circumstances and scale of change in each place, allowing a suitable degree of variety but will be consistent in their objectives and in how they stipulate design quality, following a consistent structure and format as set out in the Masterplan documents. Development will follow a carefully design coded approach, as such it may be considered appropriate to remove permitted development rights.

7.370 Layout should incorporate compensation measures for impacts from the development on the landscape, preserve the setting of heritage assets and create a distinct new place. Compensation measures will include appropriate landscaped edges, tree and hedge planting along countryside edges and green buffers to respect the amenities of adjoining residential properties. The site plays an important role in the rural setting to a number of designated and non-designated heritage assets in the wider area. There are also significant views to Danbury and Little Baddow Churches. It will be important to ensure the impacts on heritage setting are adequately mitigated, which will include extensive landscape buffers in appropriate locations. This should include the creation of viewing corridors to historic landmarks. Historic lanes, field boundaries and the Graces Walk avenue are important features of this context, which should be retained and enhanced. There will be impacts to the setting of the Chelmer and Blackwater Navigation due to the change from a rural to urban context. It will be important to mitigate these impacts and provide landscape enhancement as part of a scheme of compensatory measures. This should include buffer zones alongside rivers, reserved as public space. Heritage, social history and natural environment celebration and interpretation should play a positive role in reinforcing local character and promote heritage and understanding such as the works of renowned local nature writer J. A. Baker who has connections with this area.

7.371 Being a large strategic allocation, the wider site includes an area of flood risk. As shown on the Policies Map, development will only be located in areas at least risk of flooding. The areas at higher risk of flooding will form the country park, which will largely be natural in character, and other open space. The site layout should also positively use existing topographical, heritage, ecological and landscape site features such as established vegetation and water bodies. The design is also expected to ensure that the development achieves an attractive and well-planned gateway into Chelmsford.

7.372 Development design and layout is expected to preserve or enhance the character or appearance of the Chelmer and Blackwater Navigation Conservation Area and preserve the listed buildings and their setting on and close to the site. The masterplan process will establish the detailed preservation and enhancement principles for this site.

7.373 The development is expected to ensure inclusive and high quality buildings and spaces. This shall include a comprehensive and coherent network of multifunctional green infrastructure, formal and informal recreation and community spaces.

7.374 Practical design considerations, such as service yards and routing, utility related plant, etc. must be effectively designed to sustain a high quality approach to streetscape. Layout should also safeguard suitable access for the maintenance of foul and surface water drainage infrastructure.

7 - Where will development growth be focused?

7.375 At least half the gross site area is expected to be multifunctional green or blue infrastructure. This will include open spaces, habitat creation, allotments or community growing areas and sports areas with associated facilities and play facilities, as well as maximising opportunities for river use in accordance with the Council's Waterways Strategy. This should include foot and cycle bridges over the river to create connectivity each side of the river. The new Country Park will be expected to retain and improve habitats for wildlife and provide new and enhanced recreational opportunities, including the waterways. Appropriate and sustainable long-term management and maintenance arrangements for the new Country Park will also be required. Given the scale of the Garden Communities, the opportunity exists for these developments to achieve 20% biodiversity net gain subject to site constraints. Development proposals will be considered in line with DM16. The area to the east of Sandon Brook notated on the Policies Map for Future Recreation/SuDS/Biodiversity should, due to its location, focus on informal recreation, natural and semi-natural green infrastructure uses rather than formal sports recreation requiring floodlighting or significant servicing, or SUDS.

7.376 The development will be required to provide appropriate habitat mitigation and creation, and appropriate buffers to avoid adverse impact on the adjacent local wildlife sites River Chelmer and Old Hare Wood, Waterhall Meadows Essex Wildlife Trust Nature Reserve, the ancient woodlands of Long Spring Wood and Hall Wood, and Blakes Wood, Danbury Common, and Lingwood Common SSSI, which lie within or immediately adjacent to the site. Developers will work closely with relevant local stakeholders, such as Natural England and the SSSI site managers (National Trust and Essex Wildlife Trust) to assess recreational pressure and provide the necessary mitigation measures for SSSIs. Any costs incurred will be covered by the developers of the site. These measures will be costed over the full lifetime of the development, i.e. in perpetuity (taken to be 80 years), rather than the plan period. Natural England must be consulted at the pre-application stage on the design of the high quality semi-natural greenspaces, to ensure that these provide an effective alternative space for recreation to the SSSIs.

7.377 Through the provision of the Country Park and the series of green spaces throughout the development, high quality semi-natural greenspace of at least 12ha each will be provided to meet Natural England's 8ha/1000 new population metric and minimum circular dog-walking route on or off site of 2.3km which make use of existing Public Rights of Way and/or highways. The precise uses of the multifunctional green and blue infrastructure will be defined through the masterplanning process which will include delineating specific areas where wildlife and ecological networks are prioritised.

7.378 Flood risk management and on-site SuDS are necessary to ensure there is no increased flood risk on site, or to adjacent areas and to ensure a sustainable form of development. Such features should not limit or adversely overlap with the main function of public open spaces.

7.379 Given the scale and nature of the development, the Council will encourage the appropriate development of renewable, low carbon and decentralised energy schemes on the site, especially where there is a strong degree of community benefit and subject to deliverability, and other planning considerations such as impacts upon residential amenity. This may include a district energy plant and/or a Combined Heat and Power Plant. Early engagement with the Council is recommended to help support this.

7 - Where will development growth be focused?

7.380 As this is a major new development site, where appropriate the Council will encourage a move away from traditional wheeled bins to mass waste collection systems, such as an underground waste system. Advantages of hiding waste underground can include minimising the visual impact of bins on pavements and streets and managing odour and noise issues.

7.381 The site lies within a Minerals Safeguarding Area. In line with the Minerals Planning Authority, the developer will be required to undertake a Minerals Resource Assessment to assess if further areas of the site contain a viable minerals resource that would require extraction prior to development. Whilst it is acknowledged that working of the full mineral deposit would not be compatible with the proposed non-mineral development, the Minerals Resource Assessment would indicate that there is a workable mineral resource that would be sterilised by the non-mineral development and thus the supporting statement to the application needs to demonstrate that the need for the built development is such that it outweighs the sterilisation of the mineral resource. The Local Planning Authority will need to consider this balance in taking a decision on any planning application.

7.382 The site is in close proximity to the Chelmsford Waste Water Treatment plant where odour may impact part of the site area. As a result, a Waste Infrastructure Impact Assessment should be undertaken.

7.383 There are pylons running through the west of the site. The development will need to follow National Grid Electricity Transmission (NGET) site-specific criteria for responding to the NGET overhead transmission lines present within the site. It will need to be demonstrated how the NGET Design Guide and Principles have been applied at the masterplanning stage and how the impact of the assets has been reduced through good design.

7.384 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation. Of particular interest, land to the north of Rumbolds Farm, Hammonds Road contains a significant number and configuration of crop marks requiring further investigation. Other significant archaeological remains and their settings should also be identified and protected. The archaeological evaluation should include appropriate trial trenches. Once complete the evaluation will inform the location of development parcels and open space within the masterplan.

7.385 The site is located partly in the Parishes of Sandon and Little Baddow. Each Parish has a 'made' (adopted) Neighbourhood Plan. Development proposals should have regard to the Sandon Neighbourhood Plan and Little Baddow Neighbourhood Plan. Each Parish will receive 25% of the CIL receipt for the portion of the allocation and any other development in its area.

STRATEGIC GROWTH SITE 16b – LAND ADJACENT TO A12 JUNCTION 18 EMPLOYMENT AREA

Land adjacent to A12 Junction 18 as shown on the Policies Map, is allocated for new employment development. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- Around 43,000sqm (net) for a mix of employment Use Classes E(g)(i-iii), B2 and B8 along with other appropriate ancillary employment generating uses.

Site masterplanning principles:

Movement and access

- Main vehicular access to the site will be from a new junction at Maldon Road
- Provide access to the site in a manner that complements and does not prejudice access to East Chelmsford Garden Community (Hammonds Farm)
- A Movement Strategy outlining the necessary transport interventions
- Provide well-connected and integrated internal road layouts which allow good accessibility for bus services and bus priority measures
- Provide safe and convenient pedestrian and cycle connections within the site and to the wider area including to local bus stops, Sandon Park and Ride, Woodhill Road, routes associated with the East of Chelmsford allocations including East Chelmsford Garden Community (Hammonds Farm) and Danbury and the east of the site
- Maximise the use of public transport within the site and to key destinations
- Provide safe multi-user crossings of the A414.

Historic and natural environment

- Preserve or enhance the character or appearance of Danbury Conservation Area
- Preserve and where appropriate enhance the setting of designated heritage assets including St John the Baptist, Danbury Registered Park and Garden, Sandon Lodge, Bridge Farmhouse, and the Bridge over Sandon Brook
- Avoid harm to non-designated heritage assets including Sandon Brook Place
- Protect important views into and through the site from across the Chelmer Valley and Danbury Ridge
- Create a network of multifunctional green infrastructure including provision of new trees
- Mitigate the visual impact of the development including lighting
- Provide an extensive and robust landscape buffer along the boundaries of the site
- Retain and enhance boundary trees as part of a detailed landscaping scheme, except where there is a need to provide the main site access from Maldon Road
- Provide suitable SuDs and flood risk management
- Undertake a Minerals Resource Assessment.

7 - Where will development growth be focused?

Design and layout

- **Avoid ecological impacts and provide on site ecological mitigation, compensation and enhancement measures**
- **Landscape led approach to site layout which retains and enhances trees, both within the site and along its boundaries**
- **Ensure no adverse impact on the living conditions of existing adjoining residential development**
- **Provide suitable noise attenuation measures to avoid harm to surrounding residential amenity**
- **Make appropriate provision for parking and access**
- **Conserve and enhance local landscape character**
- **Provide for a mix of building sizes and styles including building design measures to include the consideration of layout, scale, massing and materials to soften visual impact**
- **Provide a coherent network of new and accessible open space within the site**
- **Provide new sport, leisure and recreation facilities within the site.**

Site infrastructure requirements:

- **Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority and National Highways**
- **Flood Risk Assessment.**

Reasoned Justification

7.386 This site allocation will provide a strategic development of around 43,000sqm of mixed employment floorspace in Use Classes E(g)(i-iii), B2 and B8. Development is expected to be delivered by 2030 and will support Chelmsford's economic growth by providing significant new employment floorspace and jobs.

7.387 The development of the site will be subject of a masterplan agreed with the Council prior to the determination of a planning application.

7.388 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.389 The site lies just east of Junction 18 of the A12 and to the south of Maldon Road. It will be located adjacent to the proposed East Chelmsford Garden Community (Hammonds Farm) and close to the existing Urban Area of Chelmsford. It has good access to the strategic road network via the A414 to the A12 and is close to the Sandon Park & Ride.

7.390 The development will provide a mix of type and range of sizes of office, storage, and distribution floorspace in Use Classes E(g)(i-iii), B2 and B8 employment units to help Chelmsford accommodate the predicted growth in economic development and identified need for new jobs which include the business sectors identified in Policy S8. To ensure flexibility and market responsiveness, other complementary employment generating uses and services may also be appropriate as part of the allocation, such as co-working space/café, small retail use and roadside facilities within a landscaped and attractive setting. These uses

7 - Where will development growth be focused?

must be ancillary to the main employment use of the site and not destination locations in their own right.

7.391 The development will be expected to improve connections for sustainable transport, cycling and walking, including connections into the existing networks and links to Sandon Park & Ride, Sandon Village, Chelmsford Urban Area and Danbury. The development will be expected to provide suitable safe vehicular access and active and sustainable transport, including pedestrian and cycle provision to link the site to new developments East of Chelmsford including East Chelmsford Garden Community (Hammonds Farm).

7.392 A business travel plan will be required to encourage the use of active and sustainable means of travel for all new employees, to reduce the need to travel and encourage the use of non-car modes. Consideration should be given to a reduction in staff parking, against measures that promote more sustainable travel and the proximity of the Park & Ride. Onsite parking should be appropriately integrated into the site and balanced with robust landscaping.

7.393 The development will be required to provide good accessibility for bus services including bus priority measures and provide the necessary bus stop infrastructure within the site and surrounding area.

7.394 The Council will, in conjunction with the Local Highway and Transportation Authority and National Highways, seek appropriate contributions for enhancements to the local and strategic highway network including highway improvements to ensure highway safety, capacity and traffic management and to enable safe access to the site by active and sustainable modes.

7.395 The development will be expected to promote the highest standards of design to ensure that the type, size, form, height, scale, density, massing, materials and colour palette of the new development minimises its visual impact on the local landscape. The layout and position of buildings must avoid large-scale buildings near to the southern and south-eastern parts of the site and be set back from landscape buffers to ensure that there is no unacceptable visual, landscape and heritage impact and to ensure no impact upon tree buffers.

7.396 The design and layout of proposals will also need to incorporate structural and buffer landscaping throughout the site and to its boundaries, ensure the retention and enhancement of existing vegetation within the site and provide landscape compensation measures. Landscape buffers should incorporate tree planting as well as other biodiversity enhancements and should seek to make linkages to the nearby local wildlife sites to the south and east.

7.397 The site lies within the wider setting of a number of heritage assets. The rural character of the context contributes to their settings and it is essential that impacts on key views are avoided or mitigated, including towards St Johns Church and from Danbury Registered Park and Garden. Extensive structural landscaping will be required to mitigate the impact on setting to the south and southeastern parts of the site.

7.398 Ecological assets on the site shall be maintained and enhanced and significant new trees planted in line with Policy DM17. The existing tree belts on the northern and western boundaries shall be maintained and enhanced, except where there is a need to provide the main site access from Maldon Road. Trees which need to be removed to enable access to be provided, shall be kept to the minimum needed to provide necessary visibility, and will be required to be replaced on-site. The local wildlife sites Old Hare Wood to the north east and

7 - Where will development growth be focused?

Sandon Pit to the south shall be protected. The design scheme should enhance and protect Sandon Brook, which runs along the eastern boundary of the site, and which is important for biodiversity.

7.399 An authorised caravan site lies directly to the east of the site and a small enclave of development sits on the north side of the road. The development will be expected to provide suitable measures to ensure that the amenity of those residents is not adversely affected such as noise attenuation measures and boundary screening.

7.400 New open space, sports, leisure and recreation facilities to serve the employment site will be expected to be provided on-site. Open space should be provided in an integrated and coherent manner, provide a positive contribution to the quality and character of the development and be accessible to site employees. Open space must also be multifunctional to deliver a range of benefits, for example, enhanced biodiversity, resilience to climate change and sustainable drainage. Requirements for on-site sport, leisure and recreation facilities for employees will be informed by the latest Chelmsford Open Space, Sports and Recreational Facilities Study and Sports Facilities Strategy at the time of application.

7.401 Part of the site is located within Flood Zone 2 and 3 and as such a flood risk assessment will be required and SuDs provided in accordance with Policy DM18.

7.402 The site lies within a Minerals Safeguarding Area. The developer will be required to undertake a Minerals Resource Assessment to assess if the site contains a viable minerals resource that would require extraction prior to development.

7.403 The site may contain archaeological deposits which will need to be considered in future development proposals, through an archaeological evaluation.

7.404 The site is located in the Parish of Sandon where a Neighbourhood Plan has been made (adopted). Development proposals should have regard to the Sandon Neighbourhood Plan. This Parish will receive 25% of the CIL receipt for this development.

Location 10 - North of South Woodham Ferrers

STRATEGIC GROWTH SITE POLICY 10 – NORTH OF SOUTH WOODHAM FERRERS

Land to the north of Burnham Road (B1012) and east and west of the B1418, as shown on the Policies Map, is allocated for a high quality comprehensively planned sustainable extension to the existing town, that maximises opportunities for active and sustainable travel, in a landscaped setting. Development proposals will accord with a masterplan approved by the Council to provide:

Amount and type of development:

- 1,220 new homes of mixed size and type to include affordable housing
- Travelling Showpeople site for 5 serviced plots
- Around 1,200sqm of business floorspace.

Supporting on-site development:

- Potential co-location of a new primary school with an early years and childcare nursery, and one stand-alone early years and childcare nursery; or two new stand-alone early years and childcare nurseries
- Neighbourhood Centre incorporating community facilities and flexible neighbourhood scale business
- Integration of flexible workspace facilities.

Site masterplanning principles:

Movement and access

- Development that maximises opportunities for active and sustainable travel
- Main vehicular access to the western and central parcels will be from the B1418 with potential for additional access from Burnham Road subject to traffic management measures being agreed by the Local Highways and Transportation Authority
- Vehicular access to the eastern parcel will be from Burnham Road and/or Woodham Road
- Provide a well-connected internal road layout which allows good accessibility for bus services and bus priority measures
- Provide new public transport routes/services
- Provide an effective movement strategy within the site
- Provide additional and/or improved safe and convenient pedestrian and cycle connections to the Town Centre and railway station
- Provide high quality circular routes or connections to the wider Public Rights of Way network located away from the Crouch estuary
- Provide a dedicated car club for residents and businesses on site and available to the rest of South Woodham Ferrers
- Improvements to the local and strategic road network as required by the Local Highways and Transportation Authority.

Historic and natural environment

- Preserve and where appropriate enhance the setting of the listed buildings at Edwins Hall, Shaws Farmhouse, Tabrums, Wellington Farmhouse and Barn and Ilgars and the non-designated asset Lambert's Farm
- An appropriate landscaped setting for development consisting of sufficiently dense planting belts and natural buffers to development edges and Local Wildlife Sites, to provide a network of multifunctional green infrastructure to mitigate the visual, biodiversity and heritage impacts of the development
- Mitigate potential effects due to recreational pressure on nearby designated European sites
- Provide areas for natural SuDS and flood risk management
- Undertake an Archaeological Assessment.

7 - Where will development growth be focused?

Design and layout

- Development to be planned around a coherent framework of routes, blocks and spaces that deliver areas of distinct character
- Development shall predominantly be defined by and seek to retain the existing pattern of historic and landscape features
- Layout to be defined by a coherent network of wide green spaces to include formal and informal sport, recreation and community space that is well-connected to Public Rights of Way
- Layout to provide a strategy for responding to the National Grid Electricity Transmission overhead transmission lines present within the site and other utility easements, such as the gas main.

Site infrastructure requirements:

- Potential co-location of a new primary school (Use Class F1(a)) with an early years and childcare nursery (Use Class E(f)) on 2.1 ha of suitable land, and one stand-alone early years and childcare nursery (Use Class E(f)) on 0.13 hectares of suitable land; or two new stand-alone early years and childcare nurseries (Use Class E(f)) each on 0.13 hectares of suitable land allocated for education and childcare use. The developer(s) will be expected to provide the land and a proportionate financial contribution to the physical scheme
- Appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable modes of transport
- New and enhanced cycle routes, footpaths, Public Rights of Way and bridleways where appropriate
- Improvements to the A132 junctions between South Woodham Ferrers and Rettendon Turnpike to increase capacity
- Multi-user crossings of the B1012 in South Woodham Ferrers
- Appropriate flood risk management measures and SuDS
- Demonstrate that there is sufficient capacity for waste water treatment and disposal to serve the site, including any associated sewer connections and any required mitigation within the sewerage network
- Undertake a project-level Habitats Regulations Assessment to address the impacts of the scheme
- Provision of and financial contribution to facilitate and sustain car club facilities for use by residents and businesses within the site and the wider community
- Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities
- Financial contributions to secondary education as required by the Local Education Authority
- Financial contributions and/or onsite provision of other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board, and police, ambulance and fire and rescue facilities.

Reasoned Justification

7.405 This development to the north of South Woodham Ferrers will provide a sustainable extension. The site has resolution to grant planning permission subject to a S106 Agreement for 1,220 new homes across two parcels (Ref: 21/01961/OUT and 22/00311/OUT) along with a neighbourhood centre, around 1,200sqm of business floorspace, primary school and early years provision, and five Travelling Showpeople's plots. This number is reflected in the 5 year Housing Sites Schedule April 2024. If this permission is not implemented and a new proposal comes forward, the site capacity will be considered on its individual merit.

Development is expected to be delivered between 2026 and 2035. The allocation represents a logical area of expansion to South Woodham Ferrers and is less constrained than other land around the existing settlement where the River Crouch and its protection areas, flood risk and Green Belt considerations would prevent a similar approach to development. It will maximise opportunities for active and sustainable travel in a landscaped setting.

7.406 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.407 Planning permission for a supermarket and healthcare facility to the north of South Woodham Ferrers has been granted and implemented. As such there is no need for any further large-scale retail development, but further consideration would need to be given to local healthcare provision.

7.408 Although the development quantum and extent of the allocation is set out in the Local Plan, the adopted Neighbourhood Plan for South Woodham Ferrers will help to shape this site allocation. Through the 'made' (adopted) Neighbourhood Plan, South Woodham Ferrers Town Council will also receive 25% of the CIL receipt for this development and any others in its area.

7.409 Affordable, self-build, custom-build housing, as well as other types of specialist housing should be provided in accordance with the Council's policy requirements, to meet local needs and create a mixed and inclusive community. This could include accommodation for frail elderly and homes for those with a disability or support needs. This provision should be based on the latest assessment of need and in consultation with Essex County Council. Opportunities should be taken to include flexible units for integrated residential and commercial uses, to enhance sustainable and economic growth.

7.410 In order to achieve a mixed and balanced new community, the development will be required to provide a Travelling Showpeople site for 5 plots. This site will be serviced i.e. provided with services such as water, waste disposal and electricity. It is expected that 0.2 hectares per plot should be provided. Easy and convenient access to the site for heavy goods vehicles is essential. The location of the Travelling Showpeople site will be addressed through the wider masterplanning process for the site.

7.411 A range of new community services and facilities including a potential new primary school, two early years and childcare nurseries, healthcare, open space, recreation facilities and neighbourhood centre will need to be provided on the site. These services and facilities should be of an appropriate scale to serve the new communities and located where they will be easily accessible by walking, cycling and public transport to the majority of residents in the development and existing neighbourhood. Appropriate contributions will also need to be made for police, ambulance and fire and rescue facilities.

7 - Where will development growth be focused?

7.412 Locations for business, retail and community space will need to be incorporated in a logical way to relate to local needs and maintain a balance of uses on the site and the adjoining town. The planning and design of development is required to encourage healthy and active lifestyles, in line with Sport England and Public Health England's Active Design guidance.

7.413 The land to the north of the town is predominantly open, save for field boundaries, and offers views across an undulating landscape form. The development extents should be limited to areas within the site with lower topography and/or where excessive visibility can be mitigated. Given the open context, the character of the development must exhibit a sufficiently open and green character, with greenways and open spaces within the layout and appropriate buffer and strategic landscaping to the outer margins, to respect the historic landscape character. The development must seek to preserve key wildlife connections and offer sufficient density and connectivity of green infrastructure to provide protection for wildlife and where necessary compensate for the impact on wildlife that occurs from development. This will include offering adequate protection of the Local Wildlife Site at Bushy Hill and other sensitive areas within and outside the site. The site will provide a high quality development in a landscaped setting.

7.414 Flood risk management and natural, on-site SuDs are necessary to ensure there is no increased flood risk on site or to adjacent areas and to ensure a sustainable form of development. Such features should not limit or adversely overlap with the main function of public open spaces.

7.415 The southern edge of the site is around 500m from South Woodham Ferrers railway station and associated businesses, and just over 1km from the town centre and secondary school. South Woodham Ferrers has a wide range of facilities including medical, leisure, retail, library and business areas spread throughout the town area.

7.416 The development must provide access by walking, cycling and public transport to facilities and services within the development itself and the wider area including the railway station, town centre, and schools. This must include safe crossing points at Burnham Road to enable seamless integration with the existing settlement.

7.417 There will be no vehicular access from the site to Edwins Hall Road due to the characteristics and attributes of that route. Due to existing features such as roads and land topography, it is likely that development will come forward within western, central and eastern parcels. Each parcel must benefit from suitable foot, cycle, public transport and private vehicle access to the existing public network and an appropriate interconnectivity between parcels must be achieved. This is expected to include new north/south – east/west cycle routing through the overall site. Bus stop infrastructure should be provided, along with bus priority measures within and related to the site to provide and maintain quick and convenient local bus services to the wider area including Wickford Town Centre/Railway Station and Chelmsford City Centre.

7.418 Site-wide travel plan(s) will be expected to incorporate strategic measures which reduce the need to travel and encourage people to make active and sustainable travel choices. Household travel plans will tailor those strategies to households and will include limited-term access to subsidised bus services and access to car clubs. Provision of a car club will provide a viable alternative to car ownership and can reduce the need for land devoted to car parking.

7 - Where will development growth be focused?

The existing neighbourhood provides a wider customer base for a sustainable car club operation.

7.419 Impacts from development on the local and strategic road network must be mitigated, and may include appropriate highway improvements along Burnham Road, the roundabout junctions at the B1418, Ferrers Road and Rettendon Turnpike, and the A132 and local junctions between the town and the A130, in line with Local Highways and Transportation Authority requirements. Impacts of development from within and to the adjoining areas including Basildon, Rochford and Maldon District will be part of this consideration.

7.420 Any improvements to the existing highway required to mitigate the impact of development from this Strategic Growth Site, will be primarily focused on junction enhancements, such as to the A132/B1012 Rettendon Turnpike, in order to improve the flow of traffic onto the strategic road network. These should not encourage through-traffic movements to use the local road network through neighbouring settlements such as Runwell and Wickford. The road network to the south of the Council's area is also proposed for improvement by the Local Highways and Transportation Authority including the A130, A127 and A13 corridors. These include the A127/A130 Fairglen Interchange improvement scheme. Where appropriate, off-site mitigation of this Strategic Growth Site should complement other relevant Local Highways and Transportation Authority schemes to help ensure the strategic road network provides the most attractive route for through-traffic.

7.421 This site is near the Crouch and Roach Estuaries Special Protection Area, Ramsar site and Site of Special Scientific Interest which lie to the south of the town. These sites are particularly sensitive to increased visitor pressure, which may be caused by residential development in the surrounding area including to the north of the Town, so measures that increase the recreation choice for residents away from the estuary, or which help mitigate impacts where the estuary is used for recreation, must form an integral part of the development proposals. Impacts of development in the adjoining Maldon District and other areas also need to be part of this consideration.

7.422 Due to the proximity of the site to the Crouch and Roach Estuary SPA and Ramsar site, there is a need for a project level Habitats Regulations Assessment (HRA) to address all impacts of the scheme taken alone or in combination.

7.423 Whilst there are no heritage assets within the site boundary, there are a number of listed buildings and a non-designated heritage asset around the site. Development of this site will need to mitigate any impact on these buildings and their settings.

7.424 The development must provide a high quality, connected layout and building design that reflects a strong sense of place, high quality streetscape and comfortable living environment, which works in sympathy with the local landscape. Key views and utility easements including overhead powerlines and a high-pressure gas main (if remaining) will be likely to influence the location of green spaces and routes, and create the layout framework for buildings.

7.425 Practical design considerations, such as service yards and routing, utility related plant, etc. must be effectively designed to sustain a high quality approach to streetscape.

7.426 The site may contain archaeological deposits which will need to be considered by future development proposals, through an archaeological evaluation.

Location 11 - Bicknacre

GROWTH SITE POLICY 11b – LAND AT KINGSGATE, BICKNACRE ROAD, BICKNACRE

Land at Kingsgate, Bicknacre Road, Bicknacre, as shown on the Policies Map, is allocated for a residential development.

Amount and type of development:

- Up to 1 hectare of land to accommodate around 20 new homes including affordable housing. The final amount of new homes will be confirmed through the planning application process.

Site development principles:

Movement and Access

- Vehicular access to the site will be from Bicknacre Road
- Provide safe and convenient pedestrian and cycle connections
- Provide a well-connected internal road layout.

Historic and Natural Environment

- Retain and enhance existing natural landscaping and trees in and on the boundary of the site
- Provide suitable multifunctional Green Infrastructure
- Provide suitable flood risk management and Sustainable Drainage Systems (SuDS)
- Undertake an archaeological assessment
- Assess, and where appropriate mitigate, the potential cumulative effect on the designated features of Thrift Wood SSSI.

Design and layout

- Character, scale and layout to have regard and respond to the site's surrounding context
- Development to create frontage to Bicknacre Road.

Site infrastructure requirements:

- Provide appropriate improvements, as necessary to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable modes of transport
- Financial contributions to new or enhanced sport, leisure and recreation facilities

- **Financial contributions to early years and childcare, primary and secondary education provision as required by the Local Education Authority**
- **Financial contributions towards other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.**

Reasoned Justification

7.427 The boundary of this Growth Site allocation is defined on the Policies Map and comprises the following notations

- New housing site, and
- Land allocated for future recreation use/or SUDS and/or biodiversity.

7.428 Land at Kingsgate, Bicknacre Road is adjacent to the Defined Settlement of Bicknacre. Development is expected to be delivered from 2030/2031 onwards. It is within walking distance of the village shop, primary school, recreation ground, existing public transport connections, and other facilities in the village.

7.429 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.430 The development should provide an appropriate mix of size and types of homes appropriate to the surrounding character including affordable housing. Affordable, accessible and adaptable housing should be provided in accordance with the Council's policy requirements.

7.431 Appropriate active and sustainable travel connections should be provided within the site with links into the wider network, including the primary school.

7.432 The development will be required to assess, and where appropriate mitigate, the potential cumulative effect from sites 11b and 11c on the designated features of Thrift Wood SSSI.

7.433 Land to the west of the site is allocated for future SUDs/biodiversity to serve the site, as shown on the Policies Map.

GROWTH SITE POLICY 11c – LAND WEST OF BARBROOK WAY, BICKNACRE

Land west of Barbrook Way, as shown on the Policies Map, is allocated for a residential development.

Amount and type of development:

- **Up to 1 hectare of land to accommodate around 20 new homes including affordable housing. The final amount of new homes will be confirmed through the planning application process.**

7 - Where will development growth be focused?

Site development principles:

Movement and Access

- Vehicular access to the site will be from Barbrook Way
- Provide safe and convenient pedestrian and cycle connections
- Provide a well-connected internal road layout.

Historic and Natural Environment

- Retain existing natural landscaping and trees on the boundary of the site
- Ensure a defensible landscape buffer on the sites boundaries
- Provide suitable multifunctional Green Infrastructure
- Provide suitable flood risk management and Sustainable Drainage Systems (SuDS)
- Assess, and where appropriate mitigate, the potential cumulative effect on the designated features of Thrift Wood SSSI.

Design and layout

- Character, scale and layout to have regard and respond to the site's surrounding context
- Development on western edge should front onto open countryside.

Site infrastructure requirements:

- Provide appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable modes of transport
- Financial contributions to new or enhanced sport, leisure and recreation facilities
- Financial contributions to early years and childcare, primary and secondary education provision as required by the Local Education Authority
- Financial contributions towards other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.

Reasoned Justification

7.434 Land west of Barbrook Way is adjacent to the Defined Settlement of Bicknacre. Development is expected to be delivered from 2030/2031 onwards. It is within walking distance of the village shop, primary school, recreation ground, existing public transport connections, and other facilities in the village.

7.435 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.436 The development should provide an appropriate mix of size and types of homes appropriate to the surrounding character including affordable housing. Affordable, accessible and adaptable housing should be provided in accordance with the Council's policy requirements.

7.437 Appropriate active and sustainable travel connections should be provided within the site with links into the wider network, including the primary school.

7.438 The development will be required to assess, and where appropriate mitigate, the potential cumulative effect from sites 11b and 11c on the designated features of Thrift Wood SSSI.

Location 12 – St Giles, Bicknacre

GROWTH SITE POLICY 12 - ST GILES, MOOR HALL LANE, BICKNACRE

St Giles, Moor Hall Lane as shown on the Policies Map, is allocated for specialist residential accommodation development. Development will be expected to provide:

Amount and type of development:

- **Around 32 new units for specialist residential accommodation (SRA) that responds positively to the local context. The final amount of new homes will be confirmed through the planning application process.**

Site development principles:

- **Vehicular access to the site will be from Moor Hall Lane**
- **Provide safe and convenient pedestrian and cycle connections**
- **Provide suitable flood risk management and Sustainable Draining Systems (SuDS)**
- **Protect existing trees within the development site**
- **Create a network of multifunctional green infrastructure.**

Site infrastructure requirements:

- **Appropriate improvements, as necessary, to the local and strategic road network as required by the Local Highways and Transportation Authority**
- **Provide, or make financial contributions to, new or enhanced sport, leisure and recreation facilities**
- **Financial contributions towards other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.**

Reasoned Justification

7.439 St Giles Estate is close to the village boundary of Bicknacre. Development is expected to be delivered from 2030/2031 onwards. It is within walking distance of shops and facilities in Bicknacre village. The site includes an established residential home, which provides accommodation for adults with learning difficulties and mental health problems.

7.440 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7 - Where will development growth be focused?

7.441 Development would need to consider the need for additional primary health care provision informed by robust evidence on existing provision and consultation with NHS Mid and South Essex Integrated Care Board. Further development of specialist residential housing should complement the existing provision available at this location.

Location 13 - Danbury

STRATEGIC GROWTH SITE POLICY 13 – DANBURY

An allocation of around 100 new homes to be accommodated within or adjoining the Defined Settlement Boundary of Danbury. The site(s) to accommodate this allocation will be identified and consulted upon through the emerging Danbury Neighbourhood Plan.

Amount and type of development:

- Around 100 new homes of mixed size and type including affordable housing. The final amount of new homes will be confirmed through the planning application process.

Site development principles:

Movement and Access

- Provide safe and convenient pedestrian and cycle connections.

Historic and Natural Environment

- Conserve and enhance the Sites of Special Scientific Interest (SSSI) in and around Danbury (Blake's Wood and Lingwood Common SSSI, Woodham Walter Common SSSI and Danbury Common SSSI) ensuring any new development avoids direct impacts and mitigates indirect impacts (i.e. recreational damage) as a priority and provides any required mitigation measures where necessary (including those set within any emerging visitor impact studies / strategic solutions).

Site Infrastructure Requirements:

- Contributions towards addressing cumulative recreational pressure on SSSIs in proximity to the site.

Reasoned Justification

7.442 Danbury is a Key Service Settlement located outside of the Green Belt with a good range of local services and facilities. Although future development in Danbury is restricted by significant landscape, ecology and highway constraints, there is some limited capacity in the primary schools that serve Danbury.

7.443 Infrastructure required for this location would need to accord with the relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7 - Where will development growth be focused?

7.444 There are significant tracts of protected woodland and commons in and around the Danbury Ridge which represent important valued landscapes. These include a cluster of protected Sites of Special Scientific Interest (SSSI) which are Danbury Common, Blake's Wood and Lingwood Common, and Woodham Walter Common. These SSSIs receive high levels of recreational pressure and future development in Danbury will need to consider the need for mitigation measures as part of future development proposals. Developers will work closely with relevant local stakeholders, such as Natural England and the SSSI site managers (National Trust and Essex Wildlife Trust) to assess recreational pressure and provide the necessary mitigation measures for SSSIs. Any costs incurred will be covered by the developers of the site. These measures will be costed over the full lifetime of the development, i.e. in perpetuity (taken to be 80 years), rather than the plan period.

7.445 There are a number of heritage assets in and around Danbury which may need to be considered by future development proposals. These include Danbury Conservation Area, two Registered Parks and Gardens, Danbury Hill Fort Scheduled Monument and a variety of listed buildings.

7.446 There are archaeological deposits in and around Danbury which may need to be considered by future development proposals, through an archaeological evaluation.

7.447 The A414 is a busy road connecting Chelmsford with Maldon which bisects the village. Pre-signals have been installed at the A414/Little Baddow Road/Mayes Lane (Eves Corner) junction to assist in the peak time operation of this junction.

7.448 Taking the above constraints and opportunities into account, the Spatial Strategy makes provision for an allocation of around 100 homes. This represents approximately a 5% increase of homes in Danbury. To ensure sites are sustainable and are in close proximity to local services and facilities, they should be located either within or adjacent to the defined settlement boundaries as defined on the Policies Map. The allocation of around 100 new homes will be identified by the Danbury Neighbourhood Plan, and may comprise one or multiple sites, expected to be delivered during the Local Plan period. When their Neighbourhood Plan is approved, Danbury Parish Council will also receive 25% of the CIL receipt for new developments in its area, otherwise the rate will be 15%.

Location 17 – East Hanningfield

GROWTH SITE POLICY 17a – LAND NORTH OF ABBEY FIELDS, EAST HANNINGFIELD

Land north of Abbey Fields, as shown on the Policies Map, is allocated for a residential development.

Amount and type of development:

- **Up to 1 hectare of land to accommodate around 11 new homes including affordable housing. The final amount of new homes will be confirmed through the planning application process.**

7 - Where will development growth be focused?

Site development principles:

Movement and Access

- Vehicular access to the site will be from Abbey Fields
- Provide safe and convenient pedestrian and cycle connections
- Provide a well-connected internal road layout.

Historic and Natural Environment

- Retain existing natural landscaping and trees in and on the boundary of the site
- Provide suitable multifunctional Green Infrastructure
- Provide suitable flood risk management and Sustainable Drainage Systems (SuDS).

Design and layout

- Character, scale and layout to have regard and respond to the site's surrounding context.

Site infrastructure requirements:

- Provide appropriate improvements to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable modes of transport
- Financial contributions to new or enhanced sport, leisure and recreation facilities
- Financial contributions to early years and childcare, primary and secondary education provision as required by the Local Education Authority
- Financial contributions towards other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.

Reasoned Justification

7.449 Land north of Abbey Fields is partially within and partially adjacent to the Defined Settlement of East Hanningfield. Development is expected to be delivered from 2030/2031 onwards. It is within walking distance of the village shop, primary school, recreation ground, existing public transport connections, and other facilities in the village.

7.450 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.451 The development should provide an appropriate mix of size and types of homes appropriate to the surrounding character including affordable housing. Affordable, accessible and adaptable housing should be provided in accordance with the Council's policy requirements.

7.452 Appropriate active and sustainable travel connections should be provided within the site with links into the wider network, including the primary school.

7.453 The site is located in the Parish of East Hanningfield where a Neighbourhood Plan is being prepared. It is envisaged that the Neighbourhood Plan will help shape this site allocation. When their Neighbourhood Plan is made (adopted) East Hanningfield Parish Council will receive 25% of the CIL receipt for this development and any other in its area. Otherwise the rate will be 15%.

GROWTH SITE POLICY 17b – LAND EAST OF HIGHFIELDS MEAD, EAST HANNINGFIELD

Land east of Highfields Mead, as shown on the Policies Map, is allocated for a residential development.

Amount and type of development:

- Up to 1 hectare of land to accommodate around 20 new homes including affordable housing. The final amount of new homes will be confirmed through the planning application process.

Site development principles:

Movement and Access

- Vehicular access to the site will be from Bicknacre Road
- Provide safe and convenient pedestrian and cycle connections
- Provide a well-connected internal road layout.

Historic and Natural Environment

- Retain as much existing natural landscaping and trees on the boundary of the site as possible taking into account the need for a safe vehicular entrance
- Provide suitable multifunctional Green Infrastructure
- Provide suitable flood risk management and Sustainable Drainage Systems (SuDS).

Design and layout

- Character, scale and layout to have regard and respond to the site's surrounding context.

Site infrastructure requirements:

- Provide appropriate improvements, as necessary to the local and strategic road network as required by the Local Highways and Transportation Authority
- Appropriate measures to promote and enhance active and sustainable modes of transport
- Financial contributions to new or enhanced sport, leisure and recreation facilities
- Financial contributions to early years and childcare, primary and secondary education provision as required by the Local Education Authority

7 - Where will development growth be focused?

- **Financial contributions towards other community facilities including healthcare provision as required by the NHS Mid and South Essex Integrated Care Board and Police, ambulance and fire and rescue facilities.**

Reasoned Justification

7.454 The boundary of this Growth Site allocation is defined on the Policies Map and comprises the following notations:

- New housing site, and
- Land allocated for future recreation use/or SUDS and/or biodiversity.

7.455 Land east of Highfields Mead is partially within and partially adjacent to the Defined Settlement of East Hanningfield. Development is expected to be delivered from 2030/2031 onwards. It is within walking distance of the village shop, primary school, recreation ground, existing public transport connections, and other facilities in the village.

7.456 Infrastructure required for this site is in addition to relevant requirements of Policy S9. Financial contributions will be sought in accordance with Policy S10.

7.457 The development should provide an appropriate mix of size and types of homes appropriate to the surrounding character including affordable housing. Affordable, accessible and adaptable housing should be provided in accordance with the Council's policy requirements.

7.458 Appropriate active and sustainable travel connections should be provided within the site with links into the wider network, including the primary school.

7.459 The area to the north-east of the site is allocated for biodiversity to serve the site, as shown on the Policies Map.

7.460 The site is located in the Parish of East Hanningfield where a Neighbourhood Plan is being prepared. It is envisaged that the Neighbourhood Plan will help shape this site allocation. When their Neighbourhood Plan is made (adopted) East Hanningfield Parish Council will receive 25% of the CIL receipt for this development and any other in its area. Otherwise the rate will be 15%.

Special Policy Areas

7.461 The six designated Special Policy Areas (SPA) lie outside the built-up areas, where ordinarily policy would constrain new development. The SPA designation enables the operational and functional requirements of these facilities or institutions to be planned in a strategic and phased manner. The SPA sites are shown on the Policies Map.

7.462 The key objectives are to:

- Enable Special Policy Areas to be planned in a strategic and phased manner
- Ensure future development reflects the operational and functional requirements of the Special Policy Areas
- Ensure future development minimises the impact of development on their surroundings, sites important for nature conservation, wildlife and heritage assets
- Strengthen access to the sites by sustainable modes of transport and minimise traffic pressures on local roads
- Achieve high quality design.

POLICY SPA1 – BROOMFIELD HOSPITAL SPECIAL POLICY AREA

The Council will support health related proposals which support the role, function and operation of Broomfield Hospital. This includes the provision of a loop road to allow buses, service and emergency vehicles easy access into the full body of the estate; optimising access by public transport and active travel modes; strengthening the network of pedestrian routes and spaces to aid safety, comfort and convenience; concentrating buildings of scale and mass within the central core of the estate; limiting the scale and mass of buildings at the edge of the estate; ensuring a phased and coherent strategy for removal of temporary buildings and their replacement with permanent structures; protecting and enhancing woodland, parkland, trees and hedgerows; minimising environmental impacts including in respect of ecology and water quality, and creating high quality public spaces.

Reasoned Justification

7.463 Broomfield Hospital is an important regional medical facility located to the north of Broomfield and Urban Chelmsford. It comprises clinical and ancillary buildings, car parking, hospital-related housing, a Local Wildlife Site/woodland and open space. Two water courses also pass through the site.

7.464 The Special Policy Area shown on the Policies Map has been defined to enable the operational and functional requirements of Broomfield Hospital to be planned in a strategic and phased manner as it is outside the Defined Settlement of Broomfield where ordinarily policy would constrain new development.

7 - Where will development growth be focused?

POLICY SPA2 – CHELMSFORD CITY RACECOURSE SPECIAL POLICY AREA

Development will be permitted for proposals which provide ancillary functions to support the operation of the Racecourse, subject to good design quality; promoting active and sustainable means of transport to the site and reducing use of individual trips by car; protecting and enhancing existing trees and hedgerows; preserving nearby listed buildings and their setting; minimising the impact of floodlighting; minimising environmental impacts including in respect of ecology and landscape; and ensuring the full restoration of the existing minerals site.

Reasoned Justification

7.465 Chelmsford City Racecourse is located at the former Essex County Showground. It has been revived as a major new racecourse and equestrian centre with supporting entertainment facilities.

7.466 Development opportunities will need to be balanced with the environmental impacts of this large site, especially regarding transport and the impact on the countryside, landscape and ecology (including the Local Wildlife Site). Further development related to the racecourse and equestrian centre may be appropriate within the Special Policy Area, where sensitively designed and having regard to the surrounding area including nearby residential properties, wildlife and heritage assets. The Council will not support residential development within the Special Policy Area which is unrelated to the primary use as a racecourse and equestrian centre.

7.467 The Special Policy Area boundary shown on the Policies Map includes the areas covered by the existing built development and areas with approved planning permission for future development.

POLICY SPA3 – HANNINGFIELD RESERVOIR SPECIAL POLICY AREA

Development will be permitted for proposals that are not inappropriate development in the Green Belt as set out in the National Planning Policy Framework.

Inappropriate development is harmful to the Green Belt and will not be permitted except in very special circumstances. Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations. Very special circumstances may include proposals for water infrastructure and ancillary development where there is a demonstrable need and directly associated with the role, function and operation of the Hanningfield Reservoir Treatment Works Site.

Subject to national policy on Green Belt, development proposals should optimise opportunities for active and sustainable modes of transport to the site and reduce individual trips by car; provide high quality buildings; focus built form around existing buildings; protect and enhance trees and hedgerows; avoid adverse impacts in respect of biodiversity and landscape; and promote the nature conservation and ecological interests and recreational uses of the reservoir without impact upon the nature conservation interests of Hanningfield Reservoir SSSI through recreational disturbance. Development proposals are also expected to provide suitable SuDS and flood risk management.

Reasoned Justification

7.468 Hanningfield Reservoir Treatment Works is an important site for water treatment and ancillary activities serving Chelmsford and other parts of Essex. Its Green Belt location requires careful consideration when deciding on the type and extent of any new development.

7.469 The Special Policy Area boundary shown on the Policies Map includes the main campus of existing treatment buildings, stores building and staff offices. The site also includes two Local Wildlife Sites. Any further extension of the Special Policy Area would result in visually intrusive development and a resultant negative impact upon landscape character in the area including the Site of Special Scientific Interest (SSSI). These areas are essentially open in character and existing road access is poor.

7.470 This Special Policy Area provides access to part of the wider open countryside and the area's green infrastructure network.

POLICY SPA4 – RHS HYDE HALL GARDENS SPECIAL POLICY AREA

Development will be permitted for proposals which promote the continued role of these nationally important gardens. This could include the provision of sensitively designed accommodation for education and employment needs; improved range of visitor facilities and services; promoting the continued use of existing buildings; and protecting and enhancing trees and hedgerows and other existing site and landscape features of value. Proposals should promote active and sustainable modes of transport to the site and reduce use of individual trips by car, minimise conflict between pedestrian routes and vehicle movement around the site, and enable full disabled access throughout. Proposals should protect and enhance the historic environment.

Reasoned Justification

7.471 The Royal Horticultural Society (RHS) gardens at Hyde Hall are located to the south east of Chelmsford in close proximity to the villages of East Hanningfield and Rettendon Common. It is a site which occupies 136 hectares of land, dominated by attractive hills, fields, pastures and woodland. The visitor site itself lies in a site of 10 hectares which contains controlled gardens and visitor facilities.

7 - Where will development growth be focused?

7.472 The Special Policy Area boundary is shown on the Policies Map. The Special Policy Area for Hyde Hall recognises its potential to develop as a destination garden of both national and regional significance. It will provide a clear basis for the determination of future planning applications, which may result in diversification of site usage, some intensification and increased visitor numbers.

7.473 The inclusion of the site as a Special Policy Area does not mean that all development proposals within Hyde Hall would be acceptable. The Special Policy Area is tightly drawn around existing buildings and the main developed part of the site. Areas outside of the designation can be appropriate for horticulture or garden related uses of land, but new operational buildings should be confined to the Special Policy Area. Any new access arrangements need to be considered carefully, having regard to the character of the area and highway safety. Any new development must also take into account the need to protect and enhance nearby heritage assets.

POLICY SPA5 - SANDFORD MILL SPECIAL POLICY AREA

Development will be permitted for proposals for a mix of uses to support Sandford Mill's cultural, leisure and recreational focus which improve the access into and within the Special Policy Area; promote active and sustainable means of transport to the site; provide suitable facilities for visitors; mitigate adverse impacts on cultural heritage or landscape; and increase access to the waterways. New development proposals to the south of Sandford Mill will allow the provision of a new vehicular access to Maldon Road (A414).

Reasoned Justification

7.474 Sandford Mill lies within the Rural Area to the east of Chelmsford which is designated as Green Wedge and the Chelmer and Blackwater Navigation Conservation Area. The Green Wedge provides a key part of Chelmsford's green infrastructure network. Sandford Mill comprises a collection of buildings, mill pond and filter beds that formed part of the original water treatment works that served Chelmsford. Sandford Bridge, Sandford Lock and Brook End Bridge, which are Grade II listed, lie adjacent to the site.

7.475 The site was last used as a museum related to the story of Chelmsford's unique industrial heritage. It is recognised as an opportunity for an appropriate mixed use development linked to the Chelmer and Blackwater Navigation. Re-use and restoration of existing buildings should be the focus for any redevelopment.

7.476 The previous museum offers the opportunity to promote a mixed use development. Proposals should firstly look towards re-use and restoration of existing buildings, to be accompanied by improvements to access into and within the site.

7.477 The boundaries of the Special Policy Area shown on the Policies Map are drawn to allow for future development of Sandford Mill whilst seeking to protect the local landscape, nature conservation interests and heritage assets from inappropriate development.

7 - Where will development growth be focused?

7.478 Its location within the floodplain, Conservation Area and Green Wedge will need careful consideration when deciding on the type and extent of any new development. Furthermore, development within the Special Policy Area will be expected to mitigate potential effects on the nature conservation downstream.

7.479 Vehicular access is achieved from Chelmsford via Brook End Road. There is an opportunity for this access to be improved. New connections are proposed between the new development proposals to the south and Sandford Mill. There is also an opportunity to promote more sustainable modes of transport, such as use of the Chelmer and Blackwater Navigation to link to the City Centre. Additional moorings may also be appropriate in order to increase access to the waterways.

7.480 Development within the Special Policy Area will be expected to mitigate potential effect on European protected sites downstream.

POLICY SPA6 – ARU WRITTLE SPECIAL POLICY AREA

Development will be permitted for proposals that are not inappropriate development in the Green Belt as set out in the National Planning Policy Framework. Inappropriate development is harmful to the Green Belt and will not be permitted except in very special circumstances. Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations. Very special circumstances may include development directly associated with the role, function and operation of ARU Writtle and there is a demonstrable need.

Subject to national policy on Green Belt, development proposals should look for opportunities to improve circulation through and links with existing ARU Writtle buildings; promote active and sustainable means of transport to the site and reduce individual trips by car; and improve the facilities of ARU Writtle. This includes replacing existing buildings or structures of poor design quality and materials with well-designed high quality buildings and structures that would not have a greater impact on the openness of the Green Belt and the purpose of including land within it than the existing development.

The SPA masterplan should include proposals to maintain National Cycle Route 1 which runs through the site.

Reasoned Justification

7.481 ARU Writtle was created following the merger of Anglia Ruskin University (ARU) and Writtle University College in 2023. Located on the outskirts of Chelmsford it offers postgraduate, undergraduate, further education and short courses in the areas of agriculture and animal sciences. It has also developed a range of degree programmes in applied life sciences, sport and health subjects. ARU Writtle is seeking to expand and broaden its educational facilities and opportunities, and is a key employer in Chelmsford. ARU Writtle's Green Belt location between Chelmsford and Writtle is a constraining issue, requiring careful consideration when deciding on the type and extent of any new development in the future.

7 - Where will development growth be focused?

New development proposals to the north of the site at West Chelmsford (Warren Farm) will provide improved safe and convenient cycling and walking connectivity.

7.482 The Special Policy Area is divided into three sections. The Eastern boundary at Lordship Road encompasses the main operational and functional requirements of the site including the further and higher education campuses, administration blocks, halls of residence, children's nursery, sports hall site and the proposed new campus redevelopment. It also includes the Titchmarsh campus small animal centre along Cow Watering Lane. This section of the SPA will protect the potential coalescence of the ARU Writtle with Writtle Village.

7.483 The western sections of the Special Policy Area are the locations for the Rural Education and Training Centre and Centre for Livestock Studies at Sturgeons Farm .

7.484 The boundaries of the Special Policy Area shown on the Policies Map are drawn to allow for future development of ARU Writtle whilst seeking to protect the local landscape, nature conservation interests and heritage assets from inappropriate development. This includes the surrounding Green Wedge which provides a key part of Chelmsford's green infrastructure network.

8 - Protecting and Securing Important Assets

8 - Protecting and Securing Important Assets

8.1 This Section provides other non-strategic policies of the Local Plan that will shape Chelmsford's development opportunities whilst protecting its important physical attributes. In particular, they will also contribute to delivering the Council's response to the declared climate and ecological emergency, focus on health and wellbeing, and secure the enhancement and extension of the City's Green Infrastructure Resource.

Securing the right type of Homes

POLICY DM1 - SIZE AND TYPE OF HOUSING

The Council will protect existing housing from redevelopment to other uses.

A) Within all developments of 10 or more dwellings the Council will require:

- i the provision of an appropriate mix of dwelling types and sizes that contribute to current and future housing needs and create mixed communities; and**
- ii 50% of new dwellings to be constructed to meet requirement Part M, Category 2 (Accessible and adaptable dwellings) M4 (2) of Schedule 1 (para 1) to the Building Regulations 2010 (as amended) , or subsequent government standard.**

B) Within all developments of 30 or more dwellings the Council will require A)i and A)ii above, and:

- i 5% of new affordable dwellings should be built to meet requirement Part M, Category 3 (Wheelchair user dwellings) M4 (3) (2) (b) of Schedule 1 (para 1) to the Building Regulations 2010 (as amended), or subsequent government standard.**

C) Within all developments of more than 100 dwellings the Council will require A)i, A)ii and B)i above, and:

- i 5% self-build homes which can include custom housebuilding. At the time an application is submitted, the Council will review this percentage against the latest local housing need requirement for self-build/custom build homes; and;**
- ii provision of Specialist Residential Accommodation (including Gypsy and Traveller needs) taking account of local housing needs.**

D) Within all greenfield developments of more than 500 dwellings the Council will require A)i, A)ii, B)i and C)i and C)ii above, and:

- i 10% of market housing to be provided for Older Persons.**

Reasoned Justification

8.2 The NPPF requires Local Planning Authorities to plan for a mix of housing to meet the different needs of the community including families with children, older people and people with disabilities. To ensure that market housing provision meets the needs of all sectors, it

is important that a range of house types and sizes are provided as part of new residential developments. The size, type and cost of affordable housing is covered by Policy DM2.

8.3 The Council's latest Strategic Housing Needs Assessment (SHNA) (2023), including the 2024 addendum report, indicates that the greatest need for market homes is two and three bedroom units. Table 4 below provides the future market mix required taking into account demographic change, including potential changes to the number of family households and the ageing of the population. It will be used as a monitoring tool on threshold sites to ensure that future delivery is not unbalanced when compared with the likely requirements as driven by demographic changes in the area. Site location and area character are also relevant considerations and the final mix of housing/types will be subject to negotiation with the applicant on individual development sites.

Table 4 :Size and mix for new market homes

Size of new market accommodation required in Chelmsford	
Dwelling Size	Mix Required
One Bedroom	5–10%
Two Bedroom	30-35%
Three Bedroom	35-40%
Four or more bedrooms	20-25%
Total	100%

Source: SHNA Addendum Report 2024

8.4 50% of new dwellings on major residential schemes should achieve requirement Part M, Category 2 (Accessible and adaptable dwellings) M4(2) of Schedule 1 (para 1) to the Building Regulations 2010 (as amended) to create sustainable developments for the future. Flexibility will be applied to dwellings that cannot meet this requirement where there are other overriding considerations that mean the requirement cannot be met, for example a conversion from another type of building to a residential dwelling or heritage considerations.

8.5 The SHNA 2023, including the 2024 addendum report, does not estimate the need for additional private rented housing as it is likely that the decision of households as to whether to buy or rent a home in the open market is dependent on several factors including mortgage lending practices and the availability of Housing Benefit that will fluctuate over time. The housing mix section of the SHNA (2023), including the 2024 addendum report, did not specifically look at this sector, however the analysis of affordable home ownership was based on the profile of households living in private rented accommodation and so the conclusions for that tenure are considered a reasonable starting point for considering mix.

8.6 National Planning Practice Guidance specifically anticipates that the viability of Build to Rent schemes will be considered at the development management stage. However, a flatted and a housing Build to Rent scheme were tested and the results showed flatted development of this type is unlikely to be viable even without affordable housing, but Build to Rent housing is likely to be viable and deliverable with capacity to bear more than the 20% affordable private rent housing referenced as a suitable benchmark in National Planning

8 - Protecting and Securing Important Assets

Practice Guidance. Further guidance on Affordable Private Rent housing is provided in Policy DM2 and the Planning Obligations SPD.

8.7 To support the ageing population and the specific needs of disabled people within Chelmsford, the Council expects 5% of **all** new affordable homes on larger development sites to be wheelchair accessible by meeting requirement Part M, Category 3 (Wheelchair user dwellings) M4 (3) (2) (b) of Schedule 1 (para 1) to the Building Regulations 2010 (as amended).

8.8 Wheelchair user dwellings should be provided as affordable housing for rent that the local authority is responsible for allocating or nominating a person to live in.

8.9 Where the 5% requirement does not result in whole numbers of units, the number of affordable dwellings meeting requirement Part M, Category 3 (Wheelchair user dwellings) M4 (3) (2) (b) of Schedule 1 (para 1) to the Building Regulations 2010 (as amended), will be rounded up.

8.10 Wheelchair user dwellings will need to be provided at a range of sizes which is summarised in a Wheelchair Accessible Homes Planning Advice Note and updated annually.

8.11 The development of self-build/custom build properties by individuals or community groups (including Community Land Trusts) can also contribute to meeting the need for additional housing, and provide a more diverse housing stock. Self-build and custom housebuilding means the building or completion by (a) individuals, (b) associations of individuals, or (c) persons working with or for individuals or associations of individuals of houses to be occupied as homes by those individuals. But it does not include the building of a house on a plot acquired from a person who builds the house wholly or mainly to plans or specifications decided or offered by that person. Based on Chelmsford's current self-build and custom build register of around 46 new applications each year projected to 2041, 5% of new homes on larger housing schemes should include an element of self-build/custom build plots, to provide for this demand. Where the 5% requirement does not result in whole numbers of unit, the number will be rounded up. Self-build/custom build homes will need to be provided at a range of costs, sizes and types in accordance with the identified need, which is summarised in a Self-Build and Custom Build Planning Advice Note and updated annually.

8.12 A Community Led Housing Planning Advice Note promotes greater understanding of Community Led Housing and shows the enhanced role that communities can have in influencing increased provision of Community Led Housing. It also summaries some of the different approaches in which a community group or organisation can own, manage, or steward homes.

8.13 A Self-Build and Custom Build Design Code Template has been published for sites with multiple serviced plots or other forms of self-build and custom housebuilding provision, as they will need to be supported by a Design Code at outline planning stage.

8.14 Self-build/custom build homes will not be considered as an alternative to, or replacement for, the affordable housing requirements set out in Policy DM2. Further information on the implementation of Policy DM1 C)i is set out in the Planning Obligations Supplementary Planning Document.

8.15 There are certain groups of people within the community that need Specialist Residential Accommodation that caters for their specific needs. Specialist Residential Accommodation includes housing for older people such as Independent Living schemes for the frail elderly, student accommodation, homes for those with disabilities and support needs, residential institutions and also Gypsy and Travellers who, for cultural reasons, choose to live in caravans.

8.16 The Council will refer to the latest assessments of housing need and will work with Essex County Council to identify the housing need for, and to secure provision of, suitable sites for Specialist Residential Accommodation. Such assessments include the Joint Strategic Needs Assessment (JSNA), the SHNA, the GTAA as well as housing need evidenced in the latest published City Council Housing Strategy.

8.17 Specialist Residential Accommodation will need to be provided at a range of costs in accordance with the identified need. A commuted sum in lieu of on-site Specialist Residential Accommodation will be considered on a site-by-site basis as it provides a flexible way of meeting the variety of needs identified. Specialist Residential Accommodation will not be considered as an alternative to, or replacement for, the affordable housing requirements set out in Policy DM2. Specialist Residential Accommodation that constitutes a residential unit will be included in the baseline from which the requirements of Policies DM1 A)i, DM1 A)ii, DM1 C)i and DM1 C)ii and DM2 A are calculated. Further information on the implementation of Policy DM1 C)ii is set out in the Planning Obligations Supplementary Planning Document.

8.18 On greenfield sites of more than 500 dwellings, 10% of market housing will be required to meet the housing needs of older people. The SHNA points to a need for around 10% of the annual supply of housing to be provided for older people, the majority of which should be as market housing. The provision of a choice of attractive housing options to older households is a component of achieving a good housing mix across the whole site as well as within the older person provision. The 10% of total residential dwellings applies on sites of more than 500 dwellings to ensure a critical mass of Specialist Residential Housing can be achieved if that form of housing is needed.

POLICY DM2 – AFFORDABLE HOUSING AND EXCEPTION SITES

A) Affordable Housing

The Council will require the provision of 35% of the total number of residential units to be provided and maintained as affordable housing within all new residential development sites which:

i comprise of 10 or more residential units or a site area of 0.5 hectares or more.

In considering the suitability of affordable housing, the Council will require that:

ii the mix, size, type and cost of affordable homes will meet the identified housing need of the Council's area as established by housing need assessments (as updated from time to time) reported in the current Strategic Housing Needs Assessment and be appropriately weighted to ensure that the provision makes at least a proportionate contribution to the categories of greatest housing need; and

- iii the affordable housing is integrated into residential layouts so as to avoid the over-concentration of affordable housing in any particular location within the development site and designed in such a way as to aid seamless integration between market and affordable elements of a scheme; and
- iv developers and owners enter into planning obligations in order to provide the affordable housing and to ensure it remains at an affordable price for future eligible households, or for the subsidy to be recycled for alternative affordable housing provision.

For Build to Rent housing, the Council will require Affordable Private Rent housing that meets priority housing needs.

When particular circumstances justify the need for a viability assessment at planning application stage or in circumstances where a formal amendment is sought, and the Council is satisfied that a development proposal cannot be fully compliant and remain financially viable, comprehensive review mechanisms will be applied through planning obligation agreements to schemes that do not meet, in full, the requirements of Policy DM2 A in order to ensure that affordable housing contributions are improved if viability improves over time.

Proposals that would sub-divide or under-develop sites in order to avoid making the affordable housing contribution will be refused.

B) Rural Exception Sites

Planning permission will be granted for affordable housing on small sites within Designated Rural Areas, which would not otherwise be released for housing, in order to meet local rural housing need where:

- i the Council is satisfied that there is clear evidence, supplied by the applicant, of need for the number and type of housing proposed within the Parish; and
- ii the site is adjacent to a Defined Settlement Boundary and it is accessible to local services and facilities; and
- iii the appropriate legal agreements are entered into for the affordable housing with the Council, to ensure that all dwellings will remain available for affordable housing, and exclusively for local need, in perpetuity, and that the necessary management of the scheme can be permanently secured; and
- iv the site is not subject to any other overriding environmental or other planning constraints.

Where it can be demonstrated to the satisfaction of the Council that market housing is essential to cross-subsidise the delivery of affordable housing on rural exception sites:

- v the proportion of market housing must not exceed 50%; and
- vi the market and affordable housing must not be distinguishable in design quality and standards.

C) First Homes Exception Sites

Planning permission will be granted for First Homes Exception Sites in the Rural Area and Green Wedge where:

- i the site is adjacent to an existing Defined Settlement or Urban Area; and**
- ii the total size of the proposed development area is not greater than whichever is the lesser of either 1 hectare or 5% of the measurement (in hectares) of the adjacent area within the existing settlement's Defined Settlement Boundary; and**
- iii at least 25% of the total housing on First Homes Exception Sites meet the needs of households on the Council's Housing Register through the provision of affordable housing for rent.**
- iv the appropriate legal agreements are entered into for the First Homes with the Council, to ensure that all dwellings will remain available as First Homes in perpetuity.**

Where it can be demonstrated to the satisfaction of the Council that market housing is essential to cross-subsidise the delivery of First Homes on First Homes exception sites:

- v the proportion of market housing must not exceed 20% of the total number of homes; and**
- vi the market and affordable housing must not be distinguishable in design quality and standards.**

D) Community-led Exception Sites

Planning permission will be granted for Community-led Exception Sites in non-Designated Rural Areas and Green Wedge where:

- i the site is adjacent to an existing Defined Settlement or Urban Area; and**
- ii the total size of the proposed development area is not greater than whichever is the lesser of either 1 hectare or 5% of the measurement (in hectares) of the adjacent area within the existing settlement's Defined Settlement Boundary; and**
- iii comprise community-led development that includes one or more types of affordable housing.**
- iv the appropriate legal agreements are entered into for the community-led affordable housing with the Council, to ensure that all dwellings will remain available as community-led and affordable housing where relevant in perpetuity.**

Where it can be demonstrated to the satisfaction of the Council that market housing is essential to cross-subsidise the delivery of community-led development on Community-led Exception Sites:

- v the proportion of market housing must not exceed 20% of the total number of homes; and**
- vi the market and affordable housing must not be distinguishable in design quality and standards.**

8 - Protecting and Securing Important Assets

Reasoned Justification

A) Affordable Housing

8.19 The provision of affordable housing to meet identified need is a significant objective of the Local Plan. To assess this need, the Council commissioned consultants to produce a Strategic Housing Needs Assessment (SHNA), which was published in 2023. This replaced the previous Strategic Housing Market Assessment (2015) and uses national Planning Practice Guidance to calculate the level of affordable housing need. An addendum to the 2023 report was published in November 2024. The addendum note was prepared as a partial update to the 2023 SHNA to assess the implications of moving from housing delivery using a Standard Method output of 955 dwellings per year up to a figure of 1,206 dwellings per year. The 2024 addendum report identified a total affordable housing need in Chelmsford of 966 affordable dwellings for rent per-annum, which is notionally 79% of the local housing need calculated using a figure of 1,206 dwellings per year. The SHNA (2023) considers this figure and notes that interpreting the affordable need figure in the context of the local housing need calculated using the Standard Method is not possible as the two do not measure the same thing. Many households already live in housing and do not therefore generate an overall net need for an additional home. When those already in housing are excluded from the affordable housing need calculation, the affordable need falls to 602 per annum.

8.20 The SHNA (2023), including the 2024 addendum report, concludes that whilst there is no direct link between the affordable need and the overall housing need, the need for affordable housing is notable across the Council area and the amount of affordable housing delivered will be limited to the amount that can viably be provided.

8.21 The SHNA (2023), including the 2024 addendum report, reviews a range of affordable housing products available to meet housing need. It concludes that provision of around 70% of rented housing at social rent could be justified, albeit this will need to be considered alongside viability evidence. The analysis did not identify any significant need for affordable home ownership although the report acknowledges that some delivery might help where viability is an issue or to diversify stock in some locations.

8.22 The SHNA (2023), including the 2024 addendum report, concludes that 25% of affordable housing should not be provided as First Homes given the price caps mean any First Homes are unlikely to come forward other than as a one bedroom homes and therefore a reasonable mix of this tenure would not be possible. The report does not evidence a need for First Homes or discounted market housing more generally but states that shared ownership is likely to be suitable for households with more marginal affordability as it has the advantage of a lower deposit and subsidised rent. Where major development involving the provision of housing is proposed, national planning policy (NPPF 2023) requires (with some exceptions) at least 10% of homes to be available for affordable home ownership.

8.23 The Local Plan Viability Update (2023) incorporated four sets of appraisals based on 30%, 35%, 40% and 45% affordable housing with sensitivity testing in relation to costs and values as well as variations in environmental and accessibility standards. The Update found that should the Council seek all affordable housing for rent as social rent, this would reduce the scope for affordable housing provision by 5%.

8.24 Recognising the Council has declared a climate and a housing emergency, and the need to demonstrate that the cumulative impact of policies in the Local Plan cannot put

development at serious risk, the Council will seek the following affordable housing obligations on threshold site – 35% of affordable housing consisting of 70% affordable housing for rent capped at Local Housing Allowance levels, and 30% as shared ownership housing. This equates on a whole site basis to 24.5% affordable rent and 10.5% shared ownership housing.

8.25 The SHNA (2023), including the 2024 addendum report, indicates there is a clear need for a range of different size affordable homes taking into account demographic change. Based on the range recommended in the Assessment, including the addendum report, and considering the role the delivery of larger affordable homes for rent can play in releasing a supply of smaller properties for other households, the following mix is considered appropriate:

Table 5 : Affordable rent mix

	1 Bedroom	2 Bedroom	3 Bedroom	4 Bedroom
Affordable homes for rent	25%	35%	30%	10%

8.26 The Council will closely monitor the mix of affordable housing for rent provided. In applying the mix to individual development sites, regard will be had to the nature of the site and character of the area, as well as up-to-date evidence of need and turnover of existing affordable housing for rent.

8.27 The Housing Additionality calculation set out in the Planning Obligations Supplementary Planning Document will apply when the quantum of residential accommodation sought is above the level identified in the Local Plan and there is a shortfall in the supply of new three-bedroom or four-bedroom affordable homes to rent, as recorded through the monitoring of planning permissions in the Annual Monitoring Report.

8.28 Affordable housing is an integral element of any market-led residential or mixed-use development and is expected to be provided in-kind and on-site. The Council may consider a financial contribution in lieu of on-site provision of broadly equivalent value on development sites which comprise between 10 and 15 residential units, to improve the provision of temporary accommodation for homeless households. Full details of circumstances in which this may be considered can be found in the Planning Obligations Supplementary Planning Document (SPD).

8.29 Residential schemes should be designed to maximise tenure integration to achieve mixed, inclusive and sustainable communities. To achieve this, affordable housing should:

- i be provided in more than one single parcel except in schemes where the overall number of residential dwellings is below 15 units;
- ii on sites incorporating 30 or more residential dwellings, affordable housing should be provided in groups of no more than 15% of the total number of dwellings being provided or 25 affordable dwellings, whichever is the lesser.

8.30 The Council expects the same level and type of parking provision to apply to market and affordable housing. Affordable housing dwellings should have the same external appearance and entrance arrangements as market housing.

8 - Protecting and Securing Important Assets

8.31 Residential proposals should be designed to maximise tenure integration within the affordable housing on whole sites of affordable housing and market-led housing proposals, as well as between the affordable and market housing.

8.32 On flatted developments, separate single tenure blocks will not be acceptable. The only circumstances where this might be reconsidered relates to management or maintenance matters where affordable housing dwellings are arranged around stairwells within blocks of flats that include a range of tenures.

8.33 The SHNA Addendum Report (2024) clearly sets out how the private rented sector has been playing a role in meeting the needs of households who require financial support in meeting their housing need and legislation through the 2011 Localism Action allows Councils to discharge their “homelessness duty” through providing an offer of a suitable property in the Private Rented Sector.

8.34 Given the notable need for affordable housing set out in the SHNA (2023) and SHNA Addendum Report (2024), where Built to Rent housing is proposed the Council will seek 24.5% of the total Build to Rent units to be provided as affordable private rent homes capped at Local Housing Allowance levels.

8.35 When the Council is satisfied that a viability assessment is justified, and also satisfied that a development proposal cannot be fully compliant with Policy DM2 A and remain financially viable, the Council will require the following:

- An early stage review when an agreed level of progress on implementation is not made within two years of the permission being granted
- A late stage review which is triggered when 80 per cent of dwellings are occupied
- Mid term reviews prior to implementation of phases for development proposals of more than 500 dwellings in total

8.36 When a viability assessment is submitted, the assessment should be on an open book basis and undertaken in line with the Planning Obligations SPD.

B) Rural Exception Sites

8.37 For the application of this policy, Designated Rural Areas are the Parishes of Bicknacre; East Hanningfield; Good Easter; Great Leighs; Great Waltham; Highwood; Little Baddow; Little Waltham; Margaretting; Mashbury; Rettendon; Roxwell; Sandon; South Hanningfield; Stock; West Hanningfield; and Woodham Ferrers.

8.38 In certain circumstances, small, predominantly affordable housing developments to meet Parish-wide need will be permitted outside but adjacent to Defined Settlement Boundaries where ordinarily there is a policy constraining new housing development. To enable this exception, it needs to be demonstrated that there is a proven need for the number and type of dwellings proposed, and the Council is satisfied that the affordable housing will remain affordable and exclusively available for local needs in perpetuity. When considering the suitability of rural exception sites it should be demonstrated to the satisfaction of the Council that there are no suitable and deliverable previously developed sites that could comply with the policy before consideration is given to the release of a greenfield site.

8.39 The Council expects all rural affordable housing proposals submitted under this policy to be accompanied by a local housing need survey conducted at a Parish-wide level. This will provide information on the number of households that are currently and likely to be in housing need in the next five years, their incomes and the type of accommodation required to meet the housing need. When a proportion of market housing is also proposed, the local housing needs survey must identify the type of market housing that is required. If a survey of local housing need supporting an application has been conducted more than four years prior to a planning application being submitted, the Council will require the housing need and affordability data to be updated.

8.40 Any proposal that includes market housing must include a robust, independently-prepared and audited viability assessment of the proposed development, prepared on an open book basis. This is needed for the Council to assess whether the market element of the proposal is justified. The extent of the funding gap to be bridged in order for the proposal to be viable, including the income from cross-subsidy generated through open-market sales that will assist in creating the additional scheme revenue that can fund the affordable housing on the site without requiring additional public subsidy, must be clearly set out.

C) First Homes Exception Sites

8.41 This policy cannot be applied in the Green Belt and only applies to housing development that comes forward outside of local or neighbourhood plan allocations.

8.42 To enable this exception, it needs to be demonstrated that the First Homes meet the qualifying criteria set out in National Planning Policy Guidance.

8.43 National Planning Policy Guidance allows for one or more other forms of affordable housing on a proposed First Homes exception sites where local evidence suggests a significant local need exists. The SHNA (2023), including the addendum report, demonstrates a significant need for affordable housing for rent in the Council area therefore at least 25% of homes provided on First Homes exception sites are required to be provided as affordable housing for rent to meet the most acute housing needs on the Council's Housing Register at the time a planning application is submitted. The remaining affordable homes must be provided as First Homes.

8.44 Any proposal that includes market housing must include a robust, independently prepared and audited viability assessment of the proposed development, prepared on an open book basis. This is needed for the Council to assess whether the market element of the proposal is justified. The extent of the funding gap to be bridged in order for the proposal to be viable, including the income from cross-subsidy generated through open-market sales that will assist in creating the additional scheme revenue that can fund a 30% discount from market value for the First Homes, without requiring additional public subsidy, must be clearly set out.

D) Community-led Exception Sites

8.45 This policy cannot be applied in the Green Belt or in areas listed in the Reasoned Justification for Rural Exception Sites and only applies to housing development that comes forward outside of local or neighbourhood plan allocations.

8 - Protecting and Securing Important Assets

8.46 To enable this exception, it needs to be demonstrated that the community-led development meets the definition of community-led development and provides one or more form of affordable housing, as set out for both in Annex 2 of the National Planning Policy Framework.

8.47 Any proposal that includes market housing must include a robust, independently prepared and audited viability assessment of the proposed development, prepared on an open book basis. This is needed for the Council to assess whether the market element of the proposal is justified. The extent of the funding gap to be bridged in order for the proposal to be viable, including the income from cross-subsidy generated through open-market sales that will assist in creating addition scheme revenue that can fund the community-led development, without requiring additional public subsidy, must be clearly set out.

8.48 Further information on the implementation of Policy DM2 is set out in the Planning Obligations Supplementary Planning Document.

POLICY DM3 – GYPSY, TRAVELLER AND TRAVELLING SHOWPEOPLE SITES

The Council will make provision for the accommodation needs of Gypsy, Traveller or Travelling Showpeople, who meet the national Planning Policy for Traveller Sites (PPTS) definition, through allocated sites within the Local Plan.

In determining all planning applications, only those who meet the PPTS definition of a Gypsy, Traveller or Travelling Showperson will have weight attributed to the need for a site.

A) New sites

When considering planning applications for Gypsy, Traveller and Travelling Showpeople accommodation, planning permission will be granted where all of the following criteria are met:

- i the site is not in the Green Belt, unless there are very special circumstances; and**
- ii the site is not in the Green Wedge, unless it can be demonstrated that the development would not adversely impact on the role, function, character and appearance of the Green Wedge as set out in Strategic Policy S11, and**
- iii adequate community services and facilities are within reasonable travelling distance; and**
- iv the site is of sufficient size to accommodate the proposed number of caravans, vehicles and ancillary areas; and**
- v there is no significant adverse impact on the intrinsic character and beauty of the countryside; and**
- vi the site would not lead to the loss of, or adverse impact on, important historic and natural environment assets; and**
- vii there is no significant risk of land contamination or unacceptable risk of flooding; and**

- viii **the site provides a suitable living environment for the proposed residents and there is no significant adverse impact on the amenity of nearby residents; and**
- ix **safe and convenient vehicular access to the local highway network can be provided; and**
- x **essential services (water, electricity and foul drainage) are available on-site or can be made available on-site; and**
- xi **plots for Travelling Showpeople should also be of a sufficient size to enable the storage, repair and maintenance of equipment.**

B) Sub-division of pitches or plots

The sub-division of authorised Gypsy, Traveller and Travelling Showpeople sites will also be permitted provided that the following criteria are met:

- i **the site is not within the Green Belt unless there are very special circumstances; and**
- ii **the living environment of residents on the proposed site and neighbouring land is protected; and**
- iii **sites are of a suitable size to enable the creation of additional pitches or plots; and**
- iv **there is no significant loss of soft and hard landscaping and amenity provision within the existing site, particularly where conditioned by a previous consent; and**
- v **there is no significant adverse impact on the intrinsic character and beauty of the countryside and;**
- vi **there is no adverse impact in terms of highways access and vehicle movement.**

C) Change of use and redevelopment

Planning permission will be refused for the change of use or redevelopment of all lawful Gypsy and Traveller pitches or Travelling Showpeople plots unless acceptable replacement accommodation can be provided, or it can be demonstrated that the site is no longer required to meet any identified needs.

Reasoned Justification

8.49 Ensuring that the right type of residential accommodation is planned for in the right locations for all the community is an important element of the Local Plan.

8.50 This policy applies to both allocated and non-allocated sites which may come forward in built-up areas and the countryside. Planning permission will not be granted for a site that would be detrimental to the character and appearance of the countryside and where it would adversely affect the amenities of existing residents or result in unacceptable future living conditions for occupiers of the proposal. New Gypsy and Traveller and Travelling Showpeople sites are not considered appropriate within the Green Belt or Green Wedge and would also be judged against the appropriate policies within the Local Plan for these areas.

8 - Protecting and Securing Important Assets

8.51 New Gypsy and Traveller and Travelling Showpeople sites are likely to have an adverse impact on the rural area, therefore Policy DM3 seeks to ensure that this impact is not significant on the intrinsic character and beauty of the countryside.

8.52 The sub-division of existing sites to provide more pitches or plots could be a suitable way to increase provision within existing lawful sites, but it should be tested against relevant criteria to ascertain its suitability.

8.53 When permission is granted, appropriate conditions or planning obligations will be imposed to ensure occupation of the site is restricted to those persons falling within the appropriate definition of Gypsies and Travellers or Travelling Showpeople and may also include conditions relating to landscaping and boundary treatments.

8.54 Where an unmet need for Gypsy and Traveller or Travelling Showpeople accommodation is identified and evidenced within the Council's area and allocated sites have not yet been developed or available for occupation, the Council may grant temporary planning permission as an interim measure.

8.55 Further information on the implementation of Policy DM3 is set out in the Planning Obligations Supplementary Planning Document.

Securing Economic Growth

POLICY DM4 – EMPLOYMENT AREAS AND RURAL EMPLOYMENT AREAS

Within the Employment Areas, Rural Employment Areas and new employment site allocations, as shown on the Policies Map, the Council will seek to provide and retain Class E(g), B2 and B8 Use Classes or other 'sui generis' uses of a similar employment nature unless it can be demonstrated that there is no reasonable prospect for the site to be used for these purposes.

Where planning permission is required, proposals for the redevelopment or change of use from E(g), B2 and B8 Use Classes will be granted where:

- i the premises or application site cannot be readily used for, or converted to, another Class E(g), B2, B8 or other 'sui generis' Use Class of a similar employment nature, and
- ii the proposed use is of limited small-scale and ancillary to existing uses at the application site; and
- iii the proposed use provides employment at the application site; and
- iv the proposed use will not adversely impact upon the operation and function of the Employment Area or Rural Employment Area or introduce unacceptable conflict between neighbouring uses; and
- v the proposed use is appropriate to the location of the site and its relationship to the local transport network.

Proposals will be expected to consider opportunities to promote appropriate infrastructure improvements in the designated employment area, including multifunctional green infrastructure, and measures to promote active and sustainable travel opportunities to and within the designated employment area.

Reasoned Justification

8.56 The Employment Areas, Rural Employment Areas and new allocations for employment identified on the Policies Map, make an important contribution to the Chelmsford economy and their future function. Creating thriving business locations is a key element of the Council's local planning and economic strategies but these must relate to sustainable patterns of development across Chelmsford.

8.57 Traditionally, designated employment areas have focused on providing a range of premises that meet the needs of the E(g), B2 and B8 Use Classes and this will continue to be the focus in the defined Employment Areas and Rural Employment Areas. Therefore, in the Employment Areas and Rural Employment Areas, the Council will seek to retain these uses as defined by the Use Classes Order 1987 (as amended) or other 'sui generis' uses of a similar employment nature.

8.58 To enable flexibility, it is recognised that non Class E(g), B2 and B8 uses can sometimes be appropriate in Employment Areas and Rural Employment Areas and can provide employment, adding to the character, mix and vitality of the area. Proposals will need to be accompanied by evidence to show that there is no reasonable prospect for the site to be used for, or converted, to another employment use within Class E(g), B2 or B8 uses. The evidence required will depend upon the scale and location of the proposal and include a comprehensive marketing campaign over a period of at least 12 months before the planning application is submitted. A judgement will be made on a case by case basis. Some uses may not be acceptable where they can either individually, or collectively, harm other policy objectives of the Local Plan. The form and nature of new employment allocations and acceptable uses are set out in the relevant site allocation policy.

8.59 The protection of the City Centre and other designated centres for their retail function is a key objective of the Local Plan. A proliferation of Class E(a) uses in the Employment Areas could be harmful to this objective and will be resisted, with the exception of small scale proposals (in terms of floorspace) and it being ancillary in nature by supplementing the predominant employment offering within the Employment Area.

8.60 Where the Council receives an application for redevelopment or change of use, proposals should demonstrate their continued employment function and not be detrimental to the wider area, neighbours or wider Strategic Priorities and Principles set out in the Local Plan.

8.61 The impacts generated by new uses will need to be assessed in particular to their impact on neighbouring occupiers within the Employment Area and Rural Employment Area. Any use should not give rise to unacceptable conflict between uses, traffic generation, vehicle parking, noise or smells. Such impacts can adversely affect the day-to-day operation of the Employment Area and Rural Employment Area and their existing businesses.

8 - Protecting and Securing Important Assets

8.62 The function of the Employment Areas and Rural Employment Areas in Chelmsford varies from location to location and the Local Plan recognises that businesses need sufficient flexibility to enable them to function in today's economic environment. The Employment Land Review 2023 highlights some existing employment areas as being somewhat dated and that modernisation should be encouraged if opportunities arise through reuse or expansion proposals.

8.63 Measures to improve the ongoing function and general sustainability of existing employment areas so they can continue to meet needs over the Plan period and beyond may include local transport measures or other accessibility improvements that promote a choice of modes, provision for micro-energy generation where appropriate to enhance future environmental and building standards, and provision of on-site facilities and amenities to meet the needs of businesses and workforce where these are proportionate and complementary to the primary employment functions of the site. Support will also be given to appropriate measures which promote improved provision of active and sustainable travel measures to designated employment areas.

POLICY DM5 – DESIGNATED CENTRES

A) Primary Shopping Areas

Primary Shopping Areas are defined for Chelmsford City Centre, South Woodham Ferrers Town Centre and The Vineyards Principal Neighbourhood Centre as set out on the Policies Map. Retail, other main town centre uses, and commercial, business and service uses falling within Use Class E will be supported in Primary Shopping Areas, where proposals:

- i Sustain and enhance the vitality of the centre;**
- ii Attract vibrancy, activity and generate pedestrian footfall to the centre;**
- iii Are compatible with surrounding uses;**
- iv Do not result in adverse amenity impacts;**
- v Provide an active frontage at ground floor level;**
- vi Are readily accessible by the public from the front;**
- vii Make a positive contribution to the townscape of the centre;**
- viii Would not create small token units through sub-division; and**
- ix Do not harm the character and function of the centre.**

In addition, proposals within Chelmsford City Centre Primary Shopping Area should contribute towards the objectives of Strategic Policy S17 Future of Chelmsford City Centre.

On upper floors, proposals for separate units of retail, other main town centre uses, commercial, business and service uses falling within Use Class E, and residential accommodation will be supported provided that a separate access from the ground floor is maintained or created, a separate recycling and waste store is provided, and the use does not prejudice the viability of the ground floor use.

Changes of use to residential will not be permitted on the ground floor within Primary Shopping Areas.

B) Chelmsford City Centre and South Woodham Ferrers Town Centre

Within the Chelmsford City Centre area and South Woodham Ferrers Town Centre area outside of Primary Shopping Areas, as defined by the centre boundaries on the Policies Map, the Council will support a more diverse range of uses, including main town centre uses, commercial, business and service uses falling within Use Class E, residential, employment, education and community uses, where proposals:

- i Complement the character and function of the centre;
- ii Make a positive contribution to improving the vitality and viability of the centre;
- iii Encourage a diversity of uses in the centre; and
- iv Support a high-quality and accessible environment in the centre.

C) Principal Neighbourhood Centres and Local Neighbourhood Centres

Within Principal Neighbourhood Centres and Local Neighbourhood Centres outside of Primary Shopping Areas (PSAs), as shown on the Policies Map, proposals will be supported which enhance their retail offer and service role in providing for the day to day needs of the area, and improve the centre's vitality and viability.

On upper floors, proposals for separate units of retail, office, tourism, leisure, cultural, community or residential accommodation will be supported provided that a separate access from the ground floor is maintained or created, a separate recycling and waste store is provided, and the use does not prejudice the viability of the ground floor use.

Changes of use to residential will not be permitted on the ground floor.

Reasoned Justification

Primary Shopping Areas

8.64 Town and city centres will continue to evolve to meet the needs and demands of their changing populations and customers over the plan period. Alongside the ongoing growth of online shopping, the impact of the Covid 19 pandemic has resulted in a shift in footfall alongside spending habits. A wider range of uses will therefore be encouraged including leisure, culture, entertainment and retail uses in order to maintain the attractiveness of our town and city centres and enhance the range of services they offer.

8.65 The Council recognises that permitted development rights allow some Class E Uses (such as small shops, restaurants, offices and gyms) to convert to residential and other uses without requiring full planning permission. This involves a 'prior approval' process, and the Local Planning Authority can consider impacts of the proposed change and may resist proposals which would result in adverse impacts upon town or city centre environments or other areas. Where full planning permission is required, development proposals will need to demonstrate how they address the criteria within this policy and other relevant policies in the Plan including Strategic Policy S17 for proposals within Chelmsford City Centre.

8.66 The Policies Map defines the extent of the Chelmsford City Centre and South Woodham Ferrers Town Centre as well as all the designations covered by this policy.

8 - Protecting and Securing Important Assets

8.67 The Primary Shopping Areas of Chelmsford City Centre, South Woodham Ferrers Town Centre and The Vineyards Principal Neighbourhood Centre are intended primarily for retail, commercial, business and services falling within Use Class E, and other main town centre uses such as leisure, cultural, entertainment, pubs and restaurants. These uses are important for community needs and local economic vitality. The policy seeks to support a diversity of uses within Primary Shopping Areas which strengthen a centre's vitality and viability and increase a competitive and attractive offer that will appeal to a range of users including shoppers, visitors and workers.

8.68 Within Primary Shopping Areas residential development will be supported at first floor level and above, as such uses can play an important role in ensuring the vitality and viability of centres, bringing people into the town or area at different times of the day, increasing footfall and supporting a more vibrant evening and night-time economy. Provided residential uses do not detract from the function of a Primary Shopping Area, inclusion or introduction of residential uses to upper floors also gives communities easier access to a range of services and facilities. Development proposals will be supported where they can be independently accessed from the ground floor, and they would not prejudice the uses below.

8.69 Residential uses at ground floor level within Primary Shopping Areas would be harmful to the overall vitality of the centres, both in terms of fragmenting retail and commercial uses, and also by creating incompatible living conditions for potential occupiers. The Council will therefore not support proposals for change of use of ground floor premises to residential within the Primary Shopping Areas.

Chelmsford City Centre and South Woodham Ferrers Town Centre

8.70 Outside of Primary Shopping Areas, including areas within the town or city centre areas, a more flexible approach to proposals will be taken to support a broader range of uses including residential and community uses (such as libraries, public halls, places of worship and law courts) to enhance their long term vitality and viability. This will also help to enhance the attractiveness of centres, contribute to the overall diversity of the centre offer, extend their life into the evening and provide a broader range of services for local people. These uses must be compatible with the area into which they are being introduced and must be complementary to the function of the wider area.

8.71 The Principal Neighbourhood and Local Neighbourhood Centres are shown on the Policies Map. These are groups of ground floor units that currently have a range of uses that serve day-to-day local needs. Sometimes units in a Local Neighbourhood Centres are not co-terminus but split over a larger area. Not all residents live within easy reach of the main centres of Chelmsford and South Woodham Ferrers and rely on the services and facilities that are provided in these centres. The Council will seek to retain the retail function of these frontages, whilst also accepting that other uses may provide a balanced offer to the community they serve and ensure the continued viability and vitality of the frontage as a whole. This may include evening uses which contribute to a positive mix of uses to serve the community.

8.72 The productive use of upper floors, including residential, is encouraged in order to make best use of Principal Neighbourhood Centres and Local Neighbourhood Centres. Proposals will be supported where they can be independently accessed from the ground floor and they would not prejudice the uses below.

All Designated Centres

8.73 The 2023 Retail Capacity Study Update identifies opportunities for new investment in designated centres through the amalgamation or sub-division of existing units and workspaces. This can help to attract new operators and formats, and support the vitality and viability of centres. Any such development proposal should not result in an adverse loss of overall floorspace or create small token units which may not offer sufficient retail floor space, staff facilities or storage area for stock and which will only suit a minority of occupiers. These may be a by-product of sub-dividing a larger unit or could be proposed in their own right. These units gradually undermine the retail character of the frontage and could lead to prolonged periods of vacancy due to their limited appeal to the wider retail market.

8.74 The 2023 Retail Capacity Study Update also identifies development opportunities within designated centres for complementary initiatives and meanwhile uses. Meanwhile or temporary uses in long-term vacant and underutilised units or workspaces (defined as being vacant for 18 months or longer) can be used by occupiers to test out new uses and to reduce costs. They can also provide flexible, low-cost space for business start-ups, small and medium sized enterprises (SMEs), and community groups. As such, meanwhile uses provide an opportunity to fill vacant units and premises over a short duration, and have the potential to diversify and reinvigorate centres. The Council will consider the suitability of meanwhile or temporary uses against the tests of Policy DM5 and Strategic Policy S17.

8.75 Long term vacant or underutilised units and workspaces are considered more suitable for meanwhile uses, as other short term vacant spaces can be part of the normal churn of the centres and re-occupied by new businesses on standard leases relatively quickly. Meanwhile uses will be secured by planning condition and would not constitute a use that would re-start the clock on the requirement for an 18 month vacancy period, in order to ensure that property owners are not discouraged from exploring such uses.

8.76 Proposals for complementary initiatives in designated centres, such as the construction of click and collect 'hubs' or lockers and the use of outdoor space for public events, will be supported where it can be demonstrated that they will enhance the vitality and viability of the centre and not give rise to unacceptable impacts on residential amenity and the transport network, or restrict accessibility.

Protecting the Countryside

8.77 For the purposes of all relevant policies of the Local Plan, the term Countryside includes the Green Belt, the Green Wedge and the Rural Area. All of these designations are defined on the Policies Map. The Green Wedge overlays both the Green Belt and the Rural Area.

POLICY DM6 – NEW DEVELOPMENT IN THE GREEN BELT

Within the Green Belt, inappropriate development will not be approved except in very special circumstances.

A) New buildings

Planning permission will be granted for the following exceptions to inappropriate development:

- i buildings for agriculture and forestry;**
- ii provision of appropriate facilities for outdoor sport, outdoor recreation and cemeteries as long as it preserves the openness of the Green Belt;**
- iii limited infilling in villages in accordance with Policy DM9;**
- iv limited affordable housing for local needs in accordance with Policy DM2;**
- v extensions or alterations to buildings in accordance with Policy DM11;**
- vi redevelopment of previously developed land in accordance with Part B of this Policy;**
- vii replacement buildings in accordance with Part C of this Policy.**

B) Redevelopment of previously developed land (whether redundant or in continuing use and excluding temporary building/s)

Where the proposal would contribute to meeting an identified affordable housing need, planning permission will be granted where the proposed development does not cause substantial harm to the openness of the Green Belt.

For all other proposals, planning permission will be granted where the proposed development would not have a greater impact on the openness of the Green Belt and the purpose of including land within it than the existing use and/or development. The Council will assess the development based on the following:

- i the size, scale, massing and spread of the new development compared to the existing; and**
- ii the visual impact of the development compared to the existing; and**
- iii the activities/use of the new development compared to the existing; and**
- iv the location of the site is sustainable and appropriate to the type of development proposed.**

C) Replacement buildings

Planning permission will be granted for the replacement of a building provided that:

- i the existing building being replaced is of permanent and substantial construction; and**

- ii the new building is in the same use as the existing; and
- iii the new building is not materially larger than the one it replaces; and
- iv the new building would not be out of keeping with its context and surroundings, and does not result in any other harm.

D) Local transport infrastructure

Planning permission will be granted for local transport infrastructure which can demonstrate a requirement for a Green Belt location and would preserve the openness of the Green Belt and not conflict with its purposes.

Reasoned Justification

8.78 Over one third of the Council's area falls within the Green Belt, which has checked the unrestricted growth of London. In addition, the Green Belt has also prevented the expansion of urban Chelmsford towards the south west. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open.

8.79 Inappropriate development is by definition harmful to the Green Belt and should not be approved except in very special circumstances. When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations.

8.80 New buildings in the Green Belt will be strictly controlled. The NPPF outlines the types of development that are not inappropriate and this includes agricultural or forestry buildings. In the assessment of these types of buildings, the Council will ensure that they are proportionate in size and scale in relation to their intended use, and evidence may need to be provided in order to demonstrate the needs of the agricultural holding for the development proposed. Local transport infrastructure is defined as being infrastructure that must be situated (and demonstrated as such) in the location proposed, such as a Park and Ride facility or new roads and bridges.

8.81 Buildings for outdoor sport and outdoor recreation will include stables for the keeping of leisure horses. Cemeteries, with ancillary buildings, can also be exceptions to inappropriate development. The size and scale of these types of development will be judged on a site-by-site basis in relation to their intended use. Domestic stabling should be located within or adjacent to the curtilage of the dwelling they relate to.

8.82 The Council acknowledges that due to the extent of the Green Belt in Chelmsford, there may be instances where new buildings related to community or educational uses may be proposed such as a new village hall, or new ancillary buildings related to an existing school. In accordance with the NPPF, these types of uses will be considered inappropriate development. However, the locational need for these types of uses will be given appropriate weight when considering whether there are very special circumstances that weigh in favour of the proposals.

8.83 In considering applications for redevelopment of previously developed land, it cannot be automatically assumed that the site is suitable for the development proposed if it meets the Green Belt test of openness. For example, housing developments in isolated locations

8 - Protecting and Securing Important Assets

are unlikely to meet the sustainability objectives of the Local Plan and the NPPF, even if it is within a higher category of the settlement hierarchy. The location of a development may have spatial constraints which make it unacceptable in planning terms, such as physical barriers, proximity to local facilities and services, and access to public transport and footpath links.

8.84 Replacement buildings may not be inappropriate development but, amongst other matters, the original building must be lawful. For the purposes of replacement dwellings, original means as built on 1 April 1974, or if built after this date, as originally built. The current district was formed on 1 April 1974 from the Borough of Chelmsford, and most of the Chelmsford Rural District.

8.85 Buildings must be of permanent and substantial construction. This is to avoid the replacement of shacks, caravans, railway carriages or other structures which, through the passage of time have blended into the landscape.

8.86 When considering the replacement of buildings, a replacement ancillary residential outbuilding will be treated as such and will not be considered in use as a dwellinghouse itself.

POLICY DM7 – NEW BUILDINGS AND STRUCTURES IN THE GREEN WEDGE

A) New buildings and structures

Planning permission will be granted for new buildings and structures where the development does not conflict with the purposes of the Green Wedge, and is for:

- i a local community facility where there is a demonstrated need; or**
- ii a local community facility that supports the role and function of the Green Wedge; or**
- iii agriculture and forestry or where it supports the sustainable growth and expansion of an existing, authorised and viable business where it can be demonstrated that there is a justified need; or**
- iv local transport infrastructure and other essential infrastructure or development which supports existing or potential utility infrastructure where the Green Wedge location is appropriate and the benefits of which override the impact on the designation; or**
- v appropriate facilities or infrastructure to support active and sustainable travel; or**
- vi appropriate facilities for outdoor sport, outdoor recreation and cemeteries; or**
- vii a rural worker’s dwelling in accordance with Policy DM12; or**
- viii infilling in accordance with Policy DM9; or**
- ix limited affordable housing for local needs in accordance with Policy DM2; or**
- x extensions or alterations to buildings in accordance with Policy DM11; or**
- xi redevelopment of previously developed land in accordance with Part B of this Policy; or**

- xii replacement buildings in accordance with Part C of this Policy; or
- xiii residential outbuildings in accordance with Part D of this Policy.

B) Redevelopment of previously developed land (whether redundant or in continuing use and excluding temporary building/s)

Planning permission will only be granted where the role and function of the Green Wedge, in maintaining open land between built-up areas, protecting biodiversity and promoting recreation, would not be materially harmed, and where the development would have no greater impact on the character and appearance of the area than the existing use and/or development. The Council will assess the development based on the following:

- i the size, scale, massing and spread of the new development compared to the existing; and
- ii the visual impact of the development compared to the existing; and
- iii the impact of the activities/use of the new development compared to the existing.

C) Replacement buildings

Planning permission will be granted for the replacement of a building provided that:

- i the existing building being replaced is of permanent and substantial construction; and
- ii the new building is in the same use as the existing; and
- iii the new building would not be out of keeping with its context and surroundings, and does not result in any other harm; and
- iv the new building is not materially larger than the one it replaces.

D) Residential outbuildings

Planning permission will be granted for outbuildings to be used for purposes incidental to the enjoyment of the dwelling where the new outbuilding:

- i is located within the curtilage of the dwelling; and
- ii is ancillary in size, scale and appearance to the host dwelling; and
- iii is not self-contained independent habitable accommodation; and
- iv is well designed and in keeping with its context and surroundings, and does not result in any other harm.

Reasoned Justification

8.87 The Green Wedge is a local landscape designation that recognises the crucial role of the main river valleys in providing important open green networks for wildlife, flood storage capacity, leisure and recreation and sustainable means of transport. It also has an important role in preventing settlement coalescence and maintaining a sense of place and identity for neighbourhoods. New buildings within the Green Wedge will be restricted to ensure that the openness, role and function of these landscapes are not adversely affected.

8.88 Proposals for new buildings will be assessed to ensure that they are proportionate in size and scale in relation to their intended use. In some circumstances, such as proposals

8 - Protecting and Securing Important Assets

for new agricultural buildings, evidence may be required to demonstrate the requirement for a building of the size proposed.

8.89 Essential infrastructure is defined as being infrastructure that must be situated in the location proposed for connection purposes and the benefits of which override the impact of the designation such as sewage or water connections, power sources, waste water recycling/treatment sites, electricity substations, emergency services or telecommunications, including on-site and off-site reinforcements to existing networks. Local transport infrastructure is defined as being infrastructure that must be situated in the location proposed such as a Park and Ride facility, new roads and bridges. Essential infrastructure will also be recognised as that proposed by statutory undertakers.

8.90 Buildings for outdoor sport and outdoor recreation include stables for the keeping of leisure horses. Cemeteries, with ancillary buildings, could also be acceptable. The size and scale of these types of development will be judged on a site-by-site basis in relation to their intended use. Domestic stabling should be located within or adjacent to the curtilage of the dwelling they relate to. The Council also recognises that there can sometimes be a need for outbuildings within residential properties because the size or location of the building falls outside of the remit of permitted development. These types of buildings may be used for purposes incidental to the enjoyment of the dwelling house; it is not intended for the policy to provide new planning units or non-domestic uses within a residential site in the Green Wedge.

8.91 Any proposals for a residential ‘annex’ building will need to be ancillary and proportionate in its scale to the host dwelling in terms of its use and not an independent dwelling in its own right. Such ancillary buildings will be expected to share facilities such as gardens, driveway and parking with the host dwelling. Careful consideration will be given to the proposed internal and external layout and facilities proposed to be provided.

8.92 The Council supports, in principle, the provision of new buildings for community use including educational facilities that can demonstrate a requirement for a Green Wedge location. This is likely to be due to the location of the community or facility in which it serves. These types of buildings will only be permitted where they are required to serve the immediate local community; it is not intended for “regional centre” type facilities to be located in the Green Wedge.

8.93 Economic growth in the Green Wedge is encouraged but new buildings will only be permitted in circumstances where the proposal supports the sustainable growth and expansion of an existing, authorised and viable rural business. The need for the Green Wedge location would need to be justified. The Council must be satisfied that the new building is necessary for the existing business and that it is likely to continue to grow and prosper. New buildings for start-up businesses will not be permitted in the Green Wedge. This is to avoid the proliferation of new buildings which are unconnected to existing sites and uses and may result in harm to the openness and landscape character of the river valleys.

8.94 Redevelopment of previously developed land will be permitted where the development would not have a greater impact on the characteristics and attractiveness of the landscape and the purpose of including land within the Green Wedge than the existing development and also represents sustainable development.

8.95 Where a replacement buildings complies with Part C) of the policy, they will only be permitted where the original building is lawful. For the purposes of replacement dwellings, original means as built on 1 April 1974, or if built after this date, as originally built. Buildings must be of permanent and substantial construction. This is to avoid the replacement of shacks, caravans, railway carriages or other structures which, through the passage of time have blended into the landscape.

POLICY DM8 – NEW BUILDINGS AND STRUCTURES IN THE RURAL AREA

A) New buildings and structures

Planning permission will be granted for new buildings and structures in the Rural Area where the development will not adversely impact on the identified intrinsic character and beauty of the countryside and where the development is for:

- i a local community facility where there is a demonstrated need; or
- ii agriculture and forestry or the sustainable growth and expansion of an existing, authorised and viable business where it can be demonstrated that there is a justified need; or
- iii local transport infrastructure and other essential infrastructure or development which supports existing or potential utility infrastructure; or
- iv appropriate facilities for outdoor sport, outdoor recreation and cemeteries; or
- v a rural worker's dwelling in accordance with Policy DM12; or
- vi housing which secures the optimal viable use of a heritage asset or enabling development to secure the future of a heritage asset; or
- vii housing which includes the re-use of redundant or disused buildings which leads to an enhancement to the immediate setting; or
- viii an isolated dwelling which is of exceptional design quality; or
- ix infilling in accordance with Policy DM9; or
- x limited affordable housing for local needs in accordance with Policy DM2; or
- xi extensions or alterations to buildings in accordance with Policy DM11; or
- xii redevelopment of previously developed land in accordance with Part B of this Policy; or
- xiii replacement buildings in accordance with Part C of this Policy; or
- xiv residential outbuildings in accordance with Part D of this Policy.

B) Redevelopment of previously developed land (whether redundant or in continuing use and excluding temporary buildings)

Planning permission will be granted where the proposed development would not result in harm to the identified intrinsic character, appearance and beauty of the area. The Council will assess the development based on the following:

- i the size, scale, massing and spread of the new development compared to the existing; and

8 - Protecting and Securing Important Assets

- ii the visual impact of the development compared to the existing; and
- iii the impact of the activities/use of the new development compared to the existing; and
- iv the location of the site is appropriate to the type of development proposed.

C) Replacement buildings

Planning permission will be granted for the replacement of a building provided that:

- i the existing building being replaced is of permanent and substantial construction; and
- ii the new building is in the same use as the existing; and
- iii the new building would not be out of keeping with its context and surroundings, and does not result in any other harm.

D) Residential outbuildings

Planning permission will be granted for outbuildings to be used for purposes incidental to the enjoyment of the dwelling where the new outbuilding:

- i is located within the curtilage of the dwelling; and
- ii is ancillary in size, scale, and appearance to the host dwelling; and
- iii is not self-contained independent habitable accommodation; and
- iv is well designed and in keeping with its context and surroundings, and does not result in any other harm.

Reasoned Justification

8.96 The majority of the Council's area falls outside the Urban Areas and Defined Settlements, and where it is not Green Belt it is defined on the Policies Map as Rural Area.

8.97 The Council will ensure that the intrinsic character and beauty of the Rural Area is recognised, assessed and, where there is material harm arising from new development it is protected.

8.98 This policy provides some flexibility to allow rural communities and economies to thrive and prosper. This includes the sustainable growth and expansion of rural businesses and enterprises, including local shops and community facilities and services which support the rural community and serve their day-to-day needs.

8.99 Proposals for new buildings and structures will be assessed to ensure that they are proportionate in size and scale in relation to their intended use. In some circumstances, such as proposals for new agricultural buildings, evidence may be required to demonstrate the requirement for a building of the size proposed.

8.100 Essential infrastructure is defined as being infrastructure that must be situated in the location proposed for connection purposes and the benefits of which override any adverse impacts on the intrinsic character and beauty of the countryside such as sewage or water connections, power sources, waste water recycling/treatment sites, electricity substations, emergency services or telecommunications, including on-site and off-site reinforcements to existing networks. Local transport infrastructure is defined as being infrastructure that must

be situated in the location proposed, such as a Park and Ride facility, or new roads and bridges. Essential infrastructure will also be recognised as that proposed by statutory undertakers.

8.101 Buildings and structures for outdoor sport and outdoor recreation include stables for the keeping of leisure horses. Cemeteries, with ancillary buildings, could also be acceptable. The size and scale of these types of development will be judged on a case-by-case basis in relation to their intended use. Domestic stabling should be located within or adjacent to the curtilage of the dwelling they relate to. The Council also recognises that there can sometimes be a need for outbuildings within residential properties because the size or location of the building falls outside of the remit of permitted development. These types of buildings may be used for purposes incidental to the enjoyment of the dwelling house; it is not intended for the policy to provide new planning units or non-domestic uses within a residential site.

8.102 Any proposals for a residential 'annex' building will need to be ancillary and proportionate in its scale to the host dwelling in terms of its use and not an independent dwelling in its own right. Such ancillary buildings will be expected to share facilities such as gardens, driveway and parking with the host dwelling. Careful consideration will be given to the proposed internal and external layout and facilities proposed to be provided.

8.103 The Council supports the provision of new buildings for community or educational uses that can demonstrate a requirement for a Rural Area location. This is likely to be due to the location of the community or facility in which it serves. In some cases, the catchment area for the development may be wider than the immediate locality i.e. village or town. These types of wider community facilities will only be permitted where the development serves both the local area and wider catchment jointly. This will be assessed on a site by site basis. Community facilities and services include local shops, meeting places, sports venues (indoor and outdoor) cultural buildings, public houses and places of worship.

8.104 Economic growth in the Rural Area is encouraged but new buildings and structures will only be permitted in circumstances where the proposal supports the sustainable growth and expansion of an existing, authorised and viable business. The Council must be satisfied that the new building is necessary for the existing business and that it is likely to continue to grow and prosper. New buildings for start-up businesses should be closely associated with groups of existing buildings.

8.105 Redevelopment of previously developed land will be permitted where the development would not adversely impact upon the recognised character of the area. In considering applications for redevelopment of previously developed land, it cannot be automatically assumed that the site is suitable for the development proposed if it does not harm the intrinsic character and beauty of the countryside. For example, housing developments in isolated locations are unlikely to meet the sustainability objectives of the Local Plan and the NPPF, even if it is within a higher category of the settlement hierarchy. The location of a development may have spatial constraints which make it unacceptable in planning terms, such as physical barriers, proximity to local facilities and services, access to public transport and footpath links.

8.106 Where a replacement building complies with Part C) of the policy, they will only be permitted where the original building is lawful. For the purposes of replacement dwellings, original means as built on 1 April 1974, or if built after this date, as originally built. Buildings must be of permanent and substantial construction. This is to avoid the replacement of shacks,

8 - Protecting and Securing Important Assets

caravans, railway carriages or other structures which, through the passage of time have blended into the landscape. The proposed replacement or rebuild must be acceptable in its setting by virtue of its siting, volume, form and scale.

8.107 Exceptional design quality is defined as a dwelling which is truly outstanding, reflecting the highest standards in architecture; help to raise standards of design more generally in rural areas; would significantly enhance its immediate setting, and be sensitive to the defining characteristics of the local area.

POLICY DM9 – INFILLING IN THE GREEN BELT, GREEN WEDGE AND RURAL AREA

A) Green Belt

Planning permission will be granted for limited infilling in the Green Belt provided that:

- i the site is within a village; and**
- ii the site is a small gap in an otherwise built-up frontage; and**
- iii the infilling is limited so as not to impact unacceptably on the function and purpose of the Green Belt; and**
- iv the development does not detract from the existing character or appearance of the area.**

B) Green Wedge or Rural Area

Planning permission will be granted for infilling in the Green Wedge or Rural Area provided that:

- i the site is a small gap in an otherwise built-up frontage; and**
- ii the development does not detract from the existing character or appearance of the area, and would not unacceptably impact on the function and objectives of the designation.**

Reasoned Justification

8.108 Infilling is defined as filling the small gaps within existing groups of dwellings or buildings. For the purposes of this policy, a gap is normally regarded as 'small' if it is capable of accommodating no more than one property or building. In some circumstances, the context and character of the development pattern of the immediate area will allow for more than one property, or building, within these gaps. Each site will be assessed on a case-by-case basis.

8.109 The Council will carefully assess the impact of any proposals for residential infilling to ensure that gaps in the development pattern which positively contribute to the existing setting of a hamlet or group of dwellings are not lost. Within the Green Belt, the proposal must be within a village in order to be consistent with the NPPF. The site context may only be considered as a village where there is a consolidated group of residential properties and not a dispersed settlement pattern. It will usually, although not exclusively, include some form of community facility or focus such as a church, village hall, shop, public house or post office. Whether or not a site is located within a village will be assessed on a site by site basis.

8.110 A judgement needs to be made as to whether a new building would be in character with its surroundings. Buildings that are substantial in size and scale in relation to the neighbouring units either side, and would detract from the existing character of the area, will not be supported.

POLICY DM10 – CHANGE OF USE (LAND AND BUILDINGS) AND ENGINEERING OPERATIONS

A) Green Belt

Planning permission will be granted for the change of use of buildings in the Green Belt where:

- i the building is of permanent and substantial construction, and works to convert the building would not result in substantial reconstruction; and
- ii the building is in keeping with its surroundings, and any alterations or extensions are proportionate in size in relation to the existing building and do not harm its original character; and
- iii the use of land within the curtilage of the building, and which is to be used in association with that building, would not result in harm to the openness of the Green Belt; and
- iv where the building was constructed less than ten years ago for the purposes of agriculture, but it can be demonstrated that it is no longer required for agriculture.

In addition to criteria i to iv above, where the proposed use is for a dwelling or dwellings, the building must have been constructed more than ten years ago.

Engineering operations and material changes in the use of land will be permitted within the Green Belt where they preserve openness, do not conflict with the purposes of including land in the Green Belt, and do not harm the character and appearance of the area.

B) Green Wedge

Planning permission will be granted for the change of use of buildings in the Green Wedge where:

- i the building is of permanent and substantial construction, and works to convert the building would not result in substantial reconstruction; and
- ii the building is in keeping with its surroundings, and any alterations or extensions are proportionate in size in relation to the existing building and do not harm its original character; and
- iii the use of any land within the curtilage of the building, and which is to be used in association with that building, would not conflict with the purposes of the Green Wedge designation; and
- iv the building was constructed less than ten years ago for the purposes of agriculture, but it can be demonstrated that it is no longer required for agriculture.

In addition to criteria i to iv above, where the proposed use is for a dwelling or dwellings, the building must have been constructed more than ten years ago.

8 - Protecting and Securing Important Assets

Changes of use of land and engineering operations, including proposals which enhance the role of the Green Wedge as an active travel corridor, will be permitted where the development would not adversely impact on the role, function, character and appearance of the Green Wedge as set out in Strategic Policy S11.

C) Rural Area

Planning permission will be granted for the change of use of land or buildings in the Rural Area where:

- i the building is of permanent and substantial construction, and works to convert the building would not result in substantial reconstruction; and**
- ii the building is in keeping with its surroundings, and any alterations or extensions do not harm its original character; and**
- iii it does not adversely impact on the identified intrinsic character, appearance and beauty of the Rural Area; and**
- iv the building was constructed less than ten years ago for the purposes of agriculture, but it can be demonstrated that it is no longer required for agriculture.**

In addition to criteria i to iv above, where the proposed use is for a dwelling or dwellings, the building must have been constructed more than ten years ago.

Engineering operations will be permitted within the Rural Area where they do not adversely impact upon the identified intrinsic character, appearance and beauty of the Rural Area.

Reasoned Justification

8.111 The Council recognises that the re-use and adaptation of existing buildings in the countryside can provide opportunities for residential, commercial and industrial development. In order to avoid abuse of this policy, the building/s should be permanent and not require substantial reconstruction. A structural survey will be required to be provided in order to demonstrate that the structure is capable of conversion without rebuild or creation of new structural elements.

8.112 Within the Green Belt and Green Wedge, any alteration or extension included as part of a change of use will require careful scrutiny in order to ensure that it is not disproportionate in relation to the existing building. Proportionate should be assessed in the context of footprint, height and volume.

8.113 Buildings will normally have an identified curtilage. It is important to consider how the curtilage may alter as part of the change of use to the host building; for example, through storage or domestication. In the Green Belt, the Council will be mindful about the impact on openness. In the Green Wedge, the ancillary use of the land should not conflict with the purpose of the designation. In the Rural Area, the critical aspect will be identifying the intrinsic character and making a judgement as to whether an adverse impact would result.

8.114 The 10 year period for conversions to dwellings is included in order to prevent misuse of the policy. The building must have been originally constructed and used for the purpose intended and not with a view of re-using it in the future for another use.

8.115 Development which supports the role of the Green Wedge as an active travel corridor includes proposals which facilitate greater use of all other active modes of travel, including leisure travel and horseback, through the Green Wedge.

POLICY DM11 – EXTENSIONS TO EXISTING BUILDINGS WITHIN THE GREEN BELT, GREEN WEDGE AND RURAL AREA

A) Green Belt

Planning permission will be granted for extensions or alterations to existing buildings where the building is located within the Green Belt and the extension or alteration would not:

- i result in disproportionate additions over and above the size and scale of the original building; and
- ii be out of keeping with its context and surroundings or result in any other harm.

B) Green Wedge

Planning permission will be granted for extensions or alterations to existing buildings where the building is located within the Green Wedge and the extension or alteration would not:

- i be disproportionate in size and scale in relation to the existing building; and
- ii be out of keeping with its context and surroundings or result in any other unacceptable harm; and
- iii conflict with the purposes of the Green Wedge designation.

C) Rural Area

Planning permission will be granted for extensions or alterations to existing buildings where the building is located within the Rural Area and the extension or alteration would not:

- i be out of keeping with its context and surroundings and does not result in any other unacceptable harm; and
- ii adversely impact on the identified intrinsic character and beauty of the Rural Area.

Reasoned Justification

8.116 Extensions and alterations to buildings can result in significant changes to their appearance and the impact they have on the surrounding countryside. An alteration may include changes to fenestration, materials and external features. For the avoidance of doubt, buildings include residential dwellings, and all buildings must be substantially intact and have a reasonable remaining life.

8.117 Other harm can include, but is not limited to: visual intrusion, noise, activity, light pollution and use.

8 - Protecting and Securing Important Assets

A) Green Belt

8.118 The fundamental aim of Green Belt Policy is to prevent urban sprawl by keeping land permanently open. The essential characteristics of Green Belts are their openness and their permanence. Whilst extensions or alterations to buildings within the Green Belt are not inappropriate development, this is subject to meeting the objectives of Green Belt policy.

8.119 Extensions or alterations must not result in disproportionate additions over and above the size of the original building. Original building means that as built at 1 April 1974, or if built after this date, as originally built. The current district was formed on 1 April 1974 from the Borough of Chelmsford, and most of the Chelmsford Rural District.

8.120 Detached outbuildings in close proximity to the host dwelling may in some cases be considered as extensions where the property may currently be deficient in an outbuilding to serve its domestic needs, for example - a detached garage. When determining whether an outbuilding in the Green Belt can be considered as an extension, matters for consideration will include its use, siting, form, size, scale, and proximity to the host dwelling.

B) Green Wedge

8.121 The role of the main river valleys will be protected and enhanced as a multi-faceted landscape for its openness and preventing settlement coalescence and its function as an important green network for wildlife, leisure and recreation. Some parts of the Green Wedge may also fall within the Green Belt. In these cases, the objectives and purpose of the Green Belt will still apply; Green Belt is a national designation, subject to national policies and will still be given full weight in planning decisions. The Green Wedge also covers parts of the designated Rural Area and in these cases the proposal will need to conform with both Parts B and C of the policy.

C) Rural Area

8.122 Much of the Council's area falls within the Rural Area which is very attractive and has a traditional rural appearance with long unbroken views. In assessing the intrinsic character and beauty of the Rural Area, the Council will make a judgement on a site-by-site basis. The Council will support rural communities. This includes the sustainable growth and expansion of existing and authorised rural businesses, such as shops, public houses and restaurants, tourist attractions, agriculture and diversification, offices and community uses where that expansion would not adversely impact on the identified character and beauty of the area.

POLICY DM12 – RURAL AND AGRICULTURAL/FORESTRY WORKERS' DWELLINGS

Planning permission will only be granted for a new dwelling or caravan in the Green Belt where there is a proven essential need for the purposes of agriculture or forestry, and there are very special circumstances which clearly outweigh the harm to the Green Belt and any other harm.

Planning permission will be granted for a new dwelling or caravan in the Green Wedge or Rural Area where there is a proven essential need for the purposes of agriculture or forestry, horse breeding and training, livery or other land-based rural business.

A) Temporary accommodation

For applications for temporary accommodation, the following criteria must be met:

- i it can be demonstrated that the business can sustain the full-time worker directly employed by the business at minimum wage; and
- ii it can be demonstrated that there is a functional need for the proposed accommodation which cannot be met by existing suitable accommodation available in the area, or by rearranging duties and responsibilities between workers; and
- iii the need cannot be met by re-using, extending or adapting an existing building on the holding; and
- iv the proposed accommodation is located within or adjacent to the existing farm complex of buildings or other dwellings on the holding; and
- v the size of the accommodation relates to the needs of the rural worker to be employed under his or her current situation.

B) Permanent accommodation

In addition to compliance with the above Part A) permanent accommodation will only be permitted where the unit and the agricultural/rural business have been established for at least 3 years, it can be demonstrated that the business has been profitable for at least one of them, is currently financially sound and has a clear prospect of remaining so.

In all cases, (temporary and permanent accommodation) conditions will be attached to any permission removing permitted development rights and limiting the occupancy to that required for the business concerned.

C) Removal of Occupancy conditions on existing dwellings

Planning permission will be granted for the removal of a restrictive agricultural/rural worker occupancy condition on a dwelling only where:

- i comprehensive evidence has been submitted to show that the property, including all of its land and buildings that form part of the holding, has been marketed for sale or rent for a minimum period of 12 months at a market price to reflect the occupancy condition, and confirmation of a lack of interest; and
- ii it is evidenced that there is no long-term need for an agricultural/rural workers dwelling in the locality; and
- iii the dwelling was not constructed or converted for the purposes of an agricultural or rural worker less than 10 years prior to the submission of the application to remove the occupancy condition.

8 - Protecting and Securing Important Assets

Reasoned Justification

8.123 One of the few circumstances where a new dwelling within the countryside may be justified is when accommodation is required to enable agricultural or rural workers to live at, or in the immediate vicinity of, their place of work. Such a need must be essential, and to prevent the misuse of this policy the Council requires any proposal for a new agricultural/rural workers dwelling to meet all the criteria set out within the policy.

8.124 Where possible, development on the best and most versatile agricultural land should be avoided. The re-use of existing buildings or building on previously developed land within a site should be prioritised before considering the loss of Grade 2 and Grade 3 agricultural land. Grade 3b agricultural land should be prioritised for development over higher grade land wherever possible.

8.125 In the case of a new start-up business, the Council will only allow the provision of temporary accommodation for use by a rural or agricultural worker for a temporary period of up to 3 years. This would normally take the form of a caravan/mobile home. This is to enable sufficient time for the business to be able to demonstrate that it is viable and profitable. If after a period of 3 years this cannot be demonstrated, permission will not be granted for either an extension to the temporary period or for a permanent dwelling.

8.126 If the business is able to demonstrate an essential need for a permanent dwelling in accordance with all of the criteria of the policy, the size and scale of the dwelling shall be related to the needs of the employee based upon their existing domestic circumstances. If in the future the circumstances of the occupier change, the Council will assess the need for any adaptation or extension of the dwelling on its individual merits.

8.127 When considering planning applications to remove restrictive occupancy conditions, the Council recognises that changes in the scale and character of a business may affect the longer-term requirement for dwellings in the countryside for their original purpose. The Council also recognises that it would fulfil no purpose to keep such dwellings vacant, or that existing occupiers should be obliged to remain in occupation simply by virtue of a planning condition that has outlived its usefulness. The Council will expect applications for the removal of an occupancy condition to demonstrate that there is no long-term need for an agricultural dwelling in the locality.

8.128 The Council will also bear in mind that such dwellings could be used by agricultural and forestry or rural workers seeking accommodation within the wider surrounding area. It must be demonstrated to the Council's satisfaction the availability of a dwelling subject to an occupancy condition has been effectively marketed to likely interested parties in the area concerned, and that no interest has been shown regarding purchase or occupation of the dwelling by those working in the local agricultural community. The Council will make a judgement on the adequacy of the marketing exercise on a case-by-case basis.

Protecting the Historic Environment

8.129 This Section provides policies which cover the historic environment. Policy S3 outlines the strategic approach to the historic environment. Relevant policies of the Local Plan are separated into designated and non-designated assets, to represent the distinction within the NPPF.

POLICY DM13 – DESIGNATED HERITAGE ASSETS

A) The impact of any development proposal on the significance of a designated heritage asset or its setting, and the level of any harm, will be considered against any public benefits arising from the proposed development. Where there is substantial harm or total loss of significance of the designated heritage asset, consent will be refused unless it can be demonstrated that the substantial harm or loss is necessary to achieve substantial public benefits that outweigh that harm or loss; or all of the following apply:

- i the nature of the heritage asset prevents all reasonable uses of the site; and**
- ii use of the asset is not viable in itself in the medium term, or not demonstrably possible in terms of grant funding; and**
- iii the harm or loss is outweighed by bringing the site back into use.**

Where there is less than substantial harm to the heritage asset this will be weighed against the public benefits of the development proposal, including securing the optimum viable use of the heritage asset.

The Council will take account of the desirability of sustaining and enhancing the significance of heritage assets and the positive contribution that conservation of heritage assets can make to sustainable communities, local character and distinctiveness.

B) Listed Buildings

In addition to Part A) the Council will preserve Listed Buildings and will permit proposals where:

- i any extension/alteration would not adversely affect its significance as a building of special architectural or historic interest, both internally and externally; and**
- ii development within the setting of a listed building would not adversely affect the significance of the listed building, including views to and from the building, landscape or townscape character, land use and historic associations; and**
- iii any change of use would preserve its significance as a building of special architectural or historic interest and ensure its continued use.**

C) Conservation Areas

In addition to Part A) development will be permitted in Conservation Areas where:

- i the siting, design and scale would preserve or enhance the character or appearance of the area; and**
- ii building materials and finishes are appropriate to the local context; and**
- iii features which contribute to the character of the area are retained; and**
- iv important views are preserved.**

Development involving demolition or substantial demolition will only be granted if it can be demonstrated that:

8 - Protecting and Securing Important Assets

- v **the structure to be demolished makes no contribution to the special character or appearance of the area; or**
- vi **it can be demonstrated that the structure is beyond repair or incapable of beneficial use; or**
- vii **the substantial public benefit would outweigh the harm; or**
- viii **it can be demonstrated that the removal of the structure would lead to the enhancement of the Conservation Area.**

D) Registered Parks and Gardens

Development proposals should protect Registered Parks and Gardens and their settings. Harm should be assessed in accordance with the tests within Part A) of this policy.

E) Scheduled Monuments

Development proposals should protect Scheduled Monuments and their settings. Harm should be assessed in accordance with the tests within Part A) of this policy.

Reasoned Justification

8.130 When considering proposals affecting listed buildings, local authorities have a statutory duty to have special regard to the desirability of preserving the building, its setting or any features of special architectural or historic interest. There is a clear presumption against proposals for the total or substantial demolition of any listed building, or for any alteration or extension that would adversely affect its special architectural or historic character. Proposals which affect the setting of a listed building will also be critically assessed. Any harm to a designated heritage asset will require clear and convincing justification. Any loss of the whole or part of the heritage asset will not be permitted without taking all reasonable steps to ensure the new development will proceed after the loss has occurred. The setting of a building and its contribution to a local scene may be very important; for example, where it forms an element in a group, park or garden or other townscape, or where it shares particular architectural forms or details with other buildings nearby.

8.131 The best use for an historic building is the use for which it was designed. Wherever possible, this should continue particularly if it is residential use. However, there may be occasions when this is no longer a practical proposition. The Council will consider the introduction of appropriate alternative uses for redundant listed buildings as an exception to other planning policies, provided it is the only way to preserve or enhance the special architectural and historic character or structure of the building and its setting, and it does not adversely affect amenities, highway safety, etc. In this context, a change of use can adversely affect the setting of a building through the extra activity it generates; for instance, through increased on-site car parking, even if it does not affect the external appearance of the building itself. It will not be sufficient to justify such a development merely on the basis that the proposed use will generate a higher property value or increased revenues.

8.132 The character of an area derives from a number of elements; these can include the siting and design of its buildings, open spaces, views and features such as walls, landscape, materials and the activities that take place there. Careful consideration of the setting within Conservation Areas includes judging the acceptability of materials and finishes to either

respect or complement the area. The very designation of the Conservation Area denotes architectural or historic interest; it is therefore justified that as many as possible important features remain. The most important views in a Conservation Area are those within the designated area, but proposals should also respect how the area is viewed from outside of the designated area. An incremental adverse change to the Conservation Area could result in a reduction in the designated area.

8.133 Development affecting areas designated as Registered Parks and Gardens will be assessed against the likely impact of such development on their visual character and setting.

8.134 The Council will seek to ensure that new development proposals do not adversely affect the historic or archaeological importance of a Scheduled Monument.

POLICY DM14 – NON-DESIGNATED HERITAGE ASSETS

Proposals will be permitted where they retain the significance of a non-designated heritage asset, including its setting. Where proposals would lead to harm to the significance of a non-designated heritage asset or its loss, proposals should demonstrate that:

- i the level of harm or loss is justified following a balanced judgement of harm and the significance of the asset; and**
- ii harm is minimised through retention of features of significance and/or good design and/or mitigation measures.**

Reasoned Justification

8.135 The focus of the policy is based on the protection and retention of non-designated heritage assets, as identified on the Council's Buildings of Local Value List, Inventory of Landscape of Local Interest and Protected Lanes Studies. The aim is to avoid or minimise harm and weigh up any harm against the loss of significance. Where harm is justifiably unavoidable in most cases it should be possible to retain some aspect of significance. The Council may also have regard to whether a building, monument, site, place, area or landscape should be identified as a non-designated heritage asset for the purposes of a planning decision. This consideration would be based upon guidance in the PPG and NPPF.

POLICY DM15 – ARCHAEOLOGY

Planning permission will be granted for development affecting archaeological sites that are of sufficient significance as to warrant preservation in situ, providing it protects, enhances or preserves the sites of archaeological interest and the contribution made by their settings to their significance. Where development would harm the significance of archaeological sites, they will be subject to consideration under Policy DM13 A) or DM14, dependent on their level of significance.

8 - Protecting and Securing Important Assets

Applications shall have assessed the archaeological potential of the site in consultation with the Historic Environment Record and taken account of the archaeological significance of any importance of those remains, the need for the development, the likely extent of any harm, and, in instances where archaeological remain do not warrant preservation in situ, the likelihood of the proposal successfully preserving the archaeological interest of the site by record.

Reasoned Justification

8.136 Chelmsford contains numerous sites of archaeological significance. There are 2,503 archaeological sites detailed in the Essex Historic Environment Record, maintained by Essex County Council. They constitute a finite and non-renewable resource and are in many cases highly fragile and vulnerable to damage and destruction. Many locations have sites that may have archaeological potential but have no statutory protection. They rely on the sympathetic application of planning and management policies for their survival and protection.

8.137 When new sites of archaeological significance are identified, the Council will ensure that they are afforded appropriate protection and, where possible, retained in situ. Where retention is not possible or where the archaeological remains do not warrant preservation in situ, clear justification will be required through archaeological investigation and recording either through conditions or as part of a planning obligation. Fieldwork must be undertaken by a suitably qualified contractor. Where a non-designated archaeological site is of similar national significance to a Scheduled Monument, Policy DM13 will apply.

Protecting the Natural Environment

POLICY DM16 - PROTECTION AND PROMOTION OF ECOLOGY, NATURE AND BIODIVERSITY

A) Internationally Designated Sites

Developments that are likely to have an adverse impact (either individually or in combination with other developments) on European Designated Sites must satisfy the requirements of the Habitats Regulations, determining site specific impacts and avoiding or mitigating against impacts where identified.

Where appropriate, contributions from qualifying residential developments within the Zones of Influence as defined in the Essex Recreational disturbance Avoidance and Mitigation Strategy (RAMS) will be secured towards mitigation measures identified in the RAMS.

B) Nationally Designated Sites

Development proposals within or outside a SSSI, likely to have an adverse effect on a SSSI (either individually or in combination with other developments), will not be permitted unless, on an exceptional basis, the benefits of the development clearly outweigh both the adverse impacts on the features of the site and any adverse impacts on the wider network of SSSIs.

C) Locally Designated Sites

Development likely to adversely affect locally designated sites, their features or their function as part of the ecological network, will only be permitted where the need and benefits of the development clearly outweigh the loss and the coherence of the local ecological network is maintained.

D) Biodiversity and Geodiversity in Development

Development proposals should:

- i Conserve and enhance the network of habitats, species and sites (both statutory and non-statutory, including priority habitats and species) of international, national and local importance commensurate with their status and give appropriate weight to their importance; and
- ii Incorporate measures and features into the design of new buildings, extensions or renovations to increase biodiversity; and
- iii Avoid negative impacts on biodiversity and geodiversity, adequately mitigate unavoidable impacts and as a last resort compensate for residual impacts; and
- iv Unless exempt, must provide a minimum 10% biodiversity net gain (20% on Chelmsford Garden Community and East Chelmsford Garden Community) above the existing ecological baseline value of the site, or subsequent government standard, to be calculated and reported in accordance with local and national best practice guidance prevailing at the time of the application, and to be secured for a minimum of 30 years after completion.

Applications for engineering and other operations, and change of use in order to create biodiversity sites in appropriate locations, including sites associated with the Local Nature Recovery Strategy, will be supported.

Reasoned Justification

8.138 The presence of protected species is a material consideration when the Council is considering a development proposal which, if carried out, would be likely to result in harm to the species or its habitat. When considering planning applications it is essential that the presence or otherwise of protected species and the extent that they may be affected by the development is established before planning permission is granted.

8.139 Planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats unless the need for and benefits of the development in that location clearly outweigh the loss, or appropriate mitigation measures can be put in place. On Internationally Designated Sites mitigation may involve providing or contributing towards a combination of the following measures:

- Access and visitor management measures within a site
- Improvement of existing greenspace and recreational routes
- Provision of suitable alternative natural greenspace (SANG) in accordance with Natural England SANG standards which includes 8ha/1000 new population
- Provision of high quality semi-natural accessible greenspace in accordance with Natural England standards which includes 8ha/1000 new population

8 - Protecting and Securing Important Assets

- Provision of recreational routes
- Monitoring of the impacts of new development on the site to inform the necessary mitigation requirements and future refinement of any mitigation measures
- Insert other potential mitigation measures to address air pollution impacts e.g. emission reduction measures and on site management measures.

8.140 The Essex Recreational disturbance Avoidance and Mitigation Strategy Document (RAMS) was adopted in 2019 and the SPD was adopted in 2020. The Essex Coast RAMS, which has the brand name Bird Aware Essex Coast, aims to deliver the mitigation necessary to avoid adverse effects on the integrity of habitats sites from the in-combination impacts of residential development in Essex. The Essex Coast RAMS identifies a detailed programme of strategic avoidance and mitigation measures which are to be funded by developer contributions from all qualifying residential development within the Zones of Influence as defined in the adopted RAMS. Major developments (defined as sites of 10 or more dwellings) may also be required to provide or contribute towards additional recreational mitigation measures to address alone impacts of the proposal as identified in paragraph 8.139 of DM16. This will be informed by a review of the RAMS and SPD which is expected to be complete in late 2025 and/or project level HRAs.

8.141 For development effecting Nationally Designated Sites, proposals will need to take account of the Chelmsford Green Infrastructure Strategic Plan, Local Nature Recovery Strategy (LNRS), and the Essex Green Infrastructure Strategy. Where necessary, appropriate mitigation measures may include new residential development contributing towards implementation of the objectives and targets in these documents.

8.142 The NPPF states that plans should promote enhancement of ecological networks and recovery of priority species. Priority habitats and species are those listed under the Natural Environment and Rural Communities Act 2006, or any subsequent amendment to this Act and include priority bird species, bats and reptiles.

8.143 The design of a development will be expected to incorporate beneficial biodiversity features, such as swift boxes, bat or bird boxes, swift, bat and bee bricks, green roofs, passageways to prevent access to roadways, wildlife kerbs, and gaps in bases of garden fences to facilitate the movement of native wildlife or the creation and connection of wildlife corridors through landscaping or other means. Where possible, landscaping should comprise of native species only. New water features such as attenuation ponds that can provide new wetland areas, and removal of redundant in-channel structures and culverts, can also create and restore wildlife habitats. Developments adjacent to main rivers should take opportunities to retain riparian corridors as public open space over private gardens, improve water related biodiversity through a variety of initiatives including buffer strips, riparian tree planting, alien species removal and increasing in-channel morphology diversity. The location and specification of biodiversity features should be designed with input from a qualified ecologist and be integrated within the fabric of the building to ensure longevity.

8.144 Relevant development proposals will be required to complete the Council's Biodiversity Checklist. Where there is the potential for the presence of protected species and/or habitats, a relevant ecological survey shall be undertaken by a suitably qualified ecologist. The development proposal should be informed by the results of the checklist, any relevant survey and apply the mitigation hierarchy and have regard to the Council's Green Infrastructure Strategic Plan and the Essex Green Infrastructure Strategy.

8.145 In line with the Environment Act 2021 all development proposals (except where exemptions apply) will be required to provide a minimum of 10% biodiversity net gain above the ecological baseline for the application site. This is to ensure that the environment is left in a better state than before the development. However, where it is possible to achieve, the Council will encourage the delivery of a greater than 10% biodiversity net gain. In line with policies SGS6 and SGS16a, a minimum of 20% biodiversity net gain will be required for Chelmsford Garden Community and East Chelmsford Garden Community, subject to site constraints.

8.146 Proposals for biodiversity net gain must be acceptable to the Council in terms of design and location, take into account local priorities set out in the LNRS which guides the delivery of biodiversity net gain projects in Essex, the Essex Green Infrastructure Strategy and the Chelmsford Green Infrastructure Action Plan, and be informed by a comprehensive understanding of habitats and species associated with the site.

8.147 Planning applications must be supported by a Biodiversity Net Gain Plan and supporting reports with information to demonstrate how a minimum of 10% biodiversity net gain (or 20% for sites SGS6 and SGS16a) will be achieved, implemented, managed and maintained. These should be carried out by suitably qualified professionals and use the most up-to-date Department of Environment, Farming and Rural Affairs (DEFRA) Biodiversity Metric Calculators, in order for the level of biodiversity value before and after a development takes place to be clearly measured. All development proposals, including those for biodiversity enhancements, will be required to demonstrate the application of the mitigation hierarchy to ensure harm is avoided in the first instance. Loss or damage to irreplaceable habitats cannot be offset to achieve a net gain. Public open space requirements or the provision of SANGs are separate to biodiversity net gain and will not be considered as an alternative to or a replacement for net gain provisions. Where possible, the provision of both on site should be segregated to ensure the quality of the habitat for wildlife is maximised.

8.148 The Biodiversity Net Gain Plan must include a costed long-term management and maintenance plan to include enough funding to last for a minimum period of 30 years after completion of the development. However, the Council will aim, where possible, to secure biodiversity net gain for the life-time of the development. This is in recognition of the climate and ecological emergency and of the wider long-term benefits that biodiversity net gain provides on improving health and well-being of local communities and improving the natural environment of the Council's administrative area.

8.149 The Council expects the requirements for biodiversity net gain to be provided within the application site boundary to ensure biodiversity in new development and to prevent the removal of biodiversity in developed areas. The Council will only consider off-site provision, or the purchase of off-site biodiversity units, if it can clearly be demonstrated that biodiversity net gain cannot be adequately achieved on-site. The purchase of statutory Biodiversity Credits as a mechanism to achieve biodiversity net gain will only be considered as a last resort. Off-site measures will be expected to be in reasonable proximity to the development, strategically located for nature conservation and be informed by local and national guidance and data including the LNRS, the Essex Infrastructure Strategy and Chelmsford Green Infrastructure Action Plan. This is to ensure that habitats do not become fragmented and the users of the new development are able to benefit from being close to nature. Off-site provision should be discussed in advance with the Council and where appropriate with the Essex Local Nature Partnership.

8 - Protecting and Securing Important Assets

8.150 Biodiversity net gain proposals will be secured by condition and/or legal agreement. This will include a requirement to cover the Council's costs associated with the long-term monitoring of the biodiversity net gain proposals, with reports provided to the Council by developers for inclusion in the Authority Monitoring Report and BNG reporting.

8.151 Further information on the implementation of biodiversity net gain will be set out in a Biodiversity Net Gain Planning Advice Note. Ahead of this the Council will refer to the latest national best practice guidance including 'Biodiversity Net Gain – Good Practice principles for development, a practical guide' (CIEEM, CIRIA, IEMA, 2019) and British Standard BS42020 'Biodiversity-Code of Practice for Planning and Development', or subsequent revisions.

POLICY DM17 –TREES, WOODLAND AND LANDSCAPE FEATURES

A) Protected Trees and Woodland

Planning permission will be granted for development proposals that do not result in unacceptable harm to the health of a preserved tree, trees in a Conservation Area or Registered Park and Garden, preserved woodlands or ancient woodlands. Consideration will also be given to the impact of a development on aged or veteran trees found outside ancient woodlands, both now and in the future.

Development proposals that have the potential to affect preserved trees, trees in a Conservation Area or Registered Park and Garden, preserved woodlands or ancient woodlands must set out measures to secure their protection.

In exceptional circumstances there may be overriding public benefits arising from the development that could justify the removal of a preserved tree or trees. In such circumstances, a replacement tree, or trees, shall be provided of a size and type suitable for its location.

B) Other Landscape Features

Planning permission will be granted for development proposals that do not result in unacceptable harm to natural landscape features that are important to the character and appearance of the area. Harm or loss of these features will not be permitted unless a landscape strategy, which would compensate for the loss or harm, is secured or where there are overriding public benefits arising from the development.

C) New Trees

Three new trees per net new dwelling are required to be planted for all new housing development.

All new strategic scale employment and infrastructure development (defined as development in excess of 1,000 sqm or 0.1 hectares) will be required to plant a significant number of new trees as part of landscaping requirements.

Reasoned Justification

8.152 Trees and woodland provide a vital benefit, and help to improve the wellbeing of the public and the environment. Some of their many benefits include the provision of shelter and shade, stabilisation of soil, filtering air pollution, reducing noise, improving and softening the landscape, and creating and connecting wildlife habitats.

8.153 Planning permission will only be granted where the development proposal would not conflict with the purposes of the preservation order of the tree or woodland unless there is a substantiated justification. Harm to protected trees may include, but is not limited to, excessive pruning, incursion in the root protection area, alterations to ground levels or complete removal of the tree.

8.154 Proposals must also take into account the longer-term relationship between trees and a development. In some circumstances, even when a development can be physically constructed without resulting in harm to a tree, the proximity and liveability of the development with the tree can result in long-term pressure for the tree to be constantly pruned or even felled. Examples include over-shadowing of garden areas, leaf litter, detritus and bird droppings over roofs, guttering or car parking areas. In decision making, account also needs to be taken of the incremental growth of a preserved tree.

8.155 Development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists. Any impact on irreplaceable habitats should be fully considered under policy DM16.

8.156 Landscape features in the countryside, suburban and urban environments play an important part in shaping the character and appearance of an area. They can include, but are not limited to, trees, hedgerows, woodlands, meadows, field margins and water features that do not benefit from international, national or local designations. Each application will be assessed on a case-by-case basis on the importance and contribution that the existing landscape features make to the appearance of the locality.

8.157 The Council has declared a Climate and Ecological Emergency to focus attention on reducing carbon and greenhouse gas emissions in the area and to plan for a more sustainable future.

8.158 The Council's Climate and Ecological Emergency Action Plan includes undertaking a greening programme to significantly increase to amount of woodland and the proportion of tree cover in Chelmsford.

8.159 The Council has an ambition to plant at least one tree for every existing resident and at least three new trees planted for every net new home in Chelmsford to assist in the Climate and Ecological Emergency. All new housing development is therefore required to plant three trees per net new dwelling, in addition to any compensatory tree planting, in accordance with the requirements set out in the Planning Obligations SPD.

8.160 Where possible the Council will expect tree planting to take place on development sites as part of the approved landscaping scheme, including through the creation of tree-lined streets. The appropriate trees for on-site planting will be determined by the size, position, and type of location available. Council officers will assess proposed planting schemes and provide advice where necessary. Drawings accompanying planning applications should clearly demonstrate how the requirement of three trees per dwelling is being accommodated on site.

8.161 All development proposals for major new employment and infrastructure (such as new schools, neighbourhood centres and strategic green infrastructure) must demonstrate that provision has been made for the incorporation of a significant number of new trees on

8 - Protecting and Securing Important Assets

site as part of landscaping requirements. Trees can be provided on site in a variety of ways including as part of the landscaping, public realm and amenity proposals. This will enhance tree coverage across the Council's administrative area in line with Council ambitions. It will also help to deliver environmental, biodiversity and amenity benefits to the city and users of the new development. A judgement will be made on a case by case basis over what will be considered 'significant' taking into account the nature, scale and size of the development, the site and immediate locality with more guidance to be set out in the Making Places SPD.

8.162 Where on-site planting is impractical, a commuted sum will be sought to pay for planting on Council owned land or other sites agreed by the Council. Further guidance is provided in our Tree Planting Planning Advice Note and the Planning Obligations SPD.

POLICY DM18 – FLOODING/SUDS

A) Planning permission for all types of development will only be granted where:

- i it can be demonstrated that the site is safe from all types of flooding, either because of existing site conditions or through flood risk management from the development, now and for the lifetime of the development; and**
- ii it does not worsen flood risk elsewhere.**

B) In addition to above Part A) development within areas of flood risk will be required to:

- i provide a safe dry refuge and a safe means of escape or suitably manage risk through some other means; and**
- ii manage surface water run-off so that the discharge rate will not exceed the equivalent 1 in 1 greenfield rate, unless there are overriding reasons for not doing so; and**
- iii locate the most vulnerable development in areas of lowest flood risk unless there are overriding reasons for not doing so; and**
- iv provide wider sustainability benefits to the community that mitigate flood risk.**

C) All major development will be required to incorporate integrated water management measures such as rainwater/stormwater harvesting to reduce surface water run-off and ensure that it does not increase flood risk elsewhere. The principal method to do so should be the use of Sustainable Drainage Systems (SuDS). As well as providing appropriate water management measures, where possible SuDS should be multifunctional to deliver amenity, recreational and biodiversity benefit for the built, natural (including green infrastructure) and historic environment.

D) Surface water connections should follow the sustainable drainage hierarchy with connection to the public sewerage network only made where it can be demonstrated that there are no feasible alternatives (this applies to new developments and redevelopments) and where there is no detriment to existing users. Surface water connections to the foul sewer will not be permitted, and only to a combined sewer in exceptional circumstances.

Reasoned justification

8.163 Areas of flood risk include risk from all sources of flooding including from rivers and the sea, directly from rainfall onto the ground surface and rising groundwater, overwhelmed sewers and drainage systems and from other water bodies.

8.164 In considering proposals for development, the Council will follow a sequential risk-based approach, including the application of the 'exception test' where some continuing development is necessary for wider sustainable reasons.

8.165 The Council will require that development is protected from flooding and that appropriate measures are implemented to mitigate flood risk taking into consideration the lifespan of a development. In order to reduce flood risk within Chelmsford City Centre, the Council will work with the Environment Agency to put in place strategic flood defence measures upstream from Chelmsford Urban Area on the Rivers Can and Wid and, in appropriate circumstances, local flood protection measures within development sites.

8.166 The Council also requires the provision of sustainable drainage systems for the disposal of surface water within and leading from new development. SuDS should be the principal, but may not be the only method. SuDs are often most viable when considered early in the design process so developers are encouraged to engage in pre-application discussions with Essex County Council (as Lead Local SuDS Authority), and refer to ECC's SUDS Design Guide, and any future updates, when preparing applications incorporating SuDS schemes [SuDS Design Guide \(essex.gov.uk\)](http://essex.gov.uk).

8.167 SuDS can help make space for water to accommodate climate change as well as delivering other benefits to the natural environment. They can also promote biodiversity and habitat improvements. Relevant developments should consider Countryside Stewardship schemes to help prevent soil loss and to reduce runoff from agricultural land. Where development is located within a Critical Drainage Area (CDA) it may have the potential to impact on the CDA in respect of surface water flooding. Such sites are likely to require an individually designed mitigation scheme to address this issue.

8.168 Surface water connections to the public sewerage network should only be made where it can be demonstrated that there are no feasible alternatives (this applies to new developments and redevelopments) and where there is no detriment to existing users.

POLICY DM19 – RENEWABLE AND LOW CARBON ENERGY

Planning permission will be granted for renewable or low carbon energy developments provided that they:

- i do not cause demonstrable harm to residential living environment; and**
- ii avoid or minimise impacts on the historic environment; and**
- iii can demonstrate no adverse effect on the natural environment including designated sites; and**
- iv do not have an unacceptable visual impact which would be harmful to the character of the area; and**
- v will not have a detrimental impact on highway safety.**

8 - Protecting and Securing Important Assets

Where located within the Green Belt, renewable or low carbon energy developments will also need to demonstrate very special circumstances in order to be approved.

For major renewable and low carbon energy proposals, a package of community benefits should be delivered to ensure a positive community legacy.

Reasoned Justification

8.169 The Council wishes to reduce the consumption of fossil fuels and the subsequent generation of pollution and waste to help mitigate climate change. Renewable and low carbon energy schemes have a key role to play in promoting more sustainable forms of development and reducing the production of greenhouse gases. The Council will encourage the provision of such projects and will balance the immediate impact of renewable and low carbon energy proposals on the amenities of the local environment with their wider contribution to reducing the emission of greenhouse gases.

8.170 For the purposes of the policy, the means of generating renewable or low carbon energy include (but are not restricted to) onshore wind generation, photovoltaic cells, passive solar heating systems, combined heat and power, biomass and air/ground source heat pumps.

8.171 Impacts on the natural and historic environment include, but are not limited to, water and air quality, flood risk, designated and non-designated heritage assets. Assessing the impacts of development on these assets are covered by Policies DM13, DM14, DM15 and DM16. The assessment of the visual impact of the development will take into consideration the cumulative landscape impact of the proposal.

8.172 Major solar farm proposals are those with a site area of 1 hectare or above, as defined in the Town and Country Planning (Development Management Procedure) England Order 2010. Such proposals should deliver community benefits and a positive community legacy from development in accordance with the guidance set out in the Solar Farm Development SPD.

8.173 The Council's Solar Farm Development SPD provides further detailed guidance on major solar farm development proposals. The Council's Making Places SPD provides further planning advice for smaller building mounted solar energy systems.

Delivering and protecting Community Facilities

8.174 This Section focuses on providing and protecting assets within our communities that influence our quality of life.

POLICY DM20 - DELIVERING COMMUNITY FACILITIES

Planning permission will be granted for new, or extensions to existing, facilities and services which support the local community where:

- i there is access to adequate public transport, cycling and walking links for the benefit of non-car users; and**

- ii **vehicle access and on-site vehicle parking would be provided to an appropriate standard commensurate to the scale of the development; and**
- iii **the development would be compatible with its surroundings; and**
- iv **there would be no unacceptable impact on the character, appearance or local environment;**
- v **adequate access to and between the facilities and/or services would be provided for people with disabilities commensurate to the scale of the development; and**
- vi **buildings are flexible and sited to maximise shared use of the facility.**

Where the proposal falls outside of main Urban Areas and Defined Settlements, it must also comply with the relevant policies for its location, taking account of the planning policy objectives for that area.

Reasoned Justification

8.175 This policy applies to all proposed community facilities, whether as part of larger schemes or submitted separately. New facilities and services should support the local community where they are to be situated. In some cases, the catchment area for the development may be wider than the immediate locality i.e. village or town. These types of wider community facilities will only be permitted where the development serves both the local area and wider catchment jointly. This will be assessed on a site by site basis. Community facilities and services include local shops, meeting places, sports and recreation venues (indoor and outdoor), cultural buildings, public houses, places of worship, burial space and crematoriums.

8.176 New community facilities should be accessible by active and sustainable modes of transport. Public transport links should be in close proximity to the site and provide an adequate service. Measures to reduce car dependency will be supported.

8.177 New development should be physically compatible in form and appearance with its surroundings. It should not adversely impact the local environment of the area by reason of impact on residential neighbours, noise, pollution, biodiversity, air or water quality.

8.178 Developments should respect the fact that a multitude of users will be using them, so they should provide safe and secure access, and cater for people with disabilities. Proposals should also be flexible in design and sited to maximise the potential for the shared use of a facility.

8.179 The temporary and meanwhile use of vacant buildings and sites by creative, cultural and community organisations will also be supported, particularly where they help activate and revitalise town and city centre locations and the public realm.

POLICY DM21 – PROTECTING COMMUNITY FACILITIES

A) The change of use of premises or redevelopment of sites that would result in the loss of valued community facilities or services will only be permitted where:

- i the premises or site cannot be readily used for, or converted to, any other community facility; and**
- ii the facility or service which will be lost will be adequately supplied or met by an existing or new facility in the locality or settlement concerned which shall be equivalent to or better than the facility that is being lost in terms of both quantity and quality.**

In relation to the loss of a locally valued community facility that is commercial in nature, such as public houses, livery yards and private healthcare, evidence will need to be submitted to demonstrate that the use is not economically viable and that it is no longer required to meet the needs of the local community.

B) The change of use of premises or redevelopment of existing open space, sports and recreational buildings and land, including playing fields forming part of an education establishment, will only be permitted where:

- i an assessment has been undertaken which clearly shows the facility is surplus to requirements; or**
- ii the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or**
- iii the development is for alternative provision, the needs of which clearly outweigh the loss.**

Reasoned Justification

8.180 Community facilities and services include local shops, meeting places, sports and recreation venues (indoor and outdoor, including allotments), tourism attractions, cultural buildings, public houses and places of worship. Tourist attractions would include uses such as museums, other buildings and uses of land used for cultural or other leisure purposes. In the case of open space these are shown on the Policies Map. However, other valued facilities also include show centres, livery yards or riding schools, that provide a facility for the equestrian community.

8.181 Since 2020 dog ownership has increased in the UK from nine million to 13 million. Around three million households purchased pets since the start of the Covid-19 pandemic in 2020. The majority of pets were dogs and cats. As a consequence of increased ownership and the reduction in the number of people working from home on a full time basis there is an increasing reliance on facilities and services such as catteries and dog day care.

8.182 The existing facilities are assets which serve the communities in which they are located or in some instances wider areas. This importance can relate not only to their function but also to what they offer to the wider area.

8.183 An analysis of the need for the community facility will be undertaken on a case-by-case basis, taking account of the type of asset and any existing provisions. Similarly, the context of the site and the function and purpose of the use will determine the extent of the local community that the use serves. The term “local” will differ between circumstances; for example, the local community of a single public house in a village would likely be the residents of that village. For a children’s home, “local” could be more wide-reaching, covering the catchment area that the children’s home would serve.

8.184 The retention of all community facilities, including existing sport and leisure facilities, tourist attractions and places of recreation, public open spaces and playing fields, is paramount unless a case can be made that alternative provision will be provided in an acceptable and timely manner. If no alternative provision is to be provided, permission will only be granted where an assessment, which may include details of marketing, has been undertaken which has clearly shown the facility is inappropriate for alternative community uses or is surplus to requirements.

8.185 Proposals for the change of use of public houses will need to be accompanied by evidence to show that its existing use as a public house is not economically viable and is no longer required to meet the needs of the local community. This evidence shall include:

- a comprehensive and sustained marketing campaign (agreed in advance by the Council) has been undertaken, offering the public house for sale as a going concern and using an agreed realistic valuation of the premises;
- the marketing campaign has run for a period of at least twelve months before the planning application is submitted;
- the public house has been offered for sale locally, and in the region, in appropriate publications and through specialised licensed trade agents;
- it can be demonstrated that the public house is not financially viable; in order to determine if this is the case, the Council will require submission of trading accounts for the last three full years in which the pub was operating as a full-time business;
- the location of alternative licensed premises and their distance to the public house subject to the application;
- any such alternative premises which offer similar facilities and a similar community environment to the public house which is the subject of the application;
- the approaches and attempts to transfer from a chain of tied pubs to a free house.

8.186 Proposals for the change of use of livery yards will need to be accompanied by evidence to show that its existing use as a livery yard is not economically viable, and it can be demonstrated that the facility or service which will be lost will be adequately supplied or met by an existing or new facility in the locality. As a minimum this evidence shall include:

- A list of alternative local liveries and their vacancy levels to show that the losses could be met elsewhere. This should include the same type of livery/service and facilities offered e.g, Full or DIY livery
- In considering the locality of alternative liveries, an assessment of the catchment area for the users of the existing site should be compared to the proposed alternatives considered
- A comprehensive set of figures for the business (for at least the last 5 years) covering all costs and incomes broken down and vacancy rates.

8 - Protecting and Securing Important Assets

8.187 In the case of open spaces, they offer amenity value and contribute to the character of an area in general, and can provide a ‘green lung’ and visual break in the built environment on a wider scale. Given the nature particularly of the built environment of Chelmsford, if such facilities are lost to other uses it can be extremely difficult to find alternative locations, particularly as open land is scarce and therefore at a premium.

8.188 Against this background, it is intended to secure the retention of existing spaces and facilities unless a case can be made that alternative provision will be provided in a wholly-acceptable manner. Alternative provision could comprise existing provision in the locality of the type of open space or facility as defined by the latest Chelmsford Open Space, Recreational Facilities Study and Sports Facilities Strategy at the time of application, providing there is not a deficiency in that type of open space in the locality. An alternative and improved sports and recreational provision may be acceptable in some cases where the needs for which clearly outweigh the loss.

POLICY DM22 - EDUCATION ESTABLISHMENTS

The change of use or redevelopment of educational establishments identified on the Policies Map will only be permitted if they are surplus to educational requirements.

The extension or expansion of existing educational facilities will be supported subject to their accordance with the criteria of other relevant policies within the Local Plan. Proposals for the expansion of Anglia Ruskin University will be considered in the context of agreed masterplans.

Reasoned Justification

8.189 The retention of existing education facilities is an important objective of the Local Plan. The University, colleges, schools and early years provision provide education provision to the whole community and contribute significantly to the local economy.

8.190 Essex County Council (ECC) as Education Authority has the responsibility for early years and school place planning. Through this process ECC identifies the need for early years and school places and identifies surpluses or deficits through a 10 Year Plan for School Places currently covering the period 2020-2029. Whether the change of use or redevelopment of independent schools would be considered surplus to educational requirements will be considered on a case by case basis.

8.191 The further and higher education establishments in Chelmsford have an important place in the local economy as employers, providing skills, education and research. Anglia Ruskin University has ambitious plans to continue the development of its Rivermead Campus within Chelmsford Urban Area.

8.192 ARU Writtle was created following the merger of Anglia Ruskin University (ARU) and Writtle University College in 2023. Located on the outskirts of Chelmsford, it offers postgraduate, undergraduate, further education and short courses in the areas of agriculture and animal sciences. It has also developed a range of degree programmes in applied life sciences, sport, and health subjects.

9 - Making High Quality Places

9 - Making High Quality Places

9.1 This Section provides the basis for promotion of Chelmsford as a high-quality place to live, work, visit and study in.

9.2 High quality design is essential to making places more attractive, locally-distinctive, sustainable and safe. Good design can help reduce and mitigate the impacts of climate change, promote healthier lifestyles and create safer and more accessible places for people to live in or use. New Policy DM31 has been added. It has been shown in the order it will appear, and will be renumbered in the final plan.

Making Places

POLICY DM23 - HIGH QUALITY AND INCLUSIVE DESIGN

A) Responding to Context

Planning permission will be granted for development that respects the character and appearance of the area in which it is located. Development must be well-designed to ensure it is compatible with its surroundings having regard to scale, siting, form, architecture, materials, boundary treatments, landscape and function.

B) Design of all new buildings and extensions

Planning permission will be granted for new buildings and extensions and alterations to existing buildings that:

- i are of a high quality design; and**
- ii are compatible with the character and appearance of the area, and also where relevant the host building, in terms of their siting, scale, form, massing, materials and detailing; and**
- iii are well-proportioned; and**
- iv have visually coherent elevations; and**
- v have active elevations where the building or extension is visible from public vantage points; and**
- vi create safe, accessible, inclusive and clutter free environments; and**
- vii minimise the use of natural resources in accordance with Policy DM25.**

Reasoned Justification

9.3 Good design is a key aspect of sustainable development and should contribute positively to making places better for people. Good design rests upon analysis of the character of the area to create coherent and interesting places rather than imposing arbitrary density requirements. It should respond to local character and history while not preventing or discouraging appropriate innovation. By encouraging good design, new developments can also help to limit the impact of light pollution from artificial light on local amenity, intrinsically dark landscapes and nature conservation.

9.4 New buildings, and extensions or alterations to buildings, should be proportionate in size and scale in relation to existing development or the host building. All development, including boundary treatments and other building operations must be designed so that they are in keeping with their surroundings. The surroundings may include the immediately adjacent buildings, the street scene or the wider character and appearance of the area.

9.5 The design of a building or extension can have a significant impact on the overall appearance of a development. The detailing, including use of materials, design features and layout of windows and doors are all important considerations to creating well-designed buildings, extensions and places.

9.6 The layout and design of a development are important in creating a safe environment where people are comfortable to live, work, visit and study in.

9.7 Large-volume buildings such as industrial, warehouses, retail superstores and agricultural sheds have seriously damaged the visual quality of large parts of the urban areas and some rural areas, even where the development brings economic benefits. The Council will apply the principles set out in Part B of this policy to avoid anonymous and solely functional development.

9.8 Car parks and service bays should be hidden from street views. Active street frontages should be provided. Monolithic or uniform buildings will not be permitted. Bin storage should not appear conspicuous within a development proposal. Street clutter should be avoided, for example extraneous signage and supporting structures. Street furniture when considered necessary should positively contribute to the context and function of the space where it is located, without compromising accessibility and movement.

9.9 Applicants should have regard to the Council's Making Places SPD, the Essex Design Guide, and, where appropriate, Neighbourhood Development Plans for detailed design guidance.

POLICY DM24 – DESIGN AND PLACE SHAPING PRINCIPLES IN MAJOR DEVELOPMENTS

The Council will require all new major development to be of high quality built form and urban design, which should reflect the following principles:

- **Respect the historic and natural environment of biodiversity and amenity interests through the provision of a range of green spaces**
- **Respond positively to local character and context to preserve and enhance the quality of existing communities**
- **Provide buildings that exhibit architectural quality**
- **Create well-connected places that prioritise the needs of pedestrians, cyclists and public transport services above the use of the private car**
- **Where possible, provide a mix of land uses and densities with well-defined public and private spaces**
- **Encourage site design and individual building design that minimises energy consumption, utilises integrated water management techniques and provides resilience to a changing climate**

9 - Making High Quality Places

- **Create attractive, multifunctional, inclusive, overlooked and well-maintained public realm, and enhance the setting of existing public realm**
- **Embed public art as an integral part of proposals**
- **Provide streets and spaces that are overlooked, active and promote inclusive access**
- **Include parking facilities that are well integrated as part of the overall design**
- **Provide public open space and contribute to multi-functional green infrastructure**
- **Retain existing trees and other landscape features where appropriate and explore opportunities for new tree planting**
- **Provide opportunities to promote healthy living and to improve health and wellbeing.**

The Council will require the use of masterplans by developers and will implement Design Codes where appropriate for strategic scale developments. The Council will consider the use of Planning Briefs and Design Codes on other development sites.

Where relevant, new residential development must be in accordance with the standards as set out in Appendix B, unless it can be fully demonstrated that the specific site circumstances require a different design approach resulting in a departure from standard.

Reasoned Justification

9.10 Major new development must reflect a high quality of urban and architectural design. It must also be functional and viable. Major development is defined as sites over 1 hectare, 10 or more dwellings or more than 1000sqm of floorspace. Developments will be planned carefully with the use of masterplans and design codes where appropriate. This requirement for high quality design will apply to public and private buildings across all scales of development, as well as to infrastructure projects.

9.11 The National Design Guide provides an overarching framework for design, with detailed guidance provided in the accompanying National Model Design Code. These illustrate how well-designed places that are ‘beautiful, enduring and successful’ can be achieved in practice. Significant weight will be given to development which reflects this Government guidance and which promotes high levels of sustainability or which helps to raise the standard of design more generally. The Council also encourage developers to have regard to local design principles set out in the Essex Design Guide, and the Council’s Making Places SPD. The Council will also consider the use of design codes and respond to national requirements where appropriate.

9.12 The Council will encourage developers to incorporate water management techniques in schemes to reduce water stress. This may include site or development wide rainwater recovery systems.

9.13 Enhancements to the public realm, landscaping measures and attention to architectural detail will be important features that the Council will wish to see included in new developments. Strategic scale and more local multi-functional green infrastructure can make a vital contribution to quality of place, biodiversity and health outcomes.

9.14 Trees can deliver economic, social and environmental benefits. In urban areas they are particularly important for improving air quality and providing important habitats for wildlife. Trees can reduce the landscape impact on new development and they will also help mitigate, and adapt to, climate change. This is because trees remove carbon dioxide from the atmosphere and provide shade, shelter and alleviate flooding. This includes existing and newly planted trees within sites, and as part of the wider public realm. Proposals should have regard to the Council's Tree Planting Planning Advice Note (November 2022).

9.15 Chelmsford benefits from a range of publicly-sited works of art and interpretation boards. Both make an important contribution to the character and visual quality of Chelmsford. Art is frequently integrated into buildings, where development schemes present opportunities. The Council is committed to the provision of public art and, where appropriate to the site, interpretation boards within developments and in the public realm.

9.16 The planning system can play an important role in creating healthy communities. This can include promoting new development that provides opportunities for healthy living through the encouragement of active travel and provision of open space, as set out in further detail in Sport England's 'Active Design'. Larger development proposals (50 or more dwellings, or more than 1,000sqm of non-residential development) will be required to demonstrate how new development would make a positive contribution to the health and wellbeing of different groups in the population, particularly those who may be more susceptible to poorer health outcomes, through submission of a Health Impact Assessment. Where applicable, development proposals are also encouraged to seek accreditation through the Council's Livewell Accreditation Scheme.

9.17 The Council encourages developments to take account of all users, and is committed to enhancing safety for girls and women in new development. Where major development proposals are providing or improving parks and public spaces, regard should be had to design advice and resources provided by Make Space for Girls (www.makespaceforgirls.co.uk).

9.18 The Council will require masterplans to be formulated to shape new strategic development allocations. The Council may also produce area based strategies to guide new development in the existing built-up areas.

9.19 All new residential development will be required to comply with the development standards within Appendix B. Applicants should have regard to the Council's Making Places SPD and, where appropriate, Neighbourhood Development Plans, for detailed design guidance.

POLICY DM25 – SUSTAINABLE BUILDINGS

The Council will expect all new buildings to incorporate sustainable design features to reduce carbon dioxide and nitrogen dioxide emissions, and the use of natural resources, as follows:

A) Water efficiency

All new dwellings are required to:

- Achieve a water efficiency standard of 90 litres/person/day
- Provide integrated water management techniques, including use of specific roof pitch, to optimise rainwater harvesting on site to minimise overall water consumption and maximise its reuse.

B) Electric Vehicle charging point infrastructure

The Council will have regard to the standards set out in the Essex Part 1 Parking Guidance when determining planning applications.

New buildings shall provide convenient access to Electric Vehicle (EV) charging point infrastructure as follows:

- Residential development shall provide 1 active charging point for each dwelling with allocated parking
- On-street, shared or visitor spaces for residential development shall require 1 active EV charging point for every 5 spaces
- Non-residential development shall provide active and passive charging points for a proportion of the total number of parking spaces
- Remaining spaces for residential development shall include passive provision of cable routes and power supply to install additional charging points when demand arises
- All charging points shall use specialised charging infrastructure with a charging capacity appropriate to their use
- Public charging points shall be located in highly visible, accessible locations close to building entrances.

C) BREEAM rating

All new non-residential buildings with a floor area in excess of 500sqm shall achieve a minimum BREEAM rating (or its successor) of 'Very Good' and achieve at least three credits under the Wat 01 Water Consumption measure.

Reasoned Justification

9.20 Essex has been identified as a large area of water stress by the Environment Agency. The anticipated increase in population in Chelmsford and Essex as a whole during the Local Plan period means the demand for water will continue to grow. Chelmsford City Council's Water Cycle Study (February 2024) recommends the use of integrated water management techniques to address the challenge of water stress in the Council's administrative area.

9.21 Part G of Building Regulations were changed in 2015 to include an optional requirement for water efficiency i.e. new homes should be designed to use no more than 110 litres of water/person/day. The mandatory standard is 125 litres/person/day. The tighter standard of 90 litres/person/day is in line with the Government's Environment Improvement Plan and Plan for Water and would be controlled by means of a planning condition. Detailed guidance will be set out in the updated Making Places SPD.

9.22 The Council will encourage developers to incorporate water management techniques in schemes to reduce water stress. This may include site or development wide rainwater recovery systems or the use of specific roof pitch within a development to optimise rainwater harvesting.

9.23 A rainwater collection and re-use system can contribute towards a reduction in non-potable (non-drinkable) water consumption, and is required for all new residential development due to wider considerations of water scarcity and to ensure the sustainable use of water. Recovered water can be used for tasks such as flushing toilets, washing laundry and watering gardens and plants. Site layouts will need to make the necessary space available to accommodate rainwater collection/reuse systems. Further guidance will be set out in the updated Making Places SPD.

9.24 The Council supports a transition to electric vehicles and requires access to EV charging point infrastructure to be provided in new development. The standards for electrical vehicle charging points for new development are contained in the Essex Part 1 Parking Guidance (subject to confirmation). It is considered that these standards are appropriate for Chelmsford. The standards set out details for the level of provision, types of charging infrastructure, and design guidelines. This includes a range of charging capacities for different settings, and ranges of provision applicable to different types of non-residential uses.

9.25 An active charging point has a minimum power rating output of 7kw, delivered through specialised charging infrastructure. Passive provision of cable routes and power supply is required in some cases to enable future connection when demand arises.

9.26 BREEAM is an environmental assessment method that assesses the environmental performance of non-residential buildings across ten categories with minimum standards being required in key areas such as energy, water and waste. The method of assessment seeks to minimise the adverse effects of new buildings on the environment, whilst promoting healthy indoor conditions for the occupants. The requirement for at least three BREEAM water credits will promote water efficiency in non-residential buildings. The 500sqm threshold is intended to take account of economy of scale, and to avoid imposing the requirement on modest structures.

9.27 Proposals for strategic sites should have regard to industry best practice in relation to commitments required for sustainable design and construction, which may be demonstrated through design and access statements and/or a Construction Environmental Management Plan where appropriate.

POLICY DM31 – NET ZERO CARBON DEVELOPMENT (IN OPERATION)

A) New build development (residential and non-residential)

All new buildings must be designed and built to be Net Zero Carbon in operation. They must be ultra-low energy buildings, fossil fuel free, and generate renewable energy on-site to at least match predicted annual energy use.

All new buildings (1 dwelling and above for residential; 100m² floorspace and above for non-residential) are required to comply with Requirements 1 to 5 as set out below:

Requirement 1: Space heating demand limits

- i Residential buildings (apart from bungalows) and non-residential buildings must achieve a space heating demand of 15 kWh/m² GIA (gross internal floor area)/year or less
- ii Bungalows must achieve a space heating demand of 20 kWh/m² GIA/year or less.

Requirement 2: Fossil fuel free

- i No new buildings shall be connected to the gas grid; and
- ii Fossil fuels must not be used on-site to provide space heating, domestic hot water or cooking.

Requirement 3: Energy Use Intensity (EUI) limits

- i Residential buildings (Use Class C3 and C4) must achieve an Energy Use Intensity (EUI) of no more than 35 kWh/m² GIA/year
- ii The following non-residential buildings must achieve an Energy Use Intensity (EUI) of no more than the following (where technically feasible) by building type or nearest equivalent:
 - Offices 70 kWh/m² GIA/year
 - Schools - 65 kWh/m² GIA/year
 - Light Industrial 35 kWh/m² GIA/year
- iii For other residential and non-residential buildings, that are not covered by (i) and (ii) above, applicants should report their energy use intensity but are not required to comply with a certain limit.

Requirement 4: On-site renewable energy generation

Renewable energy must be generated on-site for all new developments by whichever of the following results in the greater amount of roof top solar PV energy (electricity) generation:

- i The amount of energy generated in a year should match or exceed the predicted annual energy use of the building, i.e. renewable energy generation (kWh/m²/year) = or > predicted annual energy use (kWh/m²/year)*; or

- ii The amount of energy generated in a year is:
 - at least 80 kWh/m² building footprint per year* for all building types; and
 - at least 120 kWh/m² building footprint per year* for industrial buildings.

*For development proposals where it is demonstrated to the satisfaction of the Local Planning Authority that meeting Requirement 4 is not technically feasible then renewable energy generation on-site should be maximised and the residual amount of renewable energy generation (equivalent to the shortfall in meeting the annual energy use of the building in kWh/year) must be offset by a financial contribution (to cover the administration, purchasing and installation of a solar PV renewable energy (electricity) system elsewhere in the plan area or County, which is able to generate a similar amount of energy) and be paid into the Council's offset fund.

The offset price is set at £1.35 per kWh or the most recent updated version and the contribution shall be calculated at the time of planning application determination.

Requirement 5: As-built performance confirmation and in-use monitoring

- i All developments must submit as-built performance information at completion and prior to occupation; and
- ii In-use energy monitoring is required on a minimum of 10% of dwellings for development proposals of 100 dwellings or more, for the first 5 years of operation.

Alternative routes to meeting policy requirements

Proposals that are built and certified to the Passivhaus Classic or higher Passivhaus standard are deemed to have met Requirements 1 and 3. Requirements 2, 4 and 5 must also be met to achieve policy compliance.

B) Extensions and Conversions

Applications for residential extensions and conversions affecting existing buildings (but excluding Listed Buildings) are encouraged to meet the minimum standards approach fabric specifications set out in Table 7 and maximise renewable energy generation technology where practical and feasible.

Reasoned Justification

9.28 The policy requirements under Part A apply to new build residential (1 dwelling and above) and non-residential development (100m² floorspace and above). For the purposes of the policy 'residential buildings' means dwellinghouses and flats (C3), houses in multiple occupation (C4), and developments of self-contained residential units such as extra-care (C3). This also includes the residential element of any new mixed use buildings. Non-residential buildings include Use Classes C1 (Hotels), C2 (/C2A (Residential Institutions) and those falling within use classes B, E, F and Sui Generis. For any other residential and non-residential buildings the policy should be applied in a proportionate manner where relevant and appropriate through the Development Management process.

9 - Making High Quality Places

9.29 To meet the Requirements 1- 5, developments will need to be designed in a way that prioritises a fabric first approach to building design and embeds the energy hierarchy. This means improving building fabric standards and energy efficiency to ensure energy demand is minimised, and then installing renewable energy generation capacity to meet or exceed demand where possible, followed by offsetting residual energy (if required) as a last resort.

9.30 Designing new development to be net zero carbon in operation needs to be addressed at both building level and site level and at the earliest possible stage so that factors such as the orientation, built form, building fabric, site layout and landscaping measures can be taken into account to minimise energy demand. These factors also influence the renewable energy generation potential of a site and through good design, can help make a development more resilient to a changing climate, for example, through using landscaping measures and green/blue infrastructure to mitigate potential overheating risk to the comfort and well-being of occupants. It is important that designing for 'net zero' is done in a holistic manner at an early stage of the design process, and in a way that considers wider sustainability objectives and issues. *Report 2: Essex Net Zero Policy – Summary of Policy, Evidence and Validation Requirements (July 2023)* contains a 1 page high level design guide for a terrace block and low rise apartment block. Also the Essex Design Guide ([EDG](#)) contains practical advice on [good solar design](#) which focuses on balancing the needs of daylighting, useful solar gain and mitigating overheating risk. To support delivery, the [Essex Net Zero Specifications Guide](#) provides technical information and outline 'packaged solutions' which meet the policy requirements.

Requirement 1 – Space heating demand

9.31 The space heating demand is the amount of heat energy needed to heat a home or building over a year and is expressed in kWh/m²/year. It is a measure of the thermal efficiency of the building elements. Various design and specification decisions affect space heating demand including building form and orientation, insulation, air-tightness, windows and doors and the type of ventilation system.

9.32 Reducing space heating demand to the target levels identified is necessary to achieve a net zero carbon (in operation) building and aligns with recommendations from the Climate Change Committee, Royal Institute of British Architects (RIBA), Low Energy Transformation Initiative (LETI) and the UK Green Building Council (UKGBC). It is also beneficial to residents and building users as it directly reduces energy costs.

9.33 Space heating demand in all buildings of major development proposals should be demonstrated using predictive energy modelling, for example Passivhaus Planning Package (PHPP) or the Chartered Institute of Building Services Engineers (CIBSE) TM54. The space heating demand figure is an output of the modelling software once all data has been input.

9.34 The space heating target applies to all residential and non-residential buildings designed to be used by people (i.e. not agricultural buildings).

Requirement 2 – Fossil fuel free

9.35 New buildings must not burn fossil fuels for heating, hot water and cooking if Essex, and the UK, is to stay within carbon budgets. Alternatives are available. For example, heat pumps can provide both space heating (and cooling) and hot water and can serve individual homes or communal heating systems. They use renewable heat sources such as air, ground

or water. The key benefit of heat pumps is their efficiency. Efficiencies vary but are typically around 250-400% for an Air Source Heat Pump. Direct electric heating systems are less efficient, typically 100%, and are therefore more expensive to run. Solar thermal panels, which turn solar energy into heat can help with space and water heating too.

9.36 Heating provided through wood burners and biomass boilers has a negative impact on air quality and are therefore discouraged.

Requirement 3 – Energy Use Intensity

9.37 Energy Use Intensity (EUI), or metered energy use, is the total energy needed to run a home or building over a year (per square metre). It is a measure of the total energy consumption of the building (kWh/m²/year). Reducing total energy use of buildings to the target level identified is necessary to align with climate targets. It is also beneficial to residents and building users as it would directly reduce energy costs.

9.38 Energy Use Intensity in all buildings of major development proposals should be demonstrated using predictive energy modelling.

9.39 The EUI of a building covers all energy uses (regulated and unregulated): space heating, domestic hot water, ventilation, lighting, cooking and plug-in loads e.g. appliances, computers etc. However, electricity used for electric vehicle charging is excluded from the calculation. Whether the energy is sourced from the electricity grid or from onsite renewables does not affect the calculation.

9.40 The EUI target set in the policy for dwellings is based on modelling undertaken in the technical evidence base (*Report 1: Essex Net Zero Policy – Technical Evidence Base, July 2023*) and includes both regulated and unregulated energy uses. For clarity, the EUI target set out in 3i) applies to residential uses which include: dwellinghouses, flats, self-contained residential units (C3) and houses of multiple occupation (C4).

9.41 For non-residential buildings, the EUI's for the uses listed (office, school and light industrial) are based on gross internal floor areas (GIA) and include regulated and unregulated energy loads. Buildings which represent these generic typologies have been modelled in the evidence (*Report 1: Essex Net Zero Policy – Technical Evidence Base, July 2023*) and appropriate EUIs limits identified.

9.42 For other residential and non-residential typologies (that are not covered under 3i or 3ii), applicants are expected to comply with all other policy requirements, except Requirement 3: Energy Use Intensity limits. Instead, applicants are expected to only report their energy use intensity. However, applicants are recommended to seek to meet the limits being developed by the [UK Net Zero Carbon Building Standard initiative](#).

District Heat Networks

9.43 Developments connected to a district heat network are expected to meet the proposed EUI limits. The limits set for EUI for each building should be the same irrespective of the heating system that is proposed, to allow a fair comparison between different heating options. The EUI calculations for a scheme connected to a district heat network would have to include the energy consumption of the district heating heat generation plant. This means that the EUI includes the heat losses of the district heating system.

9 - Making High Quality Places

Requirement 4 – On-site renewable energy generation

9.44 New development presents opportunities for integrating renewable energy technology into a proposal, including renewable electricity generation. The evidence recommends that in Essex currently the most suitable and cost effective technology is rooftop solar photovoltaic (PV) panels.

9.45 Evidence (*Report 1: Essex Net Zero Policy – Technical Evidence Base (July 2023)*) shows that it is technically feasible for a building to generate sufficient renewable energy to match or exceed its predicted annual total energy use and thereby achieve an operational energy balance on-site. For clarity, the predicted annual total energy consumption of a building includes both regulated and unregulated energy uses, but excludes energy used for electric vehicle charging.

9.46 The policy sets out two routes for calculating the renewable energy provision required from a development to be policy compliant. Route i) requires renewable energy generation to match the predicted annual energy use of a building. Route ii) sets a minimum amount of renewable energy generation to be achieved in a year based on the building footprint (thereby ensuring that opportunities are taken for rooftop solar PV on large buildings e.g. warehouses). Whichever calculation results in the greater amount of solar PV renewable electricity generation is the route that must be achieved.

9.47 The *Report 1: Essex Net Zero Policy – Technical Evidence Base July 2023* sets out some worked examples, and guidance on roof design and orientation is provided in Appendix 2 of that report, which will help applicants maximise renewable energy generation. The renewable energy generation output should be calculated following the Microgeneration Certification Scheme (MCS) guidance⁴ method including the impact of shading.

9.48 Matching or exceeding predicted total annual energy use on site with renewable energy generation achieves an on-site energy balance and hence a net zero carbon development in operation from the outset. As well as helping progress towards climate targets, there are other benefits for ensuring new build development maximises renewable energy generation. For example, it would generate ‘free’ electricity close to its point of use and help deliver significant energy cost savings for residents and building users. It would also aid the transition to a more sustainable energy system by contributing to the significant increase in renewable energy generation required between now and 2050 in the UK and make efficient use of land and resources.

Renewable Energy Offsetting Mechanism

9.49 There may be circumstances where it is not technically possible to match on-site renewable energy generation with annual average energy demand. An offsetting mechanism is therefore provided to enable these developments achieve policy compliance.

9.50 For the offset mechanism to be triggered, the applicant must justify and demonstrate, to the satisfaction of the Local Planning Authority (LPA), why it is not technically possible for the development to achieve policy compliance with Requirement 4. To do this, applicants should refer to, and meet, the minimum information requirements for policy compliance set out in *Report 2: Essex Net Zero Policy – Policy Summary, Evidence and Validation*

⁴ <https://mcs-certified.com/standards-tools-library/>

Requirements (July 2023). The information will be critically reviewed by the LPA, particularly as evidence shows that it is technically possible to achieve all the policy requirements and at a reasonable cost in most development typologies. It is generally only high rise blocks of flats that would likely need to use the offsetting mechanism.

9.51 If the offsetting mechanism is justifiably triggered by non-compliance with Requirement 4, then the development proposal must still meet the other Policy requirements 1, 2, 3 and 5, and maximise on-site renewable energy generation.

9.52 The offset mechanism is expressed as a renewable energy offset and the price is set in £/kWh, which will be reviewed at least every 3 years and updated for Essex. The price (as of July 2023) is set at £1.35 per kWh (published in the *Report 1: Essex Net Zero Policy – Technical Evidence Base, July 2023*) and has been calculated using a robust methodology based on the cost of providing roof top solar PV in Essex and incorporating an allowance for maintenance and administration. The calculation of the contribution required will be made at the point a planning application is determined using the most up to date offset price (£/kWh) for Essex.

9.53 The offset contribution will be used to fund additional renewable energy capacity elsewhere in the plan area or County. The aim is to make up for the shortfall in renewable energy that cannot be generated on-site. The offset mechanism is purposely limited in role and scope and is only intended for use as a last resort.

9.54 The offsetting mechanism meets the legal tests for Section 106 in that it is: (i) necessary to make the development acceptable in planning terms; (ii) directly related to the development; (iii) fairly and reasonably related in scale and kind to the development.

9.55 Further information on how the offsetting mechanism will operate will be available in the Renewable Energy Offsetting Framework document that is in preparation and will be published on the Essex Design Guide ([EDG](#)). Current proposals are for a countywide funding mechanism to be administered by ECC. The Offset tariff will be collected as a single payment (via a direct payment / Section 106 / Unilateral Undertaking). It is initially envisaged that the payments will be used to provide roof top solar PV on public amenity facilities (to be determined). Spending of the offset fund is preferred to be within reasonable distance of the original development, and within the plan area as the development. However, pooling may be necessary to enable installation of sufficient scale schemes.

Other roof top uses

9.56 There may be certain circumstances where it is considered more appropriate for uses other than solar PV on rooftops to be delivered. Consideration should be given to the co-benefits of this on a case by case basis in accordance with wider sustainability objectives, but it is envisaged to likely be only in exceptional circumstances.

Requirement 5 – As-built performance confirmation and in-use monitoring

9.57 In order for the Net Zero Carbon buildings policy to be effective, it is important that new buildings deliver their intended performance.

9.58 Using predictive energy modelling, such as Passivhaus Planning Package or the Chartered Institution of Building Services Engineers (CIBSE) TM54, (which is a requirement for major applications), will help improve accuracy of energy performance assessments and

9 - Making High Quality Places

reduce the potential gap between the design and actual in-use energy. Also, excellent detailed design needs to be matched by high quality construction and commissioning in order for the ‘energy performance gap’ to be minimised.

9.59 The information that must be submitted at completion stage of a development (prior to occupation) to demonstrate to the satisfaction of the LPA that the building / development has been built to the approved design and energy standards, is set out in *Report 2: Essex Net Zero Policy – Policy Summary, Evidence and Validation Requirements (July 2023)* and includes the indicators listed in the table below:

Table 6 : As-built stage performance indicators (required to be submitted at completion, prior to occupation)

1	<p>Update parameters</p> <ul style="list-style-type: none"> • Use or typology • GIA (m²) • Energy supply (fossil fuel free)
2	<p>Update performance modelling</p> <ul style="list-style-type: none"> • Space heat demand using predictive energy model (kWh/m²/year) • Energy Use Intensity using predictive energy model (kWh/m²/year) • As built stage EPCs (U-values and airtightness check) • Draft DEC for non residential (regardless of user)
3	<p>Confirm renewable energy installation</p> <ul style="list-style-type: none"> • Installed solar PV (kW) • Any other installed renewable (i.e. solar thermal)
4	<p>Update offset contribution</p> <ul style="list-style-type: none"> • Assess energy balance based on data supplied and confirm whether any offset payment is required, and how much
5	<p>Confirm process for collecting ‘in-use’ data</p> <ul style="list-style-type: none"> • Confirm if in-use monitoring and reporting will be carried out • If yes, state what monitoring strategy is in place and confirm how data collected will be published

9.60 Note that for performance modelling (indicator 2), Minor applications following the “minimum standards approach” (without an energy model), do not have to report their space heat demand, energy use intensity and offset contribution at as-built stage. Applications instead need to re-confirm the specifications to which the development has been built to. Further guidance is provided below under ‘Reporting and Modelling’.

9.61 In-use energy monitoring (also known as post occupancy evaluation) is recommended to be carried out on new developments so that a building can be evaluated to ascertain whether the energy targets aimed for in the design have been met in practice.

9.62 For residential development proposals of 100 dwellings or more, the Council requires in-use energy monitoring to be undertaken on a representative sample of at least 10% of homes for a period of 5 years. The information must be evaluated to understand how buildings

are performing, minimise the performance gap, and to aid the learning, innovation and skills development in the design and construction industry. Qualitative feedback from building users via occupant satisfaction questionnaires should also be undertaken to assess performance post occupation. This information can be used to enhance the training and advice given to residents / occupiers of new homes and buildings.

Reporting and Modelling

9.63 Policy compliance will need to be demonstrated through the submission of an appropriate energy assessment, which for major development proposals should be in the form of an Energy Strategy and for minor development proposals the applicable 'net zero spreadsheet' (which will be available to download from EDG). Minimum information requirements and checklists for Major and Minor development proposals at each stage of the planning process are set out in *Report 2: Essex Net Zero Policy – Policy Summary, Evidence and Validation Requirements (July 2023)*, along with the template spreadsheet.

For the purpose of this policy:

Major Development proposals are:

- Housing development of 10 or more homes, or the site has an area of 0.5 hectares or more.
- Non-residential development with an additional floorspace of 1,000m² or more, or a site of 1 hectare or more.

Minor Development is less than 10 dwellings or less than 1,000m² of additional floorspace.

9.64 With regards major development proposals, predictive energy modelling, such as Passivhaus Planning Package (PHPP) or CIBSE TM54, should be used. This will provide the necessary assurance to the LPA of the accuracy of the energy assessment information and will help reduce any potential energy performance gap issues, which is where in-use energy does not match the design standard.

9.65 To support the transition of small / medium developers who may have not yet invested in predictive energy modelling software, the Essex Energy Tool has been developed as an interim measure. This tool can accommodate the outputs of the Building Regulations compliance software (known as SAP – Standard Assessment Procedure) and turn them into an appropriate format to indicate whether compliance with the policy requirements has been achieved. It will be available to download from the Essex Design Guide ([EDG](#)).

9.66 With regards minor development proposals, applicants may use predictive energy modelling, or the Essex Energy Tool as outlined above, or follow a 'minimum standards approach' which sets out the specifications that the development must be designed and built to. These fabric and systems specifications are presented in Appendix C of *Report 2: Essex Net Zero Policy – Summary of Policy, evidence and validation requirements (July 2023)*. By following this approach (i.e. without an energy model), minor applications do not have to report the space heating demand, energy use intensity and offset contribution, but they do need to re-confirm on completion the specifications that the development has been built to and the solar PV system installed.

9 - Making High Quality Places

Alternative routes to policy compliance

Passivhaus

9.67 Passivhaus⁵ is an international energy standard for buildings. It sets stringent standards on energy consumption for heating and overall energy demand and design requirements to control the quality of the internal environment.

9.68 In recognition of the high sustainability standards required to achieve a Certified Passivhaus Classic standard (or higher) scheme and the rigorous quality assurance process that must be followed to achieve certification, Passivhaus is considered an acceptable alternative route to compliance with policy requirements 1 and 3.

9.69 Proposals seeking to follow this route will be required to provide evidence from an accredited Passivhaus Certifier that the proposed design would be capable of and is expected to achieve the full certified Passivhaus Classic standard (or higher). The proposals would still be required to meet policy requirements 2, 4 and 5.

BREEAM

9.70 The use of BREEAM⁶ is encouraged in terms of addressing broader sustainability objectives and providing a level of independent quality assurance for development. However, the use of BREEAM as an alternative approach to policy compliance will not be accepted.

Extensions and Conversions affecting Existing Buildings (except Listed Buildings)

9.71 Development proposals involving existing buildings offer an opportunity for measures to be taken to reduce energy use and carbon emissions, and also to generate renewable energy.

9.72 Encouraging proposals for extensions and conversions to be built to the minimum fabric standards (residential) set out in Table 7 (below), will improve the energy efficiency of the existing building and contribute to meeting climate targets. Incorporating and maximising renewable energy generation technology will enhance this further. However, there may be some circumstances where this is not practical and/or feasible, such as a small extension or where the building is overshadowed.

Source: Report 2: Essex Net Zero Policy – Policy Summary, Evidence and Validation Requirements (July 2023)

Heritage Assets

9.73 Retaining, reusing, refurbishing and retrofitting historic buildings can contribute to meeting climate targets. There are sensitive issues that need to be addressed when it comes to improving the energy efficiency and climate resilience of heritage assets, including potential impact on their setting. Any schemes should have regard to the specific advice and guidance provided in the Essex Design Guide - [Climate Change and the Historic Environment | Essex Design Guide](#) .

Monitoring and Implementation

9.74 To support the implementation of this policy in Greater Essex, ECC will publish via the Essex Design Guide ([EDG](#)) a 'Net Zero (in operation) Implementation and Monitoring Guide' which will include simple proformas and templates for applicants to use when submitting their energy information. The guide will help ensure that meeting the requirements of the policy is demonstrated efficiently, effectively and consistently. The Climate and Planning Unit at ECC is available as a consultee to provide support with implementing the policy. Arrangements for monitoring compliance of permissions granted will also be published, to give confidence that new homes and other buildings are built to the standards granted consent.

9.75 As a minimum, the following indicators will be monitored on new development proposals:

- Space Heating Demand – has the limit been met? (Policy Requirement 1)
- Fossil fuel – is the development fossil fuel free? (Policy Requirement 2)
- Energy Use Intensity – has the limit been met? (Policy Requirement 3)
- Renewable energy generation – is it maximised? And does it at least match predicted annual energy demand? (Policy Requirement 4)

9 - Making High Quality Places

- Renewable energy offsetting mechanism – is this being used to achieve policy compliance? And has this been justifiably triggered?
- In-use energy monitoring – is this being carried out? What percentage of homes and for how long?

9.76 The use of assured performance standards (e.g. Passivhaus) that are accredited and certified independently will also be monitored.

Mitigating Overheating Risk

9.77 When designing new buildings, national planning policy also requires the potential for overheating risk from a changing climate, and the impact this has on the comfort, health and wellbeing of occupiers to be considered.

9.78 Overheating risk in new residential buildings has partly been addressed by amendment to the Building Regulations in June 2022 (Part O: Overheating Mitigation). Since the compliance tools for Building Regulations are not intended to accurately evaluate overheating, major development proposals are encouraged to use the CIBSE (Chartered Institute of Building Service Engineers) standards TM52 for non-residential development and TM59 for residential development.

9.79 Measures to mitigate overheating risk from both current and future climate should be incorporated into the design of the development to help ensure the future comfort, well-being and health of occupiers. Further advice and guidance on [good solar design](#) is provided on the Essex Design Guide⁷.

POLICY DM26 - DESIGN SPECIFICATION FOR DWELLINGS

A) All new dwellings (including flats) and extensions shall comply with all of the following:

- i **Achieve suitable privacy and living environment for residential occupiers; and**
- ii **Achieve sufficient private amenity space; and**
- iii **Achieve appropriate internal space through adherence to the Nationally Described Space Standards; and**
- iv **Provide appropriate and well-designed recycling and waste storage.**

The above must be in accordance with the standards as set out in Appendix B, unless it can be demonstrated that the particular site circumstances allow for a lower provision.

B) All new dwellings (including flats) shall comply with A) i and ii in addition to:

- i **Achieving appropriate internal space through adherence to the Nationally Described Space Standards; and**
- ii **Providing appropriate and well-designed recycling and waste storage.**

⁷ [Solar orientation | Essex Design Guide](#)

C) All large houses in multiple occupation (accommodating 7 or more people) shall:

- i Achieve sufficient communal garden space; and**
- ii Provide cycle storage for one cycle per bedroom, within the plot of the building in which the property is located; and**
- iii Provide appropriate and well-designed recycling and waste storage within the plot of the building in which the property is located, or a communal store where the development relates to more than one property; and**
- iv Provide off-street parking at a ratio of one space per bedroom unless the site is located within the City Centre in a sustainable location.**

The above must be in accordance with the relevant development standards within the Local Plan.

Reasoned Justification

9.80 This policy is intended to provide developers with a checklist of requirements for new dwellings. All new dwellings (including flats) will be required to comply with the development standards within Appendix B. Consideration should be given to the detailed guidance contained within the Council's Making Places SPD.

9.81 Where buildings perform a clear beneficial role in the layout (by turning corners, acting as a vista stop or where infill restores urban form), the application of the development standards may be applied more flexibly only where the Council is satisfied that it would not be detrimental to the overall quality of the development. Garden areas would normally be expected to be at the rear of properties, enclosed and private. The Council will not accept exposed areas of land to be part of the calculation for garden sizes.

9.82 In considering applications for change of use to a house in multiple occupation, the Council will consider the number of likely occupants of a property by taking into account both the number and size of bedrooms proposed.

POLICY DM27 - PARKING STANDARDS

The Council will have regard to the vehicle parking standards set out in the Essex Parking Guidance Standards - Design and Good Practice (2009), or as subsequently amended, when determining planning applications.

Proposals which provide below these standards should be supported by evidence detailing the local circumstances that justify deviation from the standard.

Reasoned Justification

9.83 The Essex Parking Standards sets out vehicle parking standards for Essex. It is considered that these parking standards are appropriate within Chelmsford, providing minimum parking for residential development to address issues of on-street parking and maximum standards for parking in non-residential developments in order to encourage more active and sustainable transport modes.

9 - Making High Quality Places

9.84 For sites located in the City Centre, close to public transport, services and facilities, a reduction and/or no parking provision may be acceptable. This will be determined on a site-by-site basis.

9.85 Separate bespoke parking standards have been developed for provision at Beaulieu and Channels, and for Chelmsford Garden Community, due to their integral role in prioritising sustainable travel modes. These standards will be published as part of the Local Plan Evidence Base. The Essex Parking Guidance also includes additional considerations for Garden Communities and large scale development.

POLICY DM28 – TALL BUILDINGS

The Council will permit proposals for buildings above 5 storeys or above 16m high in the City Centre, provided:

- i the location is suitable for higher-intensity development in terms of its immediate and wider context; and**
- ii the building reinforces surrounding scale and urban form, provides containment of space and has active frontages; and**
- iii the building's visibility from adjoining spaces contributes to townscape; and**
- iv the building exhibits individual architectural quality; and**
- v the building's visibility from longer-range views contributes towards the skyline and provides a positive addition to views into and around the city; and**
- vi the building does not detract from the context of existing historic City Centre assets or wider historic environment; and**
- vii the building does not create an adverse microclimate or environmental impact such as sunlight, daylight, overshadowing and wind; and**
- viii the building complements and enhances the public realm and surrounding urban context at ground level; and**
- ix secure and accessible space is provided within the building for sufficient bin and cycle storage, services and plant equipment, without compromising the external quality of elevations or roofscape.**

Reasoned Justification

9.86 For the purposes of this policy, tall buildings means above 5 storeys or 16 metres high. This is because throughout Chelmsford the building scale is predominantly two, three and four storeys, typically forming street frontages. Six storeys represent a shift in scale, necessitating consideration of the impacts of greater height.

9.87 When considering any new buildings, the surrounding context is key to achieving coherent, compatible and interesting character; it determines acceptable siting, scale, form and appearance. Taller buildings will not always be acceptable in the City Centre unless their context is compatible with the desired scale. Appropriate design rests upon thorough analysis of surrounding buildings and spaces, the identification of characteristic forms, materials and details, and exploiting opportunities to improve quality of place. The quality of materials and attention to detail is of great importance.

9.88 Tall buildings may be appropriate where their setting is sufficient to accommodate their height, where they contribute to a cohesive skyline and where they will form part of the positive reshaping and enhancement of the City Centre from all vantage points. Taller buildings should always be designed with the assumption of a 360° viewpath, so all sides of the building must exhibit a high quality of architecture. In order not to diminish cultural, civic or public buildings or spaces, tall buildings may not be appropriate where they would have a significant or adverse impact upon designated and non-designated heritage assets. Suitable locations for tall buildings may be areas that are the most well-connected by public transport whilst providing opportunities to make the most efficient use of land; and around large public spaces where tall structures are able to make a positive contribution to the existing character and context of an area subject to all of the above justifications. Tall buildings will not be acceptable on constrained sites where an appropriate setting cannot be achieved.

9.89 Designated and non-designated heritage assets should not be harmed by the siting, use or physical attributes of tall buildings, either individually or in combination with other buildings. The presence of existing tall buildings will not necessarily be accepted as justification for proposals for new or replacement tall buildings. Regard should be had to the detailed guidance contained within the Council's Making Places SPD which sets out a suitable height range across City Centre locations; and Historic England's Advice Note 4: Tall Buildings.

Protecting Living and Working Environments

9.90 An essential part of high-quality design should be the safeguarding of the living and working environments of existing and future residents.

POLICY DM29 - PROTECTING LIVING AND WORKING ENVIRONMENTS

Planning permission will be granted for development proposals provided the development:

- i safeguards the living environment of the occupiers of any adjacent and nearby residential property by ensuring that the development is not overbearing and does not result in unacceptable overlooking or overshadowing; and**
- ii does not result in excessive noise, activity or vehicle movements; and**
- iii is compatible with neighbouring or existing uses in the vicinity of the development by ensuring that the development avoids unacceptable levels of polluting emissions by reason of noise, light, smell, fumes, vibrations or other issues, unless it can be demonstrated that appropriate mitigation measures can be put in place and permanently maintained.**

9 - Making High Quality Places

Reasoned Justification

9.91 High-quality development by definition should not result in adverse impact on the amenities of occupiers of adjacent or nearby residential properties. This includes the protection of existing living environments by ensuring there is not excessive noise or unacceptable overlooking created by new development. The physical built form of the development must not have an oppressive or overbearing effect or result in a harmful loss of light. This applies equally to loss of light or overshadowing of existing renewable energy equipment.

9.92 The planning system has an important role to play in protecting the environment, biodiversity, local residents, businesses and the public in general from all forms of development that could give rise to pollution. Pollution can be in many forms and includes all solid, liquid and gaseous emissions to air, land and water (including groundwater) from all types of development. Pollution includes noise, light, vibration, smell, smoke and fumes, soot, ash, dust or grit which has a damaging effect on the environment and the public's enjoyment, health or amenity.

9.93 When considering amenities of a development proposal, the impact on the continued operation of existing nearby uses should also be evaluated when looking at the acceptability of the proposal.

POLICY DM30 – CONTAMINATION AND POLLUTION

A) Hazardous Substance Sites or Land

For developments on, or near to, hazardous substance sites or land which is contaminated or has a history of a potentially contaminating use, permission will only be granted where the Council is satisfied that:

- **there will be no threat to the health or safety of future users or occupiers of the site or neighbouring land; and**
- **there will be no adverse impact on the quality of local groundwater or surface water.**

B) Air Quality Management Area

For developments in or adjacent to an Air Quality Management Area, or where an air quality impact assessment has been provided, permission will only be granted where the Council is satisfied that after selection of appropriate mitigation the development will not have an unacceptable impact on air quality and the health and wellbeing of people.

Reasoned Justification

9.94 The Council recognises that all development has some environmental impact; however, development should minimise any negative impact. The Council will expect promoters of development to fully assess the impact of development through appropriate assessments to include the impact upon the environment, air quality, and public health and safety.

9.95 When considering development proposals the Council will consider the risk of pollution arising from contamination and the impact on human health, property and the wider environment. Contamination is not, however, restricted to previously developed land but it can also occur on greenfield sites and it can arise from natural sources as well as from human activities. Developers should undertake a preliminary risk assessment to identify any contamination on site. Where sites are known to be contaminated, or where contamination is subsequently discovered, any development proposals on the land will only be permitted where it can be demonstrated that the contamination can be mitigated.

9.96 The Council has no Air Quality Management Areas (AQMA) following the de-designation of AQMAs around the Army & Navy roundabout and a small section of the A414 in Danbury in 2024. Therefore, this policy would apply to any AQMA designated during the life of the Local Plan. The Council will consider each development application within or outside a designated AQMA on a site-by-site basis taking into account its effect on the AQMA and its objectives, and/or whether the development would cause unacceptable harm to the air quality of the area.

9.97 It would be inappropriate to locate new development on or near to establishments where hazardous substances are present where this would harm public safety. It would also be inappropriate to grant planning permission for development proposals to expand existing sites handling or processing hazardous substances where this would also harm public safety. Developments should accord with latest technical guidance, or as updated and amended, including 'The Land Contamination Technical Guidance' and the Environment Agency's 'Land Contamination Risk Management' (LCRM) guidance.

10 - Monitoring and Implementation

Creating and sustaining

Monitoring Framework

10.1 This Section deals with how the Council will monitor the Local Plan's success in meeting the challenges and opportunities set out in the Strategic Priorities (Section 3) to ensure that it is effective in delivering the objectives of the Local Plan.

10.2 This will be done through the monitoring of the indicators set out in the tables below on an annual basis which will be published through the Authority's Monitoring Report (AMR). The AMR will be used to report the performance of the Local Plan as well as recommending any actions required to ensure the delivery of the Local Plan.

10.3 In respect to Key Indicator 'Appeal Decisions', the Council will monitor appeal decisions from the Planning Inspectorate and use these to monitor the effectiveness of Local Plan policies in accordance with the relevant triggers for action.

Table 8 : Monitoring Framework

		<p>of less than 15 kWh/m²/yr</p> <p>Number of bungalows achieving a space heating demand of less than 20 kWh/m²/yr</p> <p>Number of new buildings connected to the gas grid</p> <p>Number of new buildings using fossil fuels on-site to provide space heating, domestic hot water or cooking</p> <p>Number of new buildings using space heating and domestic hot water using low carbon fuels to provide space heating and domestic hot water</p> <p>All new buildings must use low carbon fuels to provide space heating and domestic hot water</p> <p>All new build dwellings achieving an Energy Use Intensity (EUI) of no more than 35 kWh/m² GIA/yr</p> <p>All new build offices achieving an Energy Use Intensity (EUI) of no more than 65 kWh/m² GIA/yr</p> <p>All new build schools achieving an Energy Use Intensity (EUI) of no more than 70 kWh/m² GIA/yr</p> <p>All new build light industrial buildings achieving an Energy Use Intensity (EUI) of no more than 35 kWh/m² GIA/yr</p> <p>20% of all new builds are not achieving at least 80 kWh/m² building footprint generated on-site through renewable energy</p>	<p>heating demand of less than 20 kWh/m²/yr</p> <p>No new buildings shall be connected to the gas grid</p> <p>No new buildings using fossil fuels on-site to provide space heating, domestic hot water or cooking</p> <p>All new buildings must use low carbon fuels to provide space heating and domestic hot water</p> <p>All new build dwellings achieving an Energy Use Intensity (EUI) of no more than 35 kWh/m² GIA/yr</p> <p>All new build offices achieving an Energy Use Intensity (EUI) of no more than 65 kWh/m² GIA/yr</p> <p>All new build schools achieving an Energy Use Intensity (EUI) of no more than 70 kWh/m² GIA/yr</p> <p>All new build light industrial buildings achieving an Energy Use Intensity (EUI) of no more than 35 kWh/m² GIA/yr</p> <p>20% of all new builds are not achieving at least 80 kWh/m² building footprint generated on-site through renewable energy</p>	<p>(3) 20% of new buildings are connect to the gas grid</p> <p>(4) 20% of new buildings are using fossil fuels on-site to provide space heating, domestic hot water or cooking</p> <p>(5) 20% of new buildings are not using low carbon fuels to provide space heating and domestic hot water</p> <p>(6) 20% of new build dwellings achieve an Energy Use Intensity (EUI) of more than 35 kWh/m² GIA/yr</p> <p>(7) 20% of all new build offices achieve an Energy Use Intensity (EUI) of no more than 70 kWh/m² GIA/yr</p> <p>(8) Any all new build schools achieve an Energy Use Intensity (EUI) of no more than 65 kWh/m² GIA/yr</p> <p>(9) 20% of any new build light industrial buildings achieve an Energy Use Intensity (EUI) of no more than 35 kWh/m² GIA/yr</p> <p>(10) 20% of all new builds are not achieving at least 80 kWh/m² building footprint generated on-site through renewable energy</p>	<p>review of the Local Plan set out in Policy S13</p>

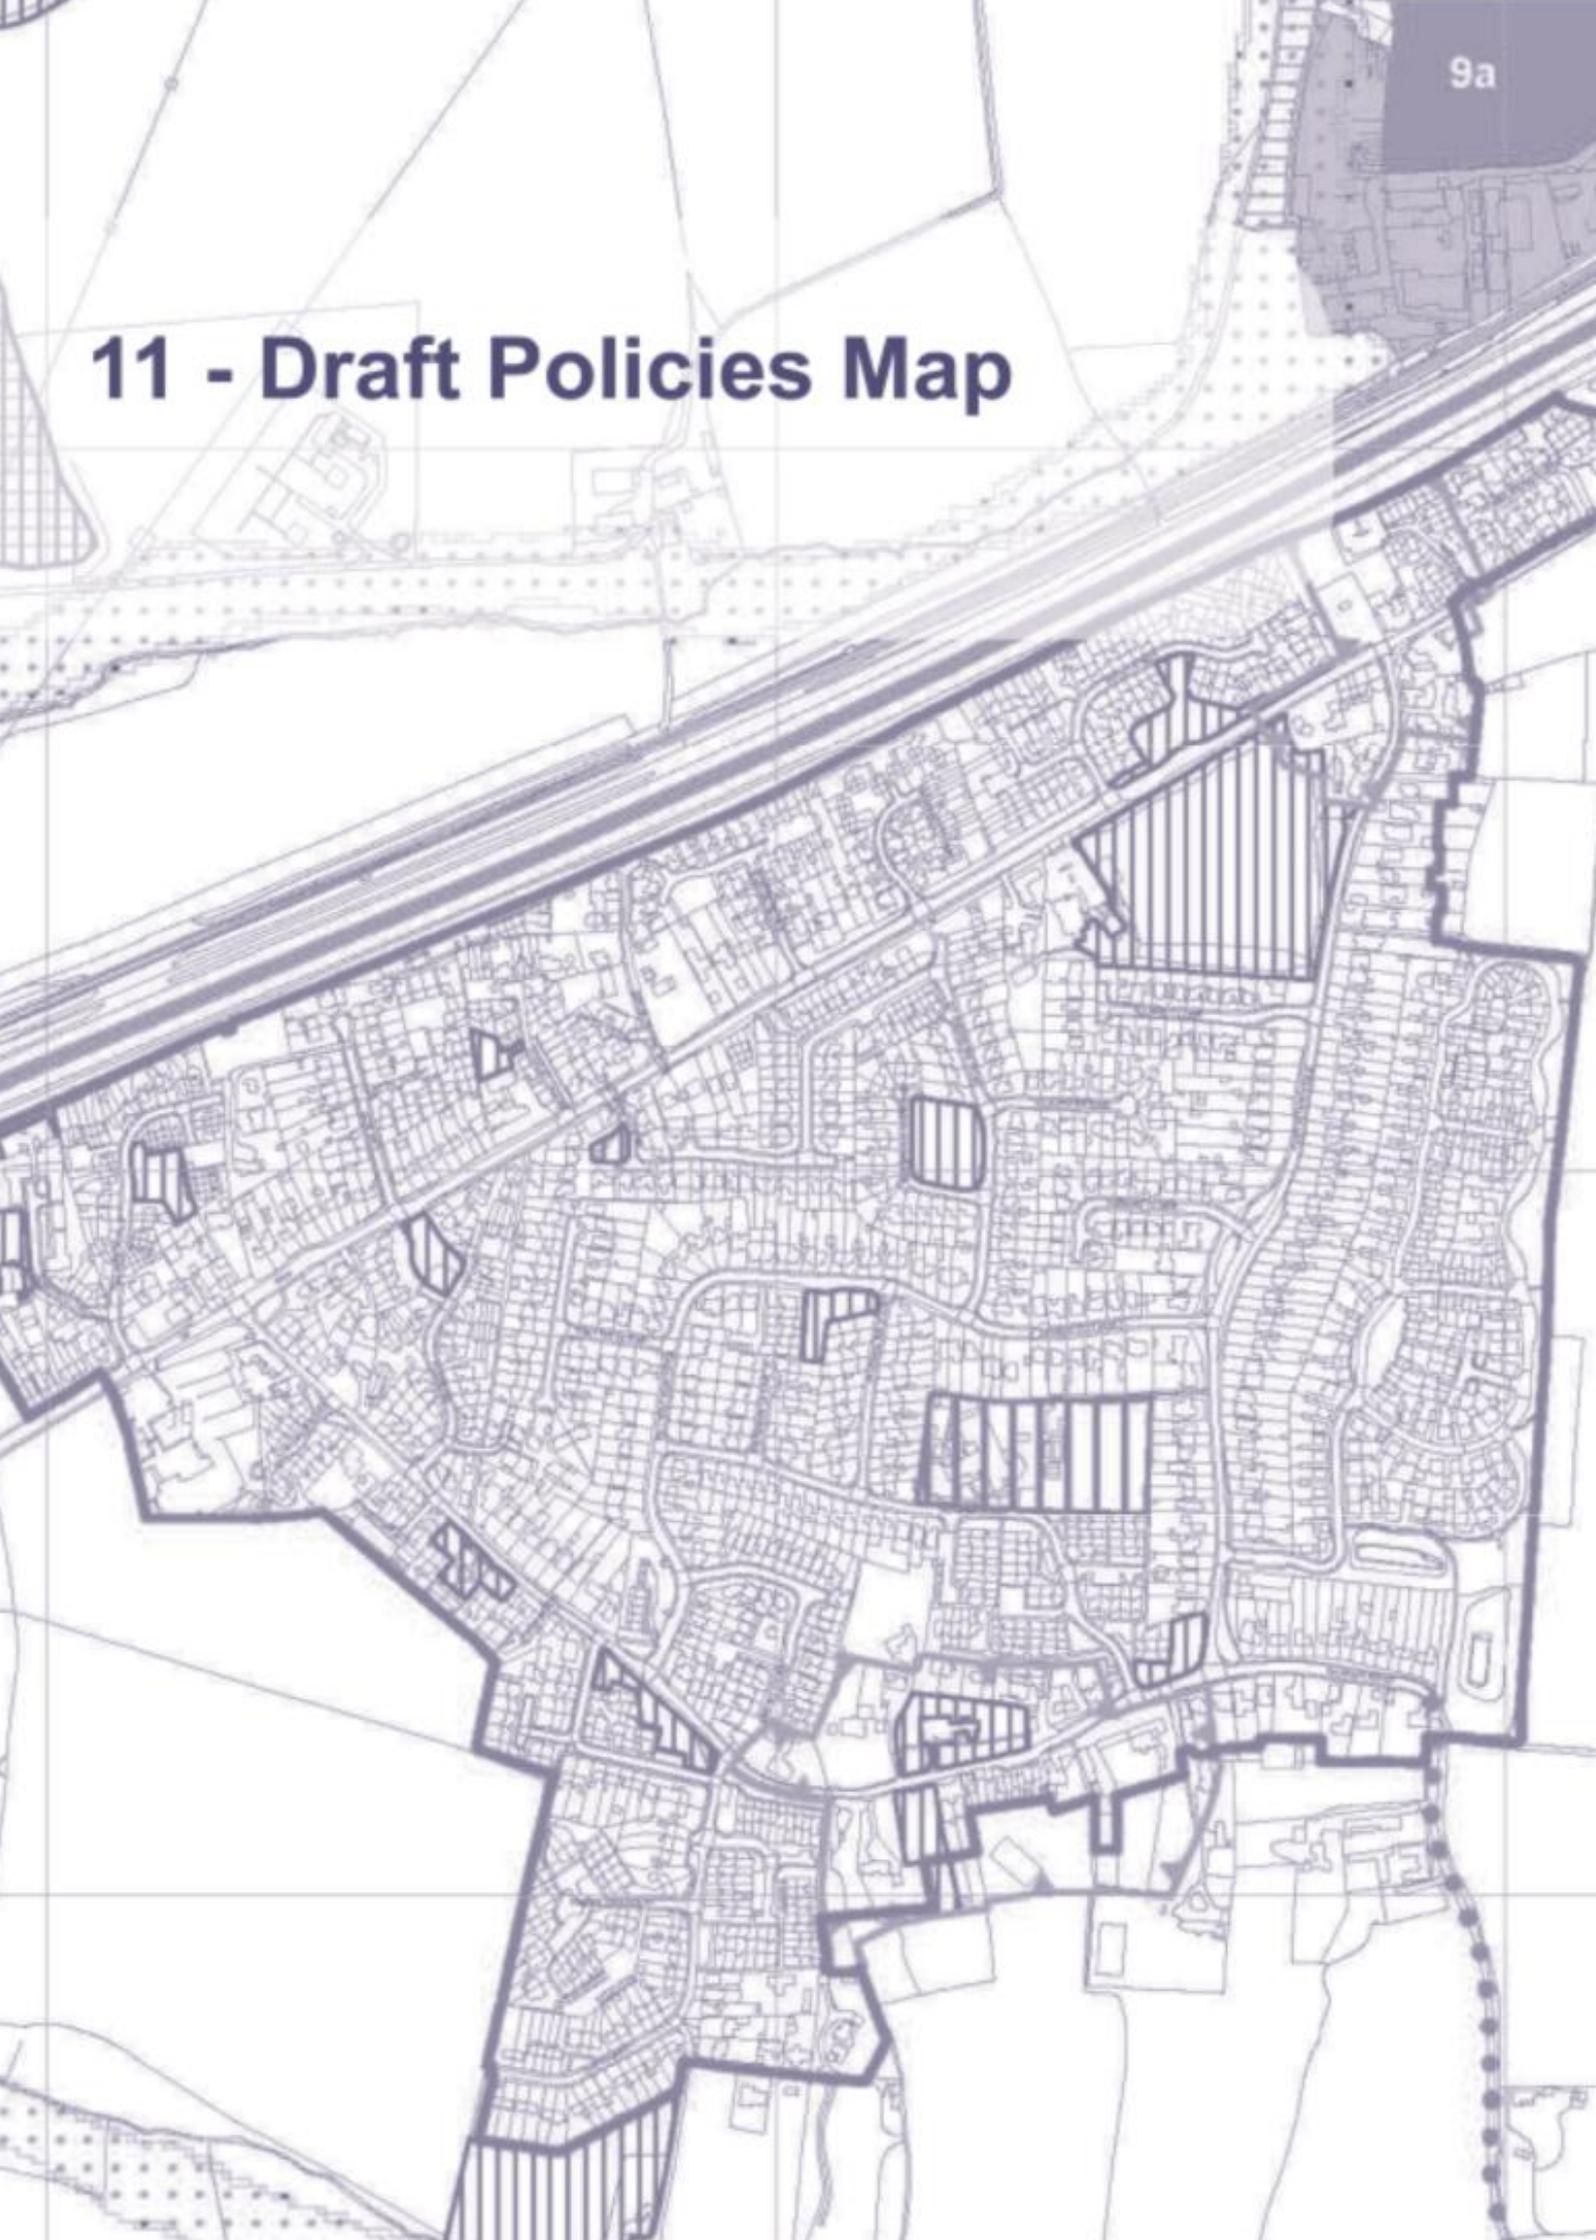

Local Plan Policy	Strategic Priority	Key Indicators	Target (if applicable)	Trigger for action	Contingency/Action
		<p>no more than 35 kWh/m² GIA/yr Number of new build offices achieving an Energy Use Intensity (EUI) of no more than 70 kWh/m² GIA/yr Number of new build schools achieving an Energy Use Intensity (EUI) of no more than 65 kWh/m² GIA/yr Number of new build light industrial buildings achieving an Energy Use Intensity (EUI) of no more than 35 kWh/m² GIA/yr The amount of renewable energy generated on-site for all new buildings</p>	<p>achieving an Energy Use Intensity (EUI) of no more than 35 kWh/m² GIA/yr At least 80 kWh/m² building footprint for all new buildings is generated on-site by renewable energy At least 120 kWh/m² building footprint for all new industrial buildings is generated on-site by renewable energy On development proposals of 100 or more dwellings, 10% of dwellings are required to have in-use energy monitoring for the first 5 years</p>	<p>(11) 20% of all new industrial buildings are not achieving at least 120 kWh/m² building footprint through renewable energy (12) 20% of dwellings on development proposals of 100 or more dwellings are not achieving the 10% requirement to have in-use energy monitoring for the first 5 years (13) 2 decisions allowed on appeal where the Council originally refused to grant planning permission for development that fails to comply with requirement 1 (14) 2 decisions allowed on appeal where the Council originally refused to grant planning permission for development that fails to comply with requirement 2 (15) 2 decisions allowed on appeal where the Council originally refused to grant planning permission for development that fails to comply with requirement 3 (16) 2 decisions allowed on appeal where the Council originally refused to grant planning permission for development that fails to comply with requirement 4</p>	

Local Plan Policy	Strategic Priority	Key Indicators	Target (if applicable)	Trigger for action	Contingency/Action
		<p>The amount of renewable energy generated on-site for all new industrial buildings</p> <p>On development proposals of 100 or more dwellings, the number of dwellings where in-use energy monitoring will take place for the first 5 years</p> <p>Number of dwellings built to Passivhaus Classic standard</p> <p>Number of dwellings built to higher than Passivhaus Classic standard</p> <p>Appeal decisions</p>		<p>(17) 2 decisions allowed on appeal where the Council originally refused to grant planning permission for residential extensions and conversions (excluding listed buildings) that do not meet the minimum standard approach to fabric specifications set out in Table 2 and incorporate renewable energy generation technology where deemed feasible</p>	

11 - Draft Policies Map

11 - Draft Policies Map

11.1 This Section includes the Draft Policies Map for the Local Plan. This covers the whole of the Chelmsford area and its purpose is to illustrate sites for development or protection within the Local Plan.

11.2 Most notations on the Draft Policies Map are defined by the Council including open spaces, Employment Areas and Settlement Boundaries. A number of evidence base studies have been used to inform the notations on the Draft Policies Map. These include an Urban Area and Defined Settlement Boundary Review 2024 and an Open Space Assessment 2016. All these evidence base studies can be found on the Council's website.

11.3 The table below sets out which areas are covered by which part or inset of the Draft Policies Map. The notations on the Draft Policies Map are shown on the Key found after the following table. An illustrative map showing the current Designated Neighbourhood Plan Areas is included within the mapping for information.

Map Number	Area Covered
1	Chelmsford North
2	Chelmsford South
3	Chelmsford Urban Area
4	Chelmsford City Centre
5	South Woodham Ferrers
6	South Woodham Ferrers Town Centre
7	Battlesbridge (Rettendon Parish)
8	Bicknacre (Woodham Ferrers and Bicknacre Parish)
9	Boreham
10	Broomfield
11	Chatham Green (Little Waltham Parish)
12	Danbury
13	East Hanningfield
14	Edney Common (Highwood Parish)
15	Ford End (Great Waltham Parish)
16	Galleywood
17	Good Easter
18	Great Leighs (Great and Little Leighs Parish)
19	Great Waltham and Howe Street
20	Highwood (Loves Green)
21	Howe Green (Sandon Parish)

Map Number	Area Covered
22	Little Baddow
23	Little Waltham
24	Margaretting
25	Pleshey
26	Ramsden Heath (South Hanningfield Parish)
27	Rettendon Common
28	Rettendon Place
29	Roxwell
30	Runwell
31	Sandon
32	Stock
33	St. Luke's Park (Rettendon and Runwell Parishes)
34	Temple Farm and Temple Wood (West Hanningfield and Stock Parishes)
35	West Hanningfield and Hanningfield Reservoir Treatment Works
36	Woodham Ferrers (Woodham Ferrers and Bicknacre Parish)
37	Writtle
Rural Employment Areas	
38	Bolding Hatch (Roxwell Parish)
39	Old Park Farm (Great Waltham Parish)
40	Warner's Farm (Great Waltham Parish)
41	Woodlands (South Hanningfield Parish)

Chelmsford Local Plan

Pre-Submission (Regulation 19) February 2025 - Draft Changes to the adopted Policies Map

1 Chelmsford North

© Crown copyright and database rights 2024 Ordnance Survey AC000095455. You are permitted to use this data solely to enable you to respond to, or interact with, the organisation that provided you with the data. You are not permitted to copy, sub-licence, distribute or sell any of this data to third parties in any form.

The Draft Policies Map shows the spatial definition of policies and Policy Areas proposed in the Review of the Local Plan Pre-Submission (Regulation 19) Consultation Document February 2025.

Important Note

Areas outside of proposed Urban Areas, Defined Settlement Boundaries, Green Belt and specific allocations or Policy Areas are within the Rural Area. The Rural Area has no notation so appears as 'white land' on the Draft Policies Map and its insets.

The Draft Policies Map shows areas at a higher risk of flooding which are defined and regularly updated by the Environment Agency. For further details please see the flood maps published on the Environment Agency's website at: www.environment-agency.gov.uk

The Draft Policies Map shows the Minerals Safeguarded Areas from the adopted Essex Minerals Local Plan (2014) which will be subject to periodic updates by Essex County Council. For further details please visit their website at: www.essex.gov.uk

Neighbourhood Plans have been 'made' (approved) or are currently under preparation within the area covered by the Draft Policies Map. Designated Neighbourhood Plan areas are shown on a separate illustrative map.

The background image shows a waterfront scene. In the foreground, there is a wooden dock with a metal railing and a white utility box. The water is calm and reflects the sky. In the middle ground, there are more docks and a paved area. In the background, there are several buildings, including a large multi-story building on the right and smaller houses on the left. The sky is overcast.

NEW PROPOSAL	17b LAND EAST OF HIGHFIELDS MEAD, EAST HANNINGFIELD

Introduction

B.1 This Appendix provides information about standards that apply to all new residential developments in Chelmsford including conversions, apartments, maisonettes, houses, Houses in Multiple Occupation (HMO's) or extensions, unless it can be fully demonstrated that the specific site circumstances require a different design approach resulting in a departure from standard.

B.2 The standards seek to ensure new developments will meet the needs of their occupiers, minimise the impact of new developments on surrounding occupiers and encourage higher rates of recycling. Detailed guidance is contained within the Council's Making Places Supplementary Planning Document. Where relevant, links have been provided to other Council documents or national standards. The following standards are covered:

- Privacy and quality of the living environment
- Private amenity space
- Natural light
- Open space
- Internal space standards
- Recycling and waste.

Achieving a high quality living environment

B.3 The Council will seek to secure high quality design and a good standard of living environment for all existing and future occupants.

B.4 The best way of ensuring privacy for new and existing occupiers is to minimise the extent to which windows face onto private areas of adjacent properties. These private areas include habitable rooms (living rooms, dining rooms, bedrooms), kitchens and privacy zones (areas in gardens immediately adjoining the building). Privacy can be ensured through design of new buildings, but also through achieving specified separation distances between windows and neighbouring private areas.

B.5 Adequate separation distance between buildings also ensures they do not feel overbearing to neighbouring residents.

B.6 Where habitable rooms in a new or extended property are proposed, the separation distances set out in Table 11 apply.

B.7 The requirements may be relaxed where privacy is 'designed-in' through careful arrangement of internal accommodation, placement of windows, window design or screening whilst also ensuring buildings are not overbearing. Shorter back-to-back distances may also be acceptable when the buildings face each other at an angle, typically 30 degrees or more. If there is a change in level between buildings, it may be possible for back-to-back distances to be adjusted.

B.8 Overlooking needs to be avoided and the perception of overlooking should be considered e.g. by avoiding large windows in side walls of non-habitable rooms even if these are obscured.

B.9 For locations outside of the Chelmsford City Centre and SWF Town Centre, it is expected that the minimum back-to-back standard of 25m will be met. A reduction in the standard will only be accepted where there are site specific character, density or design

B - Development Standards

considerations and/or identifiable existing site constraints that clearly justify a departure from the minimum standard.

B.10 To ensure a good standard of living for the occupier of a new or extended property, all habitable rooms must have at least one window in a wall allowing outlook and ventilation which meets these standards.

Table 11 : Achieving a high quality living environment - standards

Criteria	Chelmsford City Centre and SWF Town Centre	Outside Chelmsford City Centre and SWF Town Centre
A. Minimum back-to-back (or front-to-back) distance between parallel 2 or 3 storey buildings with rear or front-facing windows serving habitable rooms on upper floors	20m	25m
B. Minimum back-to-back (or front-to-back) distance between parallel 4 or more storey buildings with rear or front-facing windows serving habitable rooms on upper floors*	27.5m	35m
C. Minimum back-to-boundary distance where new buildings, or extensions to existing buildings, have a back-to-back relationship with existing residential buildings**	15m	
D. Minimum distance between a window serving an upper-floor habitable room and the side garden boundary of an adjacent property (unless the privacy zone is otherwise protected)***	15m (add 4m for each additional storey)	
E. Minimum back-to-flank wall distance****	12.5m for a two storey flank wall (add 4m for each additional storey)	

*For tall buildings (above 5 storeys or above 16 metres) the separation space needed could be greater depending on the attributes and circumstances of the scheme; most tall structures will only be acceptable where supported by an appropriate ratio of open setting. This will be judged in accordance with the above standards or on a case-by-case basis as appropriate.

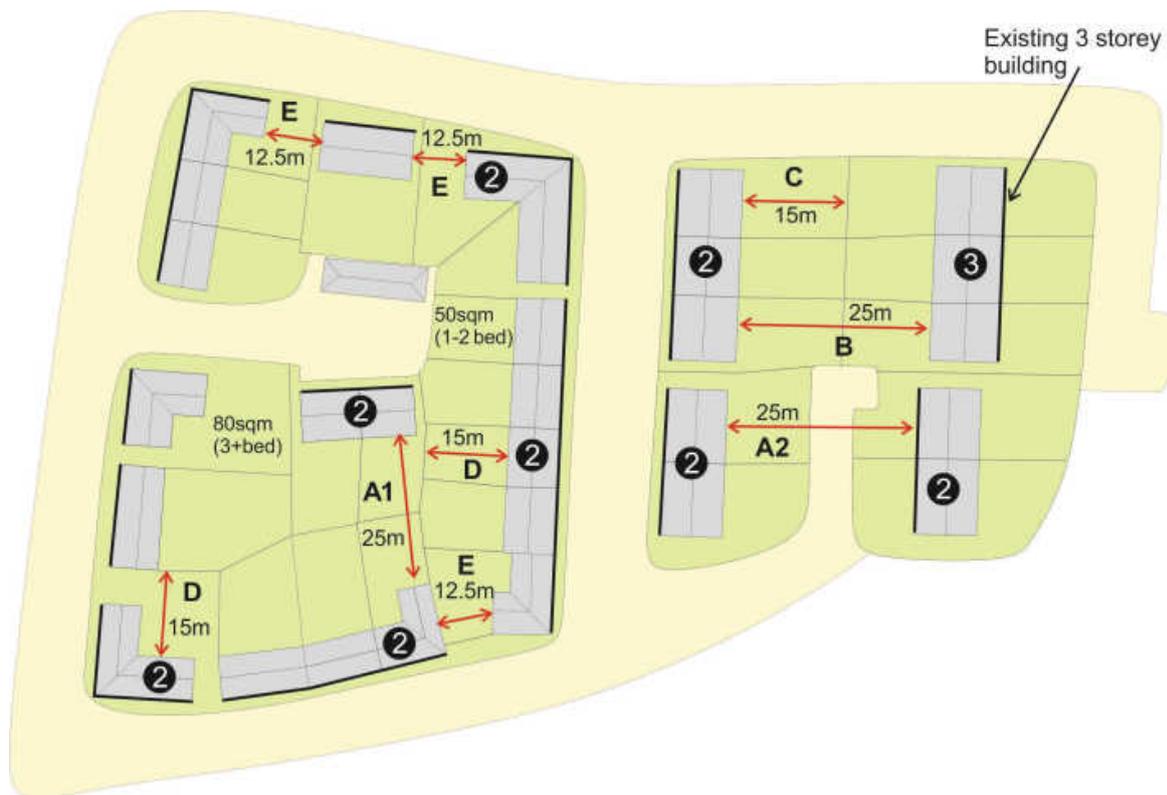

**With existing buildings with a back-to-boundary distance less than 15m, in some circumstances a two-storey extension within 15m of the boundary may be acceptable subject to satisfactory relationships with neighbouring properties.

***For corner turning plots, discretion will be needed as to the application of this standard. For example, the distance would be appropriate if a relationship is being imposed on an existing property. In new developments, the standard could be reduced if the plot serves a positive design function in the layout as any new occupiers would be aware of the pre-existing relationship. Clear glazed upper-floor windows serving habitable rooms should be avoided where they would directly face the privacy zone of a neighbouring property.

****Where a back-to-flank wall relationship will exist, clear glazed windows in flank walls should be avoided in order to safeguard against overlooking.

Figure 19 : Separation distances and private garden space for sites outside Chelmsford City Centre and South Woodham Ferrers Town Centre

- KEY**
- A1 Back to back (2 storey)
 - A2 Front to back (2 storey)
 - B Back to back (2-3 storey)
 - C Back to boundary (new building next to existing)
 - D Back to side garden
 - E Back to flank wall

Private amenity space

B.11 All new homes shall provide easy access to private or communal garden space. The size of the private space expected depends on the type of unit and the accessibility of the location. All new residential development shall provide private amenity space to a high standard. Narrow unusable garden spaces and parking areas will not be included in the calculations.

B.12 The siting, orientation, size and layout should make for a secure and usable space, which has an inviting appearance for residents and is appropriate to the surrounding context.

B - Development Standards

Please refer to the Council's Making Places SPD for more guidance. All private amenity spaces shall be designed to avoid harmful overlooking from other properties.

B.13 Where recycling and waste bins and bikes have to be kept in a rear garden then direct and secure access from the street should be provided.

B.14 Tables 12 and 13 contain space standards for private gardens, balconies and communal garden space. See also Figure 19. In tight urban environments, quality may be more important than the quantity of space. Gardens do not have to be limited to ground level, in appropriate circumstances elevated gardens and roof gardens may be encouraged to maximise use of space.

Table 12 : Garden standards for new houses

Number of bedrooms	Chelmsford City Centre and SWF Town Centre	Outside of Chelmsford City Centre and SWF Town Centre
1 or 2 bedroom houses	40sqm minimum private garden <i>or</i> use of directly accessible communal garden equivalent to 25sqm per unit including 10sqm demarcated private zone for each house	50sqm minimum private garden
Houses with 3 or more bedrooms	50sqm minimum private garden	80sqm minimum private garden

Table 13 : Garden and balcony standards for new apartment blocks and HMOs

Dwelling type	Chelmsford City Centre and SWF Town Centre	Outside of Chelmsford City Centre and SWF Town Centre
Upper floor apartments	<ul style="list-style-type: none"> Provision of a private balcony (minimum 3sqm), plus Provision of 20sqm minimum per unit of communal garden (100sqm minimum in total) or be located within 600m of a park or recreation ground 	<ul style="list-style-type: none"> Provision of a private balcony (minimum 3sqm), plus 20sqm minimum per unit of communal garden (100sqm minimum in total)
Ground floor apartments	<ul style="list-style-type: none"> Provision of a 10sqm minimum demarcated private zone, plus Provision of 20sqm minimum per unit of communal garden (100sqm minimum in total) or be located within 600m of a park or recreation ground 	<ul style="list-style-type: none"> 10sqm minimum demarcated private zone, plus 20sqm minimum per unit of communal garden (100sqm minimum in total)
Houses in Multiple Occupation (HMOs)	<ul style="list-style-type: none"> 50sqm minimum communal garden 	<ul style="list-style-type: none"> 80sqm minimum communal garden

B.15 Communal gardens are an integral part of site design and should, as practicable as possible, be enclosed by buildings and or landscaping. They are intended to be private spaces and should be of an appropriate shape to fulfil their function (e.g. socialising or drying washing). They should benefit from casual surveillance so that they feel safe and are accessible to all intended users. For City/Town Centre schemes, a communal garden area will be encouraged. Please refer to the Council's Making Places SPD for more guidance.

B.16 A demarcated private zone for ground floor apartments should be provided as a small garden, patio or deck, with direct access from the property. Where ground floor apartments cannot provide a sufficiently enclosed private zone, windows and doors should be separated from public areas through hard and/or soft landscaping. Please refer to the Council's Making Places SPD for more guidance.

B.17 For street facing ground floor apartments, the building should be designed to interact with the street, so an enclosed private zone facing the street may not be appropriate. To avoid a street facing single aspect property, dual aspect or duplex apartments are encouraged.

B.18 Maisonettes will usually include a separate entrance door and typically do not rely on communal entrances, stairs and corridors to an internal unit entrance. Where they are not integral to a larger apartment complex, their garden requirements should be akin to a house. Garden spaces must be fit for purpose by considering size, shape and location. A ground floor unit should provide a directly accessible garden space. An upper floor unit should either provide a garden space directly accessed from an external door, or a private terrace on the same level (of at least 10sqm and directly accessed from an external door). Upper floor units must avoid external staircases.

B.19 Exceptions to the above standards may be considered on physically constrained sites where development is desirable in the wider public interest.

B.20 The distance to a park or recreation ground should generally be measured in a direct line. However, consideration needs to be given to physical barriers to movement such as busy roads with no crossings, rivers or railway lines.

Natural light

B.21 New residential development and extensions should provide an adequate level of natural light for new and existing dwellings. Good natural light makes dwellings more attractive, pleasant and energy efficient. Housing layouts should be designed to maximise daylight and sunlight to dwellings as far as possible, as long as the development adheres to other policies and standards. Single aspect apartments should be avoided. Applicants are advised to refer to the BRE document "Site layout planning for daylight and sunlight: a guide to good practice (BR 209 2022 edition)" and the British Standard "BS EN 17037 Daylighting of Buildings – Improve the daylight in buildings" (or their successors).

Sunlight

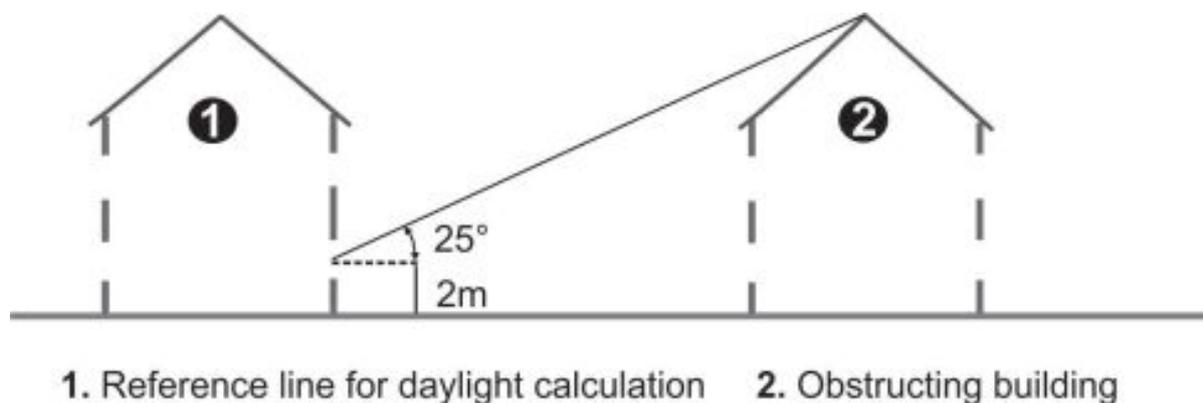

B.22 A sunlit room is achieved where a window faces 90 degrees due south. It is not a reasonable requirement to expect this of all dwellings in a development, but good levels of daylight and a pleasant outlook can compensate for a lack of direct sunlight.

B - Development Standards

Daylight

B.23 Acceptable daylight in existing building interiors is likely to be achieved if a 25 degree vertical angle from a point 2m above the floor at the building façade is not obstructed, see Figure 20. It is accepted that taller buildings may cause a higher degree of daylight loss, which is one of the reasons why taller buildings will generally be limited to appropriate City Centre locations.

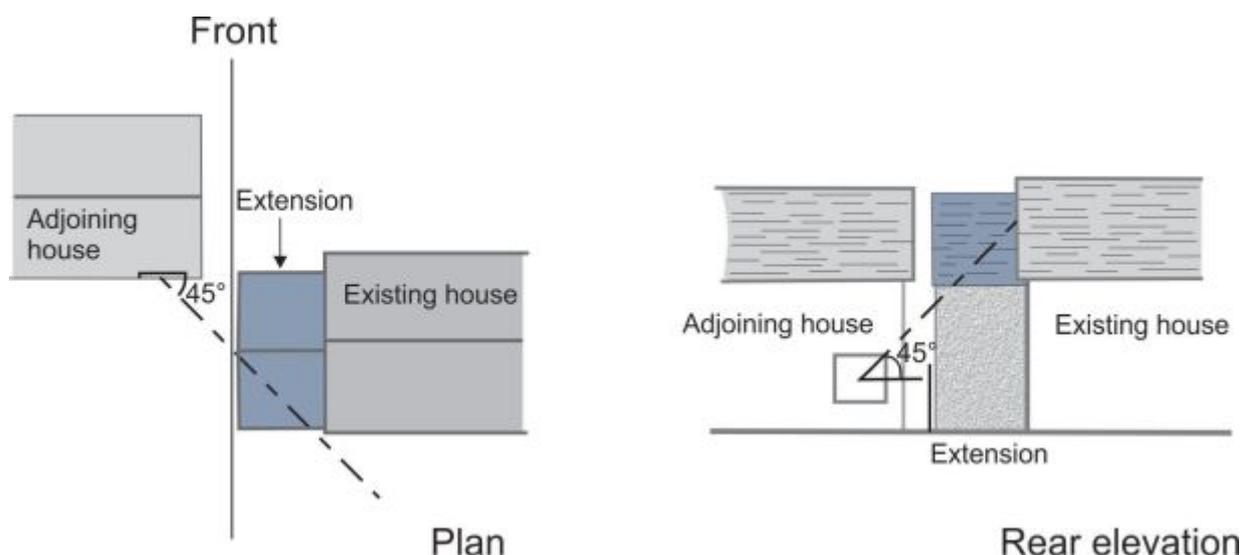

Figure 20 : Relationships between new and existing buildings 1

The obstructing building (No 2) does not breach the 25 degree angle, hence acceptable daylight should be achieved within property No 1. Adapted from Essex Design Guide www.essexdesignguide.co.uk.

B.24 Projections at right angles to a main building range should not infringe a 45 degree angle drawn in plan and elevation from the centre of the closest ground floor habitable room window in a neighbouring property, see Figure 21.

Figure 21 : Relationships between new and existing buildings 2

The extension at the neighbouring property breaches a 45 degree angle both in plan and elevation drawn from the window of a habitable room in the neighbouring property.

Open space

B.25 Open spaces and opportunities for sport and recreation can make an important contribution to the health and wellbeing of communities.

B.26 An open space study, '*Chelmsford Open Space Study 2024*', was undertaken by Knight, Kavanagh & Page Ltd to inform the Review of the Local Plan 2022 to 2041. The study was carried out in line with the National Planning Policy Framework (NPPF) and in accordance with Sport England's guidance available at the time.

B.27 Access and quantity standards for the different types of open spaces in Chelmsford are summarised in Table 14.

Table 14 : Access and quantity standards for different types of open spaces in Chelmsford

Type of open space	Definition	Quantity standard (ha/1000 population)	Access standard
Accessible Local Open Space			
Allotments	Opportunities to grow own produce. Added benefits include the long term promotion of sustainable living, health and social inclusion.	0.30	1200m
Amenity greenspace	Sites offering opportunities for informal activities close to home, work or enhancement of the appearance of residential and other areas. It includes informal recreation spaces and other incidental spaces.	0.53	480m or 6 minute walk
Play space (children)	Areas designed primarily for play and social interaction involving children under 12 years old. Sites consist of formal equipped play facilities typically associated with play areas.	0.05	1000m for sites above 0.1ha, all other sites 400m
Play space (youth)	Areas designed primarily for play and social interaction involving young people. Can include equipped sites that provide more robust equipment catering to older age ranges incorporating facilities such as skate parks, BMX, basketball courts, youth shelters and Multi-Use Games Areas.	0.05	1000m
Total Accessible Local Open Space		0.93	

B - Development Standards

Type of open space	Definition	Quantity standard (ha/1000 population)	Access standard
Strategic Open Space			
Parks and recreation grounds	Parks, formal gardens and recreation grounds, open to the general public. Accessible, high quality opportunities for informal recreation and community events.	1.23	710m or 9 minute walk
Natural and Semi-natural Greenspace			
Natural and semi-natural greenspace	Woodland (coniferous, deciduous, mixed) and scrub, grassland (e.g. down-land, meadow), heath or moor, wetlands (e.g. marsh, fen), wastelands (including disturbed ground), bare rock habitats (e.g. quarries), commons and Local Nature Reserves. Many sites are intentionally without ancillary facilities to reduce misuse/ inappropriate behaviour whilst encouraging greater flora and fauna. A size threshold of 0.2ha is generally applied.	1.80	ANGST (Natural England's Accessible Open Space Standard), refer to the Open Space Study.

B.28

To help calculate the amount of open space required for each new dwelling, the Council has grouped allotments, amenity green space, and play space for children and youths together and classed these as 'Accessible Local Open Space'. Parks and recreation grounds are referred to as Strategic Open Space. See Table 15 for summary standards in hectares (ha) and sqm/1000 population.

Table 15 : Quantity standard for 'Accessible Local Open Space, Strategic Open Space' and Natural and Semi-natural Greenspace

Type of open space	Quantity standard (ha/1000 population)	Quantity standard (sqm/1000 population) 1 ha = 10,000 sqm
Total Accessible Local Open Space	0.93ha	9,300sqm
Total Strategic Open Space	1.23ha	12,300sqm
Natural and Semi-natural Greenspace	1.80ha	18,000sqm
Total	3.96ha	39,600sqm

B.29 The calculations below set out how much open space will be required for each new dwelling for a scheme of 30 or more dwellings. The calculations are based on an average occupancy rate of 2.4 persons per dwelling in Chelmsford (Census 2011).

- 1) Number of households per 1000 population:** 1000 people/2.4 people per-dwelling = **417 dwellings**
- 2) Accessible Local Open Space per dwelling:** 9,300sqm/417 dwellings= **22sqm/dwelling**
- 3) Strategic Open Space per dwelling:** 12,300sqm/417 dwellings= **29sqm/dwelling**
- 4) Natural and Semi-natural greenspace per dwelling:** 18,000sqm/471 dwellings = **43sqm/dwelling**

Table 16 : Thresholds for on-site provision of open space

Size of Scheme	Provision
Less than 10 dwellings	No provision expected
10-29 dwellings	Accessible Local Open Space required on-site at 22sqm per dwelling
30 dwellings or more	<ul style="list-style-type: none"> • Accessible Local Open Space required on-site at 22sqm per dwelling, plus • Strategic Open Space required on-site at 29sqm per dwelling, plus • Natural and Semi-natural Greenspace required on-site at 43sqm per dwelling

B.30 On developments of 30 or more dwellings, Strategic Open Space and Natural and Semi-natural Greenspace will normally be required to be provided on-site. Considerations for accepting a commuted sum, in lieu of on-site provision, will include:

- The scale of the proposed development and site area; and
- The suitability of a site considering, for example, its topography or flood risk; and
- The existing provision of facilities within the neighbourhood and/or the sub area; and
- Other sites in the neighbourhood where additional provision is proposed; and
- Existing access to facilities within the neighbourhood and/or sub area.

B.31 Further details on calculating financial contributions is provided in the Open Space Advice Note and Planning Obligations SPD on the Council’s website. Commuted sums are to be secured through legal agreements.

Tree planting

B.32 The Council has set a requirement for three new trees to be planted for every new home that is built and for all strategic scale employment and infrastructure development to plant a significant number of new trees in addition to the normal landscaping requirements. This is to assist in the Climate and Ecological Emergency. For details, refer to DM17 Trees, Woodland and Landscape Features and the Council’s Tree Planning Advice Note on the Council’s website.

B - Development Standards

Internal space standards

B.33 In 2015, the Government introduced a space standard, 'Technical housing standards – nationally described space standard' which sits alongside Building Regulations as an optional standard. This space standard deals with internal space for new houses and flats and applies across all tenures of housing. It sets out requirements for the gross internal floor area (GIA) of new dwellings at a defined level of occupancy as well as floor areas and dimensions for key parts of homes.

B.34 According to research by the Royal Institute of British Architects (RIBA), the average new home in England is only 92% of the recommended minimum size. This means there might not be enough space for furniture, storage, socialising or spending time in quiet.

B.35 Chelmsford generally has a standard and wide ranging mix of house types within its area and therefore the Government's space standards appear to fit well with the housing stock in Chelmsford. There are no particular issues within Chelmsford's housing market that would require a departure from the national standards. To meet the needs of occupiers, all new residential development should be built in accordance with the nationally described space standard. The standard requires that:

- A dwelling provides at least the GIA and built-in storage area set out in Table 17
- A dwelling with two or more bedspaces has at least one double (or twin) bedroom
- A single bedroom has a floor area of at least 7.5sqm and is at least 2.15m wide
- A double (or twin bedroom) has a floor area of at least 11.5sqm
- One double (or twin bedroom) is at least 2.75m wide and every other double (or twin) bedroom is at least 2.55m wide
- Any area with a headroom of less than 1.5m is not counted within the GIA unless used solely for storage (if the area under the stairs is to be used for storage, assume a general floor area of 1sqm within the GIA)
- Any other area that is used solely for storage and has a headroom of 900-1500mm (such as under eaves) is counted at 50% of its floor area, and any area lower than 900mm is not counted at all
- A built-in wardrobe counts towards the GIA and bedroom floor area requirements, but should not reduce the effective width of the room below the minimum widths set out above. The built-in area in excess of 0.72sqm in a double bedroom and 0.36sqm in a single bedroom counts towards the built-in storage requirement
- The minimum floor to ceiling height is 2.3m for at least 75% of the GIA.

Table 17 : Minimum Gross Internal Floor Area and storage (sqm)**

Number of bedrooms (b)	Number of bed spaces (persons)	1 storey dwellings	2 storey dwellings	3 storey dwellings	Built-in storage
1b	1p	39 (37)*			1.0
	2p	50	58		1.5
2b	3p	61	70		2.0
	4p	70	79		

Number of bedrooms (b)	Number of bed spaces (persons)	1 storey dwellings	2 storey dwellings	3 storey dwellings	Built-in storage
3b	4p	74	84	90	2.5
	5p	86	93	99	
	6p	95	102	108	
4b	5p	90	97	103	3.0
	6p	99	106	112	
	7p	108	115	121	
	8p	117	124	130	
5b	6p	103	110	116	3.5
	7p	112	119	125	
	8p	121	128	134	
6b	7p	116	123	129	4.0
	8p	125	132	138	

* Where a one person flat has a shower room rather than a bathroom, the GIA may be reduced from 39sqm to 37sqm.

** (1) Some additional footnotes were added to the Space Standards in 2016 relating to built-in storage, bathrooms and WCs and furnished layouts. Please refer to the guidance [Technical housing standards – nationally described space standard - GOV.UK \(www.gov.uk\)](http://www.gov.uk) for details. (2) Regulations relating to the licensing of HMOs introduced in 2018 set different minimum thresholds for bedrooms used by one or more persons based on age. Please refer to The Licensing of Houses in Multiple Occupation (Mandatory Conditions of Licences) (England) Regulations 2018 at www.legislation.gov.uk.

Recycling and waste

B.36 New developments should have regard to the Council's Making Places Supplementary Planning Document (SPD) and be compliant with the Chelmsford City Council Recycling and Waste Collection Policy applicable at the time. This can be found on the Council's website.

B.37 Recycling and waste collection provision for houses, apartments and flats have been set out below in Tables 19 and 20. Refer also to the Making Places SPD, which provides details of the different bins and other receptacles provided by the Council for houses, flats and apartments. Further details are provided in the Policy referred to above including HMOs and some non-domestic properties.

B - Development Standards

B.38 To design development to facilitate source-separated collection, the following key design standards need to be considered at the early design stages:

- All bin stores should be easily accessible by the collection vehicle from the highway
- Communal bin stores should be located no further than 30m away from flats or apartments served by this store
- Communal bin stores should be in the form of dedicated bin store rooms in the ground floor of buildings or in the form of robust and covered external compounds sited in unobtrusive locations
- The road surfaces need to be suitable for collection vehicles
- Schemes to be designed to avoid collection vehicles reversing; if reversing is necessary it should be no more than 12m; if the vehicle has to turn, sufficient space needs to be provided for this in the layout.

B.39 All collection vehicles used by Chelmsford City Council are Dennis Eagle with Terberg Lifts. The largest vehicle is the Dennis Eagle Elite 2 Olympus Twin Pack 6 x 4 Wide Body RCV. See Table 18 for dimensions. All development layouts should allow for this vehicle to be used, but note that private waste collectors collecting from non-domestic properties may use larger vehicles.

Table 18 : Dimensions of the largest collection vehicle used by the Council

Dennis Eagle Elite 2 Olympus	Dimensions
Length	10.1m (allowing for rear overhang of the bin lift)
Width	2.85m (allowing for wing mirrors)
Height	3.6m (allowing for overhead fixtures and fittings)
Operating height with tailgate lifted	5.21m
Minimum turning circle	22m

B.40 The Council provides a recycling and waste collection service for non-residential uses, although businesses may also use private contractors. Since the type of waste generated varies widely between different types of businesses, the receptacles required will also vary. Therefore there are no specific standards for general waste and recycling receptacles for non-residential uses. However it is important that storage areas are designed to meet the needs of the business now and in the future when requirement for recycling of waste is likely to be stricter. Storage areas should be easily accessible from the highway, as unobtrusive as possible and ideally away from the main entrance.

Table 19 : Recycling and waste receptacles required for houses

Size of house	Material for collection	Bin type	Recommended location on house plot
1-6 person house	Non-recyclable general waste	180 litre wheeled bin (black), maximum 1 bin	Near to house, close to front or back door, easily wheeled to kerbside for collection
	Garden waste	240 litre wheeled bin (brown), maximum 2 bins	
	Cans, glass, aerosols, foil, textiles and small electrical and electronic equipment	55 litre green box	Undercover e.g. bin store, garage, car port, shed, kitchen, utility room. Able to be easily moved to kerbside for collection
	Paper	White bag – re-useable poly sack (55 litre)	
	Cardboard	White bag – re-useable poly sack (55 litre)	
	Plastic & cartons	Clear bags (55 litre)	
	Food waste – internal	7 litre small grey caddy – maximum 1 bin	In kitchen/utility room
	Food waste – external	23 litre medium green bin	Near to house, able to be easily moved to kerbside for collection
	Garden and food waste	Compost bin	Rear garden, away from the house, directly on soil
7+ person house	Household waste	240 litre wheeled bin (black), maximum 1 bin	Near to house, easily wheeled to kerbside for collection
	All other materials	Same as for 1-6 person house	

B - Development Standards

Table 20 : Recycling and waste receptacles required for flats and apartments

Material	Bin Type	Storage capacity required (litres) per unit		
		1 bedroom	2 bedroom	3 or more bedrooms
Non-recyclable general waste	240, 360, 660 or 1100 litre wheeled bins	72	108	180
Food waste	140 litre wheeled bins (green)	6.9	11.5	23
Glass (clear)	240 or 360 litre wheeled bins (green)	8.2	11.9	18.3
Glass (coloured)		8.2	11.9	18.3
Cans, foils, aerosols		8.2	11.9	18.3
Plastic and cartons		57.2	79.2	110
Mixed paper and cardboard	660 litre wheeled bins (blue), 360 litre two wheeled green bins can be used in smaller schemes	57.2	79.2	110

C.1 This Section sets out the projected timeframes for developments within the Local Plan. There are three tables which cover:

- Housing allocations
- Gypsy and Traveller allocations
- Travelling Showpeople allocations.

C.2 For each of the above, timeframes for development have been projected based on the following information:

- Published housing completions for years 2022/23 to 2023/24
- Known planning permissions and expected timeframes for development, based on developers' projected build out rates (sourced from the April 2024 Housing Site Schedule) for years 2024/25 to 2028/29
- Expected timeframes for the development of Local Plan allocations, based on projected build out rates and information from site promoters for years 2029/30 to 2040/41 as applicable
- The timing of the provision of facilities and services for a location have been factored into timeframes where applicable (e.g. the timing of school provision, utility and service provision).

C.3 In addition to the tables there is a housing trajectory graph included within the housing section.

D - Glossary

Active Travel - Making journeys in physically active ways - like walking, wheeling (using a wheelchair or mobility aid), cycling, or scooting.

Affordable Housing - Includes social rented, affordable rented and intermediate housing which is provided to specific eligible households whose housing needs are not met by the market housing on offer.

Air Quality Management Areas (AQMAs) - Designated by a local authority because they are not likely to achieve national air quality objectives by the relevant deadlines.

Authority Monitoring Report (AMR) - Monitors the production of the Council's Local Plan Documents against the Local Development Scheme (LDS) as well as the performance and effectiveness of the Council's planning policies in delivering the key objectives of the Local Plan.

Biodiversity Net Gain (BNG) - Used to improve a site's biodiversity value. Most planning applications for development will be required to ensure a minimum 10% increase in biodiversity compared to prior to the development.

Brownfield Land - Land which is or has been previously developed e.g. a redundant factory, as opposed to greenfield land which has never been developed.

Buildings of Local Value - A Register of buildings, structures, features and gardens of local interest kept by a Local Planning Authority. None of these are designated heritage assets but their local historic and architectural value is recognised.

Circular Economy - This is a model of resource production and consumption in any economy that involves sharing, leasing, reusing, repairing, refurbishing, and recycling existing materials and products for as long as possible.

Chelmsford Urban Area - The main built-up part of Chelmsford, including the areas of Great Baddow and Springfield.

Communities - A group of people living in the same place or having a particular characteristic in common.

Community Infrastructure Levy (CIL) - A payment that is made to the Council by developers when development commences. The payment is used to fund infrastructure that is needed to serve development in the area. This can include new transport schemes, community facilities, schools, and green spaces.

Community Facilities/Assets - These include but are not limited to local shops, meeting places and community centres, sports venues, arts and cultural buildings, public houses, and places of worship.

Comparison Goods - Non-food items such as clothing, footwear, electrical and household items. Shopping for comparison goods is usually undertaken less frequently than convenience (food) shopping.

Conservation Areas - Areas designated by the Council for their special architectural and historic interest.

Convenience Goods - Food and other day-to-day items. This type of shopping is usually undertaken fairly regularly.

Defined Settlement Boundaries (DSB) - These show the extent of villages across Chelmsford. They are a recognised policy tool used to contain a settlement and protect it from unplanned extension into the countryside. Within a settlement boundary, the principle of development is usually more acceptable, whereas development is more strictly controlled in the countryside outside the settlement boundary.

Deliverability - Factors and issues which affect the ability of development proposals to proceed as planned.

Designated Heritage Asset - A World Heritage Site, Scheduled Monument, Listed Building, Protected Wreck Site, Registered Park and Garden, Registered Battlefield or Conservation Area designated under the relevant legislation.

Duty to Co-operate - A legal duty that requires Local Planning Authorities and other prescribed public bodies to "engage constructively, actively and on an ongoing basis" to develop strategic policies. It is a statutory test and a key issue when assessing the soundness of Local Plans.

Employment Land Review (ELR) - Prepared to update the Council's understanding of the future needs for employment land across the City Council's administrative area, so that future Local Plan policies can be responsive to market change, key growth sectors and where appropriate ensure that employment land and premises are protected as appropriate

Evidence Base - A range of information to help the preparation of the Local Plan. These include background studies, research, surveys and feedback documents.

First Homes - A specific type of discounted market sale housing which national planning policy states should account for a minimum 25% of affordable housing secured through planning obligations.

Five-Year Housing Land Supply - Ensuring that enough homes are provided and identify enough land to maintain a steady supply of housing over the plan period. This is commonly called maintaining a Five-Year Housing Land Supply.

Garden Community/Garden City Principles - Sites based around high standards of design and multifunctional green infrastructure, walkable neighbourhoods, integrated and sustainable transport systems with local employment, shopping and recreation facilities and delivered through a partnership approach, involving the local community and with a clear vision.

The Garden City principles are an indivisible and interlocking framework for delivery, and include:

- Land value capture for the benefit of the community.
- Strong vision, leadership and community engagement.
- Community ownership of land and long-term stewardship of assets.
- Mixed-tenure homes and housing types that are genuinely affordable.
- A wide range of local jobs in the Garden City within easy commuting distance of homes.
- Beautifully and imaginatively designed homes with gardens, combining the best of town and country to create healthy communities, and including opportunities to grow food.
- Development that enhances the natural environment, providing a comprehensive green infrastructure network and net biodiversity gains, and that uses zero-carbon and energy-positive technology to ensure climate resilience.

D - Glossary

- Strong cultural, recreational and shopping facilities in walkable, vibrant, sociable neighbourhoods.
- Integrated and accessible transport systems, with walking, cycling and public transport designed to be the most attractive forms of local transport.

The TCPA has produced an extensive set of policy and practical resources on Garden Cities, which can be found at www.tcpa.org.uk/areas-of-work/garden-cities-and-new-towns/

Green Belt - A national planning policy designation to stop the uncontrolled growth of large cities and towns. The Green Belt can include both greenfield and brownfield sites in areas with both good and poor landscape value.

Green Infrastructure (GI) - A network of multifunctional green space, urban and rural, which is capable of delivering a wide range of environmental and quality of life benefits for local communities. GI includes parks, open spaces, playing fields, woodlands, street trees, allotments and private gardens.

Greenfield Sites - Land that has not been previously developed. In the main, greenfield sites are outside existing built-up areas, but areas such as open spaces and residential gardens in built-up areas are considered greenfield regardless of where they are located.

Green Wedge - Land that the Council has designated as being important for nature conservation, recreation and access and can be either within or outside of the Green Belt. It follows the river valleys of River Can, Chelmer and Wid.

Growth Sites - Smaller sites to accommodate less than 100 houses.

Habitat Regulations Assessment (HRA) - An assessment as to whether the new Local Plan will adversely affect any designated European Habitat sites. This is incorporated in the Integrated Impact Assessment.

Health Impact Assessment (HIA) - Used to evaluate the potential health impacts of a plan, policy or new development, to maximise the positive impacts and minimise negative impacts to the physical and mental health of the local community.

Heritage Asset - A building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions, because of its heritage interest. Heritage assets include designated heritage assets and assets identified by the local planning authority (including local listing).

House in Multiple Occupation (HMO) - A property rented out by at least three people who are not from one 'household' (e.g. a family) but share facilities like the bathroom and kitchen.

Infrastructure - Any structure, building, system facility and/or provision required by an area for its social and/or economic function and/or wellbeing including (but not exclusively): footways, cycleways and highways, public transport, drainage, SuDs and flood protection, waste recycling facilities, education and childcare, healthcare, police, ambulance and fire & rescue facilities, sports, leisure and recreation facilities, community and social facilities, cultural facilities, including public art, green infrastructure, open space, affordable housing, live/work units and lifetime homes, broadband and facilities for specific sections of the community such as youth or the elderly.

Infrastructure Delivery Plan (IDP) - Part of the evidence base for the Local Plan. It assesses the infrastructure capacity and needs of Chelmsford and provides an overview of the way infrastructure is planned and the agencies involved in its delivery. It also looks at costs and likely funding mechanisms for infrastructure. It forms the basis for assessing contributions that would be sought to meet the needs of new development.

Integrated Impact Assessment (IIA) - A combined assessment of the sustainability, habitats, health and equality performance of the review plan.

Key Service Settlements - A group of larger settlements which provide a range of key services such as primary school, local employment opportunities, convenience shopping facilities, community facilities and good links by public transport to key destinations.

Landscape Character Assessment - Describes the main types of landscape in an area and gives advice about the management and planning of the landscape.

Large Scale Sites - Residential development of 50 or more units and non-residential development in excess of 1,000 square metres.

Lifetime Neighbourhoods - Lifetime Neighbourhoods are places designed to be inclusive regardless of age or disability.

Listed Building - A building is listed, on the National Heritage List for England, when it is of special architectural or historic interest considered to be of national importance and therefore worth protecting.

Local Cycling and Walking Infrastructure Plan (LCWIP) - A strategic approach to identifying cycling and walking improvements required at the local level. The plans are produced by Essex County Council working closely with the borough/city/district councils to deliver the plans.

Local Development Scheme (LDS) - A project plan and timetable for the preparation of the Local Development Framework or Local Plan. It can be updated and amended as necessary by the City Council.

Local Nature Recovery Strategies - An England-wide system of locally developed spatial strategies that will establish priorities and map proposals for specific actions to reverse nature's decline and provide wider environmental benefits.

Local Plan - A comprehensive document outlining the long-term vision for Chelmsford, identifying locations for delivering housing and other strategic development needs such as employment, retail, leisure, community and transport development.

Local Wildlife Sites (LOWS) - conservation designation identifying the most important wildlife habitats in the County.

Market Housing - Includes private rented housing and sale where prices are set in the open market.

Minerals Safeguarding Area - An area of land overlying or in the immediate vicinity of a mineral resource that is defined on a map and is recognised through policy as an area that needs consideration if a non-mineral development is submitted for determination.

D - Glossary

Modal Shift - A modal shift (or modal share) is the movement from use of the private car to more active and sustainable modes of travel.

National Planning Policy Framework (NPPF) - Sets out the Government's national planning requirements, policies and objectives. It replaces much of the national advice previously contained within Planning Policy Statements, Planning Policy Guidance and Circulars. The NPPF is a material consideration in the preparation of Local Development Documents and when considering planning applications.

National Planning Practice Guidance (PPG) - Additional Government planning policy guidance containing over 40 categories including Local Plans, Neighbourhood Planning and Duty to Co-operate.

Neighbourhood Centres - An area which contains community services and facilities which can include, but are not limited to, small shopping parades, educational and healthcare facilities, places of worship, and civic and green spaces.

Net Zero Carbon - Developments that are net zero carbon achieve a balance between the carbon that is released into the atmosphere and the carbon that is removed. This will be achieved by minimising energy demand and meeting any residual demand e.g. by on-site renewable energy generation.

Non-Designated Heritage Asset - Buildings, monuments, sites, places, areas or landscapes identified as having a degree of significance meriting consideration in planning decisions but which are not statutorily recognised (i.e. they are not listed, not within a Conservation Area and not part of a Scheduled Monument).

Operational Carbon Emissions - These are the emissions associated with the energy used to run a building such as for heating, cooking, hot water generation, lighting and the use of appliances.

Phasing - The timing for which an area of development will come forward and be built.

Policies Map - An Ordnance Survey based map showing where policies and designations within the Local Plan apply.

Public Realm - Any publicly-owned streets, pathways, rights of way, parks, publicly accessible open spaces and any public and civic building and facilities. The quality of our public realm is vital if we are to be successful in creating environments that people want to live, work and study in.

Recreational Disturbance Avoidance and Mitigation Strategy (RAMS) - A strategy and partnership in Essex which sets out a long-term strategic approach to lessen the impact of local housing development on protected birds along the Essex coast.

Renewable and Low Carbon Energy - Includes energy for heating and cooling as well as generating electricity. Renewable energy covers those energy flows that occur naturally and repeatedly in the environment – from the wind, the fall of water, the movement of the oceans, from the sun and also from biomass and deep geothermal heat. Low carbon technologies are those that can help reduce emissions (compared to conventional use of fossil fuels).

Retail Capacity Study - Informs preparation of the review Local Plan by providing up-to-date, objective assessments of retail and leisure development needs in the Council area and considering possible strategic policy responses to any prevalent or emerging issues.

Registered Parks and Gardens - A designated landscape assessed to be of particular significance and registered on the National Heritage List for England.

Rural Exception Sites - Small sites used for affordable housing in perpetuity where sites would not normally be used for housing, to address the needs of the local community by accommodating households who are either current residents or have an existing family or employment connection.

Scheduled Monument - A historic building or site of national importance and registered on the National Heritage List for England.

Self-build and Custom Housebuilding - The building or completion by (a) individuals, (b) associations of individuals, or (c) persons working with or for individuals or associations of individuals of houses to be occupied as homes by those individuals.

Sequential and Exception Tests - The Sequential Test compares a proposed site with other available sites. Its aim is to steer new development to areas with the lowest risk of flooding. The Exception Test is designed to allow appropriate and safe development to proceed in scenarios where the Sequential Test has been passed, i.e. where it has been shown that suitable sites at lower risk of flooding are not available.

Service Settlements - A category of settlements which have more limited services than Key Service Settlements. They typically have primary schools, but do not have the range of other services and facilities that are found at the Key Service Settlements.

Sites of Special Scientific Interest (SSSIs) - A conservation designation denoting a protected area in the United Kingdom.

Small Settlements - The smallest category of settlements in the City Council's administrative area which have relatively limited services and facilities.

South Woodham Ferrers Urban Area - The main built-up part of South Woodham Ferrers.

Spatial Principles - These set out how the Local Plan will achieve its vision for the future growth and change of Chelmsford. Spatial principles will manage and accommodate this growth by outlining how supporting infrastructure will be secured and ensuring that growth is focused in the most sustainable locations.

Spatial Strategy - It sets out the amount and location of new development, and how places will change and be shaped throughout the Plan period and beyond.

Special Policy Areas - Designation enables the operational and functional requirements of the large facilities and institutions outside of built-up areas to be planned in a strategic and phased manner.

Standard Method - The national standard method uses a formula that incorporates a baseline of local housing stock which is then adjusted upwards to reflect local affordability to identify the minimum number of homes expected to be planned for.

D - Glossary

Strategic Flood Risk Assessment (SFRA) - Provides an overview of flood risk from all sources within a defined area and provides general guidance on flood risk and issues associated with flooding for the area being studied.

Strategic Growth Sites - Large sites to accommodate 100 or more houses.

Strategic Housing Needs Assessment (SHNA) - Sets out estimates of Chelmsford's current and future housing requirements including the number of new homes needed by tenure and type, and the housing requirements of important sub-groups of the population.

Strategic Housing and Employment Land Availability Assessment (SHELAA) - A technical assessment of sites, land and buildings that may have the potential for future development (housing, employment, community etc.). The SHELAA does not allocate new development as this is a matter for the City Council to decide through the Local Plan and/or through the planning application process.

Strategic Priorities - The key priorities that the Local Plan is based on. These priorities set the overall policy direction for all the strategic policies, site allocations and development management policies in the Local Plan.

Supplementary Planning Documents (SPDs) - Documents which add further detail to the policies in the development plan. They can be used to provide further guidance for development on specific sites, or on particular issues, such as design. Supplementary planning documents are a material consideration in planning decisions but are not part of the development plan.

Sui Generis - Planning uses falling outside the standard use classes, which can include betting offices, theatres, hostels, scrap yards, petrol stations, nightclubs, launderettes, casinos.

Sustainability Appraisal/Strategic Environmental Assessment (SEA) - Assessment of the social, economic, and environmental impacts of the policies and proposals contained within a development plan document. This is contained with the Integrated Impact Assessment.

Sustainable Development - Commonly defined as development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

Sustainable Drainage Systems (SuDS) - A natural approach to managing drainage by slowing down and reducing the quantity of surface water runoff from a developed area to manage downstream flood risk and reducing the risk of the runoff causing flooding.

Sustainable Transport/Travel - Any efficient, safe and accessible means of transport with overall low impact on the environment, including walking and cycling, low and ultra low emission vehicles, car sharing and public transport.

Use Classes - The Town and Country Planning (Use Classes) Order 1987 (as amended) puts uses of land and buildings into various categories known as 'Use Classes'. Planning permission is generally required to change from one use class to another, although there are some exceptions.

Vision - Aspirations for what the new Local Plan could achieve or accomplish in the future.

Walkable Neighbourhoods - Neighbourhoods and streets designed to promote the use of walking, cycling and sustainable transport. These places are planned to reduce the need to travel and include a mix of uses, green spaces and facilities to support the new development.

Windfall Sites - Sites not specifically identified in the Local Plan.

NON-TECHNICAL SUMMARY

This Non-Technical Summary (NTS) provides an overview of the Integrated Impact Assessment (IIA) of the Chelmsford Review of the Adopted Local Plan Pre-Submission Consultation Document (the Regulation 19 Pre-Submission Consultation Document). The IIA is being carried out on behalf of Chelmsford City Council (the Council) by WSP UK Ltd to help integrate sustainable development, health and equalities issues into the emerging Review of the Adopted Local Plan. The following sections of this NTS:

- provide an overview of the review of the adopted Chelmsford Local Plan and the Pre-Submission Consultation Document;
- describe the approach to undertaking the IIA of the Pre-Submission Consultation Document;
- summarise the findings of the IIA of the Pre-Submission Consultation Document; and set out the next steps in the IIA of the Review of the Adopted Local Plan.

REVIEW OF THE ADOPTED LOCAL PLAN PRE-SUBMISSION CONSULTATION DOCUMENT

The Review of the Adopted Local Plan will set out how much new development will be accommodated in Chelmsford City Council's Administrative Area to 2041 and where this growth will be located. It will also contain planning policies and land allocations. For brevity, the term 'the City Area' is used throughout this document to describe the Council's administrative area.

The Pre-Submission Consultation Document follows the Preferred Options Consultation undertaken in 2024 and sets out the planning issues that face Chelmsford over the next 15 years and the proposed strategy for the way they could be addressed. The key elements of the document include:

- Strategic Priorities, guiding the approach to the Local Plan
- Strategic Policies, setting out the detail of how the Strategic Priorities will be achieved;
- Housing Requirement (approaches relating to how many houses should be built up to 2041);
- Employment Land Requirement (relating to how many jobs should be supported up to 2041); and
- Spatial Strategy for accommodating the proposed development.

Further information about the preparation of the Review of the Adopted Local Plan and the Pre-Submission Consultation Document is set out in Section 1.3 and Section 1.4 of the IIA Report and is available via the Council's website at: www.chelmsford.gov.uk/lp-review

WHAT IS INTEGRATED IMPACT ASSESSMENT?

The IIA brings together into a single framework four different strands of assessment, Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA), Health Impact Assessment (HIA), Equalities Impact Assessment (EqIA) and Habitats Regulations Assessment (HRA) (Figure NTS1), in order to assess the socio-economic and environmental effects of the Local Plan.

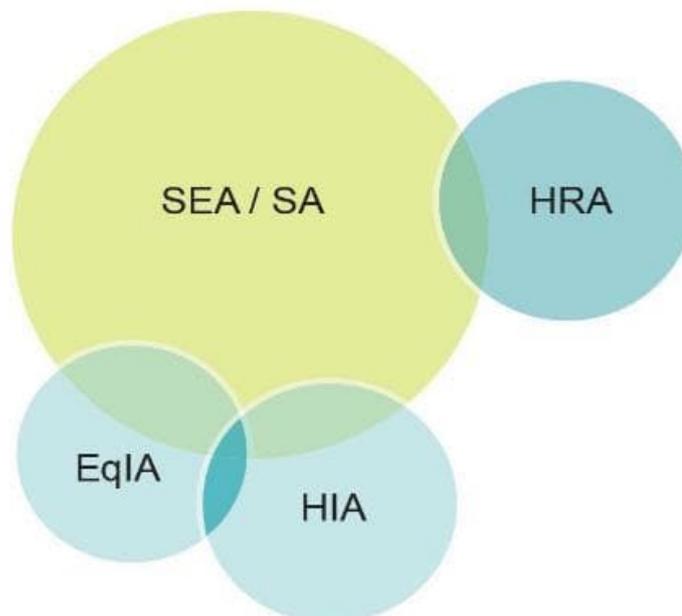

The subsequent appraisal of the Local Plan is an iterative process involving the appraisal and refinement of the Local Plan with the findings published as part of the Issues and Options Consultation, Preferred Options Consultation, Pre-Submission Consultation and Submission Local Plan.

The first stage of the IIA process involved consultation on a Scoping Report. The Scoping Report set out the proposed approach to the assessment of the Review of the Adopted Local Plan and was subject to consultation that ran from Thursday 14th April until Friday 20th May 2022. The Scoping Report is available to view on the Council's website at: <https://www.chelmsford.gov.uk/planning-and-building-control/planning-policy-and-local-plan/local-plan-review-2022/>.

The Issues and Options stage of the Review of the Adopted Local Plan was subject to consultation from Thursday 11th August 2022 for ten weeks until Thursday 20th October 2022. The document was accompanied by an IIA Report. The documents are available to view on the Council's website at: <https://www.chelmsford.gov.uk/planning-and-building-control/planning-policy-and-local-plan/local-plan-review-2022/>.

The Preferred Options stage was subject to consultation for six weeks from 8th May until 19th June 2024. The document was accompanied by an IIA Report. The documents are available to view on the Council's website at: <https://www.chelmsford.gov.uk/planning-and-building-control/planning-policy-and-local-plan/local-plan-review-2022/>

Figure NTS1 Overlaps between the different forms of assessment

WHAT HAS HAPPENED SO FAR?

Based on the five stages of undertaking a SA/SEA, **Figure NTS2** shows the stages of producing the IIA i.e. SA/SEA, EqIA, HIA and HRA. The first stage (**Stage A**) of the IIA process involved consultation on a Scoping Report. The Scoping Report set out the proposed approach to the assessment of the Review of the Adopted Local Plan including an Assessment Framework and was subject to consultation that ran from Thursday 14th April until Friday 20th May 2022.

Stage B is an iterative process involving the assessment and refinement of the Local Plan with the findings to be presented in interim IIA Reports published alongside the Local Plan Issues and Options Consultation, Preferred Options Consultation and Pre-Submission Consultation. The Issues and Options IIA Report was subject to consultation from Thursday 11th August 2022 until Thursday 10th October 2022.

The Preferred Options IIA Report was subject to consultation for six weeks from 8th May to 19th June 2024.

At **Stage C**, a Submission draft IIA Report will be prepared to accompany the Submission draft Local Plan and will be available for consultation alongside the draft Local Plan itself prior to consideration by an independent planning inspector (**Stage D**).

Following Examination in Public (EiP), the Council will issue a Post Adoption Statement as soon as reasonably practicable after the adoption of the Local Plan. During the period of the Local Plan, the Council will monitor its implementation and any significant social, economic and environmental effects (**Stage E**).

HOW HAS THE PRE-SUBMISSION CONSULTATION DOCUMENT BEEN APPRAISED?

To support the assessment of the Local Plan, an Assessment Framework has been developed. This contains a series of sustainability objectives and guide questions that reflect both the current socio-economic and environmental issues which may affect (or be affected by) the Local Plan and the objectives contained within other plans and programmes reviewed for their relevance to the IIA and the Local Plan. The Assessment Objectives are shown in **Table NTS1**.

Figure NTS2 The IIA Process

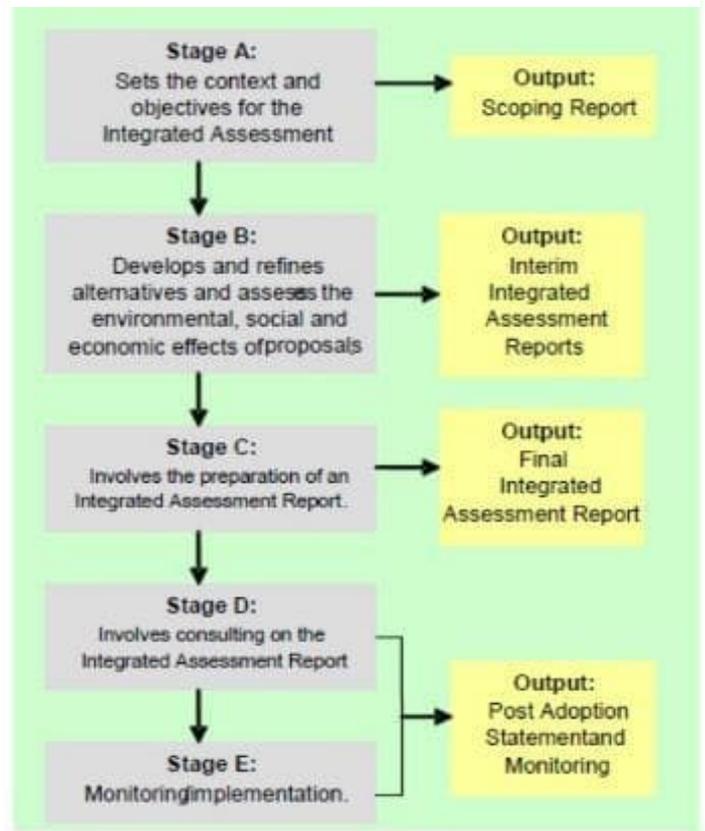

Table NTS1 IIA Assessment Objectives Used to Appraise the Pre-Submission Consultation Document

1. Biodiversity and Geodiversity: To conserve and enhance biodiversity and geodiversity and promote improvements to the multifunctional green infrastructure network.
2. Housing: To meet the housing needs of the Chelmsford City Area and deliver decent homes.
3. Economy, Skills and Employment: To achieve a strong and stable economy which offers rewarding and well located employment opportunities to everyone.
4. Sustainable Living and Revitalisation: To promote urban renaissance and support the vitality of rural centres, tackle deprivation and promote sustainable living.
5. Health and Wellbeing: To improve the health and well being of those living and working in the Chelmsford City area.
6. Transport: To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.
7. Land Use and Soils: To encourage the efficient use of land and conserve and enhance soils.
8. Water: To conserve and enhance water quality and resources.
9. Flood Risk and Coastal Erosion: To reduce the risk of flooding to people and property, taking into account the effects of climate change.
10. Air: To improve air quality.
11. Climate Change: To minimise greenhouse gas emissions and adapt to the effects of climate change.
12. Waste and Natural Resources: To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.
13. Cultural Heritage: To conserve and enhance the historic environment, cultural heritage, character and setting.
14. Landscape and Townscape: To conserve and enhance landscape character and townscapes.

The Strategic Priorities have been assessed for their compatibility with the Assessment Objectives. The Housing Requirement, Employment Land Requirement and Spatial Strategy contained in the Pre-Submission Consultation Document have been appraised using matrices to identify likely significant effects on the Assessment Objectives. A qualitative scoring system has been adopted which is set out in **Table NTS2**.

Table NTS2 Scoring System Used in the Assessment of the Pre-Submission Consultation Document

Score	Description	Symbol
Significant Positive Effect	The approach contributes significantly to the achievement of the objective.	++
Minor Positive Effect	The approach contributes to the achievement of the objective but not significantly.	+

Score	Description	Symbol
Neutral	The approach does not have any effect on the achievement of the objective	0
Minor Negative Effect	The approach detracts from the achievement of the objective but not significantly.	-
Significant Negative Effect	The approach detracts significantly from the achievement of the objective.	--
No Relationship	There is no clear relationship between the approach and the achievement of the objective or the relationship is negligible.	~
Uncertain	The approach has an uncertain relationship to the objective or the relationship is dependent on the way in which the aspect is managed. In addition, insufficient information may be available to enable an assessment to be made.	?

NB: where more than one symbol/colour is presented in a box it indicates that the assessment has identified both positive and negative effects. Where a box is coloured but also contains a '?', this indicates uncertainty over whether the effect could be a minor or significant effect although a professional judgement is expressed in the colour used. A conclusion of uncertainty arises where there is insufficient evidence for expert judgement to conclude an effect.

LOCAL PLAN VISION AND STRATEGIC PRIORITIES

The Pre-Submission Consultation Document sets out the following vision for the Review of the Adopted Local Plan:

“Guiding Chelmsford's growth towards a greener, fairer and more connected community.”

Nine Strategic Priorities have been developed (Table NTS3).

Table NTS3 Strategic Priorities of the Review of the Adopted Local Plan

Priorities for climate
<p>1. Addressing the Climate and Ecological Emergency</p> <ul style="list-style-type: none"> Mitigate the impacts of climate change and adapt to its consequences Ensure new development moves towards delivering net-zero carbon emissions (energy efficiency, sustainable construction, renewable energy, infrastructure for active and sustainable travel) Ensure development adapts to minimise adverse impacts that create climate and ecological change, including managing flood risk and reducing carbon emissions Encourage tree planting and an increase in woodland expansion Ensure sustainable drainage systems in developments
<p>2. Promoting smart, active travel and sustainable transport</p> <ul style="list-style-type: none"> Promote/prioritise active travel and sustainable transport, for example in new developments creating walkable neighbourhoods, where everyday facilities such as schools, shops, workplaces, community and sports facilities, and open spaces are easily accessible by foot or cycle in 15-20 minutes Reduce reliance on fossil fuelled vehicles Support the provision of strategic and local transport infrastructure to enable a future for alternatives to fossil fuelled vehicles Create the conditions for active and sustainable travel locally, such as electric charging points for all new houses, accessible cycle and footpaths, multi-functional greenways, secure cycle parking, and provision of or subscription to car clubs Promote innovations in transport including smart technology

3. Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks

- Plan positively for biodiversity net gain and green infrastructure including high quality green spaces
- protect and enhance local distinctiveness and plan positively for the creation, protection, enhancement and management of multi-functional green/blue infrastructure networks and habitats to ensure a net gain for biodiversity and green infrastructure in line with the Council's Green Infrastructure Strategic Plan
- Minimise the loss of the best and most versatile agricultural land to ensure future food production
- Protect/enhance the River Valleys and increase opportunities for sustainable travel
- Use high quality green infrastructure to protect, enhance and create wildlife corridors to maintain ecological connectivity when greenfield land will be lost

Priorities for growth

4. Ensuring sustainable patterns of development and protecting the Green Belt

- Plan positively to meet identified development needs and ensure that new development takes place in a sustainable way by balancing the key economic, social and environmental dimensions
- Promote development of previously developed land in Chelmsford's Urban Area
- Use the Settlement Hierarchy to identify most sustainable existing locations
- Locate development in locations that are close to existing or proposed local facilities so people can walk/cycle and be less reliant on the car
- Protect the Green Belt from inappropriate development
- Ensure accordance with the Minerals Local Plan, Waste Local Plan and South East Inshore Marine Plan

5. Meeting the needs for new homes

- Provide high quality new homes that meet people's needs (market, affordable, starter, supported, specialist, Gypsies and Travellers)
- Address the imbalance between the supply and need for affordable housing for rent
- Meet identified targets/needs for numbers and types of homes required to be built each year
- Maintain a good supply of homes throughout the Local Plan period

6. Fostering growth and investment and providing new jobs

- Ensure Chelmsford's businesses thrive, continue to innovate and can be even more productive and resilient
- Foster new economic growth and new jobs to meet forecast local needs generated by the growing population.
- Ensure a flexible rolling supply of employment land over the Local Plan period
- Support the retention of existing designated employment and rural employment areas to maintain supply and choice of employment floorspace and rural employment development opportunities, and support the growing green economy and creative sector
- Promotion of a circular economy

Priorities for place

7. Creating well designed and attractive places, and promoting the health and social well-being of communities

- Promote the health and wellbeing of communities
- Encourage healthy lifestyles and living environments for all residents for example by requiring development to contribute to creating an inclusive built and natural environment, to provide new green spaces including high quality green infrastructure and access to the countryside, sport and recreation facilities and to promote active and healthy lifestyles through the enhancement of sustainable and active travel routes
- Ensure that the integrity of communities is maintained, and social cohesion is promoted in new development
- Ensure that all new development meets the highest standards of design
- Require the use of masterplans and encourage design codes where appropriate for strategic scale developments
- Ensure new development helps provide new primary health services

<ul style="list-style-type: none"> • Promote community involvement in the long-term management and stewardship of new strategic residential development • Encourage development to be future-proofed and as sustainable and energy efficient as possible
<p>8. Delivering new and improved strategic and local infrastructure</p> <ul style="list-style-type: none"> • Address city-wide infrastructure needs • Maximise the efficient use of existing infrastructure capacities • Explore opportunities for new sustainable infrastructure • Ensure that necessary new or upgraded local infrastructure is provided alongside new development when it is needed • Ensure appropriate and timely strategic infrastructure to support new development
<p>9. Encouraging resilience in retail, leisure, commercial and cultural development</p> <ul style="list-style-type: none"> • Promote the vitality and viability of Chelmsford City Centre, South Woodham Ferrers Town Centre and Principal Neighbourhood Centres • Promote a range of functions which contribute to the vibrancy of Chelmsford City Centre and maintain its position as a leading destination. • Enhance the retail, leisure, commercial and cultural development offer of South Woodham Ferrers Town Centre • Protect existing and support new/enhanced leisure, sports, arts, cultural and recreation facilities to ensure that all parts of the City Council area are vibrant and successful • Implementation of the Plan for Improving Rivers and Waterways in and around Chelmsford, to improve the appearance, attractiveness and recreational use of Chelmsford's rivers and waterways, and some of its ambitions have been translated into policy

FINDINGS OF THE ASSESSMENT OF THE PRE-SUBMISSION CONSULTATION DOCUMENT

STRATEGIC PRIORITIES

It is important that the Strategic Priorities for the Local Plan are aligned with the IIA Objectives. The Strategic Priorities have therefore been assessed for their compatibility with the objectives that comprise the IIA Framework to help establish whether the general approach to the Local Plan is in accordance with the principles of sustainability.

ASSESSMENT

Table NTS4 presents the assessment of the compatibility between the Local Plan Strategic Priorities and the IIA Objectives.

Table NTS4 IIA Objectives and Strategic Priorities Compatibility Matrix

Assessment Objective	Strategic Priorities								
	1. Addressing the Climate and Ecological Emergency	2. Promoting smart, active travel and sustainable transport	3. Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks	4. Ensuring sustainable patterns of development and protecting the Green Belt	5. Meeting the needs for new homes	6. Fostering growth and investment and providing new jobs	7. Creating well designed and attractive places, and promoting the health and social well-being of communities	8. Delivering new and improved strategic and local infrastructure	9. Encouraging resilience in retail, leisure, commercial and cultural development
1. Biodiversity and Geodiversity: To conserve and enhance biodiversity and geodiversity and promote improvements to the multifunctional green infrastructure network.	+	+	+	+	?	?	+	?	0
2. Housing: To meet the housing needs of the Chelmsford City Area and deliver decent homes.	-	0	-	?	+	+	?	+	0
3. Economy, Skills and Employment: To achieve a strong and stable economy which offers rewarding and well-located employment opportunities to everyone.	-	0	-	?	0	+	?	+	+
4. Sustainable Living and Revitalisation: To promote urban renaissance and support the vitality of rural centres, tackle deprivation and promote sustainable living.	0	+	0	+	+	+	+	+	+
5. Health and Wellbeing: To improve the health and well being of those living and working in the Chelmsford City area.	+	+	+	0	+	+	+	+	+
6. Transport: To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	+	0	?	0	?	0	+	+
7. Land Use and Soils: To encourage the efficient use of land and conserve and enhance soils.	+	0	+	+	-	-	+	?	0
8. Water: To conserve and enhance water quality and resources.	+	0	+	+	?	0	+	?	0
9. Flood Risk: To reduce the risk of flooding to people and property, taking into account the effects of climate change.	+	0	+	+	?	0	+	?	0

Assessment Objective	Strategic Priorities								
	1. Addressing the Climate and Ecological Emergency	2. Promoting smart, active travel and sustainable transport	3. Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks	4. Ensuring sustainable patterns of development and protecting the Green Belt	5. Meeting the needs for new homes	6. Fostering growth and investment and providing new jobs	7. Creating well designed and attractive places, and promoting the health and social well-being of communities	8. Delivering new and improved strategic and local infrastructure	9. Encouraging resilience in retail, leisure, commercial and cultural development
10. Air: To improve air quality.	+	+	+	+	?	0	?	-	0
11. Climate Change: To minimise greenhouse gas emissions and adapt to the effects of climate change.	+	+	+	+	?	?	+	-	0
12. Waste and Natural Resources: To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	+	0	0	0	-	0	?	0	0
13. Cultural Heritage: To conserve and enhance the historic environment, cultural heritage, character and setting.	0	0	+	+	-	?	+	?	0
14. Landscape and Townscape: To conserve and enhance landscape character and townscapes.	+	0	+	+	-	?	+	?	0

Key

+	Compatible	?	Uncertain	0	Neutral	-	Incompatible
---	------------	---	-----------	---	---------	---	--------------

The key findings of this assessment are as follows:

- Interactions between Strategic Priorities and the IIA Objectives are predominantly compatible or neutral in character.
- Uncertainties are principally associated with Strategic Priorities 5, 6 and 8 (meeting the need for new homes, economic development and infrastructure provision), reflecting the sustainability performance of development being dependent upon its scale, location, design and proposed mitigation measures.

- Potential incompatibilities exist between housing and economic development (IIA Objectives 2 and 3 respectively) and environmental protection and enhancement (Strategic Priorities 1 and 3), reflecting the frequent need for compromises to be made between development and environmental interests.
- Similarly, potential incompatibilities between land use (IIA Objective 7) and delivering homes and investment (Strategic Priorities 5 and 6); air quality and climate change (IIA Objectives 10 and 11) and delivering infrastructure (Strategic Priority 8); and waste and resources, townscape and landscape (IIA Objectives 12, 13 and 14) and the delivery of new homes (Strategic Priority 5).

Where possible incompatibilities or uncertainties have been identified, these stand a greater chance of being resolved if development takes place in accordance with all the Strategic Priorities. As such, an incompatibility or uncertainty is not necessarily irreconcilable or insurmountable but one that may need to be considered in the development of policies that comprise the Local Plan.

HOUSING REQUIREMENT

In order to meet the transitional arrangements for plan-making contained within the revised NPPF (December 2024), provision is made for a minimum of 22,990 net new homes at an average annual rate of 1,210 net new homes per year. This equates to 83% of the housing need identified in the revised Standard Method (December 2024).

The findings of the Gypsy and Traveller Accommodation Assessment that covers the period 2023 to 2041 identifies a requirement for 40 permanent Gypsy and Traveller pitches and 38 permanent Travelling Showpeople plots to be developed by 2041 within Chelmsford for households that meet the definition of Gypsies and Travellers in the PPTS.

In order to meet identified need, a total of 30 permanent pitches for Gypsies and Travellers as defined by national planning policy for the period 2022-2041 will be provided.

In order to meet identified need, a total of 28 permanent plots will be provided for Travelling Showpeople as defined by national planning policy in the period 2022- 2041.

The remainder of the need to be met through windfall applications using the criteria of Policy DM3.

ASSESSMENT

The Proposed Housing Requirement has been assessed against the IIA objectives, using the qualitative scoring system in **Table NTS2**. **Table NTS5** summarises the assessment.

Table NTS5 Assessment of the Proposed Housing Allocation

Assessment Objective	1. Biodiversity	2. Housing	3. Economy	4. Sustainable Living and Revitalisation	5. Health and Wellbeing	6. Transport	7. Land Use	8. Water	9. Flood Risk	10. Air Quality	11. Climate Change	12. Waste and Natural Resources	13. Cultural Heritage	14. Landscape and Townscape
Housing Requirement	+/-	++	++	+/-	+/-	+/- /?	+/-	-/?	-/?	-/?	-/?	-/?	+/-	+/-

The key likely significant sustainability effects associated with the Housing Requirement relate to:

- **Housing (Objective 2):** the approach would meet in full, and exceed, the assessed housing requirement for the Chelmsford City Area over the plan period. This is in accordance with the objective of the National Planning Policy Framework (NPPF) to boost housing supply.
- **Economy (Objective 3):** the approach would help to stimulate economic growth through the provision of a workforce as well as consumers. Development proposals are typically careful to ensure homes, jobs and infrastructure are delivered in a co-ordinated fashion to help limit excess in- or out-commuting and ensure a degree of self-containment.
- **Land use (Objective 7):** whilst brownfield land will be used through windfall sites, a significant area of greenfield land will be required.

The negative (and uncertain) effects identified across a range of the IIA Objectives reflects the potential for housing growth to result in adverse environmental impacts. These potential effects will require further consideration in the identification of site allocations and development of policies for the Local Plan and in this regard, there is the potential for new housing to deliver benefits in respect of, for example, sustainable travel, health and enhancements to townscapes.

EMPLOYMENT LAND REQUIREMENT

Whilst the Adopted Local Plan employment policies are still relevant and site allocations for new employment development are also progressing in line with projections, some policies will require updating and additional policies may be required in the light of changes to national planning policy and new legislation. Changes are also required to ensure that the plan continues to meet future employment needs to 2041.

The Pre-Submission Consultation Document proposes a continuation of the existing approach to employment land provision, i.e. a flexible rolling employment land supply across the plan period to 2041). Consequently, it is proposed that development sites to accommodate a minimum of 162,646 sqm of new employment business floorspace (Use Classes E(g)(i-iii), B2 and-B8) in addition to existing commitments over the Plan period.

ASSESSMENT

The proposed approach to the Employment Land Requirement has been assessed against the IIA objectives using the qualitative scoring system in **Table NTS2**. The emerging findings of the assessment are summarised in **Table NTS6**.

Table NTS6 Assessment of the Proposed Approach to the Employment Allocation

Assessment Objective	1. Biodiversity	2. Housing	3. Economy	4. Sustainable Living and Revitalisation	5. Health and Wellbeing	6. Transport	7. Land Use	8. Water	9. Flood Risk	10. Air Quality	11. Climate Change	12. Waste and Natural Resources	13. Cultural Heritage	14. Landscape and Townscape
Proposed employment allocation (162,646sqm)	-/?	0	++/?	+	+/?	+/?	+/?	-/?	-/?	+/?	+/?	-	+/?	+/?

The key likely significant sustainability effects associated with the Employment Land Requirement relate to:

- **Economy (Objective 3):** The provision of employment land will support economic growth across Chelmsford, delivering deliver jobs and supporting regeneration and investment.
- **No significant negative effects** on the IIA objectives have been identified.

The negative (and uncertain) effects identified across a range of the IIA objectives reflects the potential for economic development to result in adverse environmental impacts. These potential effects will require further consideration in the development of policies for the Local Plan and will require particular attention in the identification of site location, design and mitigation measures. There is the potential for new employment uses to deliver benefits in respect of, for example, sustainable travel, health and enhancements to townscapes.

PROPOSED SPATIAL STRATEGY

The Proposed Spatial Strategy for the delivery of the proposed housing and employment growth is presented in **Table NTS7** and **Figure NTS1**. The Proposed Spatial Strategy draws on aspects of the

five spatial approaches set out in the Issues and Options Consultation Document¹. The Assessment of the Proposed Spatial Strategy is set out in **Table NTS8**.

Table NTS7 Summary of the Proposed Spatial Strategy

Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Growth Area 1 – Central and Urban Chelmsford					
Site/Location					
1	Previously developed sites in Chelmsford Urban Area	3,013			4,000sqm Use Class Eg(i-iii)
2	West Chelmsford	880		5	
3a	East of Chelmsford - Manor Farm	360			
3b	East of Chelmsford - Land North of Maldon Road				5,000sqm Office/Business Park
3c	East of Chelmsford - Land North of Maldon Road	109			
3d	East of Chelmsford - Land North of Maldon Road	65			
4	Land North of Galleywood Reservoir	24			
5	Land surrounding Telephone Exchange, Ongar Road, Writtle	25			
Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Area Total		4,476		5	9,000sqm
Growth Area 2 – North Chelmsford					
Site/Location					
6	North East Chelmsford (Chelmsford Garden Community)	5,569	10		56,946sqm Office/Business Park
7a	Great Leighs - Land at Moulsham Hall	750		5	

¹ Approach A: Growing Existing Strategy; Approach B: Growth in Urban Areas; Approach C: Wider Strategy; Approach D: Growth Along Transport Corridors; Approach E: New Settlement

Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
7b	Great Leighs - Land East of London Road	250			
7c	Great Leighs - Land North and South of Banters Lane	100			
8	North of Broomfield	512			
9a	Waltham Road Employment Area				3,500sqm B2/B8

Figure NTS1 Proposed Spatial Distribution of Growth Locations

Table NTS8 Summary of the sustainability effects of the Proposed Spatial Strategy

Assessment Objective	1. Biodiversity	2. Housing	3. Economy	4. Sustainable Living and Revitalisation	5. Health and Wellbeing	6. Transport	7. Land Use	8. Water	9. Flood Risk	10. Air Quality	11. Climate Change	12. Waste and Natural Resources	13. Cultural Heritage	14. Landscape and Townscape
Proposed Spatial Strategy	+/-/?	++	++	+/-	+/-	+/-/?	-/?	-/?	0	0/?	0/?	+/-	+/-/?	+/-/?

The likely significant sustainability effects associated with the Proposed Spatial Strategy relate to:

- **Housing (Objective 2):** Realising the delivery of homes to help meet local and sub-regional needs, including affordable housing.
- **Economy (Objective 3):** The provision of employment land will support economic growth across Chelmsford, delivering deliver jobs and supporting regeneration and investment.
- **Health and Well-Being (Objective 5):** The provision of more and a wider range of services associated with population growth.
- Significant negative effects associated with **Land Use (Objective 7)** and **Landscape (Objective 14)**, reflecting the permanent loss of these resources to urban development.

The negative (and uncertain) effects identified across a range of IIA objectives reflects the potential for development to result in adverse environmental impacts. These potential effects will require further consideration in the development of policies for the Review of the Adopted Local Plan and will require particular attention in the identification of site location, design and mitigation measures. There is the potential for new development to deliver benefits in respect of, for example, sustainable travel, health and enhancements to townscapes.

The Proposed Spatial Strategy is capable of delivering housing and employment land requirements over the plan period, resulting in positive sustainability effects. There are mixed positive and negative effects in respect of biodiversity, cultural heritage, flood risk, land use and resource use, with potential uncertainty in respect of sustainable living and revitalisation, air quality and climate change water resource use is an issue, reflecting regional local supply deficits.

The uncertainties and negative effects recorded emphasise the importance of the monitoring of the performance of sustainability indicators to help implement mitigation measures which would help improve the performance of all approaches, notably in respect of air quality, biodiversity, climate change and health and well-being. In addition, small allocations in Key Service and Service Settlements will help to support the villages’ services and facilities.

Overall, the Proposed Spatial Strategy draws on elements of the five spatial approaches previously presented and in so doing meets the housing and employment needs of the City Area. The limitations and opportunities associated with all five approaches are acknowledged in the suite of policies supporting the proposed spatial strategy and attendant allocations, based on experience in bringing forward strategic site allocations such as the North East Chelmsford Garden Community.

HABITATS REGULATIONS ASSESSMENT

Regulation 105 of the *Conservation of Habitats and Species Regulations 2017* (as amended) states that if a land-use plan is “(a) is likely to have a significant effect on a European site or a European offshore marine site (either alone or in combination with other plans or projects); and (b) is not directly connected with or necessary to the management of the site” then the plan-making authority must “...make an appropriate assessment of the implications for the site in view of that site’s conservation objectives” before the plan is given effect. The process by which Regulation 105 is met is known as Habitats Regulations Assessment (HRA). The Council has a statutory duty to prepare the Local Plan and is therefore the Competent Authority for an HRA.

Regulation 105 essentially provides a test that the final plan must pass; there is no statutory requirement for HRA to be undertaken on draft plans or similar developmental stages (e.g. issues and options; preferred options). However, it is accepted best-practice for the HRA of strategic planning documents to be run as an iterative process alongside plan development.

Appendix N of this report provides guidance on the HRA-related issues that will be relevant to both the plan development and the HRA. It includes:

- an outline of the proposed approach and scope of the Local Plan HRA;
- a summary of the environmental and European site baseline, as currently understood, and any known data gaps or environmental aspects subject to future studies;
- informal guidance for the Council on any HRA-related issues or risks that may be relevant to the Options selection process, and/or which may need to be considered when reviewing the Local Plan.

The proposed approach will not create fundamental systematic effects that cannot be avoided or mitigated irrespective of how the objectives and options are defined through allocation and policy.

HEALTH IMPACT ASSESSMENT AND EQUALITIES IMPACT ASSESSMENT

The Proposed Spatial Strategy has been subject to Equalities Impact Assessment (EqIA) and Health Impact Assessment (HIA) and presented in Appendices I and J respectively. The principal results from the assessments are presented in Table NTS9.

Table NTS9 Principal Results from the HIA and EqIA

HIA	EqIA
<p>Strategic Policies</p> <p>Overall, the strategic policies will help to support and progress the HIA objectives by improving access to new homes, employment opportunities and associated infrastructure.</p> <p>The policies encourage high quality design and active travel, the protection and enhancement of the environment, community facilities and the delivery of multi-functional open spaces and green infrastructure. Strategic Policy S14 (Health and Wellbeing) is likely to significantly progress all of the objectives as it directly relates to health and wellbeing. It sets out a commitment to improving the health and wellbeing of residents and communities, promoting more active and healthier lifestyles, creating healthy living environments and reducing health inequalities through high-quality placemaking.</p>	<p>The Strategic Policies do not directly affect a number of the protected characteristics considered under the EqIA, reflecting the intention and scope of the plan as a land use document. All of the Strategic Policies and Site Allocations are assessed as having either a positive, mixed or neutral outcome in respect of the protected characteristics; consequently, the Pre-Submission Document is considered to be generally compatible with the duties of the Equality Act 2010.</p> <p>In respect of gender reassignment, marriage and civil partnership, sex and sexual orientation there are no identified effects included in policy options or site options that are considered to</p>

While the delivery of the new infrastructure can have temporary negative effects on the health and well-being of existing communities; through increased disturbance (noise), reduced local air quality as a result of increased traffic emissions and dust, and the loss of existing open/ green spaces, the strategic policies in conjunction with other Local Plan policies provide sufficient mitigation to ensure that there are no residual significant negative effects on the HIA objectives.

Growth Area Policies

The growth area policies propose the delivery of housing, employment and associated infrastructure across a number of sites.

The delivery of strategic scale infrastructure will significantly progress the HIA objectives through improved access to good quality homes (including affordable homes), employment opportunities, community facilities (including education and health services) and greater opportunities for active travel. The policies also require the provision of accessible and multi-functional open/ green spaces and the provision or contributions to new or enhanced recreational facilities.

While the delivery of the new infrastructure can have temporary negative effects on the health and well-being of existing communities; through increased disturbance (noise), reduced local air quality as a result of increased traffic emissions and dust, and the loss of existing open/ green spaces, the growth area policies in conjunction with other Local Plan policies provide sufficient mitigation to ensure that there are no residual significant negative effects on the HIA objectives. There is the opportunity to strengthen the growth area policies in relation to HIA objective 5, through the requirement for the delivery of communal food growing opportunities in strategic scale development, such as allotments or community orchards. The policies relating to Special Policy Areas (SPA) are likely to progress HIA objectives 2, 4 and 6 as they allow for the continued operation and function of key facilities, including Broomfield Hospital.

Development Management Policies

The development management policies often relate to a specific issue and therefore progress a particular HIA objective. In general, the majority of them are not likely to progress or hinder the HIA objectives given the nature of the policies. Policies DM1, DM2 and DM24 are likely to significantly progress HIA objective 1 relating to design of homes. The policies require an appropriate mix of dwelling types and sizes, the delivery of affordable homes and high quality built form and urban design. None of the policies were identified as having the potential to have significant negative effects on the HIA objectives.

have a direct effect on these four protected characteristics. For the remaining five protected characteristics – age, disability, religion or belief, pregnancy and maternity and race - the options considered as part of the Local Plan Pre-Submission document are likely to have some positive effects as follows:

- policies which seek to provide and enhance community services and facilities will benefit the young, old and those with accessibility issues such as the disabled and pregnant women (Strategic Policies S1, S5, S9, S12, S15, S16, S17).
- the provision of accessible greenspace and enhancement of accessibility (Strategic Policies S1, S2, S5, S9, S13, S15) is likely to directly benefit those with relatively limited accessibility.
- Those vulnerable to air pollution (the young, old and pregnant women) are also likely to directly benefit from the provision of more open space which is accessible, as well as improvements in air quality as a result of modal shift in transport use, notably through the provision of walking and cycling routes and EV charging infrastructure (Strategic Policies S1, S2, S5, S9, S12, S13, S15).
- The provision of high quality community infrastructure including meeting spaces is likely to benefit those vulnerable to social isolation (notably the elderly, disabled and pregnant women) through offering opportunities for socialising in accessible places (Strategic Policies S1, S5, S9, S12, S15, S16, S17)
- The provision of a wide range of housing types and affordable options will help to ensure greater equality of access, meeting the needs of specific groups, notably the elderly, disabled and young).

The Proposed Spatial Strategy is likely to yield overall positive effects, reflecting the provision of greater opportunities for access to services and employment.

Overall, no negative effects have been identified across the two analyses, although there are a wide range of uncertainties associated with policy implementation and the requirement for ongoing monitoring and evaluation to determine the success of policy implementation and any unintended consequences.

Consideration of Options and Reasonable Alternatives

Throughout the plan preparation process, growth level and spatial options have been prepared and consulted upon to help prepared a balanced and reasoned plan. As part of the preparation of the Pre-submission IIA, the proposed strategy (Option 2a) is compared to a no change scenario (Option 1) and four reasonable alternatives which present different configurations of growth and its spatial distribution. The six reasonable alternatives comprise:

- Option 1: Lower Growth includes existing adopted Local Plan allocations.
- Option 2a: Transitional growth includes existing adopted Local Plan allocations, new brownfield and small site options, East Chelmsford Garden Community (Hammonds Farm) and Land adjacent to A12 Junction 18 Employment Area.
- Option 2b: Transitional growth includes existing adopted Local Plan allocations, new brownfield and small site options, Chatham Green and Land East and West of the A12, North and North West of Howe Green Sandon.
- Option 2c: Transitional growth includes existing adopted Local Plan allocations, new brownfield and small site options, West and North West Chelmsford and Land East and West of the A12, North and North West of Howe Green Sandon.
- Option 2d: Transitional growth includes existing adopted Local Plan allocations, new brownfield and small site options, Howe Green and Rettendon Common/ Place and Land East and West of the A12, North and North West of Howe Green Sandon.
- Option 3: Higher growth includes the sites outlined under Option 2a and Option 2c. Also includes an increased number of dwellings on East Chelmsford Garden Community (Hammonds Farm) and West and North West Chelmsford.

The likely significant effects of these reasonable alternatives are analysed, followed by the presentation of the outline reasons for the selection of the preferred approach and rejection of alternatives which explains why the preferred spatial strategy option is selected in light of alternatives.

The analysis of Reasonable Alternatives demonstrates that overall, the alternatives perform no better, and in many instances worse than the Proposed Spatial Strategy (Option 2a).

The lower growth option (Option 1a) performs better than Option 2a in respect of Objective 7 Land Use and soils; and Objective 8 Water, reflecting lower inherent resource use. By contrast, Option 1a performs more poorly against Option 2a in respect of Objective 2 Housing and Objective 3 Employment, reflecting more limited opportunities for meeting housing and associated employment needs.

Central variants, Options 2b – 2d all offer similar types of performance, generally poorer than the Proposed Spatial Strategy, particularly in respect of Objective 4 Sustainable Living and Revitalisation and Objective 6 Transport, reflecting housing-led developments without established sustainable infrastructure connections and consequent reliance on use of the private car, at least in the short and medium term. Whilst relatively large-scale developments could in principle over time deliver a relatively high degree of self-sufficiency, there is a risk that this will not be achieved.

The higher growth option (Option 3) performs more poorly overall reflecting greater resource use with greater uncertainty overall such as potential oversupply of housing in the plan period disrupting co-ordinated delivery against identified need.

OVERALL EFFECTS OF THE PROPOSED SPATIAL STRATEGY

Throughout the evolution of the Local Plan Review, a range of options in respect of amount of development and spatial distribution and site delivery options have been tested and assessed, taking into account:

- The current pattern of development including commitments to future growth on certain sites, as well as learning from the successes and lessons of recent developments.
- The scale of required development which will in the case of housing, both help to meet existing demand (notably for affordable housing) but also the planned growth of the City.
- Environmental protection constraints including biodiversity, Green Belt, Green Wedge and flood risk.
- Using a balance of large, medium and smaller sites which provide for opportunities for higher degrees of self-containment of both new development and that associated with existing settlements where service provision can be vulnerable.
- Commitments to the regeneration of the Chelmsford City urban area through the recycling of brownfield land in preference to greenfield, where possible, maintaining and enhancing service provision, green infrastructure and accessibility using non-car forms of transport.
- Maintaining and enhancing the City's economic dynamism and potential through a proportionate employment land supply and balancing housing development with job creation such that a higher degree of self-containment is achievable than was previously the case.
- Taking opportunities to introduce higher and challenging standards for matters such as green infrastructure (notably on larger sites, but also City-wide), addressing climate change through flood risk mitigation strategies, energy efficiency in building design and implementing best practice on place-making such as the Essex Design Guide.

The proposed quantum of development reflects realistic delivery of supporting community infrastructure as part of a balanced portfolio of development sites, from a new large-scale garden community to proportionate additions to existing settlements, whilst ensuring brownfield redevelopment as a priority.

The scale of development proposed (and across all options) means that there will be significant greenfield land-take and which cannot be mitigated in itself but through the introduction of biodiversity enhancement and wider green infrastructure, particularly on larger sites, creates new resources and enhances health and wellbeing through greater access to these important facets of high quality places. In addition, there will be disruption to existing landscape character associated with the land-take of significant scale new communities.

Whilst higher growth options are more likely to deliver and/or contribute to significant new infrastructure such as road and junction enhancements, this has to be balanced with the wider aspiration to minimise the need to travel and encourage a modal shift away from the private car to 'sustainable' modes of transport (walking, cycling, public transport, electric vehicles). Similarly, the introduction of low-carbon energy generation (such as through ground source heat pumps/networks, battery storage) along with class-leading standards of sustainable design and construction could be presented through the economies of scale associated with high development quanta, in addition to planned communities.

The proposed configuration of growth across the Plan area matches aspirations for housing and employment development with opportunities for a greater degree of self-containment within new and existing communities, reducing the need to travel, accessing local jobs and services and providing an attractive environment for recreation and leisure.

In light of the above, the Pre-Submission Local Plan is likely to have significant positive effects across a number of the IIA Objectives, including:

- Meeting the housing needs of the City both now and in the future through the delivery of a minimum of 22,990 homes (1,210 per year) to 2041, including housing for older people and other specialist needs and demand-led affordability targets, contributing to Objective 2: Housing and Objective 4: Sustainable Living & Revitalisation.
- Expanding and creating sustainable neighbourhoods through City-centre regeneration, expanding existing urban extensions, a new garden community, and proportionate increases to smaller, free-standing communities, creating a well-connected and communities with access to services, contributing to Objective 2: Housing, Objective 4: Sustainable Living & Revitalisation and Objective 5: Health and Wellbeing.
- Expanding and strengthening the City's successful economy through the provision of a flexible rolling employment land supply across the plan period to 2041 to accommodate a minimum of 162,646 sqm of new employment business floorspace (Use Classes E(g)(i-iii), B2 and-B8), contributing to Objective 3: Economy, Skills and Employment; Objective 4. Sustainable Living and Revitalisation and Objective 5: Health and Wellbeing.
- Protecting and enhancing local centres contributing to Objective 3. Economy, Skills and Employment, Objective 4. Sustainable Living and Revitalisation and Objective 5: Health and Wellbeing.
- Achieving high quality design contributing to Objective 4. Sustainable Living and Revitalisation: Objective 13: Cultural Heritage, 14. Landscape and Townscape.
- Providing social, health and education facilities which will support progression towards sustainable communities contributing to Objective 4. Sustainable Living and Revitalisation and Objective 5: Health and Wellbeing.
- Protecting and enhancing Green and Blue Infrastructure resources, including biodiversity resources, recreational amenity, air and water quality, contributing to Objective 1: Biodiversity and Geodiversity, Objective 5: Health and Wellbeing, Objective 7: Land Use and Soils, Objective 8: Water, Objective 9: Flood Risk and Coastal Erosion: Objective 10: Air.
- Encouraging more sustainable forms of transport contributing to Objective 5: Health and Wellbeing and Objective 6: Transport.
- Managing waste and natural resources contributing to Objective 12: Waste and Natural Resources.
- Responding to the challenge of climate change through mitigation measures such as energy efficiency in buildings and on-site energy generation contributing to Objective 2: Housing, Objective 4. Sustainable Living and Revitalisation and Objective 11: Climate Change.

MITIGATION AND ENHANCEMENT

The assessment contained in this Report has identified (see **Section 5.12**) a range of measures to help address potential negative effects and enhance positive effects associated with the implementation of the approaches contained in the Pre-Submission Consultation Document. These measures are highlighted within the detailed assessment matrices and will be considered by the Council in refining the approaches and developing the policies that will comprise the Review of the Adopted Local Plan.

NEXT STEPS

This Pre-Submission IIA Report is being issued for consultation alongside the Pre-Submission Consultation Document. The consultation will run from 04 February to 18 March 2025.

The findings of the Pre-submission IIA Report, together with consultation responses and further evidence base work, will accompany the Submission Local Plan Document.

This Consultation: How to Give Us Your Views

We would welcome your views on any aspect of the IIA Report. In particular, we would like to hear your views as to whether the effects which are predicted are likely and whether there are any significant effects which have not been considered.

Please provide your comments by 18 March 2025. The Council encourages people to submit comments via its consultation portal at:
www.chelmsford.gov.uk/planningpolicyconsult

Alternatively, comments can be sent:

- **By email – planning.policy@chelmsford.gov.uk**
- **By post – Spatial Planning Services, Chelmsford City Council, Civic Centre, Duke Street, Chelmsford, CM1 1JE**
- **You can comment on as much or as little as you wish but please ensure you clearly mark which paragraph/figure/table/policy your comments relate to.**
- **Please note we are unable to accept anonymous representations and any comments received after the closing date cannot be accepted.**
- **Full details of how to make comments can be found in the Consultation Statement available at: www.chelmsford.gov.uk/lp-review**

1. BACKGROUND TO THE INTEGRATED IMPACT ASSESSMENT

1.1 OVERVIEW

- 1.1.1 Chelmsford City Council (the Council) is currently preparing a Review of the Adopted Local Plan (the Local Plan) for Chelmsford City Council's Administrative Area (the City Area). The Local Plan will replace the current Local Plan that was adopted in May 2020, setting out the vision, objectives, planning policies and site allocations that will guide development in the local authority area to 2041. WSP UK Limited (hereafter 'WSP') has been commissioned by the Council to undertake an Integrated Impact Assessment (IIA) of the Review of the Local Plan.
- 1.1.2 The IIA appraises the environmental, social and economic performance of the Review of the Local Plan and any reasonable alternatives. In doing so, it helps to inform the selection of the approaches for the Local Plan concerning (in particular) the quantum, distribution and location of future development in Chelmsford and associated policies. The IIA process also identifies measures to avoid, minimise or mitigate any potential negative effects that may arise from the Local Plan's implementation as well as opportunities to improve the contribution of the Local Plan towards sustainability.
- 1.1.3 The IIA brings together into a single framework five different strands of assessment, Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) (considered as a single assessment), Health Impact Assessment (HIA), Equalities Impact Assessment (EqIA), and Habitats Regulations Assessment (HRA) in order to assess the socio-economic and environmental effects of the Review of the Adopted Local Plan.
- 1.1.4 As part of the preparation of the Local Plan, the Council has prepared the Chelmsford Local Plan Pre-Submission Consultation Document (the Regulation 19 Pre-Submission Consultation Document)². This document sets out the planning issues that face Chelmsford over the next 15 years and the proposed strategy for the way they could be addressed. It is being published for consultation from 04 February to 18 March 2025.
- 1.1.5 This report presents the findings of the IIA of the Pre-Submission Consultation Document.

1.2 PURPOSE OF THIS REPORT

- 1.2.1 Under Section 19(5) of the Planning and Compulsory Purchase Act 2004, the Council is required to carry out a SA of the Local Plan to help guide the selection and development of policies and proposals in terms of their potential social, environmental and economic effects. In undertaking this requirement, local planning authorities must also incorporate

² www.chelmsford.gov.uk/new-local-plan

the requirements of the Environmental Assessment of Plans and Programmes Regulations 2004 (statutory instrument 2004 No. 1633)³.

- 1.2.2 The SEA Regulations seek to provide a high level of protection of the environment by integrating environmental considerations into the process of preparing certain plans and programmes, specifically *“to contribute to the integration of environmental considerations into the preparation and adoption of plans and programmes with a view to promoting sustainable development, by ensuring that an environmental assessment is carried out of certain plans and programmes which are likely to have significant effects on the environment.”*
- 1.2.3 The National Planning Policy Framework (NPPF) (2023) sets out that local plans are key to delivering sustainable development (para 32) and that they must be prepared with the objective of contributing to the achievement of sustainable development, as follows: *“Local plans and spatial development strategies should be informed throughout their preparation by a sustainability appraisal that meets the relevant legal requirements. This should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gains). Significant adverse impacts on these objectives should be avoided and, wherever possible, alternative options which reduce or eliminate such impacts should be pursued. Where significant adverse impacts are unavoidable, suitable mitigation measures should be proposed (or, where this is not possible, compensatory measures should be considered).”*
- 1.2.4 Planning Practice Guidance makes clear that SA plays an important role in demonstrating that a local plan reflects sustainability objectives and has considered reasonable alternatives. In this regard, IIA will help to ensure that a local plan is “justified”, a key test of soundness that concerns the extent to which a plan is the most appropriate strategy, when considered against the reasonable alternatives and available and proportionate evidence.
- 1.2.5 IIA is therefore an integral part of the preparation of the Local Plan. In accordance with paragraph 32 of the NPPF, IIA of the Local Plan will help to ensure that the likely social, economic and environmental effects of the Plan are identified, described, appraised and communicated. Where negative effects are identified, measures will be proposed to avoid, minimise or mitigate such effects. Where any positive effects are identified, measures will be considered that could enhance such effects.
- 1.2.6 This IIA Report supports the development and refinement of the Local Plan by appraising the sustainability strengths and weaknesses of the approaches that comprise the Pre-Submission Consultation Document. This will help promote sustainable development through the early integration of sustainability considerations into the preparation of the Local Plan and selection of approaches. More specifically, this IIA Report sets out:
- an overview of the Review of the Adopted Local Plan;

³ Under the Withdrawal Act, EU-derived domestic legislation (such as existing environmental regulations that implement EU Directives) and Direct EU legislation (such as EU regulations and decisions) which were in force immediately prior to the end of the transition period continued to form part of UK domestic law after 31 December 2020. After 31 December 2020, however, Parliament is at liberty to introduce future changes to the existing legislation since, after 31 December 2020, the UK will no longer be bound by EU legislation.

- a review of relevant international, national, regional, sub-regional and local plans, policies and programmes;
- baseline information for the Local Plan area across key sustainability topics;
- key economic, social and environmental issues relevant to the assessment of the Local Plan;
- the approach to undertaking the assessment of the Pre-Submission Consultation Document;
- the findings of the assessment of the Pre-Submission Consultation Document;
- reasonable alternatives considered as part of the preparation of the Plan; and
- conclusions and an overview of the next steps in the IIA process.

1.3 THE CHELMSFORD REVIEW OF THE ADOPTED LOCAL PLAN – AN OVERVIEW

REQUIREMENT TO PREPARE A LOCAL PLAN

1.3.1 The NPPF⁴ determines that each local planning authority should prepare a local plan for its area. Local plans should set out the strategic priorities and policies to deliver:

- the homes and jobs needed in the area;
- the provision of retail, leisure and other commercial development;
- the provision of infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat);
- the provision of health, security, community and cultural infrastructure and other local facilities; and
- climate change mitigation and adaptation and conservation and enhancement of the natural and historic environment, including landscape.

1.3.2 Planning Practice Guidance (2021)⁵ clarifies (at paragraph 002 ‘Local Plans’) that local plans “*should make clear what is intended to happen in the area over the life of the plan, where and when this will occur and how it will be delivered*”.

PREPARATION OF THE REVIEW OF THE ADOPTED LOCAL PLAN

1.3.3 The Council’s Local Development Scheme (LDS) was updated in November 2023⁶. The LDS sets out the timetable for production of the Local Plan in accordance with the

⁴ Department for Communities and Local Government (2021) National Planning Policy Framework. Available from: https://assets.publishing.service.gov.uk/media/65829e99fc07f3000d8d4529/NPPF_December_2023.pdf

⁵ Department for Communities and Local Government (2021) Planning Practice Guidance. Available from: <https://www.gov.uk/government/collections/planning-practice-guidance>

⁶ Available from [chelmsford-local-development-scheme-2023-2028.pdf](https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/118888/chelmsford-local-development-scheme-2023-2028.pdf)

requirements for plan production set out in The Town and Country Planning (Local Planning) (England) Regulations 2012).

- 1.3.4 The Council has a statutory duty to review the Local Plan at least every five years under Regulation 10A of the Town and Country Planning (Local Planning) (England) Regulations 2012. The NPPF (2023) sets out in paragraph 33 that policies in local plans and spatial development strategies should be reviewed to assess whether they need updating at least once every five years and should then be updated as necessary. It also states that reviews should be completed no later than five years from the adoption date of a plan (which would be 28th May 2025) and should take into account changing circumstances affecting the area, or any relevant changes in national policy. Relevant strategic policies will need updating at least once every five years if their applicable local housing need figure has changed significantly; and they are likely to require earlier review if local housing need is expected to change significantly in the near future. The adopted Local Plan committed to a full or partial review of the Plan in Policy S13 to commence in 2022. The key plan preparation milestones are detailed in **Table 1.1**.

Table 1.1 Local Plan Preparation Milestones

Stage	Date
Evidence gathering and public participation – Scoping Consultation (Regulation 18) (Issues and Options)	August – October 2022
Preferred Options Consultation (Regulation 18)	Spring/Summer 2024
Consultation on Draft Local Plan (Regulation 19)	Early 2025
Submission (Regulation 22)	Summer 2025
Examination in Public (Regulation 24)	Autumn 2025
Adoption (Regulation 26)	Spring 2026

- 1.3.5 Adoption of the Review of the Adopted Local Plan is due to take place in Spring 2026. This is being preceded by three principal periods of consultation during which the Local Plan will be developed and refined taking into account (*inter-alia*) national planning policy and guidance, the Council’s evidence base, the outcomes of consultation and the findings of the IIA.
- 1.3.6 Further information in respect of the review of the Adopted Local Plan is available via the Council’s website at: www.chelmsford.gov.uk/lp-review

1.4 THE PRE-SUBMISSION CONSULTATION DOCUMENT

SCOPE OF THE PRE-SUBMISSION CONSULTATION DOCUMENT

- 1.4.1 The Pre-Submission Consultation Document sets out the planning issues that face the City Area over the next 15 years and the proposed strategy for the way they could be addressed. The key elements of the document, and which are the subject of assessment in this IIA Report, include:
- Strategic Priorities;

- Housing Requirements;
- Employment Land Requirements; and
- Spatial Strategy.

1.4.2 These key elements of the Pre-Submission Consultation Document are discussed in-turn below.

STRATEGIC PRIORITIES

1.4.3 The Pre-Submission Consultation Document sets out Strategic Priorities that are the key priorities that the Local Plan is based on. These priorities set the overall policy direction for all the strategic policies, site allocations and development management policies in the Local Plan.

1.4.4 The proposed Strategic Priorities are set out in **Table 1.2**.

Table 1.2 Proposed Strategic Priorities

Priorities for climate
<p>1. Addressing the Climate and Ecological Emergency</p> <ul style="list-style-type: none"> • Mitigate the impacts of climate change and adapt to its consequences • Ensure new development moves towards delivering net-zero carbon emissions (energy efficiency, sustainable construction, renewable energy, infrastructure for active and sustainable travel) • Ensure development adapts to minimise adverse impacts that create climate and ecological change, including managing flood risk and reducing carbon emissions • Encourage tree planting and an increase in woodland expansion • Ensure sustainable drainage systems in developments
<p>2. Promoting smart, active travel and sustainable transport</p> <ul style="list-style-type: none"> • Promote/prioritise active travel and sustainable transport, for example in new developments creating walkable neighbourhoods, where everyday facilities such as schools, shops, workplaces, community and sports facilities, and open spaces are easily accessible by foot or cycle in 15-20 minutes • Reduce reliance on fossil fuelled vehicles • Support the provision of strategic and local transport infrastructure to enable a future for alternatives to fossil fuelled vehicles • Create the conditions for active and sustainable travel locally, such as electric charging points for all new houses, accessible cycle and footpaths, multi-functional greenways, secure cycle parking, and provision of or subscription to car clubs • Promote innovations in transport including smart technology
<p>3. Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks</p> <ul style="list-style-type: none"> • Plan positively for biodiversity net gain and green infrastructure including high quality green spaces • Protect and enhance local distinctiveness and plan positively for the creation, protection, enhancement and management of multi-functional green/blue infrastructure networks and habitats to ensure a net gain for biodiversity and green infrastructure in line with the Council's Green Infrastructure Strategic Plan • Minimise the loss of the best and most versatile agricultural land to ensure future food production • Protect/enhance the River Valleys and increase opportunities for sustainable travel • Use high quality green infrastructure to protect, enhance and create wildlife corridors to maintain ecological connectivity when greenfield land will be lost
Priorities for growth

4. Ensuring sustainable patterns of development and protecting the Green Belt

- Plan positively to meet identified development needs and ensure that new development takes place in a sustainable way by balancing the key economic, social and environmental dimensions
- Promote development of previously developed land in Chelmsford's Urban Area
- Use the Settlement Hierarchy to identify most sustainable existing locations
- Locate development in locations that are close to existing or proposed local facilities so people can walk/cycle and be less reliant on the car
- Protect the Green Belt from inappropriate development
- Ensure accordance with the Minerals Local Plan, Waste Local Plan and South East Inshore Marine Plan

5. Meeting the needs for new homes

- Provide high quality new homes that meet people's needs (market, affordable, starter, supported, specialist, Gypsies and Travellers)
- Address the imbalance between the supply and need for affordable housing for rent
- Meet identified targets/needs for numbers and types of homes required to be built each year
- Maintain a good supply of homes throughout the Local Plan period

6. Fostering growth and investment and providing new jobs

- Ensure Chelmsford's businesses thrive, continue to innovate and can be even more productive and resilient
- Foster new economic growth and new jobs to meet forecast local needs generated by the growing population.
- Ensure a flexible rolling supply of employment land over the Local Plan period
- Support the retention of existing designated employment and rural employment areas to maintain supply and choice of employment floorspace and rural employment development opportunities, and support the growing green economy and creative sector
- Promotion of a circular economy

Priorities for place

7. Creating well designed and attractive places, and promoting the health and social well-being of communities

- Promote the health and wellbeing of communities
- Encourage healthy lifestyles and living environments for all residents for example by requiring development to contribute to creating an inclusive built and natural environment, to provide new green spaces including high quality green infrastructure and access to the countryside, sport and recreation facilities and to promote active and healthy lifestyles through the enhancement of sustainable and active travel routes
- Ensure that the integrity of communities is maintained, and social cohesion is promoted in new development
- Ensure that all new development meets the highest standards of design
- Require the use of masterplans and encourage design codes where appropriate for strategic scale developments
- Ensure new development helps provide new primary health services
- Promote community involvement in the long-term management and stewardship of new strategic residential development
- Encourage development to be future-proofed and as sustainable and energy efficient as possible

8. Delivering new and improved strategic and local infrastructure

- Address city-wide infrastructure needs
- Maximise the efficient use of existing infrastructure capacities
- Explore opportunities for new sustainable infrastructure
- Ensure that necessary new or upgraded local infrastructure is provided alongside new development when it is needed

- Ensure appropriate and timely strategic infrastructure to support new development

9. Encouraging resilience in retail, leisure, commercial and cultural development

- Promote the vitality and viability of Chelmsford City Centre, South Woodham Ferrers Town Centre and Principal Neighbourhood Centres
- Promote a range of functions which contribute to the vibrancy of Chelmsford City Centre and maintain its position as a leading destination.
- Enhance the retail, leisure, commercial and cultural development offer of South Woodham Ferrers Town Centre
- Protect existing and support new/enhanced leisure, sports, arts, cultural and recreation facilities to ensure that all parts of the City Council area are vibrant and successful
- Implementation of the Plan for Improving Rivers and Waterways in and around Chelmsford, to improve the appearance, attractiveness and recreational use of Chelmsford's rivers and waterways, and some of its ambitions have been translated into policy

1.4.5 The findings of the compatibility assessment of the Strategic Priorities and the Assessment Objectives are presented in Section 5.2.

HOUSING REQUIREMENT

- 1.4.6 In order to meet the transitional arrangements for plan-making contained within the revised NPPF (December 2024), provision is made for a minimum of 22,990 net new homes at an average annual rate of 1,210 net new homes per year. This equates to 83% of the housing need identified in the revised standard method (December 2024).
- 1.4.7 The findings of the Gypsy and Traveller Accommodation Assessment that covers the period 2023 to 2041 identifies a requirement for 40 permanent Gypsy and Traveller pitches and 38 permanent Travelling Showpeople plots to be developed by 2041 within Chelmsford for households that meet the definition of Gypsies and Travellers in the PPTS.
- 1.4.8 In order to meet identified need, a total of 30 permanent pitches for Gypsies and Travellers as defined by national planning policy for the period 2022-2041 will be provided. In order to meet identified need, a total of 28 permanent plots will be provided for Travelling Showpeople as defined by national planning policy in the period 2022- 2041.
- 1.4.9 The remainder of the need to be met through windfall applications using the criteria of Policy DM3.

EMPLOYMENT LAND REQUIREMENT

- 1.4.10 Whilst the adopted Local Plan employment policies are still relevant and site allocations for new employment development are also progressing in line with projections, some policies will require updating and additional policies may be required in the light of changes to national planning policy and new legislation. Changes are also required to ensure that the Local Plan continues to meet future employment needs to 2041.
- 1.4.11 The Pre-Submission Consultation Document proposes a continuation of the existing approach to employment land provision, i.e. a flexible rolling employment land supply across the plan period. Development sites will be allocated to accommodate a minimum of 162,646 sqm of new employment business floorspace (Use Classes E(g)(i-iii), B2 and-B8) in addition to existing commitments over the Plan period.

1.5 PROPOSED SPATIAL STRATEGY

1.5.1 The Proposed Spatial Strategy draws on aspects of the five spatial options set out in the Issues and Options Consultation Document, which comprised: Approach A: Growing

Existing Strategy; Approach B: Growth in Urban Areas; Approach C: Wider Strategy; Approach D: Growth Along Transport Corridors; Approach E: New Settlement. (see **Appendix K** and the Issues and Options IIA (2022)). The Proposed Spatial Strategy for the delivery of the proposed housing and employment growth is presented in **Figure 1.1** and the proposed allocations listed in **Table 1.2**.

Figure 1.1 Summary of the Proposed Spatial Strategy

Table 1.2 Summary of the Proposed Spatial Strategy

Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Growth Area 1 – Central and Urban Chelmsford					
Site/Location					
1	Previously developed sites in Chelmsford Urban Area	3,013			4,000sqm Use Class Eg(i-iii)
2	West Chelmsford	880		5	
3a	East of Chelmsford - Manor Farm	360			
3b	East of Chelmsford - Land North of Maldon Road				5,000sqm Office/Business Park
3c	East of Chelmsford - Land North of Maldon Road	109			
3d	East of Chelmsford - Land North of Maldon Road	65			
4	Land North of Galleywood Reservoir	24			
5	Land surrounding Telephone Exchange, Ongar Road, Writtle	25			
Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Area Total		4,476		5	9,000sqm
Growth Area 2 – North Chelmsford					
Site/Location					
6	North East Chelmsford (Chelmsford Garden Community)	5,569	10		56,946sqm Office/Business Park

17a	Land North of Abbey Fields, East Hanningfield	11			
17b	Land east of Highfields Mead, East Hanningfield	20			
Area Total;		4,423	20	18	87,200sqm
Total Local Plan Allocations		16,100	30	28	162,646 sqm
Windfall Allowance 2026-2041		2,573			
TOTAL		18,473	30	28	162,646 sqm

1.6 SUMMARY OF PROPOSED CHANGES TO THE PRE-SUBMISSION DOCUMENT

Development Requirements - Housing

1.6.1 The revised NPPF (December 2024) makes the standard method for calculating housing numbers mandatory and changes the formula to increase housing in areas of high demand/low affordability across a wider range of urban areas such as Chelmsford. This significantly increases the Council's housing requirement from 1,000 dwellings per annum

(dpa) to 1,454 dpa. The transitional arrangements contained within the revised NPPF state that to proceed under the existing plan system, local plans need to meet a minimum of 80% of the new housing number. It is proposed to meet this new target using the existing 20% supply buffer within the preferred options site allocations and the following revisions to the Spatial Strategy:

- Increasing the **windfall allowance** from 100 dpa to 150 dpa as analysis of past trends demonstrates that there is a strong track record of this amount of windfall sites being delivered (an average of 196 windfall homes built per year over the past 12 years)
- Allocating a **new site** at Andrews Place, off Waterhouse Lane which is now being activity promoted by Chelmer Housing partnership (CHP) for redevelopment and considered deliverable in the plan period
- **Increasing the capacity** of Meadows Shopping Centre (Strategic Growth Site 1w) in line with recent pre-application discussions and the assessment of representations submitted by the applicant to the Local Plan
- Significantly **reducing the supply buffer** from around 20% proposed in the Preferred Options Local Plan to around 1.5% by using all the preferred allocations to meet the potential revised minimum housing requirement (except for sites that are now built out such as Woodhall Road (Growth Site 1o) and Rivermead (Growth Site 1u) and sites which are either no longer available or suitable such as the former Kay Metzeler site (Strategic Growth Site 1x) and Land West of Back Lane, Ford End (Growth Site 14a)).

Pre-Submission Spatial Strategy

1.6.2 Overall, the Pre-Submission Spatial Strategy shown in Table 1.2 represents a refinement of that set out in the Preferred Options consultation document. Other key changes include:

- **Amending site capacities** for some allocations to reflect new information and further assessment including Granary Car Park, Victoria Road (Growth Site 1z)
- **Amending the Build-out Rate** for Chelmsford Garden Community within the plan period to align with the outline planning applications showing that 681 of the overall 6,250 units will be delivered post-2041
- **Replacing the Travelling Showpeople Allocation** of 9 plots in the adopted Local Plan with 10 Gypsy & Traveller pitches at Chelmsford Garden Community (Strategic Growth Site 6)
- **Relocating the allocation of 10 Travelling Showpeople Plots** from Chelmsford Garden Community (Strategic Growth Site 6) to East Chelmsford Garden Community – Hammonds Farm (Strategic Growth Site 16a).

1.6.3 Other elements of the Spatial Strategy are not proposed for any change including requirements for employment and Travelling Showpeople plots, the Settlement Hierarchy, three Growth Areas, protection of the Green Belt and Green Wedge, and Special Policy Areas.

1.7 SUPPORTING POLICIES

1.7.1 The Local Plan will include new and amended policies to reflect changes in legislation, wider policies and implementation of the adopted Local Plan. Table 1.3 sets out, by strategic priority, where new or amended policies are proposed.

Table 1.3 Proposed Strategic Policies

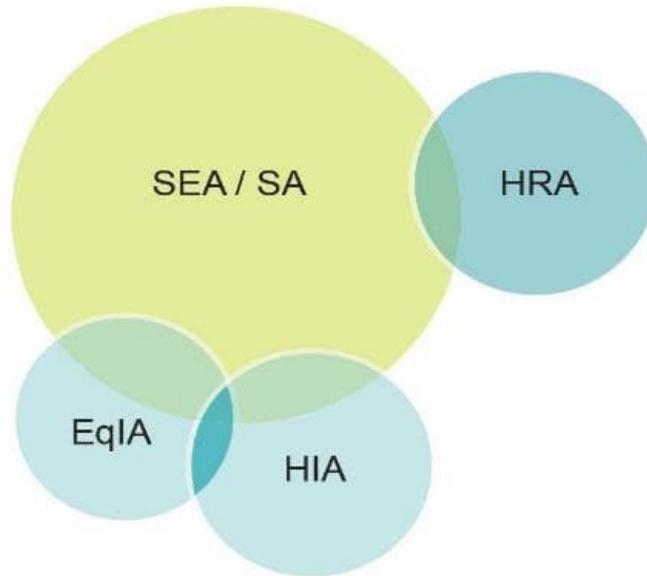

Strategic Priority	Proposed Strategic Policies
Strategic Priority 1 – Addressing the Climate and Ecological Emergency	S1 – Spatial Principles
	S2 – Addressing Climate Change and Flood Risk
Strategic priority 2 – Promoting smart, active travel and sustainable transport	S14 – Health and Wellbeing NEW
Strategic Priority 3 - Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks	S15 – Creating Successful Places NEW
	S3 – Conserving and Enhancing the Historic Environment
	S4 – Conserving and Enhancing the Natural Environment
Strategic Priority 4 - Ensuring sustainable patterns of development and protecting the Green Belt	S5 – Protecting and Enhancing Community Assets
Strategic Priority 5 - Meeting the needs for new homes	S6 – Housing and Employment Requirements
	S7 – The Spatial Strategy
Strategic Priority 6 - Fostering growth and investment and providing new jobs	S8 – Delivering Economic Growth
Strategic Priority 7 - Creating well designed and attractive places, and promoting the health and social wellbeing of communities	S16 – Connectivity and Travel NEW
	S9 – Infrastructure Requirements
	S10 – Securing Infrastructure and Impact Mitigation
Strategic Priority 8 - Delivering new and improved strategic and local infrastructure	S11 – The Role of the Countryside
Strategic Priority 9 – Encouraging resilience in retail, leisure commercial, and cultural development	S12 – Role of City, Town and Neighbourhood Centres
	S17 – Future of Chelmsford City Centre NEW
	S13 – Monitoring and Review

1.8 INTEGRATED IMPACT ASSESSMENT

WHAT IS INTEGRATED IMPACT ASSESSMENT?

1.8.1 The IIA brings together into a single framework four different strands of assessment, Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) (considered as a single assessment), Health Impact Assessment (HIA), Equalities Impact Assessment (EqIA) and Habitats Regulations Assessment (HRA) (**Figure 1.2**), in order to assess the socio-economic and environmental effects of the Review of the Adopted Local Plan.

Figure 1.2 Overlaps between the components of the Integrated Impact Assessment

SUSTAINABILITY APPRAISAL (SA) AND STRATEGIC ENVIRONMENTAL ASSESSMENT (SEA)

1.8.2 SA is an iterative, evidence based and qualitative process that appraises the environmental, social and economic performance of the Local Plan against a set of sustainability objectives in order to identify, describe and evaluate the likely significant social, economic and environmental effects. Where appropriate, the SA will highlight areas where measures to avoid, minimise or mitigate any potential negative effects could be required. Similarly, and where appropriate, opportunities to enhance the contribution that the Local Plan could make to sustainability should be identified. In undertaking this requirement, local planning authorities must⁷ also incorporate the requirements of the Environmental Assessment of Plans and Programmes Regulations 2004⁸ (SEA Regulations). The SEA Regulations seek to provide a high level of protection of the environment by integrating environmental considerations into the process of preparing certain plans and programmes.

EQUALITIES IMPACT ASSESSMENT (EQIA)

1.8.3 EqIA is a tool to assist the Council in complying with requirements under the UK Equality Act 2010 and Public Sector Equality Duty, which require public bodies to have due regard to the need to eliminate discrimination, advance equality of opportunity and foster good relations between different people when carrying out their activities. Legislation identifies nine protected characteristics (age, disability, gender reassignment, marriage and civil partnership, pregnancy and maternity, race, religion or belief, sex and sexual orientation) and the EqIA considers the potential for effects on these.

⁷ Paragraph 32 of the National Planning Policy Framework (2021)

⁸ Statutory Instrument 2004 No. 1633 *The Environmental Assessment of Plans and Programmes Regulations 2004*. Available from [SEA Regulations](#)

1.8.4 **Appendix I** presents the EqlA of the Pre-Submission Local Plan.

HEALTH IMPACT ASSESSMENT (HIA)

- 1.8.5 HIA assesses the main health and wellbeing impacts of policies and proposals in order to identify any opportunities for the emerging planning policies to maximise the benefits and avoid any potential adverse impacts. The HIA process looks at the positive and negative health and wellbeing impacts of development as well as assessing the indirect implications for the wider community. Essex County Council, as part of the Essex Design Guide⁹, has produced the Essex Healthier Places Guidance which together with the Livewell Development Accreditation provides the criteria for the specific consideration of health-related issues.
- 1.8.6 The specification of policies within the Review of the Adopted Local Plan, along with locationally-specific allocations as part of the Pre-Submission stage, have enabled the detailed assessment of the likely impacts against detailed health and equalities measures.
- 1.8.7 **Appendix J** presents an HIA of the Pre-Submission Local Plan.

HABITATS REGULATIONS ASSESSMENT (HRA)

- 1.8.8 Regulation 105 of the Conservation of Habitats and Species Regulations 2017 (the 'Habitats Regulations') states that if a land-use plan is *“(a) is likely to have a significant effect on a European site¹⁰ or a European offshore marine site^{11 12} (either alone or in combination with other plans or projects); and (b) is not directly connected with or necessary to the management of the site”* then the plan-making authority must *“... make an appropriate assessment of the implications for the site in view of that site’s*

⁹ <https://www.essexdesignguide.co.uk/supplementary-guidance/health-impact-assessments/process-method/>

¹⁰ 'European sites' are: any Special Area of Conservation (SAC) from the point at which the European Commission and the UK Government agreed the site as a 'Site of Community Importance' (SCI) (if this was before 31 Jan 2020); any classified Special Protection Area (SPA); and any candidate SAC (cSAC). However, the term is also commonly used when referring to potential SPAs (pSPAs), to which the provisions of Article 4(4) of Directive 2009/147/EC (the 'new wild birds directive') apply; and to possible SACs (pSACs) and listed Ramsar Sites, to which the provisions of the Habitats Regulations are applied a matter of Government policy (NPPF para. 187) when considering development proposals that may affect them. "European site" is therefore used in this report in its broadest sense, as an umbrella term for the above designated sites

¹¹ 'European offshore marine sites' are defined by Regulation 15 of *The Offshore Marine Conservation (Natural Habitats, &c.) Regulations 2007* (as amended); these regulations cover waters (and hence sites) over 12 nautical miles from the coast.

¹² The Conservation of Habitats and Species Regulations 2017 were amended by the Conservation of Habitats and Species (Amendment) (EU Exit) Regulations 2019 to reflect the UK's exit from the EU. These largely carried forward the provisions and terminology of the 2017 Regulations (so, for example, the term 'European site' is currently retained and for all practical purposes the definition is essentially unchanged). However, the UK European sites are no longer legally part of the 'Natura 2000' network of protected sites, with this being replaced in the UK by the 'national site network' which comprises all existing SACs and SPAs and any new SACs and SPAs designated under the 2019 Regulations (Ramsar sites do not form part of the network). This also has relevance if compensation measures are required for an adverse effect, as the relevant metric is the overall coherence of the 'national site network'. The 2019 Regulations establish management objectives for the 'national site network' which contribute to the conservation of UK habitats and species that are also of pan-European importance, and to the achievement of their favourable conservation status within the UK.

conservation objectives” before the plan is given effect. The process by which Regulation 105 is met is known as Habitats Regulations Assessment (HRA)¹³.

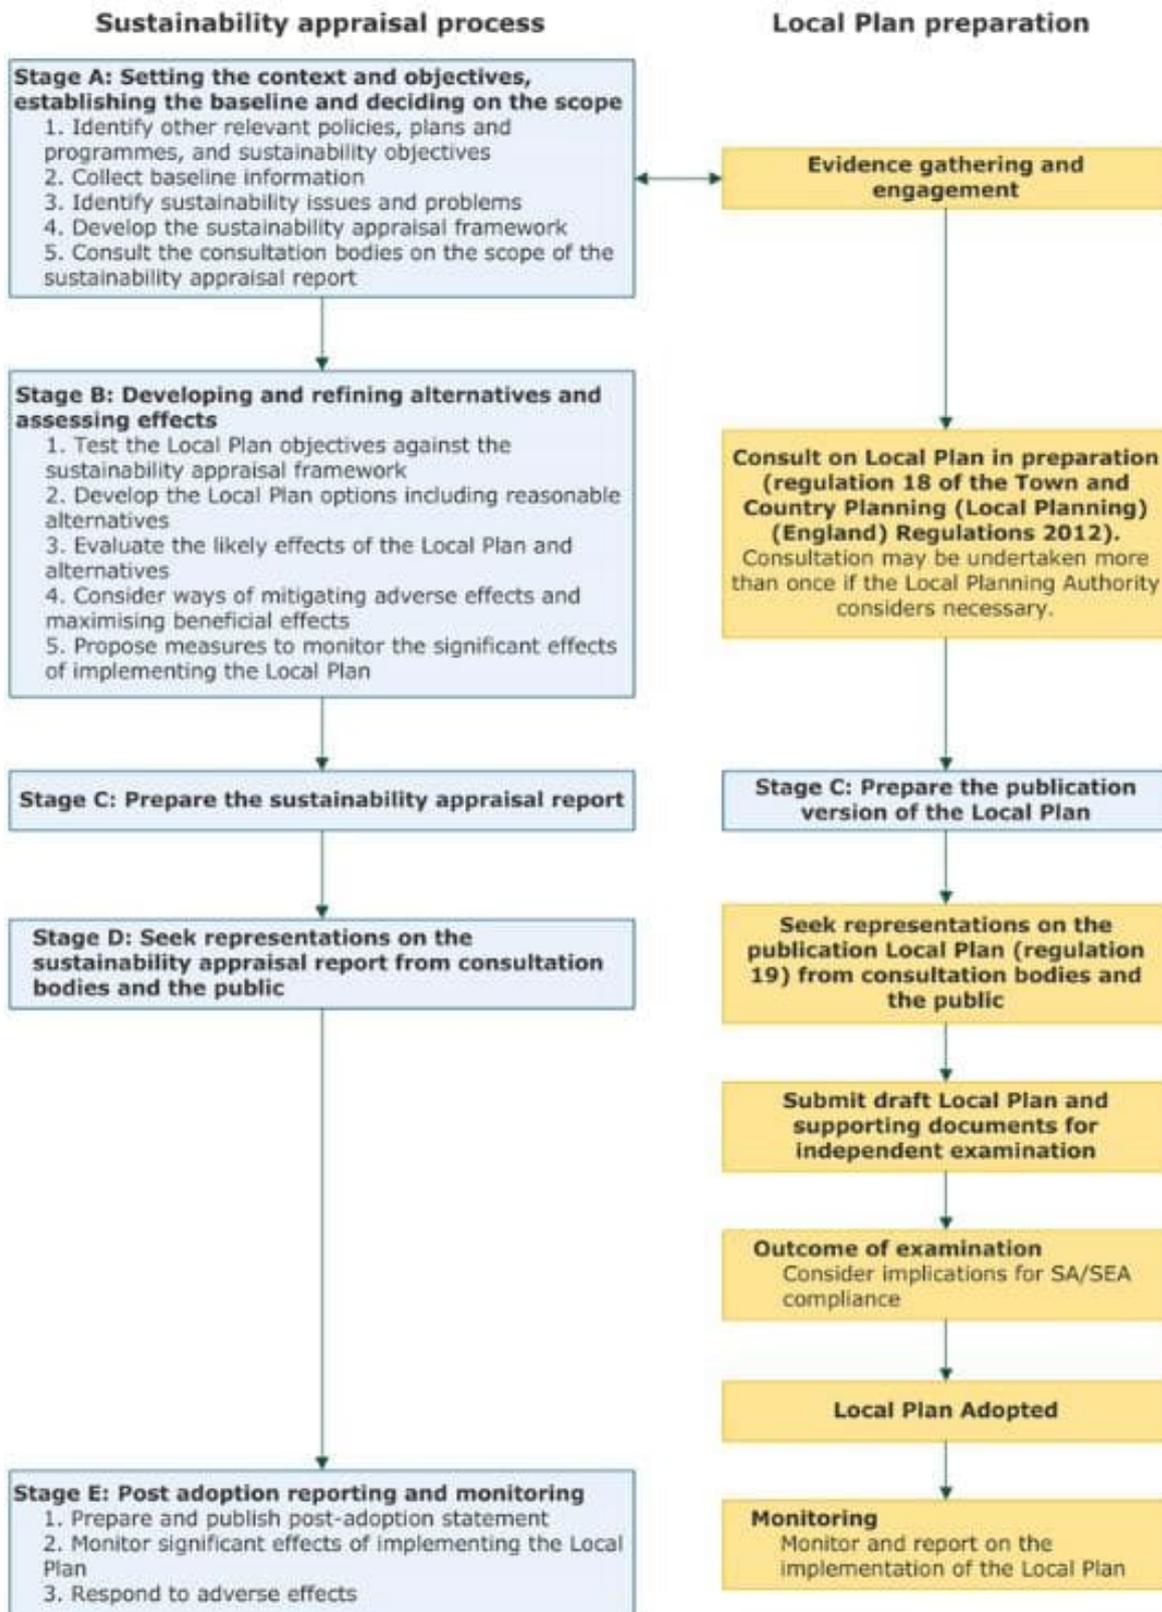

- 1.8.9 An HRA determines whether there will be any ‘likely significant effects’ (LSE) on any European site (now referred to as National Site Network (NSN) sites) as a result of a plan’s implementation (either on its own or ‘in combination’ with other plans or projects) and, if so, whether these effects will result in any adverse effects on site integrity. The Council has a statutory duty to prepare the Local Plan and is therefore the Competent Authority for an HRA. **Appendix N** presents an HRA of the Pre-Submission Local Plan.

STAGES IN THE IMPACT ASSESSMENT PROCESS

- 1.8.10 There are five key stages in the SA process and these are highlighted in **Figure 1.3** together with links to the development of the Local Plan. The stages for the IIA preparation process mirror those of SA.

¹³ The term ‘Appropriate Assessment’ has been historically used to describe the process of assessment; however, the process is more accurately termed ‘Habitats Regulations Assessment’ (HRA), with the term ‘Appropriate Assessment’ limited to the specific stage within the process.

Figure 1.3 The Sustainability Appraisal (IIA) Process and Linkages with Local Plan Preparation

Source: Department for Levelling Up, Housing and Communities (updated 2023) *Planning Practice Guidance*.

- 1.8.11 The first stage (Stage A) led to the production of a SA Scoping Report¹⁴. Informed by a review of other relevant policies, plans and programmes as well as baseline information and the identification of key sustainability issues affecting the Chelmsford City Area, the Scoping Report set out the proposed framework for the assessment of the Local Plan (the Assessment Framework).
- 1.8.12 The Scoping Report was subject to consultation that ran from Thursday 14th April until Friday 20th May 2022. A total of 11 responses were received to the consultation from the statutory SEA consultation bodies (Natural England, the Environment Agency and Historic England) as well as a range of other stakeholders. Responses related to all aspects of the Scoping Report and have resulted in amendments to the Assessment Framework. **Appendix B** contains a schedule of the consultation responses received to the Scoping Report, the Council's response and the subsequent action taken and reflected in this IIA Report.
- 1.8.13 Stage B is an iterative process involving the appraisal and refinement of the Local Plan with the findings presented in a series of interim IIA Reports published alongside the Local Plan Issues and Options Consultation Document and Preferred Options Consultation Document.
- 1.8.14 This report is the second formal output of Stage B and is intended to support the development and refinement of the Local Plan by testing the sustainability strengths and weaknesses of the proposals contained within the Pre-Submission Consultation Document. This will help promote sustainable development through the early integration of sustainability considerations (including health and equality) into the preparation of the Local Plan. This IIA Report has been issued for consultation alongside the Pre-Submission Consultation Document.
- 1.8.15 The Issues and Options stage of the Review of the Local Plan was subject to consultation from Thursday 11th August 2022 for ten weeks until Thursday 20th October 2022. Responses were received to the consultation from the statutory SEA consultation bodies (Natural England, the Environment Agency and Historic England) as well as a range of other stakeholders. Responses to the Issues and Options IIA Report have resulted in amendments to the Assessment Framework. The Preferred Options was subject to consultation from Thursday 8th May 2024 for six weeks until Thursday 19th June 2024. **Appendix B** contains a schedule of the consultation responses received, the Council's response and the subsequent action taken and reflected in this IIA Report.
- 1.8.16 At Stage C, this IIA Report is being prepared to accompany the Pre-Submission draft Local Plan. This will be prepared to meet the reporting requirements of the SEA Regulations and will be available for consultation alongside the draft Local Plan itself prior to consideration by an independent planning inspector (Stage D).
- 1.8.17 Following Examination in Public (EiP), and subject to any significant changes to the draft Local Plan that may require appraisal as a result of the EiP, the Council will issue a Post Adoption Statement as soon as reasonably practicable after the adoption of the Local Plan. This will set out the results of the consultation and IIA process and the extent to

¹⁴ Wood (2022) Integrated Impact Assessment of the Review of the Adopted Chelmsford Local Plan

which the findings of the IIA have been accommodated in the adopted Local Plan. During the period of the Local Plan, the Council will monitor its implementation and any significant social, economic and environmental effects (Stage E).

1.9 STRUCTURE OF THIS REPORT

1.9.1 This Report is structured as follows:

- **Non-Technical Summary** - Provides a summary of the IIA Report including the findings of the assessment of plan approaches;
- **Section 1: Background** - Includes a summary of the Local Plan and the Pre-Submission Consultation Document, an overview of IIA, report contents and an outline of how to respond to the consultation;
- **Section 2: The Approach to Assessment** - Provides an overview of the review of those plans and programmes relevant to the Local Plan and IIA that is contained at **Appendix C**;
- **Section 3: Baseline Information** - Presents the baseline analysis of the City Area's social, economic and environmental characteristics and identifies the key sustainability issues that have informed the Assessment Framework and IIA;
- **Section 4: IIA Assessment Framework and Methodology** - Outlines the approach to the IIA of the Pre-Submission Consultation Document including the Assessment Framework;
- **Section 5: Assessment of Effects** - Presents the findings of the assessment of the Pre-Submission Consultation Document;
- **Section 6: Assessment of Alternatives** - explains how alternatives have been identified at the Pre-Submission stage of the Local Plan Review and presents the findings of the IIA of any reasonable alternatives;
- **Section 7: Cumulative, Synergistic and Secondary Effects** - Outlines effects from the Pre-Submission Local Plan and from other plans and programmes; and
- **Section 8: Conclusions and Next Steps** - Presents the conclusions of the IIA of the Pre-Submission Consultation Document and details the next steps in the assessment process.

1.9.2 This IIA Report has been prepared in accordance with the reporting requirements of the SEA Regulations. A Quality Assurance Checklist is presented at **Appendix A**.

1.10 HOW TO COMMENT ON THIS IIA REPORT

1.10.1 This IIA Report has been issued for six weeks consultation alongside the Pre-Submission Consultation Document from 04 February to 18 March 2025. Details of how to respond to the consultation are provided below.

This Consultation: How to Give Us Your Views

We would welcome your views on any aspect of the IIA Report. In particular, we would like to hear your views as to whether the effects which are predicted are likely and whether there are any significant effects which have not been considered. Please provide your comments by 18 March 2025. The Council encourages people to submit comments via its consultation portal at: www.chelmsford.gov.uk/planningpolicyconsult

Alternatively, comments can be sent:

- **By email – planning.policy@chelmsford.gov.uk**
- **By post – Spatial Planning Services, Chelmsford City Council, Civic Centre, Duke Street, Chelmsford, CM1 1JE**

Please include your name, address, and where available an e-mail address.

You can comment on as much or as little as you wish but please ensure you clearly mark which paragraph/figure/table/policy your comments relate to.

Please note we are unable to accept anonymous representations and any comments received after the closing date cannot be accepted.

Full details of how to make comments can be found in the Consultation Statement available at: www.chelmsford.gov.uk/lp-review

2. THE APPROACH TO ASSESSMENT

2.1 INTRODUCTION

2.1.1 This section describes the approach to the IIA of the Pre-Submission Consultation Document. In particular, it sets out the Assessment Framework and how this has been used to appraise the key components of the Pre-Submission Consultation Document. It also documents the difficulties encountered during the assessment process including key uncertainties and assumptions.

2.2 REVIEW OF PLANS AND PROGRAMMES

2.2.1 One of the first steps in undertaking the IIA is to identify and review other relevant plans and programmes that could influence, or be influenced by, the Local Plan. The requirement to undertake a plan and programme review and identify the environmental and wider sustainability objectives relevant to the plan being assessed is set out in the SEA Regulations.

2.2.2 Plans and programmes relevant to the Local Plan may be those at an international/ European, UK, national, regional, sub-regional or local level, as relevant to the scope of the document. The review of relevant plans and programmes aims to identify the relationships between the Local Plan and these other documents, i.e. how the Local Plan could be affected by the other plans' and programmes' aims, objectives and/or targets, or how it could contribute to the achievement of their sustainability objectives. The review also ensures that the relevant environmental protection and sustainability objectives are integrated into the IIA. Additionally, reviewing plans and programmes can provide appropriate information on the baseline for the plan area and help identify the key sustainability issues.

2.2.3 The completed review of plans and programmes has been used to provide the policy context for the subsequent appraisal process and help to inform the development of objectives and guide questions that comprise the Assessment Framework (see Section 4).

2.3 OBJECTIVES AND POLICY MESSAGES

2.3.1 The review of plans and programmes presented in **Appendix C** has identified a number of objectives and policy messages relevant to the Local Plan and scope of the IIA across the following topic areas:

- Biodiversity and Green Infrastructure
- Population and Community
- Health and Wellbeing
- Transport and Accessibility
- Land Use, Geology and Soils
- Water
- Air Quality
- Climate Change
- Material Assets
- Cultural Heritage
- Landscape and Townscape

2.3.2 These messages are summarised in **Table 2.1** together with the key sources and implications for the Assessment Framework. Only the key sources are identified; however, it is acknowledged that many other plans and programmes could also be included.

Table 2.1 Key Messages Arising from the Review of Plans and Programmes

Key Objectives and Policies	Key Source(s)	Implications for the Assessment Framework
Biodiversity and Green Infrastructure		
<ul style="list-style-type: none"> Protect and enhance biodiversity, including designated sites, species of principal importance, habitats and ecological networks. Identify opportunities for green infrastructure provision. 	<p>Environment Act: The Natural Choice: Securing the Value of Nature; Biodiversity 2020: A Strategy for England's Wildlife and Ecosystem Services; UK post 2010 Biodiversity Framework; NPPF; Realising the Benefits of trees, woods and forests in the East of England, Essex Biodiversity Action Plan 2010-2020, Chelmsford City Council Biodiversity Action Plan, Chelmsford City Council Parks and Green Spaces Strategy.</p>	<p>The IIA Framework should include a specific objective relating to the protection and enhancement of biodiversity including green infrastructure provision.</p>
Population and Community		
<ul style="list-style-type: none"> Address deprivation and reduce inequality through regeneration. Ensure social equality and prosperity for all. Provide high quality services, community facilities and social infrastructure that are accessible to all. Meet the full affordable and private market housing need for Chelmsford within the administrative boundary where possible. Consider any requests from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development. Make appropriate provision for Gypsies, Travellers and Travelling Showpeople. Ensure that there is an adequate supply of employment land to meet local needs and to attract inward investment. Encourage economic diversification including growth in high value, high growth, high knowledge economic sectors. Encourage rural diversification and support rural economic growth. Create local employment opportunities. 	<p>NPPF; Planning Policy for Traveller Sites; The London Plan; The future of Essex; Chelmsford City Council Economic Strategy, Chelmsford Local Plan 2013-2036, Making Places SPD; Essex Prosperity and Productivity Plan</p>	<p>The IIA Framework should include objectives and/or guide questions relating to:</p> <ul style="list-style-type: none"> addressing deprivation and promoting equality and inclusion; the provision of high quality community facilities and services; the provision of high quality housing; the enhancement of education and skills; delivery of employment land that supports economic diversification and the creation of high quality, local jobs; enhancing Chelmsford City Centre; enhancing the area's town and other centres.

Key Objectives and Policies	Key Source(s)	Implications for the Assessment Framework
<ul style="list-style-type: none"> Enhance skills in the workforce to reduce unemployment and deprivation. Improve educational attainment and ensure the appropriate supply of high quality educational facilities. Promote the vitality of the City Centre and support retail and leisure sectors. Promote the vitality of other centres. 		
Health and Wellbeing		
<ul style="list-style-type: none"> Promote improvements to health and wellbeing. Promote healthier lifestyles. Minimise noise pollution. Reduce crime including the fear of crime. Reduce anti-social behaviour. Ensure that there are appropriate facilities for the disabled and elderly. Deliver safe and secure networks of green infrastructure and open space. 	<p>NPPF; Joint Essex Health and Wellbeing Strategy 2022-2026, Be Moved – Chelmsford’s Sport and Art Strategy 2012-2016, Parks and Green Spaces Strategy and Public Health Strategy, Chelmsford Air Quality Management Plan, Chelmsford Local Plan 2013-2036, Essex Children and Young People’s Plan.</p>	<p>The IIA Framework should include a specific objective and/or guide questions relating to:</p> <ul style="list-style-type: none"> the promotion of health and wellbeing; the delivery of health facilities and services; the provision of open space and recreational facilities; reducing crime, the fear of crime and anti-social behaviour.
Transport and Accessibility		
<ul style="list-style-type: none"> Encourage sustainable transport and reduce the need to travel. Reduce traffic and congestion. Improve public transport provision. Encourage walking and cycling. Enhance accessibility to key community facilities, services and jobs for all. Ensure timely investment in transportation infrastructure to accommodate new development. Promote sustainable freight movement. Locate new housing development in sustainable locations or in locations that can be made sustainable. 	<p>NPPF; Essex Transport Strategy - The Local Transport Plan for Essex; Essex Cycling Strategy; Essex Walking Strategy; Essex Sustainable Modes of Travel Strategy</p>	<p>The IIA Framework should include objectives and/or guide questions relating to:</p> <ul style="list-style-type: none"> reducing the need to travel, particularly by car; the promotion of sustainable forms of transport; encouraging walking and cycling; maintaining and enhancing accessibility to key facilities, services and jobs; reducing congestion and enhancing road safety; investment in transportation infrastructure to meet future needs.

Key Objectives and Policies	Key Source(s)	Implications for the Assessment Framework
Land Use, Geology and Soils		
<ul style="list-style-type: none"> Encourage the use of previously developed (brownfield) land. Promote the re-use of derelict land and buildings. Reduce land contamination. Protect soil quality and minimise the loss of Best and Most Versatile agricultural land. Promote high quality design. Avoid damage to, and protect, geologically important sites. Encourage mixed use development. 	<p>Safeguarding Our Soils: A Strategy for England; Making Places SPD, Chelmsford Local Plan 2013-2036.</p>	<p>The IIA Framework should include objectives and/or guide questions relating to:</p> <ul style="list-style-type: none"> encouraging the use of previously developed land and buildings; reducing land contamination; avoiding the loss of Best and Most Versatile agricultural land; promoting high quality design including mixed use development; protecting and avoiding damage to geologically important sites.
Water		
<ul style="list-style-type: none"> Protect and enhance surface and groundwater quality. Improve water efficiency. Avoid development in areas of higher flood risk. Reduce the risk of flooding arising from new development. Ensure timely investment in water management infrastructure to accommodate new development. Promote the use of Sustainable Urban Drainage Systems. 	<p>Water Framework Directive; Drinking Water Directive; Floods Directive; Flood and Water Management Act 2010; Water for Life, White Paper; NPPF; Essex and Suffolk Water Final Water Resources Management Plan, Water Resource Strategy – Regional Action Plan for the Anglian Region, Anglian River Basin District Management Plan and Essex Local Flood Management Strategy.</p>	<p>The IIA Framework should include specific objectives relating to the protection and enhancement of water quality and quantity and minimising flood risk.</p>
Air Quality		
<ul style="list-style-type: none"> Ensure that air quality is maintained or enhanced and that emissions of air pollutants are kept to a minimum. 	<p>Air Quality Directive; Air Quality Strategy for England, Scotland, Wales and Northern Ireland; NPPF and Army and Navy Air Quality Management Area Action Plan.</p>	<p>The IIA Framework should include a specific objective and/or guide question relating to air quality.</p>
Climate Change		

Key Objectives and Policies	Key Source(s)	Implications for the Assessment Framework
<ul style="list-style-type: none"> Minimise the effects of climate change. Reduce emissions of greenhouse gases that may cause climate change. Encourage the provision of renewable energy. Move towards a low carbon economy. Promote adaptation to the effects of climate change. 	Climate Change Act 2008; Carbon Plan: Delivering our Low Carbon Future; UK Renewable Energy Strategy; NPPF, Essex Design Guide, Levelling up Essex – An Essex White Paper, Making Places SPD, Solar Farm SPD.	The IIA Framework should include a specific objective relating to climate change mitigation and adaptation.
Material Assets		
<ul style="list-style-type: none"> Promote the waste hierarchy (reduce, reuse, recycle, recover). Ensure the adequate provision of local waste management facilities. Promote the efficient and sustainable use of mineral resources. Promote the use of local resources. Avoid the sterilisation of mineral reserves. Promote the use of substitute or secondary and recycled materials and minerals waste. Ensure the timely provision of infrastructure to support new development. Support the delivery of high quality communications infrastructure. Promote the maximum recovery of minerals from construction, demolition and excavation wastes by segregating, reusing and recycling minerals generated as a result of development/ redevelopment. 	Waste Framework Directive; Landfill Directive; Waste Management Plan for England; NPPF; National Planning Policy for Waste; Joint Municipal Waste Management Strategy for Essex, Essex Minerals Local Plan, Essex County Council and Southend-on-Sea Borough Council Waste Local Plan.	The IIA Framework should include objectives and/or guide questions relating to: <ul style="list-style-type: none"> promotion of the waste hierarchy; the sustainable use of minerals; investment in infrastructure to meet future needs.
Cultural Heritage		
<ul style="list-style-type: none"> Conserve and enhance cultural heritage assets and their settings. Maintain and enhance access to cultural heritage assets. Respect, maintain and strengthen local character and distinctiveness. Improve the quality of the built environment. 	NPPF; Historic Environment Characterisation Project and Making Places SPD, Essex Design Guide.	The IIA Framework should include a specific objective relating to the conservation and enhancement of cultural heritage.
Landscape and Townscape		

Key Objectives and Policies	Key Source(s)	Implications for the Assessment Framework
<ul style="list-style-type: none">• Protect and enhance the quality and distinctiveness of natural landscapes and townscapes.• Promote access to the countryside.• Promote high quality design that respects and enhances local character.• Avoid inappropriate development in the Green Belt.• Ensure that the Green Belt endures beyond the plan period.• Conserve and enhance the undeveloped coastline.	NPPF; Public Realm Strategy, Village Design Statement, Making Places SPD, and Chelmsford, Maldon and Uttlesford Council's Landscape Character Assessments, Essex Design Guide.	The IIA Framework should include a specific objective relating to the protection and enhancement of landscape and townscapes.

3. BASELINE INFORMATION

3.1 INTRODUCTION

3.1.1 An essential part of the IIA process is the identification of current baseline conditions and their likely evolution. It is only with a knowledge of existing conditions, and a consideration of their likely evolution, can the effects of the Local Plan be identified and appraised and its subsequent success or otherwise be monitored. The SEA Regulations also requires that the evolution of the baseline conditions of the plan area (that would take place without the plan or programme) is identified, described and taken into account.

3.1.2 This section identifies and characterises current socio-economic (including health and equality) and environmental baseline conditions for Chelmsford, along with how these are likely to change in the future. The baseline analysis is presented for the following topic areas:

- Biodiversity and Green Infrastructure;
- Population and Community;
- Health and Wellbeing;
- Transport and Accessibility;
- Land Use, Geology and Soils;
- Water;
- Air Quality;
- Climate Change;
- Material Assets;
- Cultural Heritage; and
- Landscape and Townscape.

3.1.3 Additionally, this section presents a high level overview of the City Area.

3.1.4 To inform the analysis, data has been drawn from a variety of sources, including: the 2021 Census; Nomis; Chelmsford City Council's Authority Monitoring Report; the emerging Local Plan evidence base; Environment Agency; Historic England; Essex County Council; Index of Multiple Deprivation 2019; Department for Environment, Food and Rural Affairs (Defra) and the Department for Business, Energy and Industrial Strategy (BEIS). Information from the Local Government Association has been used, especially its benchmarking tool at: <https://lginform.local.gov.uk/>

3.1.5 The key sustainability issues arising from the review of baseline conditions are summarised at the end of each topic.

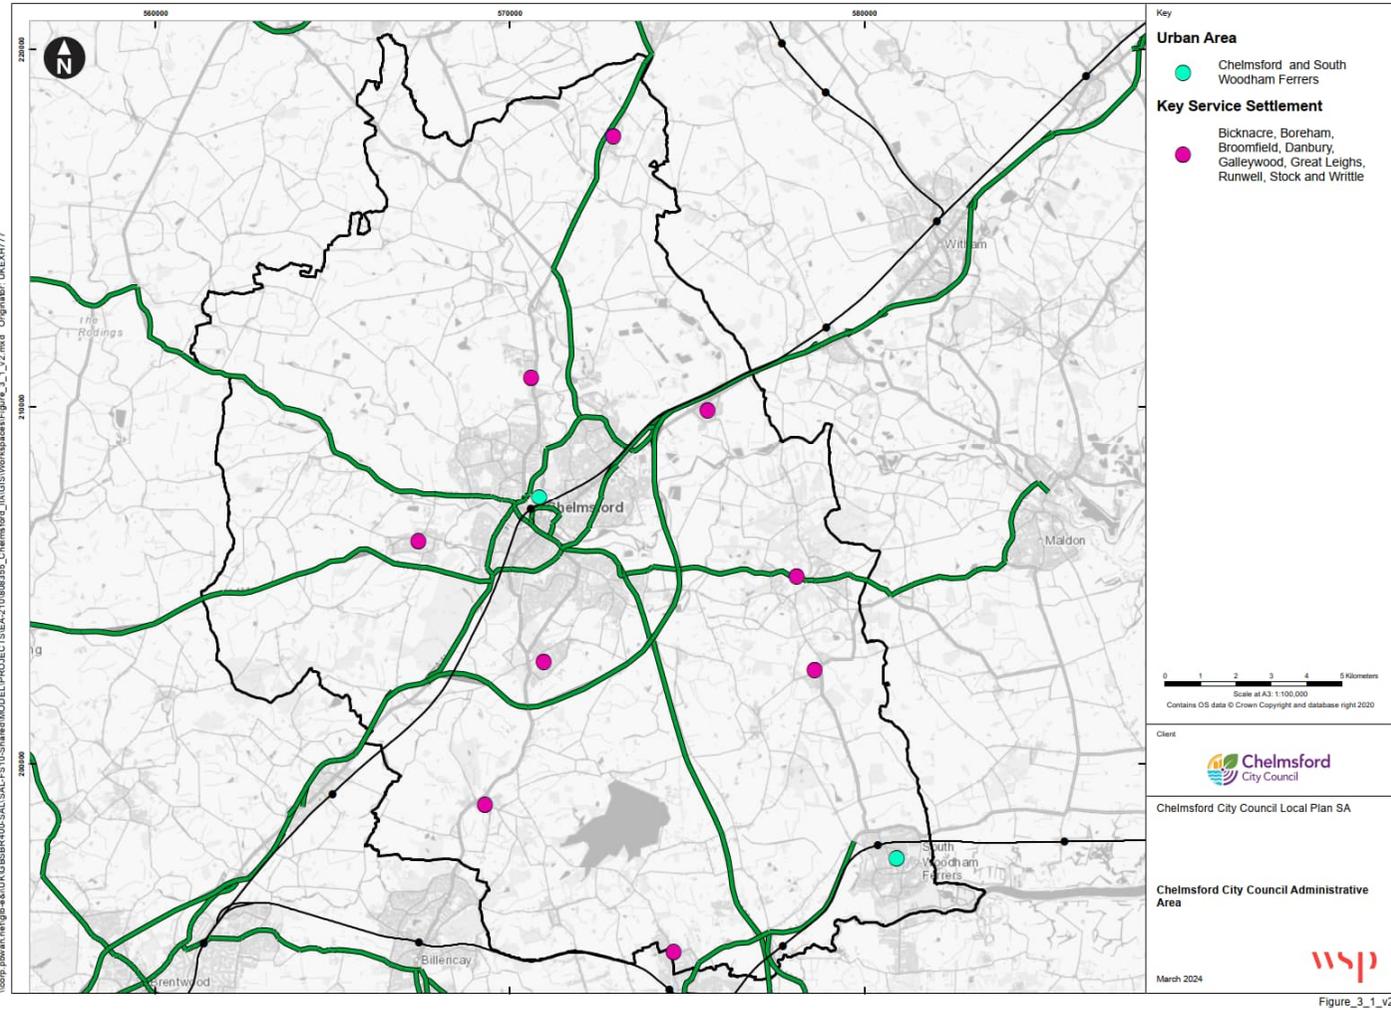

3.2 THE CITY AREA: AN OVERVIEW

3.2.1 The Chelmsford City Area is located centrally within Essex in the East of England and is approximately 30 miles to the north east of London (see **Figure 3.1**). It covers an area of approximately 130 square miles and is one of three cities in Essex (Chelmsford was awarded city status on 1st June 2012) in addition to the town of South Woodham Ferrers, villages and open countryside. Chelmsford is bordered by seven local authorities:

Braintree and Uttlesford to the north; Maldon to the east; Brentwood, Basildon and Rochford to the south; and Epping Forest to the west.

- 3.2.2 The Chelmsford City Area is connected by a number of rail links, with frequent services operating between Chelmsford, London Liverpool Street, Ipswich and Norwich and between South Woodham Ferrers and London. There are several primary road routes within the local authority area including the A12 linking with London and the M25. The A12 also offers direct links into East Anglia.
- 3.2.3 Chelmsford has two major centres; the principal settlement of Chelmsford City in the centre of the local authority area and the town of South Woodham Ferrers to the south east. Beyond these centres, the local authority area is characterised by a number of villages surrounded by open countryside. The Chelmsford Local Plan identifies Chelmsford's other 'Key Service Settlements' as including: Bicknacre; Boreham; Broomfield; Danbury; Galleywood; Great Leighs; Runwell; Stock; and Writtle. There are a large number of Service Settlements and Small Settlements across the City Council area.
- 3.2.4 The Chelmsford City Area has a large number of key strengths, not least its good connectivity to London, a strong economy boasting particular strengths in the financial and business services sectors and ready access to the countryside. However, there are also issues which need to be addressed to ensure the area's long term sustainability including, in particular, a rapidly growing population, pockets of deprivation, high commuting levels and environmental constraints including Green Belt and flood risk. These strengths and issues are discussed further in the sections that follow.

Figure 3.1 The Chelmsford City Council Administrative Area and Service Centres

3.3 BIODIVERSITY AND GREEN INFRASTRUCTURE

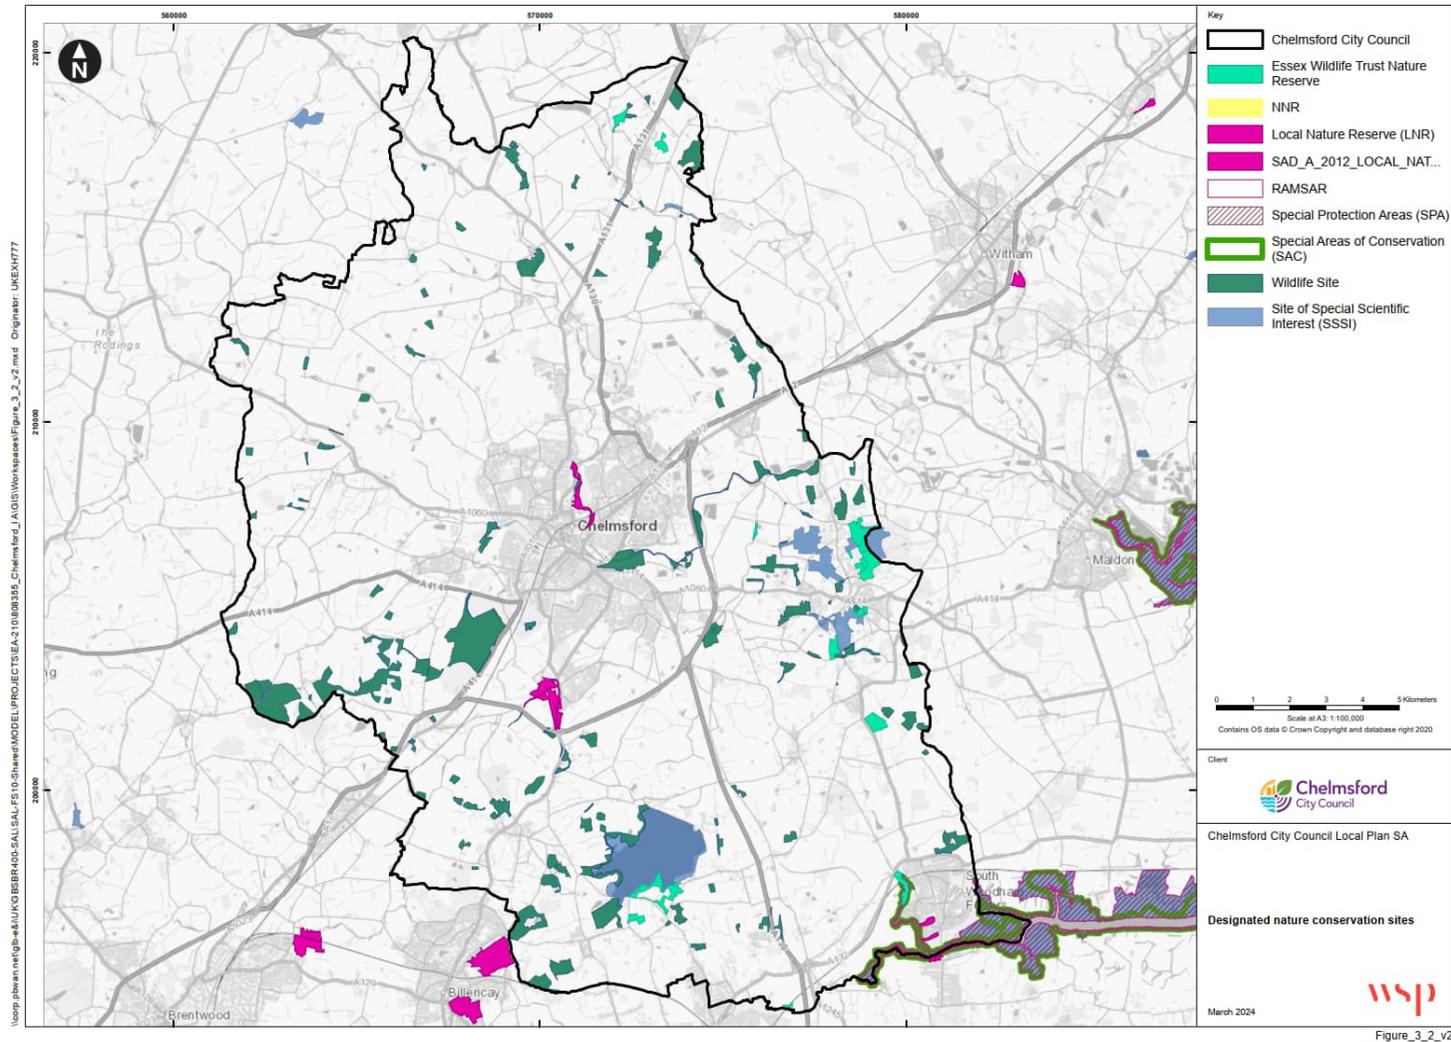

BIODIVERSITY

- 3.3.1 Biodiversity is defined as the variety of plants (flora) and animals (fauna) in an area, and their associated habitats. The importance of preserving biodiversity is recognised from an international to a local level. Biodiversity is important in its own right and has value in terms of quality of life and amenity.
- 3.3.2 The Chelmsford City Area has a rich and varied natural environment including a range of sites designated for their habitat and conservation value. **Figure 3.2** shows designated nature conservation sites within and in close proximity to the local authority area.
- 3.3.3 Sites of European importance (Special Protection Areas (SPAs), Special Areas of Conservation (SACs) and RAMSARs) are designated to conserve natural habitats and species of wildlife which are rare, endangered or vulnerable in the European Community (EC). In the UK, these formally formed part of the 'Natura 2000' network of sites protected under the Habitats Directive (92/43/EEC) and now form part of the UK national site network following the UK's departure from the European Union. There are three European sites within the Chelmsford City Area: Crouch and Roach Estuaries (Mid-Essex Coast Phase 3) SPA; Crouch and Roach Estuaries Ramsar; and the Essex Estuaries SAC together with four additional sites within approximately 10km.
- 3.3.4 The conservation objectives for all of the sites have been revised by Natural England in recent years to increase consistency of assessment and reporting. As a result, the high-level conservation objectives for all sites are effectively the same.
- 3.3.5 The objectives for SACs are:

“With regard to the SAC and the natural habitats and/or species for which the site has been designated (the ‘Qualifying Features’...), and subject to natural change; ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring [as applicable to each site];

- *the extent and distribution of the qualifying natural habitats;*
- *the extent and distribution of the habitats of qualifying species;*
- *the structure and function (including typical species) of the qualifying natural habitats;*
- *the structure and function of the habitats of qualifying species;*
- *the supporting processes on which the qualifying natural habitats rely;*
- *the supporting processes on which the habitats of qualifying species rely;*
- *the populations of qualifying species; and,*
- *the distribution of qualifying species within the site.”*

Figure 3.2 Designated Nature Conservation Sites

3.3.6 For SPAs the objectives are:

“With regard to the SPA and the individual species and/or assemblage of species for which the site has been classified (the ‘Qualifying Features’...), and subject to natural change; ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring:

- *the extent and distribution of the habitats of the qualifying features;*
- *the structure and function of the habitats of the qualifying features;*
- *the supporting processes on which the habitats of the qualifying features rely;*
- *the population of each of the qualifying features; and,*
- *the distribution of the qualifying features within the site.”*

3.3.7 Natural England has prepared a Site Improvement Plan (SIP) for Essex Estuaries¹⁵ which covers (inter alia) the Crouch and Roach Estuaries (Mid-Essex Coast Phase 3) SPA and the Essex Estuaries SAC. The SIP provides a high level overview of the issues (both current and predicted) affecting the condition of features on the sites and outlines the priority measures required to improve the condition of the features.

3.3.8 In response to visitor pressures from an increased population, the Essex Coast Recreational Disturbance Avoidance and Mitigation Strategy 2018-2038 (Essex RAMS)¹⁶ has been developed in partnership with Natural England and 12 councils in Essex. The strategy sets out a long-term strategic approach to lessen the impact of local housing development on protected birds along the Essex coast. The Essex RAMS aims to prevent bird and habitat disturbance from recreational activities. It does this through a series of mitigation measures, which encourage all coastal visitors to enjoy their visits responsibly.

3.3.9 Within the Chelmsford City Area there are eight Sites of Special Scientific Interest (SSSI) covering an area of 2,412.77 hectares (ha):

- River Ter;
- Newney Green Pit;
- Blake’s Wood & Lingwood Common;
- Woodham Walter Common;
- Danbury Common;
- Thrift Wood, Woodham Ferrers;
- Hanningfield Reservoir; and
- Crouch and Roach Estuaries.

¹⁵ Natural England (2015) *Site Improvement Plan: Essex Estuaries*. Available at: <http://publications.naturalengland.org.uk/publication/5459956190937088>

¹⁶ <https://www.chelmsford.gov.uk/planning-and-building-control/essex-coast-rams/>

3.3.10 The conditions of each SSSI, as assessed by Natural England, are summarised in **Table 3.1**.

Table 3.1 Condition of SSSIs within the Chelmsford City Area

Site	Area (ha)	Condition (% of area)
River Ter	6.41	100% favourable
Newney Green Pit	0.08	100% favourable
Blake's Wood & Lingwood Common	87.33	100% favourable
Woodham Walter Common	79.65	100% favourable
Danbury Common	70.96	48.26% favourable; 51.74% unfavourable but recovering
Thrift Wood, Woodham Ferrers	19.45	100% favourable
Hanningfield Reservoir	402.91	100% favourable
Crouch and Roach Estuaries	1,729.13	23.08% favourable; 76.25% unfavourable but recovering; 0.67% unfavourable no change

Source: Natural England (various) *Designated Sites Condition Summaries*.

3.3.11 In addition to the above European and nationally designated nature conservation sites, there are six Local Nature Reserves (LNRs) (Admirals Park, Marconi Ponds, Chelmer Valley Riverside, Galleywood Common, Fenn Washland, and Frankland Fields) and 171 Local Wildlife Sites (LoWS) which are non-statutory sites of importance for nature conservation value but which play a fundamental role in the conservation of the area's biodiversity.

3.3.12 There are a number of core areas of biodiversity and ecological importance within the Chelmsford City Area which include:

- Danbury/Little Baddow - a large concentration of heathland, woodland and grassland sites, many of which are already managed by conservation organisations;
- Writtle Forest/Hylands - a concentration of ancient woodlands that form a key part of an ancient landscape;
- Hanningfield - Billericay border - a number of ancient woodlands;
- The River corridors - the river valleys running through the local authority area contain LoWSs along their length;
- South Woodham Ferrers - the Crouch Estuary is part of a large SSSI and SPA linking to sites in Maldon and Rochford Districts;
- The Green Wedge - in the vicinity of the Chelmsford Urban Area, the Green Wedge contains a number of LoWSs as well as publicly owned land (see **Figure 3.10**).

- 3.3.13 The Chelmsford City Council Local Wildlife Sites Review, 2016 (and focused update)¹⁷ updates the previous review undertaken in 2004 that ratified 150 Local Wildlife Sites (then referred to as 'Wildlife Sites'). The 2016 review identified a net increase of 21 Sites to give a new total of 171 Local Wildlife Sites. This increase in number belies many significant changes within the LoWS network, with numerous additions and amalgamations, and a few deletions.
- 3.3.14 The Chelmsford Biodiversity Action Plan (BAP) 2013-2018¹⁸ highlights that the Chelmsford City Area has a diverse biodiversity and contains examples of 14 of the 20 habitats included in the Essex BAP (EBAP)¹⁹. Action Plans have been developed for the following habitats: hedgerows; traditional orchards; lowland meadows; lowland dry acid grassland and heathland; lakes and ponds; rivers; lowland raised bog; reed beds; lowland mixed deciduous woodland; wet woodland; wood pasture and parkland; and urban.

GREEN INFRASTRUCTURE

- 3.3.15 Green infrastructure encompasses all “green” assets in an authority area, including parks, river corridors, street trees, managed and unmanaged sites and designed and planted open spaces. Chelmsford City Council’s Open Space Study²⁰ has identified the existing provision of open space within Chelmsford as set out in **Table 3.2**.

Table 3.2 Existing Open Space Provision

Open space typology		Number of sites	Total amount (hectares) ²¹
Allotments		48	42
Amenity greenspace		162	96
Cemeteries/churchyards		38	37
Natural & semi-natural greenspace	Accessible	83	1,778
	Limited access	135	1,002
Outdoor sports		42	350
Park and recreation		223	223
Provision for children & young people		171	10
TOTAL		902	3,538

²⁰ Chelmsford City Council (2024) *Chelmsford Open Space Study*

²¹ Rounded to the nearest whole number

3.3.16 The Council has been awarded 17 Green Flag awards for nineteen of its parks with the Cemetery and Crematorium gaining a Green Flag Award in its own right (see **Table 3.3**). Three parks, Admirals Park, Tower Gardens and West Park, combine to form one award and Brookend Gardens and Chancellor Park combine to form another. Chelmer Park and Jubilee Park also combine to form one award as do Boleyn Gardens the Grand Vista and Beaulieu Park Recreation Ground, Melbourne Park and Andrews Park. Springfield Hall Park has a Green Flag award in its own right.

Table 3.3 Chelmsford City Area Parks with Green Flag Awards

Parks with Green Flag Awards	Size (ha)
Oaklands Park, Moulsham Street, Chelmsford	4.8
Boleyn Gardens the Grand Vista and Beaulieu Park, Chelmsford	9.12
Admirals Park, Tower Gardens and the adjoining West Park, Chelmsford	29.4
Chelmer Park and Jubilee Park	16.99
Hylands Estate	232
Coronation Park	5.72
Compass Gardens and Saltcoats Park	10.08
Melbourne Park and Andrews Park	25.77
Brook End Gardens and Chancellor Park	8.11
Central Park	14.87
Lionmede Recreation Ground	2.0
Chelmsford Cemetery & Crematorium	7.8
Springfield Hall Park	14.40
Chelmer Valley Local Nature Reserve	18.1
Total	444.06

Source: https://loveyourchelmsford.co.uk/green-spaces/green_flag/

3.3.17 In addition to those identified above, Andrews Park on Patching Hall Lane achieved Green Flag Award in its own right in 2020 and in 2021, 17 parks were awarded Green Flag status with Galleywood Common and Frankland Fields also awarded this status²². The Council has also committed itself to continuing to positively manage its parks to ensure it can earn even more of these rewards and continue to have many high quality parks. In 2021, the parks of Admirals Park/Tower Gardens including the adjoining West Park, Hylands Estate and Oaklands Park all received Green Heritage Site awards for their excellence.

²² Love Your Chelmsford (2021) Green Flag. Available online https://loveyourchelmsford.co.uk/green-spaces/green_flag/

3.3.18 The adopted Local Plan contains a Green Wedge designation for its river valleys and policies that seek to protect them to ensure these important natural resources are conserved. These are the basis of Chelmsford's green infrastructure network and are, therefore, an important resource and amenity for the residents of the urban area of Chelmsford. Key objectives are to maximise public enjoyment of the river valleys, protect and enhance ecological health and diversity, preserve local landscape and wildlife links between the countryside and Chelmsford's urban area and recognise the Sandford Mill Special Policy Area.

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE LOCAL PLAN

3.3.19 Information in respect of the condition of SSSIs and the extent of the habitat network indicates that biodiversity in the Chelmsford City Area is being well managed and protected. Notwithstanding, common threats to biodiversity have been identified in the Chelmsford BAP which include:

- Many sites are now small and isolated. This makes it difficult for specialist plants and animals to move between sites and hence more vulnerable to damage. They are also more difficult to manage.
- The biodiversity value for many habitats has developed as a result of human management over centuries. If this management stops, natural succession will take place and the wildlife value will decline as those features that are important for specialist species are lost.
- In grassland and heathland sites, neglect leads to scrub and eventually woodland colonising, in woods this can result in the loss of age structure when coppicing stops. Ponds and lakes might become full of vegetation and eventually silt up.
- The changes in agricultural practices over the past century have led to significant changes in the landscape. Larger machinery requires larger fields which have resulted in the loss of hedges and ditches. Better drainage results in fewer wetlands and ponds. Traditional orchards are no longer considered to be economically viable and many of the traditional fruit varieties are hard to store or are difficult to transport. The most significant impacts, however, arose from the introduction of chemical fertilisers and pesticides; this has resulted in substantial declines in plant diversity and associated fauna.
- Nutrient enrichment usually arises due to run-off from agricultural land or sewerage discharges. This is particularly an issue for rivers and other water bodies but can also affect grassland within the floodplain and heathlands.
- New development can result in the direct loss of habitats (e.g. building on a site) or indirect damage (e.g. increased recreational pressure or more intensive management of grassland and ponds).
- Introduced species of plants and animals can cause significant problems to native species.
- Climate change, particularly with more extreme weather events, will place more stresses on a range of habitats.

3.3.20 There are a number of ongoing initiatives and projects that together will help to conserve and enhance biodiversity and which would be expected to continue without the Local Plan. These include the delivery of the Chelmsford BAP and the emerging Nature

Recovery Networks. With specific regard to green infrastructure, the Council's Parks and Green Spaces Strategy²³ sets out a collective vision for improved green spaces and which includes an objective to support the Chelmsford BAP.

- 3.3.21 It is reasonable to assume that without the Review of the Adopted Local Plan, existing trends would continue. National planning policy contained in the NPPF and existing Development Plan policy (such as Strategic Policy S4 – Conserving and Enhancing the Natural Environment) would help to ensure that new development protects and enhances biodiversity.
- 3.3.22 The Council has also expressed a desire to improve its parks further in order to ensure it receives further national awards.

SUMMARY OF KEY SUSTAINABILITY ISSUES

- The need to conserve and enhance biodiversity including sites designated for their nature conservation value.
- The need to provide net gains in biodiversity where possible.
- The need to maintain, restore and expand Biodiversity Action Plan habitats.
- The need to safeguard existing green infrastructure assets.
- The need to enhance the multifunctional green infrastructure network, addressing deficiencies and gaps, improving accessibility for all users and encouraging multiple uses where appropriate.

3.4 POPULATION AND COMMUNITY

DEMOGRAPHICS

- 3.4.1 As of 2021²⁴, the Chelmsford City Area had a population of 181,500 an increase of 7.8% since 2011 (168,300) and 13.5% since the 2001 Census when the population stood at 157,072. Approximately half of Chelmsford's population resides in the Chelmsford Urban Area and South Woodham Ferrers. Of the total resident population, 49.0% are male and 51.0% female.
- 3.4.2 The over 65's account for some 19.4% of the population, compared to 18.6% in England.
- 3.4.3 Chelmsford is the fourth most populated authority district in the east of England, with only the local authority areas of East Suffolk, Colchester and Basildon being more populated²⁵.

²³ Chelmsford City Council (2013) *Parks and Green Spaces Strategy 2004-2014*. Available at:

²⁵ LG Inform (2020), Total resident population (2020) for All local authority districts East. Available at: Total resident population in Chelmsford | LG Inform (local.gov.uk)

DIVERSITY

Ethnicity

3.4.4 Using ONS category descriptions²⁶, the population of Chelmsford is predominantly White (88.5% of the population) with the second largest ethnic group being Asian/Asian British (5.3%, [9.6% in England]), followed by Black (2.6% [4.2% in England]) followed by mixed/multiple ethnic groups (2.6% [3.0% in England]).

Religious Belief

3.4.5 Christianity is the predominant religion in Chelmsford (48.0%) similar to the England figure (46.3%), followed by Muslim (2.0%), compared to England (6.7%). Those with no religion was 41.2%, compared to 36.7% for England.

Civil Partnerships, Marriage and Sexual Orientation

3.4.6 For the Chelmsford population, aged 16 or over, in the 2021 Census, 34.0% are single (never married) [37.9% for England], 49.1% are married or in a civil partnership [44.7% for England], 0.2% are in a registered same-sex civil partnership, 3.4% are separated (but still legally married or in a registered same-sex civil partnership), 9.6% are divorced or dissolved civil partnership [9.1% for England] and 6.0% are widowed or surviving civil partnership partner [6.1% for England].²⁷

Gypsy, Travellers and Travelling Showpeople

3.4.7 There are two main longstanding publicly funded Travelling Showpeople sites in the Chelmsford City Area which provide 22 pitches in total with capacity for 44 caravans, 92 authorised private Traveller caravans and 47 authorised private Travelling Showpeople caravans²⁸.

DEPRIVATION

3.4.8 The English Index of Multiple Deprivation (IMD) measures relative levels of deprivation in small areas of England called Lower Layer Super Output Areas (LSOA). Deprivation refers to an unmet need, which is caused by a lack of resources including for areas such as income, employment, health, education, skills, training, crime, access to housing and services, and living environment.

3.4.9 The 2015 IMD ranked the Chelmsford City Area 253rd out of 317 local authorities (where a rank of 1 is the most deprived in the country and a rank of 326 is the least deprived) placing Chelmsford in the top 20% least deprived local authority areas nationally²⁹.

3.4.10 By 2019, the City Area had continued to improve on the whole, scoring 260th out of 317 local authorities³⁰. Chelmsford performs particularly well in respect of crime, employment and health and disability with the local authority area being within the 20% least deprived nationally for these domains. However, there are pockets of deprivation across the

³⁰ Indices of Deprivation 2015 and 2019. Available at: http://dclgapps.communities.gov.uk/imd/ioid_index.html#.

Chelmsford City Area with some LSOAs, such as those within the wards of Marconi, Patching Hall and St Andrews, being within the most deprived in the country and this remained the case in 2019.

HOUSING

3.4.11 In December 2023 the average house price for all properties in Chelmsford was £372,048 compared to England: £302,164³¹. House prices for the following types of property in Chelmsford were as follows:

- detached: £658,140
- semi-detached: £410,501
- terraced: £319,255
- flats: £216,093

3.4.12 Housing affordability in the Chelmsford City Area, as in other areas of the County and Country, is a significant issue. Responding to this issue, the Chelmsford Housing Strategy³² recognises that Chelmsford faces a housing crisis (the City Council made that declaration on 22 February 2022) including in respect of:

- ever-growing numbers of Chelmsford residents (no longer just young people) being unable to afford to buy or rent privately a property that meets their needs;
- over 460 families and individuals being homeless, requiring the City Council to provide expensive and often unsuitable temporary accommodation; and
- a growing need for various kinds of specialised housing that, along with all affordable housing, is in very short supply.

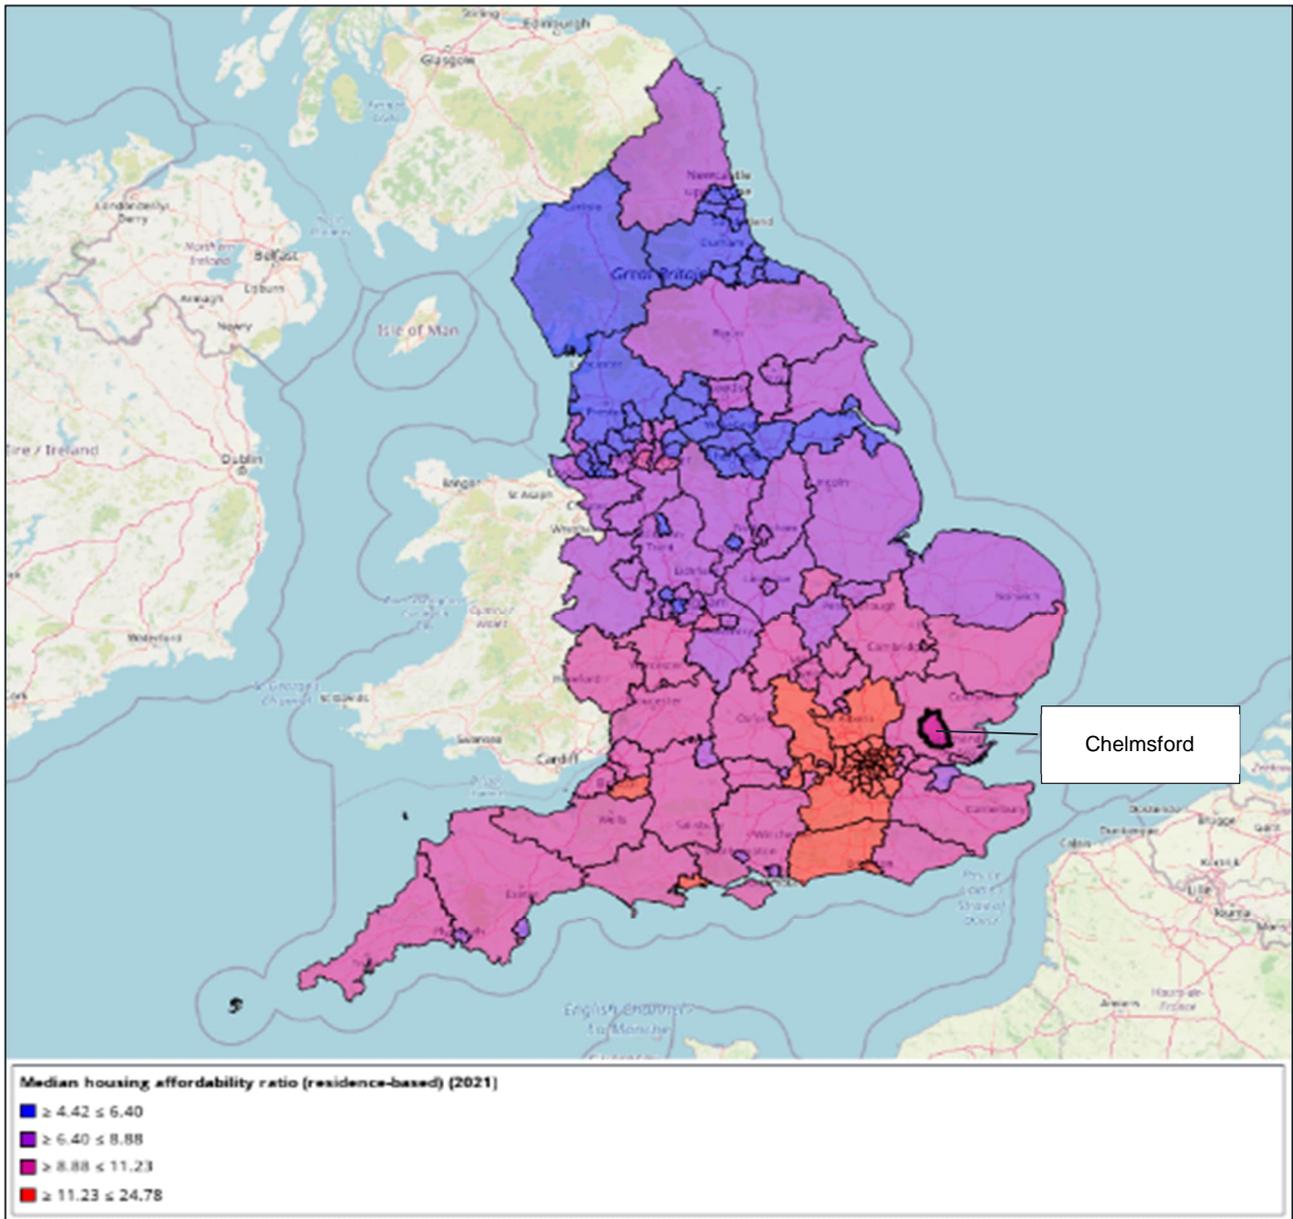

3.4.13 The strategic priorities identified in the Housing Strategy are:

1. Increasing the supply of affordable homes with a focus on larger units
2. Increasing the supply of affordable homes from the existing housing stock
3. Supporting landlords and tenants of privately rented homes
4. Enabling the right supply of specialist housing to meet local need
5. Developing effective partnerships
6. Monitoring trends and performance to inform future actions.

ECONOMY

3.4.14 The Council's Economic Strategy (2017)³³ provides an overview of the economy of the Chelmsford City Area. It highlights that Chelmsford has been a major driver of growth within the Heart of Essex sub-region, which comprises the local authority areas of Chelmsford, Brentwood and Maldon. The City contributes over £4.5 billion per year to the Essex economy through some 103,000 jobs and 9,335 businesses, with particular strengths in the financial and business services sectors, research and development, and

³³ Chelmsford City Council (2017) *Chelmsford Economic Strategy*. Available at: [A3 Chelmsford Economic Strategy](#)

advanced manufacturing. The Council's Employment Land Review³⁴ provides an overview of the economy of the Chelmsford City Area. The report highlights the size of the office market and the prominence of Chelmsford City Centre, connections to Central London but a lack of good quality office accommodation coupled with a lack of recent office development and the need for flexibility as a result of new hybrid working patterns. The report identifies that the industrial market has remained buoyant and active, with demand currently outperforming the existing supply of available industrial space. Despite this increase in demand, Chelmsford is not likely to become a sizeable logistics or industrial hub like other neighbouring authorities over the course of the next 5 years. The demand seen for industrial premises in Chelmsford is primarily for small to medium sized units (up to 5,000sqm) that aim to fulfil indigenous industrial needs, as opposed to larger scale distribution floorspace.

- 3.4.15 The Chelmsford City Council Authority Monitoring Report (2023-2024)³⁵ notes that: some 83.9% (100,600) of the population within the Chelmsford City Administrative area are economically active. Of the 100,600 Chelmsford residents who are economically active, 92,700 (76.8%) are in employment. This is 10.5% higher than the national average. The largest employment sectors in Chelmsford are human health and social work activities (13,000 people are employed within this sector), wholesale retail trade (13,000), education (7,000), professional, scientific and technical activities (7,000) and administrative and support services (6,000). The average gross weekly earning of a full-time worker in the Chelmsford administrative area is £682/80. This is 3.3% higher than the current East of England average.
- 3.4.16 Skills levels in Chelmsford are above the national and local average, with some 87% of residents having a recognised qualification (NVQ Level 1 and above) and 33.5% of the population are educated to NVQ Level 4 or higher. As a result, many Chelmsford residents are engaged in higher level occupations, with nearly half working in managerial, professional and technical roles, which is higher than regional and national averages. Conversely, employment in process plant, machine operative and elementary occupations is lower than regional and national averages.
- 3.4.17 New employment space has been consistently allocated through the Local Plan process. The City Centre has an office floorspace stock of approximately 4.7m sqft (437,000sqm), the largest stock anywhere in Essex³⁶ and it is recognised that the future growth of Chelmsford's economy will be dependent upon the provision of high quality development opportunities, including high quality office space and industrial unit space, in order to attract new investors.
- 3.4.18 There is a significant amount of business activity taking place within the parishes and rural areas of the Chelmsford City Area.

³⁴ Chelmsford City Council (December 2023) Employment Land Review available at: [econ002-chelmsford-city-council-employment-land-review-2023.pdf](#)

³⁶ Chelmsford City Council (December 2023) Employment Land Review available at: [econ002-chelmsford-city-council-employment-land-review-2023.pdf](#)

SKILLS AND EDUCATION

- 3.4.19 Skills levels in Chelmsford are above the national and local average, with some 82% of residents having a recognised qualification (NVQ Level 1 and above) and 33.9% of the population are educated to NVQ Level 4 or higher³⁷. As a result, many Chelmsford residents are engaged in higher level occupations, with nearly half working in managerial, professional and technical roles, which is higher than regional and national averages. Conversely, employment in process plant, machine operative and elementary occupations is lower than regional and national averages.
- 3.4.20 Chelmsford is home to Anglia Ruskin University (ARU), one of the fastest growing universities in the UK. Chelmsford also hosts ARU Writtle, which delivers land-based degrees. Both campuses provide a range of research and consultancy services to businesses, working in partnership to add value to their business and are therefore important drivers of the local economy. In addition, Chelmsford College is developing its specialism in engineering, science and technology.
- 3.4.21 Essex County Council provides updated figures on the school places demand within the Chelmsford City Area in its 10 Year Plan – Meeting the demand for school places in Essex 2024-2033³⁸. There is a need for new schools or the expansion of existing schools in order to meet the future demand for school places associated with population growth, at all levels, across the Chelmsford City Area which will be met through proposed new school proposals identified in the Local Plan, particularly associated with new communities.

COMMUNITY FACILITIES AND SERVICES

- 3.4.22 Larger services such as schools and health facilities are predominantly focused within the two main urban areas of Chelmsford and South Woodham Ferrers. There is a high concentration of services and facilities within Chelmsford City Centre with a more limited range available at the five Principal Neighbourhood Centres which are Beaulieu, Chelmer Village, Gloucester Avenue, The Vineyards and Newlands Spring. In the rural areas beyond the Green Belt, the settlements of Bicknacre, Boreham, Broomfield, Danbury and Great Leighs have access to a good range of facilities and are located on important public transport corridors. These services may include primary schools, local employment opportunities, shops, community facilities, good public transport links, surgeries and green spaces. Other rural settlements have a more limited range of facilities and public transport services.
- 3.4.23 Chelmsford has a strong retail sector led by the City Centre. Chelmsford performs well against other towns in the sub-region³⁹ and is attractive to new investors given its socio-economic and demographic composition. This will continue to be a strong sector in Chelmsford and important to the local economy. The Retail Study update confirms that current allocations for comparison shopping in the City will meet future demand although there is evidence of reducing market shares across Chelmsford's retail centres.

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE LOCAL PLAN

- 3.4.24 The latest projections⁴⁰ estimate that the population of the Chelmsford City Area will increase by 15.25% between 2018 and 2043 requiring the provision of additional housing.
- 3.4.25 An ageing population of the Chelmsford City Area and wider Essex region means that the demand for specialist housing will increase.
- 3.4.26 There is a need for new schools or the expansion of existing schools in order to meet the future demand for school places associated with population growth, at all levels, across the Chelmsford City Area.
- 3.4.27 The size of the office market and the prominence of Chelmsford City Centre will continue. However, there is a lack of good quality office accommodation coupled with a lack of recent office development, along with a need for flexibility as a result of new hybrid working patterns.
- 3.4.28 The role of Chelmsford City Centre as the principal retail and business centre will continue and be attractive to new investors given its socio-economic and demographic composition, although there is evidence of a reducing market share.

KEY SUSTAINABILITY ISSUES

- Overall, the need to create sustainable places where people want to live, work and relax.
- The need to enable housing growth, using the standard method to identify the minimum number of homes to be planned for and planning for a mix of accommodation to suit all household types.
- The need to make best use and improve the quality of the existing housing stock.
- The need to support the delivery of independent living housing for older people and people with disabilities.
- The need to deliver a range of employment sites to support economic growth.
- The need to ensure a flexible supply of land for employment development.
- The need to address the surplus of unsuitable office space in the City Centre.
- The need to support economic development in the rural areas of Chelmsford.
- The need to support the growth of new sectors linked to the growth of Anglia Ruskin University, such as medical technologies.
- The need to raise incomes and especially for those whose incomes are in the lowest quartile.

⁴⁰ ONS (2018) Subnational Population Projections for England: 2018-based projections. Available at: [Population projections for local authorities: Table 2 - Office for National Statistics](#)

- The need to reduce out-commuting to London for work by encouraging businesses to invest and set up within Chelmsford.
- The need to tackle pockets of deprivation that exist in the area.
- The need to maintain and raise educational attainment and skills in the local labour force.
- The need to maintain and enhance the vitality of the City Centre and South Woodham Ferrers as well as the area's larger villages.
- The need to strengthen the convenience shopping role in Chelmsford City Centre and ensure that the neighbourhood and local centres continue to perform a strong convenience goods role which serves local needs.
- The need to address forecast deficits in, in particular, school places and early years and childcare provision.
- The need to support the City Area's educational establishments including Anglia Ruskin University and ARU Writtle.
- The need to safeguard existing community facilities and services and ensure the timely delivery of new facilities to meet needs arising from new development.
- The need to safeguard the identity of existing communities.
- The need to safeguard and maintain and enhance access to cultural and community facilities which benefit and support sustainable communities.

3.5 HEALTH AND WELLBEING

Physical Health

- 3.5.1 The 2019 Health Profile for Chelmsford produced by Public Health England⁴¹ identifies that the health of the people in Chelmsford is generally better than the England average and that the life expectancy of men and women in this area is higher than the England average. However, it was also identified that approximately 11.8% (3,550) children live in low income families within the area. It was also identified that the life expectancy for men in the most deprived areas of Chelmsford was 5.3 years lower (better than 2017) and 4.8 years lower for women (worse than 2017) than the areas of least deprivation.
- 3.5.2 Estimated levels of adult physical activity were higher than the England average in 2016, though by 2019 this has changed, with the levels of estimated activity being slightly lower in the Chelmsford City Area than the England average.
- 3.5.3 The rate of people killed and seriously injured on roads are higher than average in 2016 and this trend has continued in 2019 and is expected to continue to worsen, meaning more people are expected to die on the roads of the Chelmsford City Area than the average for England.

⁴¹ Public Health England (2019) Chelmsford District Health Profile 2019. Available at: [Local Authority Health Profiles - Data - OHID \(phe.org.uk\)](https://www.phe.org.uk/local-authority-health-profiles-data)

- 3.5.4 Rates of sexually transmitted infections and TB were better than the average for England, which is a trend that has continued into 2019. Rates of statutory homelessness in 2016 was lower than the England average. However, there has been a considerable change in both trends as of 2019, with the Chelmsford City Area now having a higher case of homelessness than the England average and this trend seems set to continue.
- 3.5.5 Rates of violent crime, long term unemployment, early deaths from cardiovascular diseases and early deaths from cancer are lower than or in keeping with the average for England in 2016 and these trends have continued to 2019.

Mental Health

- 3.5.6 The rate of alcohol-related harm hospital stays is 560 per 100,000 population, lower than the average for England. This represents 942 stays per year. By 2019, this figure had risen to 582 alcohol specific hospital stays among those under 18, representing 1,008 admissions per year, which is still lower than the England average⁴².
- 3.5.7 The rate of self-harm hospital stays is 183 per 100,000 population. This represents 312 stays per year. By 2019, this figure has fallen to 150 per 100,000 population, representing 260 admissions per year to hospital and remains lower than the England average.
- 3.5.8 The estimated dementia diagnosis rate (for those aged 65 and over) in 2020 stands at 55.2% which is below that for England as whole (61.6%) reflecting that many people predicted to be suffering from dementia may not be being diagnosed.⁴³
- 3.5.9 The suicide rate within the Chelmsford area (12.2 per 100,000) in 2020 is higher than that for the region (10.8 per 100,00) and England as a whole (10.4 per 100,000) and suicide rates have been increasing in recent years and have been above the England average since 2015⁴⁴.

Children's Health

- 3.5.10 In Year 6, 16.1% of children were classified as obese, which was lower than the average for England. By 2019 this has increased to 16.8% of children being classed as obese, a 0.7% increase since 2017⁴⁵.
- 3.5.11 The rate of alcohol specific hospital stays among those under 18 was 19 per 100,000 population, lower than the average for England (2017). By 2019, this figure has dropped to 9 per 100,000 population, which has ensured Chelmsford is considerably lower than the average for England⁴⁶.
- 3.5.12 Levels of teenage pregnancy, GCSE attainment, breastfeeding and smoking at time of delivery are also lower than the England average and this trend has continued to 2019⁴⁷.

⁴⁶ Ibid.

⁴⁷ Ibid.

Disability

- 3.5.13 It is predicted that there are 3,286 people (2.35% of the population) aged 18 plus in Chelmsford with a learning disability in 2019 which is very similar to Essex (2.34%), East region (2.34%) and England (2.36%)⁴⁸. The number of people predicted to have a moderate or severe learning disability is 682 (0.49%) which is also the same as Essex (0.48%), East region (0.48%) and England (0.49%)⁴⁹.
- 3.5.14 With regards to physical impairments, it is predicted that 11,287 people (10.01% of the population) aged 18 plus in Chelmsford have a physical impairment in 2019 which is very similar to Essex (10.13%) as a whole. The percentage of people considered to have day-to-day activities limited a little (24.3%) is similar to Essex as a whole (24.6%). However, the percentage of people who considered to have day-to-day activities limited a lot (18.4%) is lower than the Essex figure (21.5%)⁵⁰.

Healthcare Provision

- 3.5.15 Healthcare provision in the Chelmsford City Area includes Broomfield Hospital and a range of private and NHS health care providers. There are also four private hospitals in Chelmsford and new GP surgeries at Danbury and South Woodham Ferrers and new healthcare facilities proposed as part of the major new development to the north-east of the City Centre. GP-patient ratio data for the NHS Mid Essex Clinical Commissioning Group highlights that, as at 2014, ratios were 1,654.3 patients per Full Time Equivalent (FTE) GP. This is above the UK average of 1,580 patients per FTE⁵¹.
- 3.5.16 Local priorities in Chelmsford include reducing obesity, reducing alcohol-related harm, helping people to age well, tackling homelessness and reducing suicide rates.

OPEN SPACE

- 3.5.17 The provision of open space, sports and recreational facilities can play a significant role in the promotion of healthy lifestyles. As highlighted in Chelmsford City Council's 2024 Open Space Study⁵², there are 1,778 ha of accessible natural green space within the Chelmsford City Area. The Open Space study maps in detail current levels provision by quantity and quality, and by implication deficits by individual settlement. Provision standards are set out and surpluses/deficits are calculated (**Table 3.11**).

Source: Chelmsford Open Space Study Table 2024

- 3.5.18 The importance of access to high quality open space is increasingly recognised as fundamental to quality of life and, as such, is likely to secure a higher profile in the future, and consequently currently detailed plan policies seek to remedy deficiencies through protection, enhancement and new provision, via open space standards.
- 3.5.19 For new development, principles of good design should be applied in respect of the standards of provision for different types of open space, in turn contributing to the achieving the aims of the City’s Green Infrastructure Strategic Plan⁵³. This document sets out in detail access to natural greenspace across the City Area.

CRIME

- 3.5.20 As of 2021, the overall crime rate in Chelmsford was 83 crimes per 1,000 people, which is 2.5% higher than the rate of Essex (81 per 1,000 residents)⁵⁴. However, Chelmsford is considered to be the 53rd safest major town in England, Wales and Northern Ireland⁵⁵. **Table 3.12** and **Figure 3.4** illustrate the historic crime rates for Chelmsford and the types and total crimes committed within the City Area as compared to Essex, respectively.

Table 3.12 Historic Crime Rates for Chelmsford

Year	Crime rate per 1,000 people	Total Crimes
2021	83	9,883
2020	79	9,390
2019	90	10,664

Figure 3.4 Crime in Chelmsford Compared to Essex

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE REVIEW OF THE ADOPTED LOCAL PLAN

3.5.21 Chelmsford City Council’s vision for health and wellbeing is⁵⁷ “to work with communities and residents to reduce health inequalities and improve the opportunities for adults and children so that they can enjoy a healthy, safe, and fulfilling life.” This vision is supported by the overarching principles of:

- Partnership working;
- A focus on prevent of ill-health and early intervention;
- Increase communication and making use of technology;
- Improve mental health and wellbeing; and
- Effective health service and self-care.

3.5.22 Chelmsford City Council’s contribution to delivering better health outcomes, as set out above, is delivered within the context of a much wider local coalition of partners under the

⁵⁶ CrimeRate (2021) Crime and Safety Chelmsford. Available at: <https://crimerate.co.uk/essex/chelmsford#:~:text=The%20overall%20crime%20rate%20in.of%2081%20per%201%2C000%20residents.&text=This%20is%204.5%25%20higher%20than.2020's%20crime%20rate%20of%2037>

⁵⁷ Chelmsford City Council (2019) Health & Wellbeing Plan. Available at: [7-health-and-wellbeing-plan.pdf \(chelmsford.gov.uk\)](https://www.chelmsford.gov.uk/7-health-and-wellbeing-plan.pdf)

new public health arrangements. The Essex Joint Health and Wellbeing Strategy 2022 - 2026 (2022)⁵⁸ sets out the following vision:

“To improve the health and wellbeing of all people in Essex by creating a culture and environment that reduces inequalities and enables residents of all ages to live healthier lives.”

3.5.23 The Essex Joint Health & Wellbeing Strategy 2022-2026 sets out five key priorities:

- Improving mental health and wellbeing
- Physical activity and healthy weight
- Supporting long term independence
- Alcohol and substance misuse
- Health inequalities & the wider determinants of Health

3.5.24 The life expectancy of males within the most deprived area of Chelmsford has improved in recent years; however, the life expectancy of women in these areas has considerably worsened. Whilst the NPPF and existing Development Plan policies will be expected to help protect health and promote healthy lifestyles, the Review of the Adopted Local Plan will provide an opportunity to facilitate further the promotion of healthy lifestyles including through safeguarding existing open space and recreational facilities and addressing deficiencies. The Local Plan could also help to ensure the future provision of health facilities and services to meet local needs.

3.5.25 The latest data from Essex Police shows that in the year up to January 2022⁵⁹, antisocial behaviour had reduced substantially, which may reflect the impact of the Covid 19 pandemic, but all crime had increased. Overall, the picture was mixed with, for example, 10 types of victim-based crime showing a reduction on the previous year but the majority (29) showing an increase. The baseline illustrates that Chelmsford continues to manage to keep its crime rates against various types of crime lower than or keeping with the average for Essex.

3.5.26 The Police and Crime Plan for Essex 2024-2028⁶⁰ has the following six policing priorities:

- More local, visible and accessible policing
- Drive down anti-social behaviour and crime
- Beat knife crime and drug gangs and protect young people
- Tackle violence against women and girls and domestic abuse
- Ensure vulnerable people are protected

- Improve road safety and reduce road deaths in Essex to zero

KEY SUSTAINABILITY ISSUES

- The need to protect the health and wellbeing of Chelmsford's population.
- The need to promote healthy lifestyles and in particular reduce obesity and increase levels of physical activity.
- The need to plan for an ageing population.
- The need to address health inequalities, especially for those in the most deprived areas.
- The need to combat suicide and its causes.
- The need to protect and enhance open space provision across the Chelmsford City Area.
- The need to support high quality design that creates safe and secure communities.
- The need to safeguard existing health care facilities and services and ensure the timely delivery of new facilities and services to meet needs arising from new development.

3.6 TRANSPORT AND ACCESSIBILITY

TRANSPORT INFRASTRUCTURE

- 3.6.1 There are several primary road routes within the Chelmsford City Area. The A12 is a trunk road and runs from London and the M25, centrally in a north-easterly direction onwards to Suffolk and Norfolk. Two other significant primary routes are the A130, which runs north-south across Essex, and the A414, which begins in Harlow and terminates in Maldon.
- 3.6.2 Chelmsford has two Park and Ride facilities (Chelmer Valley and Sandon) with frequent connections to the City Centre for commuters and shoppers.
- 3.6.3 Chelmsford rail station is one of the busiest in the East of England, accommodating around 6.5 million passenger trips per year in 2023-2024⁶¹. **Table 3.13** illustrates the estimated usage of the rail stations within the Chelmsford City Area. As can be seen, Chelmsford railway station remains, and will continue to be, the principal station for Chelmsford and the surrounding area.

⁶¹ Office of Rail and Road (2023) Estimates of Station Usage. Available at: <https://dataportal.orr.gov.uk/statistics/usage/estimates-of-station-usage>.

Table 3.13 Stations within Chelmsford and their estimated usage 2017-2024

Station Name	Entries and Exits (2023-24)	Entries and Exits (2022-23)	Entries and Exits (2021-22)	Entries and Exits (2020-21)	Entries and Exits (2019-20)	Entries and Exits (2018-19)	Entries and Exits (2017-18)
Chelmsford	6,538,092	5,784,584	4,595,710	1,716,828	8,606,294	8,619,942	8,536,968

Battlesbridge	21,852	19,086	18,712	5,580	19,848	21,108	16,804

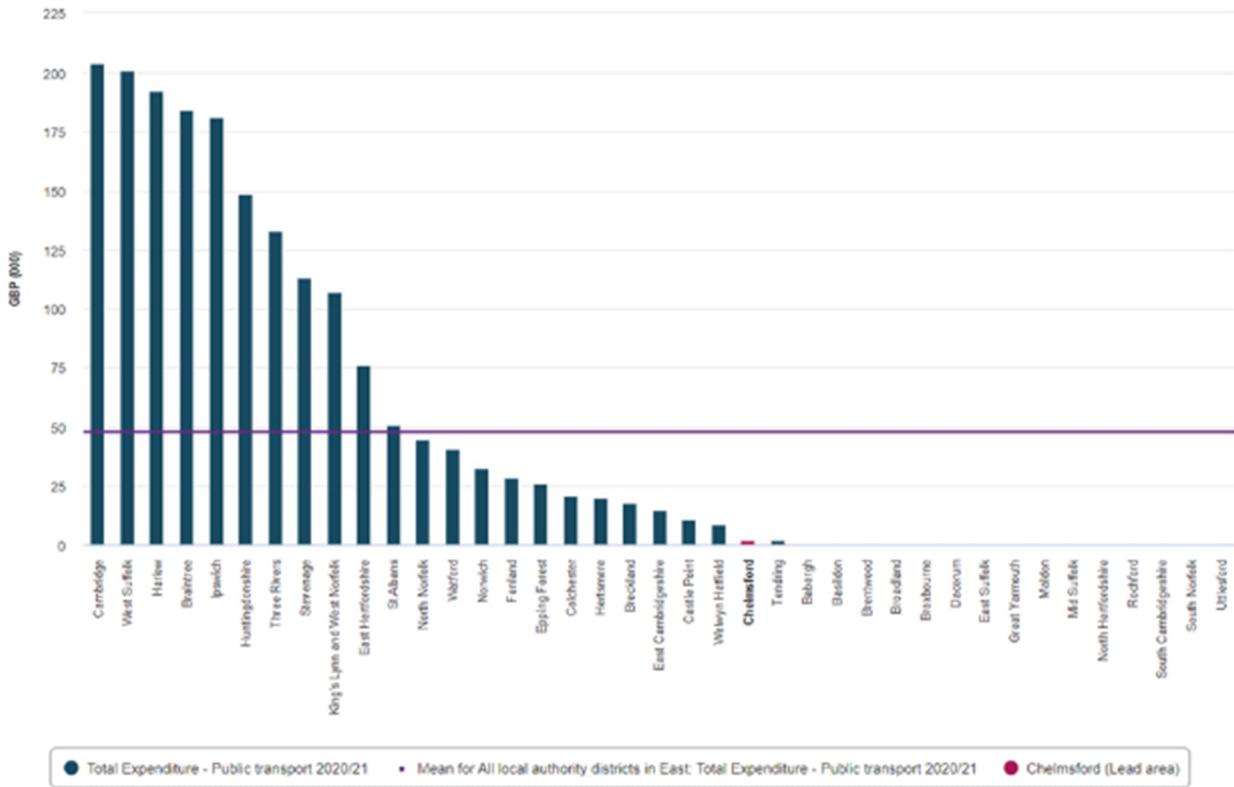

Source: Office of Rail and Road⁶²

- 3.6.4 Regular services connect Chelmsford with London Liverpool Street (with up to ten trains per hour), Ipswich and Norwich. A recently completed programme of upgrade works, including train capacity, has enhanced the accessibility and usability of Chelmsford Station. Work on a new North East Chelmsford railway station (Beaulieu Park Rail Station) has commenced and is expected to be opened in 2025. This will be a key element of the City’s planning strategy for the area, and will help to remove traffic from the outskirts of the city as part of the ‘Chelmsford future transport network – strategic zonal focus’. The station and Boreham Interchange together will comprise an important transport hub, which in turn, will help stimulate investment and development in the area north east of the station. Park and ride facilities are an important aspect of this approach.
- 3.6.5 Chelmsford is around 25 to 30 minutes’ drive from London Stansted Airport (via the A131/A120), and London Heathrow, London Gatwick, London City, Luton and Southend airports are all within a 1-1.5hrs drive time.
- 3.6.6 The Global Commuting Index as reported on Uswitch, highlights that the UK as a whole has quite poor public transport and that the Chelmsford area scored 4.19/10 due to high public transportation costs and long commuting times⁶³.
- 3.6.7 As illustrated in **Figure 3.5**, the Chelmsford City Area has limited spend on public transport/general transport perhaps reflecting relatively high costs facing residents/commuters.

Figure 3.5 Total Expenditure – Public Transport (2020/21) for All local authority districts in East England

Source: LG Inform⁶⁴

MOVEMENT

3.6.8 According to the 2011 Census, the average distance travelled to work by Chelmsford residents was 18.9 km in 2011 which represents an increase of approximately 4 km compared to 2001. **Table 3.14** compares the distance travelled to work by residents in 2001 and 2011 and highlights that the proportion of people travelling less than 10km has decreased marginally whilst the proportion travelling over 10km has increased. The 2011 Census also illustrates that the primary means of travelling to work is by car or van (40.63%) with 9.18% of residents travelling by train.

⁶⁴ LG Inform (2021) Total Expenditure – Public transport in Tower Hamlets. Available at: https://lginform.local.gov.uk/reports/lgastandard?mod-metric=8201&mod-area=E09000030&mod-group=AllUnitaryLainCountry_England&mod-type=namedComparisonGroup.

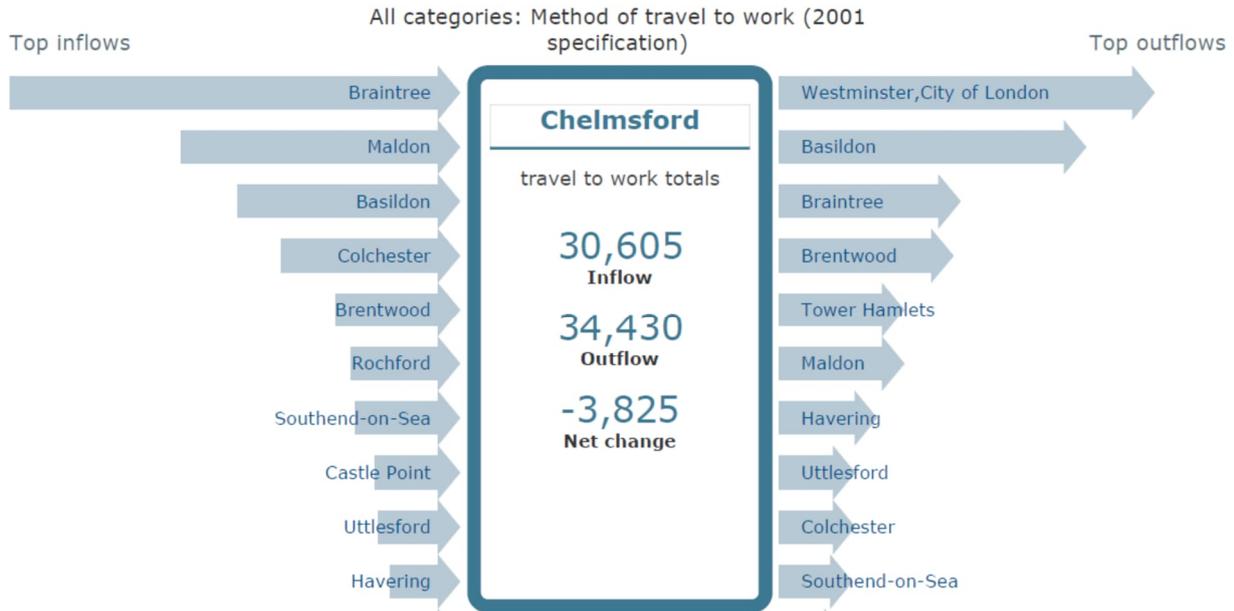

Table 3.14 Distance Travelled to Work

Distance Travelled to Work	Number of People (2001)	% of People in Employment (2001)	Number of People (2011)	% of People in Employment (2011)
Less than 2 km	14,069	17.03	14,061	16.26
2 km to less than 5 km	14,051	17	14,068	16.27
5 km to less than 10 km	7,630	9.23	7,708	8.91
10 km to less than 20 km	16,242	19.66	12,168	14.08
20 km to less than 30 km	7,138	8.64	5,357	6.2
30 km to less than 40 km	3,715	4.5	3,584	4.8
40 km to less than 60 km	2,143	2.59	11,698	13.53
60 km and over	1,556	1.88	1,569	1.81
Working from home	8,857	10.72	8,857	10.25
Other	7,220	8.73	7,381	8.54

Source: ONS (2001) *Census 2001*; ONS (2011) *Census 2011*.

- 3.6.9 Commuting flows indicate that there is a significant outflow of commuters from the Chelmsford City Area alongside a significant inflow. In 2011, a total of 30,605 workers commuted into Chelmsford from other local authorities whilst 34,430 residents commuted out of Chelmsford. This represents a net outflow of 3,825 workers.
- 3.6.10 **Figure 3.6** shows the workplace destinations of the Chelmsford City Area's workforce for 2011. It demonstrates that the majority of residents commuted to Westminster, City of London (5,702 people) followed by the neighbouring authorities of Basildon, Braintree and Brentwood. Braintree, meanwhile, was the origin of the most in-commuters to the local authority area (6,854 people).

Figure 3.6 Workplace Destinations

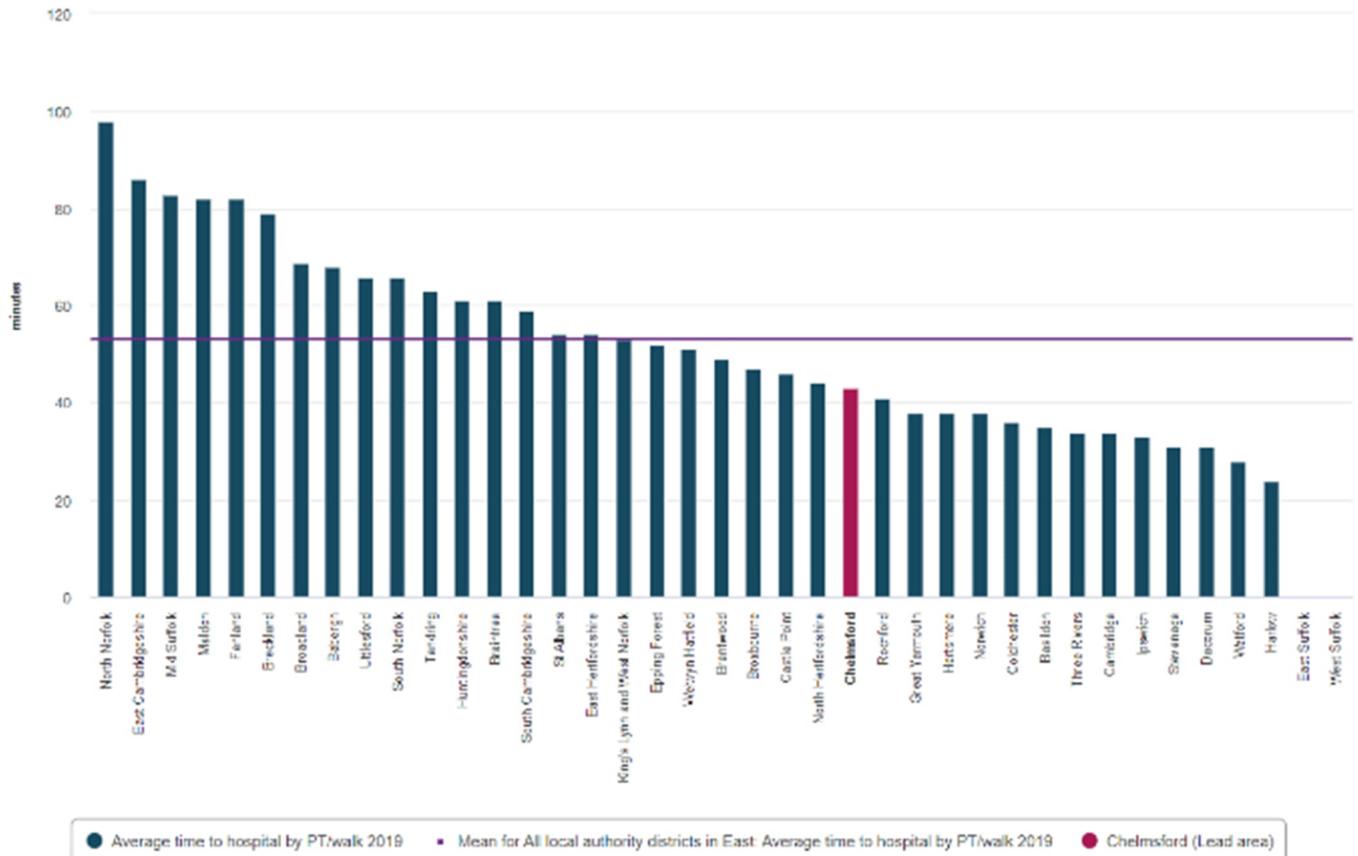

Source: NOMIS (2014) *Location of usual residence and place of work by method of travel to work*. Available at: <http://www.nomisweb.co.uk/census/2011/WU03UK/chart/1132462182>

- 3.6.11 Roads are considered to be operational when running at up to 90% capacity; the remaining 10% provides flexibility, resilience and reliability. Chelmsford’s road network is operating at 96% capacity during peak times, so sheer volume of traffic can lead to delays. There is not the available space in the City Centre to increase capacity on the existing roads, or to build new roads⁶⁵.
- 3.6.12 The Chelmsford City Area benefits from having, relative to all other local authorities in the East, low travel times to a hospital through public transport or walking. The average time taken for such a journey by these transportation methods is 43 minutes in 2019 and **Figure 3.7** highlights how this compares favourably against the other local authorities in the East. The time of 43 minutes in 2019 is consistent with the times such a trip would take⁶⁶.

⁶⁵ Essex County Council (2016) *Chelmsford’s future transport network*. Available at: <http://www.essexhighways.org/highway-schemes-and-developments/major-schemes/chelmsford-future-transport-network.aspx>
⁶⁶ Ibid.

Figure 3.7 Travel time in minutes to nearest hospital by public transport/walking (2019) for all local authority districts in East England

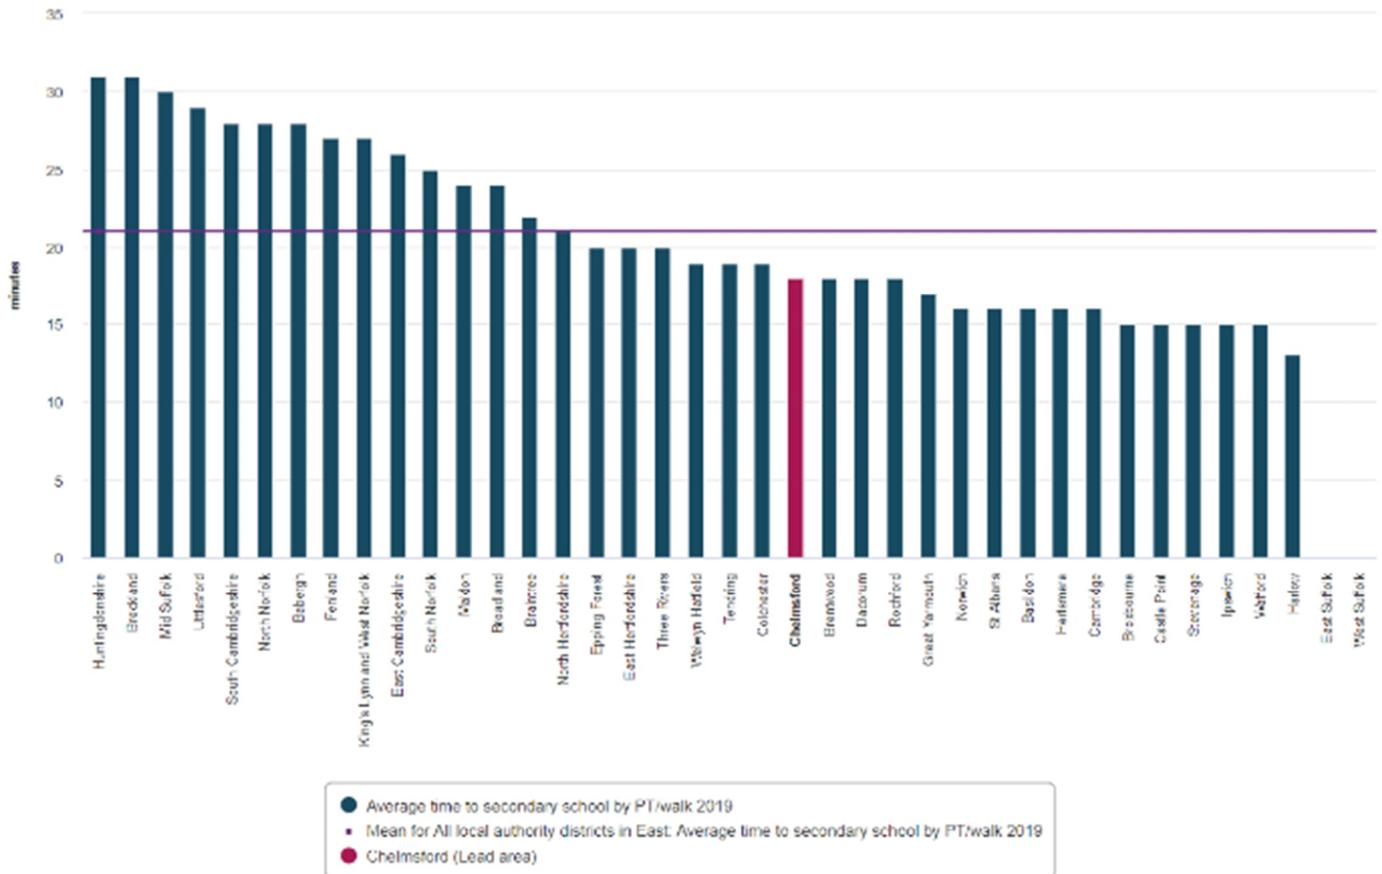

Source: LG Inform⁶⁷

3.6.13 The Chelmsford City Area benefits from having accessible secondary schools by public transport or walking, with the average journey using these methods taking only 18 minutes. This compares favourably to the other local authorities in the East and compares well against the combined average for the East of England of 21 minutes, which can be seen in **Figure 3.8**. As there are usually a higher density of primary schools in an area when compared to secondary schools, Chelmsford also scored well against the accessibility of primary schools by walking or public transport as the average travel time of these journeys is nine minutes⁶⁸.

⁶⁷ LG Inform (2021) Travel time in minutes to nearest hospital by public transport/walking in Chelmsford. Available at: https://lginform.local.gov.uk/reports/lgastandard?mod-metric=10238&mod-area=E07000070&mod-group=AllDistrictInRegion_East&mod-type=namedComparisonGroup.

⁶⁸ LG Inform (2021) Travel time in minutes to nearest primary school by public transport/walking in Chelmsford. Available at: https://lginform.local.gov.uk/reports/lgastandard?mod-metric=10226&mod-area=E07000070&mod-group=AllDistrictInRegion_East&mod-type=namedComparisonGroup.

Figure 3.8 Travel time in minutes to nearest secondary school by public transport/walking (2019) for all local authority districts in East England

Source: LG Inform⁶⁹

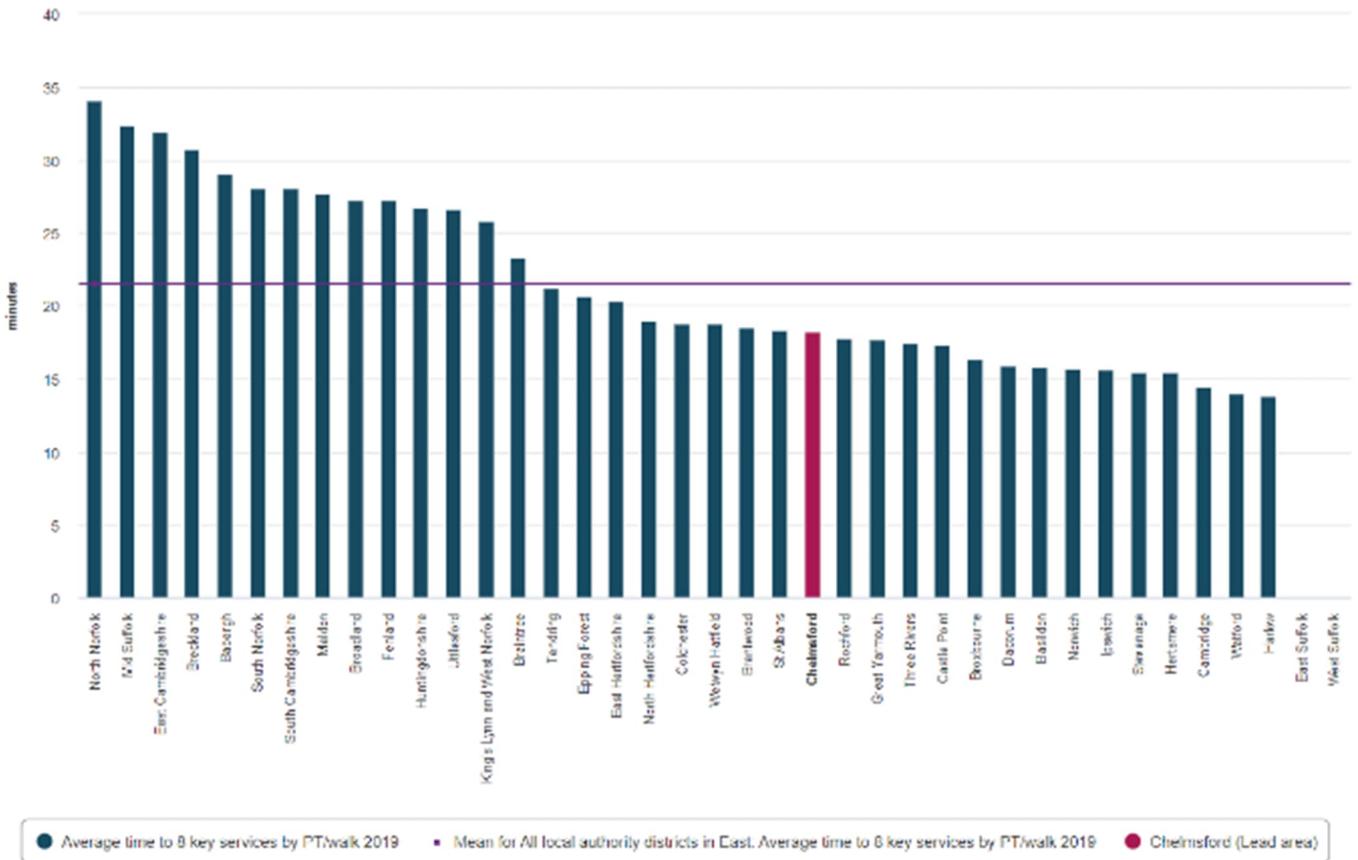

3.6.14 The Chelmsford City Area additionally benefits from low travel times by walking and public transport to 8 key services⁷⁰ (18.2 minutes), being below the average for such trips within the local authorities of the East (21.5 minutes), which is illustrated in **Figure 3.9**. Chelmsford also benefits from a good score with regard to travel time by cycling to 8 key services of 15.9 minutes, whilst the average for local authorities in the East is 19.5 minutes⁷¹.

⁶⁹ LG Inform (2021) Travel time in minutes to nearest secondary school by public transport/walking in Chelmsford. Available at: https://lginform.local.gov.uk/reports/lgastandard?mod-metric=10229&mod-area=E07000070&mod-group=AllDistrictInRegion_East&mod-type=namedComparisonGroup.

⁷⁰ The 8 key services are the average of minimum journey times to medium sized centres of employment (500-4999 jobs), primary schools, secondary schools, further education, GPs, hospitals, food stores and town centres.

⁷¹ LG Inform (2021) Travel time in minutes to 8 key services by cycle in Chelmsford. Available at: https://lginform.local.gov.uk/reports/lgastandard?mod-metric=10250&mod-area=E07000070&mod-group=AllDistrictInRegion_East&mod-type=namedComparisonGroup.

Figure 3.9 Travel time in minutes to 8 key services by public transport/walking in (2019) for all local authority districts in East England

Source: LG Inform⁷²

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE REVIEW OF THE ADOPTED LOCAL PLAN

3.6.15 An increase in population and households within the Chelmsford City Area will in-turn generate additional transport movements. Based on existing trends, the majority of these movements are likely to be by car with a continuation of (net) out-commuting but also substantial in-commuting. This could result in increased pressure on the local road network and public transport infrastructure with congestion on key trunks roads including the A12, A130 and A414 east and west of Chelmsford. In this regard, a number of junctions on the strategic highway network have capacity constraints and pinch points. Demand for rail transport is also expected to increase.

3.6.16 Essex County Council's vision for Chelmsford's future transport network is follows⁷³:

⁷² LG Inform (2021) Travel time in minutes to 8 key services by public transport/walking in Chelmsford. Available at: https://lginform.local.gov.uk/reports/lgastandard?mod-metric=10249&mod-area=E07000070&mod-group=AllDistrictInRegion_East&mod-type=namedComparisonGroup.

⁷³ Ibid

“For Chelmsford's transport system to become 'best in class' rivalling similar cities across the UK offering enhanced connectivity, and access to opportunities for residents, visitors and businesses to support the sustainable economic growth of the city.”

- 3.6.17 To ensure the delivery of this vision, funding from planning obligations has been secured⁷⁴ to deliver a variety of schemes following a zonal approach. The central zone will focus on improving the quality of the public realm, managing traffic efficiently and providing alternative sustainable transport options. The mid zone focuses on journeys within the City limits, 56% of which are currently made by private car. Sustainable alternatives to the private car will be identified and walking and cycling will be promoted. In the outer zone, which targets journeys from outside Chelmsford, schemes will focus on encouraging rail use, removing traffic from the outskirts of the City and using signage to direct drivers to the most appropriate routes.
- 3.6.18 The adopted Local Plan 2020 also includes a number of policies and proposals to enhance transport in the local authority area. Specific developments include the Chelmsford North East Bypass (with Section 1 expected to open in 2026) and the new Beaulieu Park Rail Station (referenced above), in addition to capacity improvements at the existing station, transport links between new neighbourhoods and Chelmsford City Centre, consideration of additional Park and Ride sites, bus priority and bus-based rapid transit (ChART). Improvements to the A12: junction 19 (Chelmsford North) to junction 25 (A120 interchange) are also planned by National Highways with widening to provide three lanes between Chelmsford and Colchester. In this context, it would be expected that some transport improvements would be delivered independently of the Review of the Adopted Local Plan. Chelmsford City Council has also been involved with developing transport improvements for north/west Chelmsford, including initiatives such as DigiGo which is a fully electric shared public transport service offering on-demand or pre-bookable travel.⁷⁵
- 3.6.19 The adopted Local Plan 2020 provides within its Strategic Policy S9 a long list of infrastructure requirements it will try to attain throughout its lifetime in order to improve the infrastructure of Chelmsford, especially in places where it is desperately needed⁷⁶. The Local Plan also seeks to encourage the use of Park and Ride facilities and encourage the creation of new Park and Ride facilities and to improve the pedestrianisation of the area. Strategic Policy S10 supports Policy S9 by trying to ensure the financial contributions required in order to implement needed infrastructure and to ensure new infrastructure is in the best/most suitable places possible.
- 3.6.20 The Chelmsford City Area does benefit from accessible educational facilities, with travel times to primary schools and secondary schools being relatively low. Travel times to 8 key services by cycling, walking and public transport, showing that such services are currently well positioned across the area to ensure they are accessible.

⁷⁴ Chelmsford City Council (March 2022) Infrastructure Funding Statement 2020/21

⁷⁵ See: <https://www.essexhighways.org/digigo>

⁷⁶ Ibid.

KEY SUSTAINABILITY ISSUES

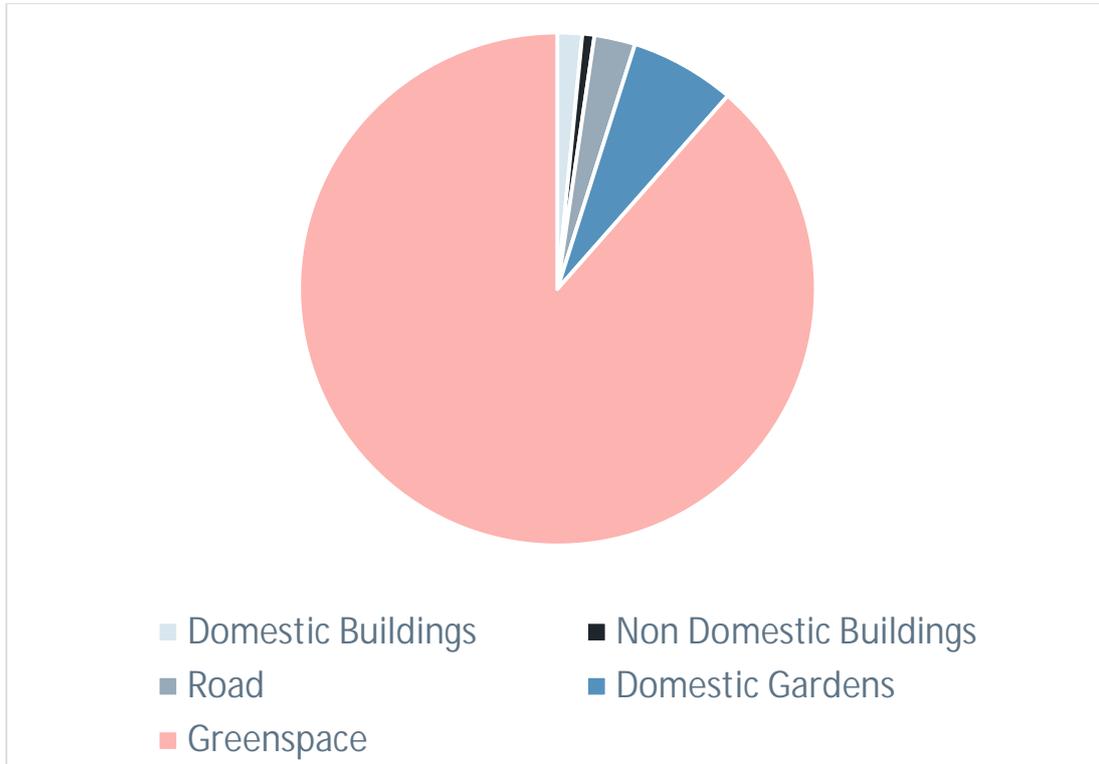

- The need to ensure timely investment in transport infrastructure and services through securing developer funded works or contributions and other sources of funding.
- The need to address congestion, particularly on and around the main A12, A130 and A414 transport corridors.
- The need to address existing junction capacity issues.
- The need to enhance the connectivity of more remote settlements, particularly to the north of the Chelmsford City Area.
- The need to encourage alternative modes of transport to the car, including the expansion of park and ride sites.
- The need to ensure that new development is accessible to a range of community facilities and services and jobs so as to reduce the need to travel.
- The need to reduce out-commuting by creating a stronger employment market within the Chelmsford City Area.
- The need to encourage walking and cycling, as part of active travel.
- The need to encourage the use of public transport, and in particular key transport interchanges between different modes, namely bus and rail.
- The need to encourage car sharing, especially along heavily congested transport corridors.
- The need to address congestion in and around the City Centre.
- The need to investigate more innovative and creative ways to tackle behaviour change, rather than simply the monitoring of travel patterns.

3.7 LAND USE, GEOLOGY AND SOILS

LAND USE

- 3.7.1 **Figure 3.10** illustrates the key land uses in the Chelmsford City Area (as at 2005) and highlights that the majority of the area (84.7%) was classified as green space, slightly lower than the regional average of 88.1% and national average of 87.5%.

Figure 3.10 Land Use

GEOLOGY

- 3.7.2 The geology of the Chelmsford City Area can be separated into two areas; Northern areas are underlain by the London Clay Formation (composed of clay, or silty clays with small calcareous nodules and selenite crystals), southern areas are characterised by outcrops of the Claygate Beds (silts and silty clays with inter-bedded fine grained sands) overlying the London Clay and are generally found associated with higher ground. Occasionally, the Bagshot Beds (fine grained sands) are found overlying the Claygate Beds. Near Tye Green, the Bagshot Beds are overlain by the Bagshot Pebble Bed (approximately 4m of rounded black flint pebbles).
- 3.7.3 Drift deposits overlying the solid geology consist mainly of the Lowestoft Formation in the northern area of the local authority area, which comprises Glaciofluvial Deposits, Till and Glaciolacustrine Deposits except in the areas around large river channels where Head Deposits are prevalent. In the southern part of the Chelmsford City Area, the predominant superficial deposits are the Head Deposits. River Terrace Deposits and alluvium tend to be located around river channels.⁷⁷
- 3.7.4 There are two designated sites of geological interest in the Chelmsford City Area, River Ter SSSI and Newney Green Pit SSSI. River Ter SSSI is representative of a lowland stream with a distinctive floor regime. In addition, the site demonstrates characteristic

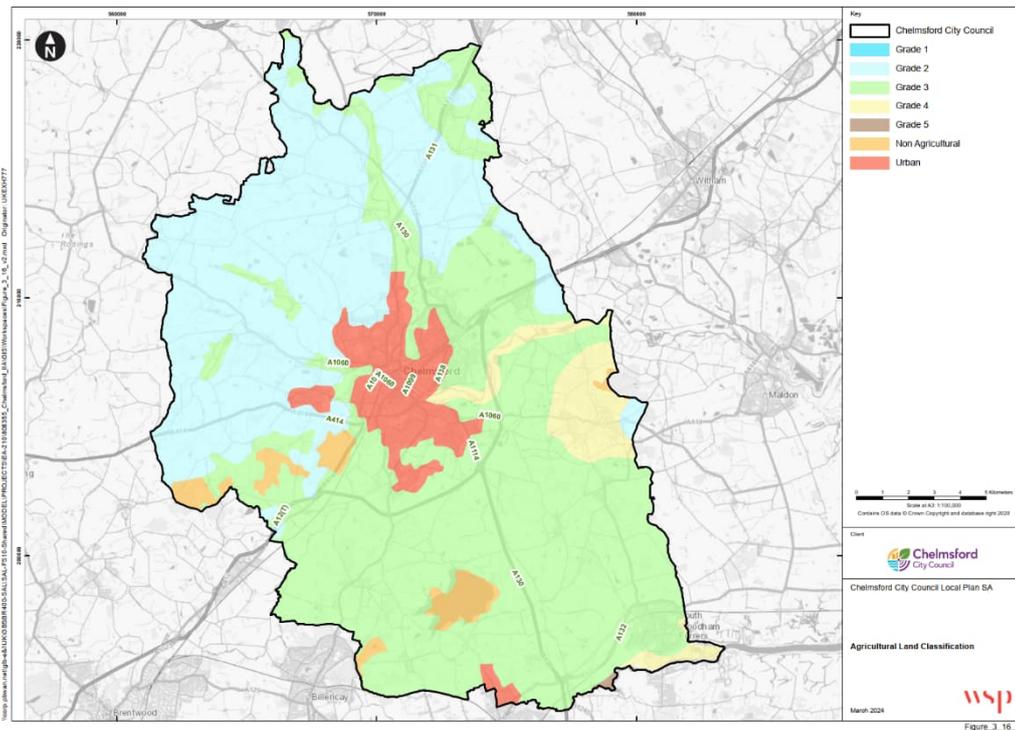

⁷⁷ British Geological Survey (1975) Geological Survey of England and Wales. Available at: <http://www.bgs.ac.uk/data/maps/maps.cfc?method=viewRecord&mapId=9660>

features of a lowland stream including pool-riffle sequences, bank erosion, bedload transport and dimensional adjustments to flooding frequency.⁷⁸ Newney Green Pit SSSI, meanwhile, provides exposures in the important Middle Pleistocene sequence first recognised in Suffolk, namely Kesgrave (Thames) Gravel, with a Cromerian Palaeosol (fossil soil horizon) developed in its upper layers, and overlain by the Lowestoft (Anglian) Till.⁷⁹

SOILS

- 3.7.5 The Agricultural Land Classification (ALC) system developed by Defra provides a method for assessing the quality of farmland. The system divides the quality of land into five categories, as well as non-agricultural and urban. The ‘best and most versatile land’ is defined by the NPPF as that which falls into Grades 1, 2 and 3a.
- 3.7.6 Best and most versatile agricultural land in the Chelmsford City Area generally lies to the north/north west of the Chelmsford Urban Area and which is characterised by Grade 2 (‘Very Good’) quality land. Land to the south of the urban area, meanwhile, is predominantly Grade 3 (‘Good’) agricultural land, as shown in **Figure 3.15** below.

Figure 3.15 Agricultural Land Classification

source: Chelmsford Local Plan 2013-2036⁸⁰

⁷⁸ Natural England (2017) *River Ter SSSI*. Available at:

<https://designatedsites.naturalengland.org.uk/SiteDetail.aspx?SiteCode=S2000058&SiteName=&countyCode=15&responsiblePerson=>

⁷⁹ Natural England (2017) *Newney Green Pit SSSI*. Available

⁸⁰ Chelmsford City Council (2020) Chelmsford Local Plan 2013-2036. Available at: <https://www.chelmsford.gov.uk/planning-and-building-control/planning-policy-and-local-plan/adopted-local-plan/>.

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE REVIEW OF THE ADOPTED LOCAL PLAN

- 3.7.7 National planning policy encourages the effective use of land by re-using land that has been previously developed and also seeks to protect the best and most versatile agricultural land. Similarly, the adopted Local Plan 2020 seeks to avoid the significant, irreversible or permanent loss of the best and most versatile agricultural land (see Policies S1, S7 and S8, for example) and promotes the use of previously developed land. However, if councils do not have a supply of specific deliverable sites sufficient to provide five years' worth of housing against their housing requirements, the NPPF's presumption in favour of sustainable development can often outweigh other national and local policy constraints.
- 3.7.8 The Council has produced an assessment of the capacity of future development sites. The April 2024 Five Year Housing Land Supply Position Statement⁸¹ and associated Site Schedule show there is a supply of 6,792 dwellings forecast to be completed in the next 5 years. On the basis of the five year housing requirement and the forecasted housing supply, Chelmsford City Council can demonstrate a suitable supply of housing for over 8 years.

KEY SUSTAINABILITY ISSUES

- The need to encourage development on previously developed (brownfield) land.
- The need to make best use of existing buildings and infrastructure.
- The need to protect the best and most versatile agricultural land.
- The need to protect and enhance sites designated for their geological interest.

3.8 WATER

WATER QUALITY

- 3.8.1 The majority of the Chelmsford City Area is located within the River Chelmer catchment. The River Chelmer drains a 648 km² catchment in south Essex. The River Chelmer, which rises upstream of Thaxted, flows in a south eastwards direction to Chelmsford. The River Wid is a major tributary to the River Can which itself joins the River Chelmer in Chelmsford. Downstream of Chelmsford, the River Chelmer is canalised and flows eastwards to the tidal discharge point at Beeleigh Falls near Maldon. At the southern extremity of the local authority area, South Woodham Ferrers is situated within the River Crouch catchment.
- 3.8.2 The other watercourses within the Chelmsford City Area are:
- Roxwell Brook;
 - Boreham Brook;

⁸¹ Chelmsford City Council (April 2024) Five-Year Housing Land Supply Position Statement, at: www.chelmsford.gov.uk/media/hd1pv4ct/five-year-land-supply-position-statement-april-2024.pdf

- Newlands Brook;
- One Bridge Brook Chignall;
- Baddow Meads Ditch;
- Fen Brook;
- Rettendon Ditch;
- Runwell Brook;
- Margaretting Brook;
- Sandon Brook;
- Sandon Brook East Arm; and
- Eyotts Farm Ditch.

3.8.3 The River Basin Management Plan (RBMP) highlights that the most common pressures for not achieving good status or potential include:

- physical modification from agriculture and rural land management
- phosphates from agriculture and rural land management; and
- dissolved oxygen from agriculture and rural land management and the water industry.

3.8.4 For groundwater quality, the main reasons for poor status were high or rising nitrate concentrations, with some failures for pesticides and other chemicals. The main reason for poor quantitative status was that abstraction levels – mainly for drinking water – exceeded the rate at which aquifers recharge.

3.8.5 The Chelmsford City Area falls within the Combined Essex Management Catchment (**Figure 3.11**) and Chelmer Operational Catchment. Data from 2019⁸² records a mixed picture of ecological and chemical status with room for improvement across both measures (**Table 3.15**).

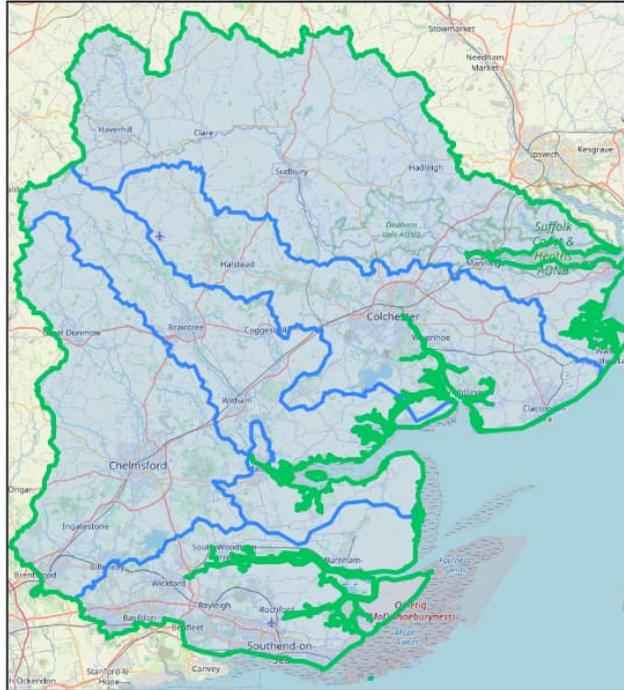

Table 3.15 Ecological and Chemical Status of Water Bodies and Water Body Elements in the Essex Combined Management Catchment 2019

Ecological status or potential	Bad	Poor	Moderate	Good	High	Total
Number of water bodies	0	14	52	4	0	70
Number of water body elements	15	56	83	112	381	647
Chemical status			Fail	Good	Total	

⁸² <https://environment.data.gov.uk/catchment-planning/ManagementCatchment/3018/classifications>

Number of water bodies	70	0	70
Number of water body elements	181	830	1011

Figure 3.11 The Essex Combined Management Catchment

Source: <https://environment.data.gov.uk/catchment-planning/ManagementCatchment/3018>

WATER RESOURCES

3.8.6 The public water supply for the Chelmsford City Area is provided by Essex & Suffolk Water (E&SW). Chelmsford lies within the Essex Water Resource Zone (WRZ) bounded by the Thames Estuary in the south and the Essex coastline as far north as Salcott in the east. The intrinsic water resources include the Essex rivers, the Chelmer, Blackwater, Stour and Roman River which support pumped storage reservoirs at Hanningfield and Abberton (which has recently been enlarged and enhanced to provide long term water resources for Essex), and treatment works at Langford, Langham, Hanningfield and Layer. The remaining water sourced from inside the Essex WRZ (approximately 3% of total water supplied in the zone) is derived from groundwater via Chalk well and adit sources in the south and south west of the zone at Linford, Stifford, Dagenham and Roding, each with on-site treatment. Water transferred into the Essex supply area comes from two sources, namely the Chigwell raw water bulk supply from Thames Water’s Lee Valley Reservoirs and the Ely and Ouse to Essex Transfer Scheme⁸³.

⁸³ Essex and Suffolk Water (2024) Draft Water Resources Management Plan 2024. Available at: [Draft Water Resources Management Plan 2024 consultation \(eswater.co.uk\)](https://www.eswater.co.uk/consultation/2024/)

- 3.8.7 A Water Cycle Study (WCS) was prepared for the City Area in 2018,⁸⁴ and the updated Water Cycle Study (2024)⁸⁵ identifies some constraints with respect to water service infrastructure and the water environment to deliver development, likely to require that strategic water resource options and wastewater solutions are developed in advance of development coming forward.
- 3.8.8 The draft Essex and Suffolk Water Resource Management Plan 2024 identifies that without further investment in things like expanding reservoirs and other sources of water, that demand for water will begin to outpace supply in the future (2030+). This is also due to changes in the rules governing how much water, water companies can take from existing sources that will come into force after 2030.
- 3.8.9 In total, three Water Recycling Centres (WRCs) will serve to manage the wastewater of the proposed future development across the City Area. Two of these, Great Leighs and South Woodham Ferrers, are considered to require revised quality conditions (permits) to accommodate the future development proposed in the period 2021-2041. Upgrades may be required to the WRC and careful development phasing is also recommended. The Chelmsford WRC is considered to have sufficient capacity.
- 3.8.10 The WCS also identifies that there is significant water demand stress across the City Area. In consequence, there are key drivers requiring that water demand is managed across the area for all new development, in order to achieve long term sustainability in terms of water resources. Overall, the WCS concludes there are no constraints with respect to water services infrastructure and the water environment to delivering development on the basis that strategic water resource options and wastewater solutions are developed in advance of development coming forward.
- 3.8.11 The WCS notes (p.174) that *“AWS and CCC should work with the EA to find the most suitable solution or combination of solutions to address the identified risk at each WRC identified above. It has not yet been fully confirmed if the potential solutions discussed above can be implemented in a timely manner to fully address the risk of meeting the ‘no deterioration’ policy appropriately within the plan period, based on the current proposed development trajectories (development timings and number of dwellings) used within this Detailed WCS. Therefore, CCC must prevent development occurring ahead of capacity at the WRC becoming available either by taking a stepped approach or by redirecting some development into another WRC catchment with sufficient capacity if needed.”* Policy S4 of the Pre-Submission plan seeks to address this matter through requiring that developers demonstrate the existence of sufficient waste water treatment capacity.
- 3.8.12 The Regional Water Resources Plan for Eastern England⁸⁶ describes the entire Eastern England as being ‘seriously water stressed’, with demand likely to double by 2050. It is noted that: *“while future water demand drivers from population and housing growth are significant, these could be largely offset through demand management measures such as leakage reduction and a focus on household and non-household water efficiency, enabled by an increase in measures such as smart metering.”* However, *“water demand management alone is not going to provide sufficient water to enable the region’s*

⁸⁴ Chelmsford City Council (2024) Water Cycle Study Update 2024.

⁸⁵ Chelmsford City Council (February 2024) Chelmsford City Council Water Cycle Study

⁸⁶ Water Resources East (2023) The Regional Water Resources Plan for Eastern England available at: <https://wre.org.uk/projects/the-regional-plan/>

environmental vision to be realised while also aiming to support water-dependent economic activity. Significant new infrastructure will be required.”.

FLOOD RISK

- 3.8.13 The NPPF seeks to ensure that flood risk is taken into account at the plan making stage in order to avoid inappropriate development in areas at risk of flooding and to direct development away from areas at highest risk. **Figure 3.12** shows the prevalence of Flood Zones 2 and 3 across the Chelmsford City Area.
- 3.8.14 The 20247 Strategic Flood Risk Assessment (SFRA) for the Chelmsford City Area highlights that Chelmsford has historically been subject to flooding from several sources of flood risk. The primary fluvial flood risk is associated with the River Chelmer and its tributaries. The main urban area at risk is Chelmsford City. Other areas that are shown to be at risk include Margaretting, Little and Great Waltham. The primary tidal flood risk is associated with the tidal River Crouch, Fenn Creek and Clements Green Creek. The main urban area at risk is South Woodham Ferrers. However, much of the area benefits from defences consisting of sea walls and embankments.
- 3.8.15 The Risk of Flooding from Surface Water map⁸⁷ shows a number of prominent overland flow routes; these predominantly follow topographical flow paths of existing watercourses or dry valleys with some isolated ponding located in low lying areas. In addition, a number of these follow local road infrastructure. Surface water flooding is shown to be a risk to the majority of towns and villages within Chelmsford. The sewers are managed by Anglian Water⁸⁸.

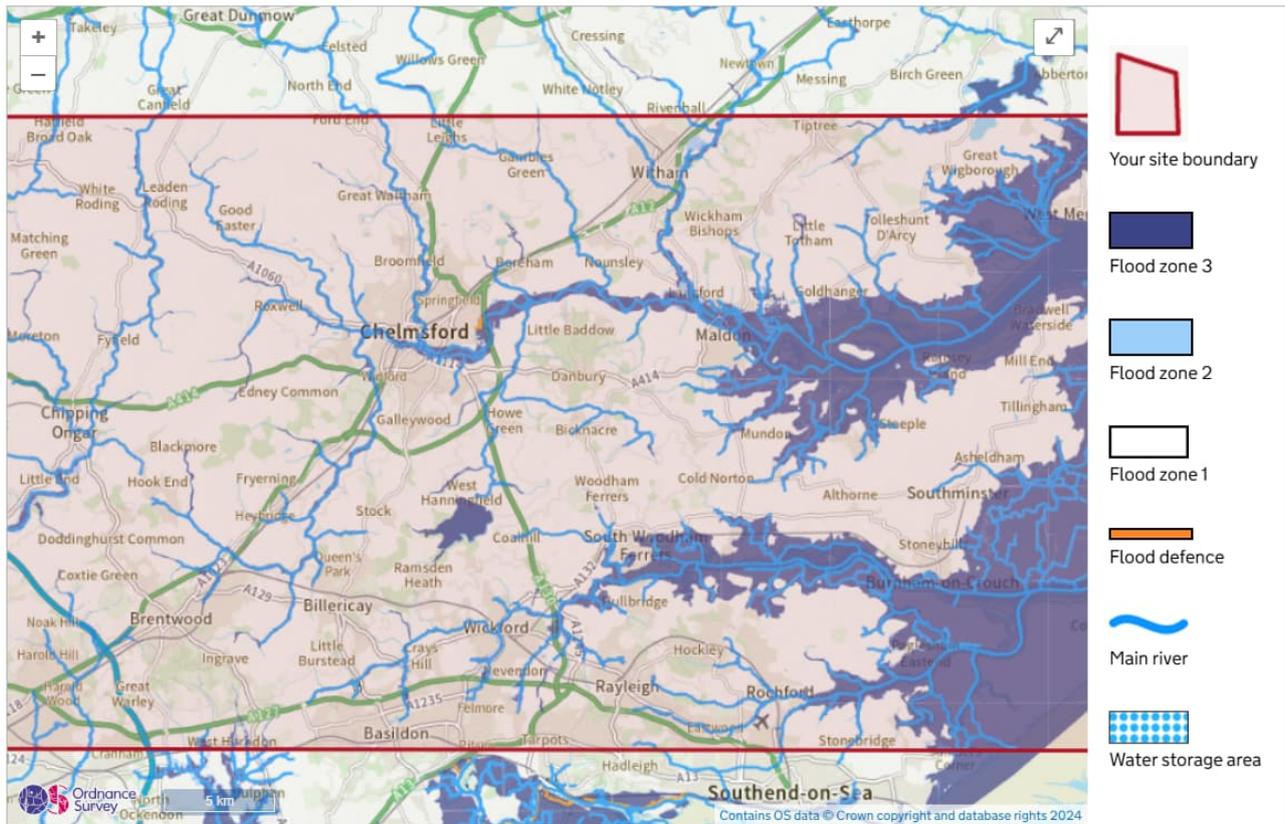

⁸⁷ Environment Agency (2024) *Extent of flood risk from surface water*. Available at:

Figure 3.12 Environment Agency Flood Zone Map Zones 2 and 3

Source: Environment Agency Flood Zone Map (2024)

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE REVIEW OF THE ADOPTED LOCAL PLAN

- 3.8.16 The projected increase in the population of the Chelmsford City Area will result in increased pressure on water resources which could affect water availability and quality. However, the WCS indicates that the local water infrastructure can be upgraded to meet the increased demand for both wastewater management and potable drinking water.
- 3.8.17 The RBMP anticipates an improvement in the ecological status of surface water bodies and the quantitative states of groundwater bodies whilst the chemical status of surface water bodies and groundwater bodies are likely to remain the same.
- 3.8.18 The Chelmsford Surface Water Management Plan (2014) outlines the preferred surface water management strategy for Chelmsford. It establishes a long-term action plan to support the management of surface water flood risk across the City Area⁸⁹.

⁸⁹ Chelmsford CC and the Environment Agency have been working together for many years to develop a flood alleviation scheme for the City. This project is currently in development working towards delivery later in the 2020s. Options are

3.8.19 Taking into account national planning policy set out in the NPPF and adopted Local Plan policy, it is expected that flood risk would be managed without the Review of the Adopted Local Plan. The Chelmsford Flood Resilience Partnership will identify strategic flood defence measures required to protect existing development in Chelmsford City Centre. However, flood risk has the potential to be a significant constraint on future development and there is an increased risk that new development could be inappropriately sited without up-to-date policy and site allocations. Further, opportunities to ensure the timely delivery of flood alleviation schemes may not be realised.

KEY SUSTAINABILITY ISSUES

- The need to protect and enhance the quality of water sources in the Chelmsford City Area.
- The need to promote the efficient use of water resources.
- The need to ensure the timely provision of new water services infrastructure to meet demand arising from new development.
- The need to locate new development away from areas of flood risk, taking into account the effects of climate change.
- The need to ensure the timely provision of flood defence/management infrastructure.

3.9 AIR QUALITY

3.9.1 Legislative frameworks and guidance in relation to air quality have been established at both the European and UK level. Policies aim to reduce exposure to specific pollutants by reducing emissions and setting targets for air quality. Policies are driven by the aims of the EU Air Quality Directive (2008/50/EC)⁹⁰. The key objective is to help minimise the negative impacts on human health and the environment. The Directive sets guidance for member states for the effective implementation of air quality targets.

3.9.2 The UK's National Air Quality Strategy⁹¹ sets health-based standards for five key pollutants and objectives for achieving them. This is to ensure a level of ambient air quality in public places that is safe for human health and quality of life. It also recognises that specific action at the local level may be needed depending on the scale and nature of the air quality problem.

3.9.3 The main source of air pollution in Chelmsford is road traffic emissions from major roads, notably the A12, A414, A138, A130 and B1016. Other pollution sources, including

currently being assessed and are likely to involve a combination of upstream storage, natural flood management, amendments to the channel to improve conveyance, and localised defences. Developing this will involve working with partners and landowners and as part of the Local Plan the potential for the scheme should be considered as land may need to be set aside to enable delivery of the scheme [EA Communication, 30/05/22].

⁹⁰European Commission (2008) Directive 2008/50/EC on ambient air quality and cleaner air for Europe. Available at: <http://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex:32008L0050>

⁹¹ Department for Environment, Food and Rural Affairs (2023) *Air Quality strategy: framework for local authority delivery*. Available at: <https://www.gov.uk/government/publications/the-air-quality-strategy-for-england/air-quality-strategy-framework-for-local-authority-delivery>

commercial, industrial and domestic sources, also make a contribution to background pollution concentrations.

- 3.9.4 Air pollution, through nitrogen deposition, acid deposition and toxic effects, directly and indirectly affects the health of the natural environment. Whilst some emissions (such as nitrogen oxides associated with the burning of fossil fuels) have fallen overall, others such as ammonia have remained high. Localised effects associated with pollutants can be severe, where, for example nitrogen enrichment encourages nitrogen-tolerant plant growth (such as along road verges), eutrophication of water bodies and inhibition of lichen growth.
- 3.9.5 The 2021 Local Air Quality Monitoring Report explicitly states that air pollution in 2020 reduced significantly due to the Covid-19 pandemic⁹². Subsequently, and with a return to 'normal' traffic levels, the Local Air Quality Monitoring Report (2023)⁹³ identifies that:
- There is a long term downwards trend of monitored NO₂ air pollution.
 - No exceedances of the air quality objectives have been identified in 2022.
 - No exceedances of the air quality objectives at relevant exposure have occurred within the last three years.
 - There are no new developments that will have a significant impact on air quality.
- 3.9.6 The two Air Quality Management Areas (AQMAs) at the Army and Navy Roundabout and A414 Maldon Road, Danbury have been revoked⁹⁴ following the recording of no exceedances over the previous 5 years.

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE REVIEW OF THE ADOPTED LOCAL PLAN

- 3.9.7 The development of Park & Ride schemes at Chelmer Valley and Sandon will continue to contribute to changes in patterns of travel behaviour and consequent effects on air quality.
- 3.9.8 To complement the successful Cycle Point secure cycle storage facilities installed at Chelmsford rail station in 2014, the Council has installed thirteen toast-rack bike stands in the Fairfield Road car park and Marconi Plaza to provide additional parking for up to 130 bikes and encourage sustainable commuting to the railway station. An e-scooter trial⁹⁵ continues with some 1,200,000 hires since February 2021.

⁹⁵ <https://www.chelmsford.gov.uk/leisure-theatres-and-museums/visiting-chelmsford/chelmsford-e-scooter-trial/>

KEY SUSTAINABILITY ISSUES

- The need to minimise the emissions of pollutants to air, including through continued investment in sustainable transport options and infrastructure to support the use of electric vehicles.

3.10 CLIMATE CHANGE

3.10.1 Rising global temperatures will bring changes in weather patterns, rising sea levels and increased frequency and intensity of extreme weather. The effects of climate change will be experienced internationally, nationally and locally with certain regions being particularly vulnerable. Key trends⁹⁶ will centre on:

- higher average temperatures, particularly in summer and winter
- changes in seasonal rainfall patterns
- rising sea levels
- more very hot days and heatwaves
- more intense downpours of rain
- higher intensity storms

3.10.2 The policy and legislative context in relation to climate change was established at the international level (Kyoto Agreement) and has been transposed into European, national and local legislation, strategies and policies. Reducing man-made carbon dioxide (DM7) emissions to the atmosphere is a national objective in order to contribute to reduce the rate of climate change and its long-term implications. This is driven in the UK by the Climate Change Act (2008) (as amended 2019), which sets a legally binding commitment for the UK government to reducing greenhouse gas emissions by at least 100% of 1990 levels (net zero) by 2050.

3.10.3 **Table 3.16** details the reducing emissions of DM7 from industry, domestic source within the Chelmsford City Area, with industrial/commercial and domestic emissions both reducing by approximately 30% over the period 2018-2022, compared to no reduction in transport emissions.

⁹⁶ UK Climate Impacts Programme (2023) Future Climate Vulnerability. Available at: [3 Future climate vulnerability | UKCIP](#)

Table 3.16 DM7 emissions estimates - Total in Chelmsford (kilotonnes)

	Industry ⁹⁷	Commercial ⁹⁸	Domestic ⁹⁹	Transport ¹⁰⁰	Total* ¹⁰¹
2018	50.4	89.8	264.0	408.9	857.5
2019	43.6	80.7	250.9	401.2	825.7
2020	39.7	67.9	251.4	330.5	727.8
2021	41.4	78.9	254.5	357.2	771.8
2022	40.4	71.5	222.9	352.5	735.0

Source: LG Inform

- 3.10.4 The prudent use of fossil fuels and reducing levels of energy consumption will help to achieve lower DM7 emissions. Between 2005 and 2012, total energy consumption in the Chelmsford City Area decreased from 3,849.5 Gigawatt Hours (GWh) to 3,536.4 GWh. This represents a reduction in energy consumption of 8.1%, although this is significantly lower than the decrease in emissions at the regional level (16.8%) and the national (UK) level (16.5%) over the same period. At 2012, transport was the largest consuming sector of energy equating to 37.4% of all energy consumed. In comparison, the domestic sector consumed 35.7% of energy whilst industry and commercial consumed 27.0%. This is similar to regional trends but differs from the national (UK) average where industry and commercial is the dominant consuming sector followed by domestic and transport.
- 3.10.5 As of 2016, the East of England region generated 8,157 GWh of electricity from renewable sources, higher than all other English regions except Yorkshire and Humber, which generated 19,315 GWh primarily from bioenergy for which the average was 3,602 GWh. This represents an increase in generation of over 500% since 2003. The principal source of electricity was wind, largely offshore wind, which accounted for a combined 4,490 GWh of electricity generated¹⁰².
- 3.10.6 Measures to prevent or minimise the adverse effects of climate change include: efficient use of scarce water resources; adapting building codes to future climate conditions and extreme weather events; building flood defences and raising the levels of dykes; and more

climate resilient crop selection (e.g. drought-tolerant species). The UK Government considers the development of a low carbon economy combined with a greater proportion of energy generated by renewable means as essential.

- 3.10.7 This is further enforced by the Government production of a more up to date NPPF, which requires local authorities to do more to combat climate change and tasks developers with considering their potential effects with greater scrutiny than previous versions. The Commons has also issued a climate emergency and though this is not legally binding, it reflects that the vast majority of MPs agree that climate change is an emergency that requires immediate and continuous action. The UK is therefore tasked with achieving a reduction in carbon emissions to zero by 2050.
- 3.10.8 Chelmsford City Council has also declared a climate emergency in 2019, joining 115 first/second tier councils in doing so and joins the 71 of this group who have set themselves a target of achieving net zero carbon (for council related process) by 2030¹⁰³.
- 3.10.9 Following the declaration of a climate emergency, the Council issued a Climate and Ecological Emergency Action Plan in 2020 with the following aims¹⁰⁴, ¹⁰⁵:
- i. *“Establishing a ‘carbon baseline’ position.*
 - ii. *Updating planning guidance on how on-site renewable energy measures can be integrated into new developments and for all new dwellings to incorporate sustainable design features to reduce DM7 and NO2 emissions and the use of natural resources [including putting in place a low carbon infrastructure in strategic growth areas].*
 - iii. *Working with Essex County Council to improve movement around the City, including improvements to the cycling and walking infrastructure, to reduce traffic congestion and journey times and encourage more sustainable travel choices.*
 - iv. *Implementing further measures to reduce the amount of waste generated and ensure that as much as possible of any waste that is generated is reused, recycled or composted.*
 - v. *Implementing measures to lower energy consumption, ensure the most efficient use of water resources, reduce pollution and improve air quality.*
 - vi. *Undertaking a greening programme to significantly increase the amount of woodland and the proportion of tree cover in Chelmsford.*
 - vii. *Implementing measures to improve the ‘green infrastructure’ of Chelmsford, protecting and expanding natural habitats and increasing biodiversity.*

- viii. *Improving the environmental quality, attractiveness and recreational potential of public spaces, rivers and waterways and associated green corridors in the City Centre and surrounding areas.*
- ix. *Upgrading the Council's vehicle fleet to embrace the latest low emission technology, including ultra-low emission electric powered vehicles as they become operationally and commercially viable.*
- x. *Supporting the Environment Agency to implement the Margaretting flood alleviation scheme and other flood mitigation measures to reduce the risk of flooding to residential and commercial properties in the City.*
- xi. *Establishing a 'green investment fund' to support the Council's environment plan.*
- xii. *Reviewing the Council's investment strategy in light of the Climate and Ecological Emergency Declaration.*
- xiii. *Reviewing the Council's procurement policies and practices in light of the Climate and Ecological Emergency Declaration.*
- xiv. *Creating opportunities for people, local organisations and businesses to get involved, to influence and to inspire innovation and cooperation in response to the key challenges identified in the Climate and Ecological Emergency.*
- xv. *Reviewing the Council's human resources and employment policies and practices in light of the Climate and Ecological Emergency Declaration."*

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE REVIEW OF THE ADOPTED LOCAL PLAN

3.10.10 UK Climate Projections (UKCP18)¹⁰⁶ provide climate information for the UK up to the end of this century and projections of future changes to the climate are given, based on simulations from climate models. Projections are broken down to a regional level across the UK and illustrate the potential range of changes and the level of confidence in each prediction.

3.10.11 According to the UKCP18, the following climatic changes are likely:

- By the end of the 21st century, all areas of the UK are projected to be warmer, more so in summer than in winter. This projected temperature rise in the UK is consistent with future warming globally.
- By 2070, in the high emission scenario, the likely temperature increase amounts to 0.9 °C to 5.4 °C in summer, and 0.7 °C to 4.2 °C in winter.
- Hot summers are expected to become more common. The summer of 2022 was the warmest summer for the UK exceeding 2018, 2006, 2003 and 1976. Climate change has already increased the chance of seeing a summer as hot as 2018 to between 12-

¹⁰⁶ Met Office (2021) UK Climate Projections: Headline Findings

https://www.metoffice.gov.uk/binaries/content/assets/metofficegovuk/pdf/research/ukcp/ukcp18_headline_findings_v3.pdf

25%. With future warming, hot summers by mid-century could become even more common, near to 50%.

- Rainfall patterns across the UK are not uniform and vary on seasonal and regional scales and will continue to vary in the future.
- Despite overall summer drying trends in the future, new data from UKCP Local (2.2km) suggests future increases in the intensity of heavy summer rainfall events. These increases in UKCP Local (2.2km) are typically greater than those in the Regional (12 km).
- UKCP Local (2.2km) suggests significant increases in hourly precipitation extremes in the future.
- For London, sea level rise by the end of the century (when compared to 1981-2000), for the low emission scenario is very likely to be in the range 0.29m to 0.70m. For a high emission scenario, the range is very likely to be 0.53m to 1.15m.
- We can continue to expect increases to extreme coastal water levels driven mainly by increases in mean sea level rise, although we cannot rule out additional changes in storm surges.

3.10.12 In addition, the following broad threats will occur:

- decrease in water resources exacerbated by a potential increase in demand;
- increase in risk to people, property and the environment from flooding;
- hotter and sunnier summers putting public health and safety at greater risk;
- hotter summers causing greater “heat stress” to buildings, utilities and the transport system; and
- decrease in soil moisture (particularly during summer and autumn) affecting agriculture, the natural environment and landscape.

3.10.13 Climate change is occurring and will continue regardless of local policy intervention. However, national policy on climate change, adopted Local Plan policy and other plans and programmes alongside the progressive tightening up of Building Regulations will help to ensure that new development is located and designed to adapt to the effects of climate change and that measures are in place to mitigate climate change. Notwithstanding this, without the Review of the Adopted Local Plan, the Council is likely to have less control over, in particular, the location of new development which could exacerbate climate change impacts and mean that opportunities to mitigate effects (for example, through reducing transport movements, tree planting and district-scale renewable energy solutions) may be missed.

KEY SUSTAINABILITY ISSUES

- The need to ensure that new development anticipates and can be adapted to the effects of climate change.
- The need to increase woodland and tree cover to help mitigate and adapt to climate change.
- The need to mitigate climate change including through maximising renewable energy provision at site and district level.

3.11 MATERIAL ASSETS

WASTE

- 3.11.1 Essex County Council is the waste disposal authority and the minerals and waste planning authority for the County, including the Chelmsford City Area. Chelmsford City Council, meanwhile, is a waste collection authority with a statutory duty under the provisions of the Environmental Protection Act 1990 (as amended) to arrange for the collection of household waste in its area.
- 3.11.2 Growing levels of waste and a number of fiscal instruments have led authorities to recycle and compost more waste, landfill less and use waste as a means to generate power. Increased recycling and composting rates as well as energy recovery rates in future years will, however, be necessary if a reduction in the volume of waste going to landfill is to occur. The Waste Management Plan for England (2021) requires that by 2035 the re-use and the recycling of municipal waste is increased to a minimum of 65% by weight and the amount of municipal waste landfilled is reduced to 10% or less of the total amount of municipal waste generated (by weight).
- 3.11.3 **Table 3.17** illustrates, by local authority area within Essex, the total amount of waste produced and proportion recycled. Chelmsford records some 55.3% of waste as recycled or composted, the County average being 49.9%.

Table 3.17 Amounts and proportions of waste produced and recycled by Essex Local Authority Area 2020/21

Authority	House hold Residual Waste (Tonnes)	House hold Waste Reused or Recycled (Tonnes)	Household Waste Composted (Tonnes)	Total Household Waste (Tonnes)	Household Waste Reused or Recycled (%)	Household Waste Composted (%)	Total Recycled or Composted (%)	Number of Households
Basildon Borough Council	46507.21	20890.36	18,822	86,220	24.2%	21.8%	46.1%	79,085
Braintree District Council	31273.09	12832.13	14,920	58,825	21.5%	25.4%	46.8%	66,168
Brentwood Borough Council	18834.57	7141.50	5,964	31,740	22.5%	18.8%	41.3%	34,072
Castle Point Borough Council	19246.27	8691.85	9,094	37,031	23.5%	24.6%	48.0%	38,908
Chelmsford City Council	34338.12	18027.24	24,412	76,777	23.5%	31.8%	55.3%	77,768

Essex Waste Partnership Total	335,613	201,266	159,670	696,549	28.9%	22.9%	51.8%	650,903

MINERALS

- 3.11.4 Government policy promotes the general conservation of minerals whilst at the same time ensuring an adequate supply is available to meet needs. Mineral resources are not

distributed evenly across the country and some areas are able to provide greater amounts of certain minerals than they actually use.

3.11.5 A summary of Essex's minerals profile is provided within Essex Minerals Local Plan (2014)^{107, 108}. It highlights that:

- Essex has extensive deposits of sand and gravel; there are more localised deposits of silica sand, chalk, brickearth and brick clay;
- marine dredging takes place in the extraction regions of the Thames Estuary and the East Coast, whilst aggregate is landed at marine wharves located in east London, north Kent, Thurrock, and Suffolk. Essex has no landing wharves of its own;
- there are no hard rock deposits in the County so this material must be imported into Essex. This currently occurs via rail to the existing rail depots at Harlow and Chelmsford;
- Essex is the largest producer and consumer of sand and gravel in the East of England;
- there are 20 permitted sand and gravel sites in Essex, one silica sand site, two brick clay and one chalk site;
- there are two marine wharves and four rail depots capable of handling aggregates;
- construction, demolition and excavation waste is also recycled at 29 dedicated and active aggregate recycling sites; and
- aggregate is both imported into Essex (hard rock, and sand and gravel) and exported (sand and gravel, primarily to London).

3.11.6 Policy P1 of the Minerals Local Plan allocates Blackley Quarry, Great Leighs and Land at Shellow Cross Farm in Roxwell as preferred and reserve sites for sand and gravel extraction. Bulls Lodge Quarry, meanwhile, is allocated under Policy S5 as a Strategic Aggregate Recycling Site (SARS) (i.e. a site with a capacity to recycle at least 100,000 tonnes per annum as a minimum). Chelmsford Rail Depot is allocated as a safeguarded transshipment site whilst Bulls Lodge and Essex Regiment Way are identified as safeguarded coated stone plants.

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE REVIEW OF THE ADOPTED LOCAL PLAN

3.11.7 Overall, between 2005/06 and 2015/16 the waste arisings in Essex reduced by 1% (from 0.687mt in 2005/06 to 0.679mt in 2015/16). However, when compared to the lowest total waste managed in any monitoring period (in 2012/13), the total local authority collected waste arisings increased by 0.034mtpa, which could be attributed to an increase in households within County.

¹⁰⁷ Essex County Council (2014) *Essex Minerals Local Plan Adopted July 2014*. Available from: <https://www.essex.gov.uk/Environment%20Planning/Planning/Minerals-Waste-Planning-Team/Planning-Policy/minerals-development-document/Documents/Essex%20Minerals%20Plan%20-%20Adopted%20July%202014.pdf>

¹⁰⁸ Essex County Council (2021) Interim Minerals Authority Monitoring Report 2021 Available at: <https://assets.cffassets.net/knkzaf64jx5x/4otwoarfxoJmBuxFRNPRyJ/b2d56d210e8a2d7bcf0a80436f659d80/Interim-Minerals-Authority-Monitoring-Report-2018-2020.pdf>

- 3.11.8 The way that the household waste arisings is managed has changed drastically. Since 2005/06, the amount recycled has increased by 41%, which is comparable to the 30% reduction in the amount being sent to landfill during the same timeframe. The single largest improvement is within the amount of waste that is composted, which has nearly doubled since 2005/06, although this is the smallest waste type managed.
- 3.11.9 However, the Chelmsford City Area still has considerable issues with household waste and the amount of waste that is not sent to recycling, which can be seen in the household waste data for the past five years.
- 3.11.10 Overall, waste generation in the Chelmsford City Area is expected to increase, commensurate with population growth. This could place pressure on existing waste management facilities, although it is envisaged that recycling/reuse rates would also continue to rise and new facilities will be established. In this regard, the Council's strategy and improvement plan for recycling and waste collection services¹⁰⁹ seeks to deliver a significant reduction in the amount of energy and natural resources consumed and a corresponding reduction in the level of greenhouse gases that are generated by producing less waste and achieving high levels of reuse, recycling and energy recovery. The Joint Municipal Waste Management Strategy for Essex¹¹⁰, meanwhile, seeks to achieve high levels of recycling, with an aspiration to achieve collectively 60% recycling of household waste by 2020.
- 3.11.11 The replacement Essex Waste Local Plan 2017¹¹¹ highlights that there will be an increase in the amount of waste that is generated in the plan area by 2032, subject to future waste minimisation measures and changes in construction practises. In particular, it highlights that:
- a capacity gap currently exists for biological waste treatment, which is anticipated to increase to 217,000 tpa;
 - a capacity gap has been forecast for 2031/32 for inert waste management, with a further 1.5mtpa required by this period;
 - a capacity gap of 50,250 tpa hazardous waste management has been expected by 2031/32.
- 3.11.12 The Essex Waste Local Plan 2017 also establishes an aim for the Essex and Southend-on-Sea region to be net self-sufficient by 2032.
- 3.11.13 New development (both within the Chelmsford City Area and nationally) may place pressure on local mineral assets to support construction. However, the adopted Minerals Local Plan (2014) sets requirements for the provision of primary minerals for the County for the 18-year period to 2029. This Plan is currently under review. In the case of

¹⁰⁹ Chelmsford City Council (2009) *Managing waste in Chelmsford... today and tomorrow. A strategy and improvement plan for recycling and waste collection services in Chelmsford*. ¹¹¹ Essex County Council and Southend on Sea Borough Council (2017) *Essex and Southend-on-Sea Waste Local Plan*. Available at: <https://www.southend.gov.uk/development-plan-documents/essex-southend-waste-local-plan>.

preferred sites for sand and gravel extraction, the principle of extraction has been accepted and the need for the release of minerals proven.

3.11.14 Overall, planning for waste and minerals is a County function and in consequence, the baseline would not be expected to change significantly without the Review of the Adopted Local Plan. However, policies in the Review of the Adopted Local Plan could support the objectives of the emerging Waste Local Plan and adopted Minerals Local Plan including by, for example, promoting the provision of on-site recycling facilities and the sustainable use of materials in new development.

KEY SUSTAINABILITY ISSUES

- The need to minimise waste arisings and encourage reuse and recycling.
- The need to promote the efficient use of mineral resources.
- The need to ensure the protection of Chelmsford's mineral resources from inappropriate development, in accordance with the adopted Minerals Local Plan.
- The need to address identified capacity gaps for waste management that currently exist and are forecast to exist.
- The need to achieve net self-sufficiency by 2032.

3.12 CULTURAL HERITAGE

3.12.1 Chelmsford's cultural heritage is a key feature of the local authority area. The National Heritage List for England includes the following entries for the Chelmsford City Area:

- 1,011 listed building entries (comprising 20 Grade I, 43 Grade II* and 948 Grade II listed buildings¹¹²);
- 19 Scheduled Monuments; and
- 6 Registered Parks and Gardens of Special Interest (comprising 1 Grade II* and 5 Grade II parks and gardens).¹¹³

3.12.2 Designated heritage assets in the Chelmsford City Area are shown in **Figure 3.16**. Additionally, there are 25 Conservation Areas in the Chelmsford City Area. These mainly include historic villages and towns, but also other important historic areas such as the Chelmer and Blackwater Navigation and St John's Hospital.

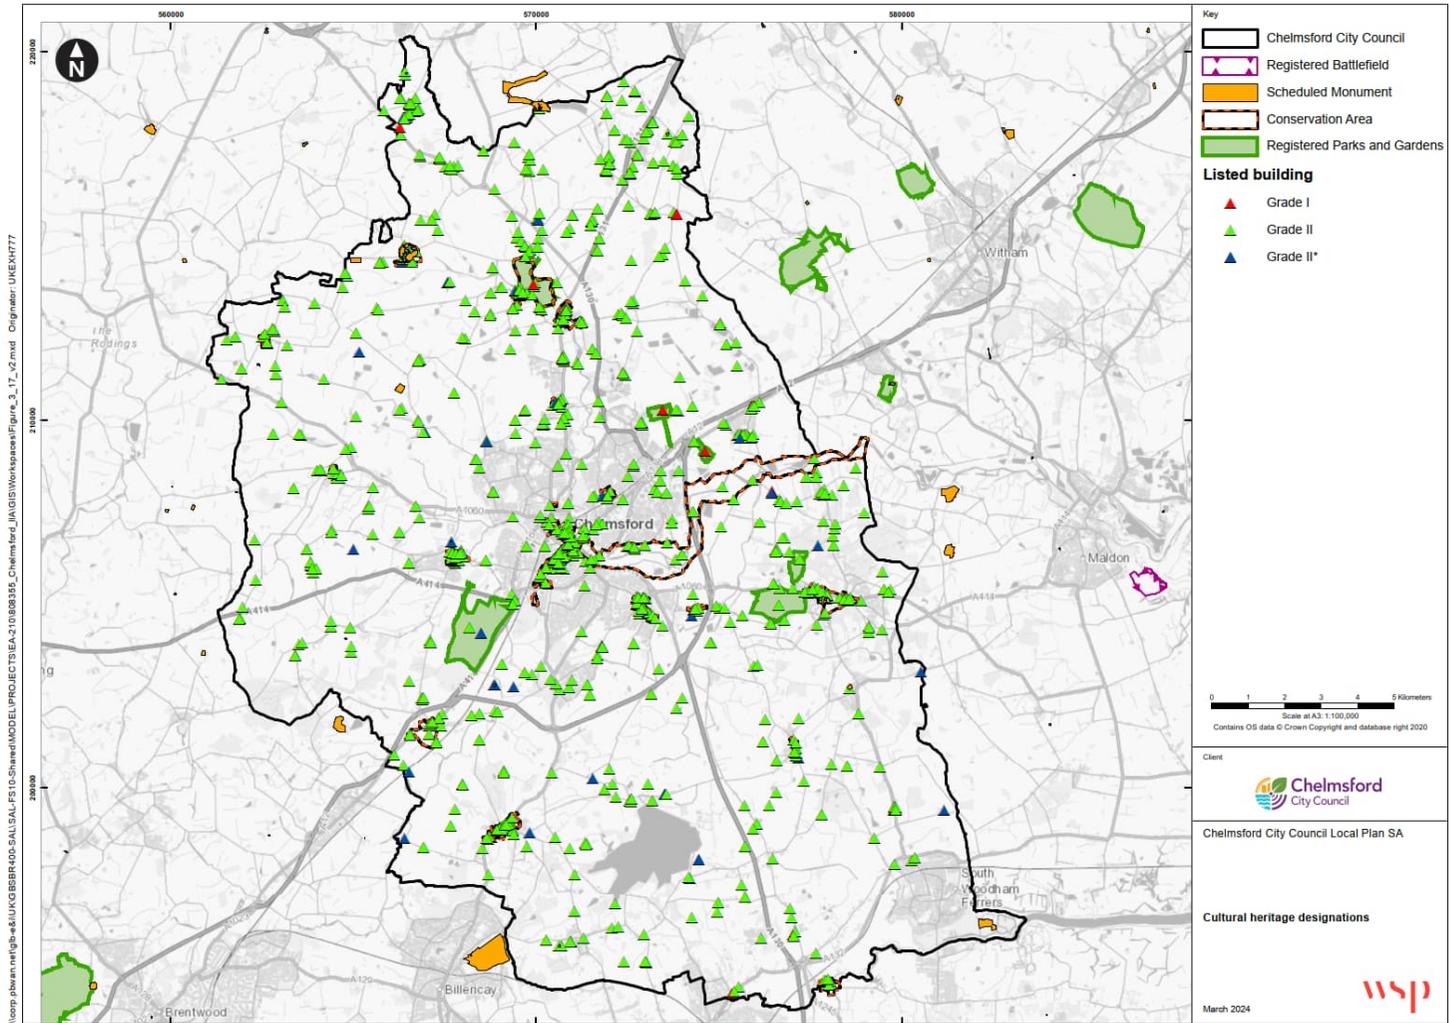

3.12.3 There are also many buildings within the Chelmsford City Area which are not listed, but which contribute to the character of the area. The Council has recognised the buildings and structures which it feels are of particular local interest in a local register¹¹⁴.

¹¹² Historic England (2022) Chelmsford Listed Buildings List. Available at: <https://historicengland.org.uk/listing/the-list/results/?searchType=NHLE+Simple&search=Chelmsford>.

¹¹⁴ Chelmsford City Council (2017) *Register of buildings for local value*. Available at: <https://www.chelmsford.gov.uk/planning-and-building-control/conservation-areas-and-listed-buildings/historic-and-important-local-buildings/>

Figure 3.16 Designated Cultural Heritage Assets

- 3.12.4 Chelmsford's coastline is situated on the north bank of the Crouch Estuary and consists of large areas of historical and archaeological interest. The zone historically comprised low lying salt marsh and grazing marsh, the Crouch and associated creeks facilitated exploitation of marine resources and access to coastal trade and transport. The archaeological resources comprise a varied range of deposits associated with the exploitation of the coastal region. Neolithic and Mesolithic land surfaces are preserved and overlain by later deposits. The wider City Area also includes numerous sites of archaeological importance, many of which have archaeological potential but have no statutory protection.
- 3.12.5 Within the Chelmsford City Area, the current historical assets that are on the Council's 'At Risk' register are shown below¹¹⁵. The number of heritage assets at risk within the Chelmsford City Area stands at 12, four of which are grade II* listed; three of which are grade II listed; three of which are unlisted but within Conservation Areas, one of local interest and one Registered Park and Garden:
- Signal Box, Chelmsford Station, Duke Street, Chelmsford
 - Shire Hall, High Street, Chelmsford
 - Writtle Wick, Chelmsford
 - Chelmsford West End Conservation Area
 - The Brick Barn, Brick Barns Farm, Danbury
 - Wickham House, Runsell Green, Danbury
 - 66-68 High Street, Great Baddow
 - The Cottage, Hyde Hall Lane, Great Waltham
 - Mashbury Church, Mashbury Hall Chase, Mashbury
 - Stock Windmill, Mill Lane, Stock
 - Rectory Hall, Stock Road, Stock
 - The Barn at the Bear Public House, The Square, Stock

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE REVIEW OF THE ADOPTED LOCAL PLAN

- 3.12.6 It is reasonable to assume that the majority of Chelmsford City Area's designated heritage assets would be protected without the Review of the Adopted Local Plan (since works to them invariably require consent). However, elements which contribute to their significance could be harmed through inappropriate development in their vicinity. Opportunities to enhance assets may also be missed. Further, other non-designated elements which contribute to the character of the area could be harmed without an up-to-date policy framework. Notwithstanding this, it is recognised that national planning policy

¹¹⁵ Chelmsford City Council (2023) Historic Buildings at Risk in Chelmsford City 2023. Available at: www.chelmsford.gov.uk/media/edycnhwb/historic-buildings-at-risk-2023.pdf?allid=25184

set out in the NPPF and adopted Local Plan policy and associated guidance would together provide a high level of protection in this regard.

KEY SUSTAINABILITY ISSUES

- The need to protect and enhance Chelmsford City Area's cultural heritage assets and their settings.
- The need to avoid harm to designated heritage assets and the contribution made by their setting.
- The need to recognise the value of non-designated heritage assets and protect these where possible.
- The need to recognise the contribution made by the historic environment to the character of landscapes and townscapes.

3.13 LANDSCAPE AND TOWNSCAPE

LANDSCAPE

- 3.13.1 The landscape of the Chelmsford City Area has evolved as a result of an interaction of the physical structure of the landscape and the vegetation and land uses that cover it. The basic structure of the landscape is fundamentally influenced by its underlying rocks and relief.
- 3.13.2 The Chelmsford City Area comprises two National Landscape Character Areas (NCA)¹¹⁶, namely South Suffolk and North Essex Clayland to the north and Northern Thames Basin to the south. The South Suffolk and North Essex Clayland is an ancient landscape of wooded arable countryside with a distinct sense of enclosure. The overall character is of a gently undulating, chalky boulder clay plateau, the undulations being caused by the numerous small-scale river valleys that dissect the plateau. There is a complex network of old species-rich hedgerows, ancient woods and parklands, meadows with streams and rivers that flow eastwards. Traditional irregular field patterns are still discernible over much of the area, despite field enlargements in the second half of the 20th century. The widespread moderately fertile, chalky clay soils give the vegetation a more or less calcareous character. Gravel and sand deposits under the clay are important geological features, often exposed during mineral extraction, which contribute to our understanding of ice-age environmental change.
- 3.13.3 The Northern Thames Basin is an area rich in geodiversity, archaeology and history and diverse landscapes ranging from the wooded Hertfordshire plateaux and river valleys, to the open landscape and predominantly arable area of the Essex heathlands, with areas of urbanisation mixed in throughout. Urban expansion has been a feature of this area. This has put increased pressure on the area in terms of extra housing developments, schools and other necessities for expanding populations, with a consequential reduction in tranquillity.
- 3.13.4 The Landscape Character Assessment for the local authority area¹¹⁷ identifies the following Landscape Character Types:
- River Valley, characterised by:
 - ▶ v-shaped or u-shaped landform which dissects Boulder Clay/Chalky Till plateau;
 - ▶ main river valley served by several tributaries;
 - ▶ flat or gently undulating valley floor;
 - ▶ intimate character in places; and
 - ▶ wooded character in places.

¹¹⁶ Natural England (2014) *National character area profiles*. Available at: <https://www.gov.uk/government/publications/national-character-area-profiles-data-for-local-decision-making/national-character-area-profiles>

¹¹⁷ Chris Blandford Associates (2006) *Braintree, Brentwood, Chelmsford, Maldon and Uttlesford Landscape Character Assessments*. Available at: www.chelmsford.gov.uk/media/r5wapqrb/eb-099-braintree-brentwood-chelmsford-maldon-and-uttlesford-landscape-character-assessment.pdf

- Farmland Plateau, characterised by:
 - ▶ elevated gently rolling Boulder Clay/Chalky Till plateau landscape which is incised by river valleys;
 - ▶ network of winding lanes and minor roads;
 - ▶ medium to large-scale enclosed predominantly arable fields;
 - ▶ long distance views across valleys from certain locations; and
 - ▶ well wooded in places (with several areas of semi-natural and ancient woodland).
- Drained Estuarine Marsh, characterised by:
 - ▶ areas of flat, artificially drained former saltmarsh currently grassland and cultivated fields;
 - ▶ visible sea walls separate drained former marshland and current saltmarsh/mudflats;
 - ▶ lack of large areas of trees or woodland; and
 - ▶ network of visible drainage ditches.
- Wooded Farmland, characterised by:
 - ▶ elevated undulating hills or ridges and slopes;
 - ▶ mixture of arable and pasture farmland;
 - ▶ pockets of common and pasture;
 - ▶ views to wooded horizons;
 - ▶ well wooded with blocks of mature mixed and deciduous woodland (including areas of ancient and semi-natural woodland); copses, hedges and mature single trees;
 - ▶ mature field boundaries;
 - ▶ framed views to adjacent character areas;
 - ▶ enclosed character in places; and
 - ▶ network of quiet, often tree-lined narrow lanes.

3.13.5 There are no national landscape designations affecting the Chelmsford City Area. However, a large proportion of the local authority area is Metropolitan Green Belt (about 35% of the total area). The Green Wedge is defined in the adopted Local Plan along the river valleys within Chelmsford and its suburbs, recognising the important visual and landscape function that they have for the City.

TOWNSCAPE

3.13.6 The City Centre has areas of distinct built character based on history, townscape and use, all requiring the reinforcement of their sense of place.

3.13.7 South Woodham Ferrers was the first large-scale application of the urban design promoted by the Essex Design Guide. The public and private sector delivery and the

resulting character of the town’s built environment as well as the relatively small size of the town set it apart from earlier new towns.

LIKELY EVOLUTION OF THE BASELINE WITHOUT THE REVIEW OF THE ADOPTED LOCAL PLAN

3.13.8 New development is likely to place pressure on the landscape of the Chelmsford City Area. Whilst national planning policy set out in the NPPF, adopted Local Plan policy and guidance contained in the Council’s suite of SPD would continue to offer some protection and guidance, there is the potential that development could be inappropriately sited and designed without an up-to-date policy framework. This could adversely affect the landscape and townscape character of the area. Further, opportunities may not be realised to enhance landscape and townscape character through, for example, the provision of green infrastructure or the adoption of high quality design standards which reflects local character.

KEY SUSTAINABILITY ISSUES

- The need to conserve and enhance Chelmsford City Area's landscape character including the character of its villages and surrounding countryside.
- The need to preserve and appropriately manage development within the Green Belt, Green Wedge and Coastal Protection Areas.
- The need to promote high quality design that respects local character.
- The need to maximise opportunities associated with new development to enhance townscape character and the quality of urban environments.
- The need to protect landscapes of value to the local economy where these have been specifically identified in landscape character statements.

3.14 KEY SUSTAINABILITY ISSUES

3.14.1 From the analysis of the baseline presented in the preceding sections, a number of key sustainability issues affecting the Chelmsford City Area have been identified. These issues are summarised in **Table 3.18**.

Table 3.18 Key Sustainability Issues Identified

Topic	Key Sustainability Issues
Biodiversity and Green Infrastructure	<ul style="list-style-type: none"> • The need to conserve and enhance biodiversity including sites designated for their nature conservation value. • The need to provide net gains in biodiversity where possible. • The need to maintain, restore and expand Biodiversity Action Plan habitats. • The need to safeguard existing green infrastructure assets. • The need to enhance the multifunctional green infrastructure network, addressing deficiencies and gaps, improving accessibility for all users and encouraging multiple uses where appropriate.

Topic	Key Sustainability Issues
-------	---------------------------

Population and Community	<ul style="list-style-type: none"> • Overall, the need to create sustainable places where people want to live, work and relax. • The need to enable housing growth, using the standard method to identify the minimum number of homes to be planned for and planning for a mix of accommodation to suit all household types. • The need to make best use and improve the quality of the existing housing stock. • The need to support the delivery of independent living housing for older people and people with disabilities. • The need to deliver a range of employment sites to support economic growth. • The need to ensure a flexible supply of land for employment development. • The need to address the surplus of unsuitable office space in the City Centre. • The need to support economic development in the rural areas of Chelmsford. • The need to support the growth of new sectors linked to the growth of Anglia Ruskin University, such as medical technologies. • The need to raise incomes and especially for those whose incomes are in the lowest quartile. • The need to reduce out-commuting to London for work by encouraging businesses to invest and set up within Chelmsford. • The need to tackle pockets of deprivation that exist in the area. • The need to maintain and raise educational attainment and skills in the local labour force. • The need to maintain and enhance the vitality of the City Centre and South Woodham Ferrers as well as the area's larger villages. • The need to promote a range of functions which contribute to the vibrancy of Chelmsford City Centre and ensure that the neighbourhood and local centres continue to perform a strong convenience goods role which serves local needs. • The need to address forecast deficits in, in particular, school places and early years and childcare provision. • The need to support the City Area's educational establishments including Anglia Ruskin University and ARU Writtle. • The need to safeguard existing community facilities and services and ensure the timely delivery of new facilities to meet needs arising from new development. • The need to safeguard the identity of existing communities. • The need to safeguard and maintain and enhance access to cultural and community facilities which benefit and support sustainable communities.
Health and Wellbeing	<ul style="list-style-type: none"> • The need to protect the health and wellbeing of Chelmsford's population. • The need to promote healthy lifestyles and in particular reduce obesity and increase levels of physical activity. • The need to plan for an ageing population. • The need to address health inequalities. • The need to combat suicide and its causes. • The need to protect and enhance open space provision across the Chelmsford City Area. • The need to support high quality design that creates safe and secure communities. • The need to safeguard existing health care facilities and services and ensure the timely delivery of new facilities and services to meet needs arising from new development.

Topic	Key Sustainability Issues
Transport and Accessibility	<ul style="list-style-type: none"> • The need to ensure timely investment in transport infrastructure and services through securing developer funded works or contributions and other sources of funding. • The need to address congestion, particularly on and around the main A12, A130 and A414 transport corridors. • The need to address existing junction capacity issues. • The need to enhance the connectivity of more remote settlements, particularly to the north of the Chelmsford City Area. • The need to encourage alternative modes of transport to the car, including the expansion of park and ride sites. • The need to ensure that new development is accessible to a range of community facilities and services and jobs so as to reduce the need to travel. • The need to reduce out-commuting by creating a stronger employment market within the Chelmsford City Area. • The need to encourage walking and cycling, as part of active travel. • The need to encourage the use of public transport, and in particular key transport interchanges between different modes, namely bus and rail. • The need to encourage car sharing, especially along heavily congested transport corridors. • The need to address congestion in and around the City Centre. • The need to investigate more innovative and creative ways to tackle behaviour change, rather than simply the monitoring of travel patterns.
Land Use, Geology and Soils	<ul style="list-style-type: none"> • The need to encourage development on previously developed (brownfield) land. • The need to make best use of existing buildings and infrastructure. • The need to protect the best and most versatile agricultural land. • The need to protect and enhance sites designated for their geological interest.
Water	<ul style="list-style-type: none"> • The need to protect and enhance the quality of water sources in the Chelmsford City Area. • The need to promote the efficient use of water resources. • The need to ensure the timely provision of new water services infrastructure to meet demand arising from new development. • The need to locate new development away from areas of flood risk, taking into account the effects of climate change. • The need to ensure the timely provision of flood defence/management infrastructure.
Air Quality	<ul style="list-style-type: none"> • The need to minimise the emissions of pollutants to air, including through continued investment in sustainable transport options and infrastructure to support the use of electric vehicles.
Climate Change	<ul style="list-style-type: none"> • The need to ensure that new development anticipates and can be adapted to the effects of climate change. • The need to increase woodland and tree cover to help mitigate and adapt to climate change. • The need to mitigate climate change including through maximising renewable energy provision at site and district level.

Topic	Key Sustainability Issues
Material Assets	<ul style="list-style-type: none"> • The need to minimise waste arisings and encourage reuse and recycling. • The need to promote the efficient use of mineral resources. • The need to ensure the protection of Chelmsford's mineral resources from inappropriate development, in accordance with the adopted Minerals Local Plan. • The need to address identified capacity gaps for waste management that currently exist and are forecast to exist. • The need to achieve net self-sufficiency by 2032.
Cultural Heritage	<ul style="list-style-type: none"> • The need to protect and where appropriate enhance Chelmsford City Area's cultural heritage assets and their settings. • The need to avoid harm to designated heritage assets. • The need to recognise the value of non-designated heritage assets and protect and where appropriate enhance these where possible. • The need to recognise the contribution made by the historic environment to the character of landscapes and townscapes.
Landscape and Townscape	<ul style="list-style-type: none"> • The need to conserve and where appropriate enhance Chelmsford City Area's landscape character including the character of its villages and surrounding countryside. • The need to preserve and appropriately manage development within the Green Belt, Green Wedge and Marine Conservation Zone. • The need to promote high quality design that respects local character. • The need to maximise opportunities associated with new development to enhance townscape character and the quality of urban environments. • The need to protect landscapes of value to the local economy where these have been specifically identified in landscape character statements.

4. THE IIA ASSESSMENT FRAMEWORK AND METHODOLOGY

4.1 IIA ASSESSMENT FRAMEWORK

- 4.1.1 The Assessment Framework comprises sustainability objectives and guide questions to inform the assessment. Establishing assessment objectives and guide questions is central to appraising the sustainability (including health and equalities) effects of the Local Plan. Broadly, the Assessment Objectives define the long term aspirations for the Chelmsford City Area with regard to social, economic and environmental considerations (including EqIA and HIA matters) and it is against these objectives that the components of the Pre-Submission Consultation Document have been appraised.
- 4.1.2 **Table 4.1** presents the Assessment Framework including Assessment Objectives and associated guide questions. The Assessment Objectives and guide questions reflect the analysis of the key objectives and policies arising from the review of plans and programmes (**Section 2**), the key sustainability issues identified through the analysis of the socio-economic and environmental baseline conditions (**Section 3**) and comments received during consultation on the Scoping Report, Issues and Options and Preferred Options consultations (see **Appendix B**). The SEA topic(s) to which each of the Assessment Objectives relates is included in the third column.

Table 4.1 The Assessment Framework

Objective	Guide Questions	SEA Regulations Topic(s)
1. Biodiversity and Geodiversity: To conserve and enhance biodiversity and geodiversity and promote improvements to the multifunctional green infrastructure network.	<ul style="list-style-type: none"> Will it conserve and enhance international and national designated nature conservation sites (Special Areas of Conservation, Special Protection Areas, Ramsars and Sites of Special Scientific Interest) both within and beyond the local authority area? Will it conserve and enhance Local Nature Reserves, Local Wildlife Sites and Ancient Woodland? Will it avoid damage to, and protect, geologically important sites? Will it conserve and enhance priority species and habitats? Will it provide opportunities for new habitat creation or restoration and link existing habitats as part of the development process through Biodiversity Net Gain? Will it enhance ecological connectivity and maintain and improve the multifunctional green infrastructure network? Will it provide opportunities for people to access the natural environment? Will it contribute to Biodiversity Net Gain across the City? 	Biodiversity, Fauna and Flora Human Health
2. Housing: To meet the housing needs of the Chelmsford City Area and deliver decent homes.	<ul style="list-style-type: none"> Will it provide a range of housing types to meet the current and emerging need for market and affordable housing? Will it reduce the level of homelessness? Will it help to ensure the provision of good quality, well designed homes which meet the needs of all groups in society? Will it deliver homes of high energy efficiency standards which contribute to the City Area's zero carbon targets? Will it deliver pitches required for Gypsies and Travellers and Travelling Showpeople? Will it deliver independent living housing for older people and people with disabilities? 	Population

Objective	Guide Questions	SEA Regulations Topic(s)
3. Economy, Skills and Employment: To achieve a strong and stable economy which offers rewarding and well located employment opportunities to everyone.	<ul style="list-style-type: none"> • Will it provide a supply of high quality employment land to meet the needs of existing businesses and attract inward investment? • Will it maintain and enhance economic competitiveness and promote the interests of local businesses? • Will it help to diversify the local economy? • Will it provide good quality, well paid, and accessible employment opportunities that meet the needs of local people and all groups in society? • Will it improve the physical accessibility of training and employment opportunities, including childcare provision? • Will it support rural diversification and economic development? • Will it promote a low carbon economy? • Will it reduce out-commuting? • Will it contribute to opportunities for home-working? • Will it improve access to training to raise employment potential? • Will it promote investment in educational establishments? 	Population
4. Sustainable Living and Revitalisation: To promote urban renaissance and support the vitality of rural centres, tackle deprivation and promote sustainable living.	<ul style="list-style-type: none"> • Will it support and enhance the City of Chelmsford by attracting new commercial investment and reinforcing the City's attractiveness? • Will it promote principles of inclusive and age-friendly design? • Will it encourage more people to live in urban areas? • Will it enhance the public realm, including provision for pedestrians and cyclists? • Will it enhance the viability and vitality of South Woodham Ferrers town centre and neighbourhood centres? • Will it tackle deprivation in the most deprived areas and reduce inequalities in access to education, employment and services amongst all social groups? • Will it maintain and enhance community facilities and services, through co-location, for example? • Will it increase access to schools and colleges? • Will it enhance accessibility to key community facilities and services? • Will it align investment in services, facilities and infrastructure with growth? • Will it contribute to regeneration initiatives? • Will it foster social cohesion and good community relations? 	Population Human Health
5. Health and Wellbeing: To improve the health and well being of those living and working in the Chelmsford City area.	<ul style="list-style-type: none"> • Will it avoid locating development where environmental circumstances could negatively impact on people's health? • Will it maintain and improve access to multifunctional open space, leisure and recreational facilities for all residents? • Will it provide for the management and maintenance of open spaces, such as through Stewardship Agreements? • Will it promote healthier lifestyles amongst all residents? • Will it meet the needs of an ageing population and support those with disabilities? • Will it align investment in healthcare facilities and services with growth? • Will it improve access to healthcare facilities and services? • Will it promote community safety and reduce the fear of crime through safe and welcoming open and natural spaces? • Will it reduce actual levels of crime and anti-social behaviour? • Will it promote design that discourages crime? • Will it promote a healthier community food environment such as through opportunities for food growing? 	Population Human Health

Objective	Guide Questions	SEA Regulations Topic(s)
6. Transport: To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	<ul style="list-style-type: none"> • Will it reduce travel demand and the distance people travel for jobs, employment, leisure and services and facilities? • Will it reduce out-commuting? • Will it encourage a shift to more sustainable modes of transport? • Will it encourage walking, cycling and the use of public transport through the provision of connected, attractive and safe routes? • Will it help to reduce traffic congestion and improve road safety? • Will it allow for people with mobility problems or a disability to access buildings and places? • Will it deliver investment in transportation infrastructure that supports growth in the Chelmsford City Area? • Will it enhance Chelmsford's role as a key transport node? • Will it reduce the level of freight movement by road? 	Population Human Health Air Climatic Factors
7. Land Use and Soils: To encourage the efficient use of land and conserve and enhance soils.	<ul style="list-style-type: none"> • Will it promote the use of previously developed (brownfield) land and minimise the loss of greenfield land? • Will it avoid the loss of best and most versatile agricultural land? • Will it reduce the amount of derelict, degraded and underused land? • Will it encourage the reuse of existing buildings and infrastructure? • Will it prevent land contamination and facilitate remediation of contaminated sites? 	Material Assets Soil
8. Water: To conserve and enhance water quality and resources.	<ul style="list-style-type: none"> • Will it reduce water pollution and improve ground and surface water quality? • Will it address issues associated with nutrient loading? • Will it reduce water consumption and encourage water efficiency? • Will it ensure that new water/wastewater management infrastructure is delivered in a timely manner to support new development? 	Water
9. Flood Risk: To reduce the risk of flooding to people and property, taking into account the effects of climate change.	<ul style="list-style-type: none"> • Will it help to minimise the risk of flooding to existing and new developments/infrastructure? • Will it manage effectively, and reduce the likelihood of, flash flooding, taking into account the capacity of sewerage systems? • Will it discourage inappropriate development in areas at risk from flooding? • Will it ensure that new development does not give rise to flood risk elsewhere? • Will it deliver multifunctional sustainable urban drainage systems (SUDs) where possible and promote investment in flood defences that reduce vulnerability to flooding? 	Climatic Factors Water
10. Air: To improve air quality.	<ul style="list-style-type: none"> • Will it maintain and improve air quality? • Will it address air quality issues? • Will it avoid locating development in areas of existing poor air quality? • Will it minimise emissions to air from new development, such as through the preparation of a sustainable travel plan to reduce car use? • Will it provide for electric charging points to support the adoption of electric vehicles? • Will it affect air quality at designated sites that are sensitive to air pollution? 	Air Human Health Biodiversity, Fauna and Flora

Objective	Guide Questions	SEA Regulations Topic(s)
11. Climate Change: To minimise greenhouse gas emissions and adapt to the effects of climate change.	<ul style="list-style-type: none"> • Will it minimise energy use and reduce or mitigate greenhouse gas emissions, assisting realisation of the City Area’s emission targets? • Will it plan or implement adaptation measures for the likely effects of climate change? • Will it maximise the delivery of renewable and low carbon energy generation at site level and district level and reduce dependency on non-renewable sources? • Will it promote sustainable design that minimises greenhouse emissions and is adaptable to the effects of climate change? • Will it deliver homes and other buildings of high energy efficiency standards which contribute to the City Area’s zero carbon targets? 	Climatic Factors
12. Waste and Natural Resources: To promote the waste hierarchy (reduce, reuse, recycle, recover) and ensure the sustainable use of natural resources.	<ul style="list-style-type: none"> • Will it minimise the demand for raw materials? • Will it promote the use of local resources? • Will it reduce minerals extracted and imported? • Will it increase efficiency in the use of raw materials and promote recycling? • Will it result in development within a Minerals Safeguarding Area? • Will it reduce waste arisings? • Will it increase the reuse and recycling of waste? • Will it support investment in waste management facilities to meet local needs? 	Material Assets
13. Cultural Heritage: To conserve and enhance the historic environment, cultural heritage, character and setting.	<ul style="list-style-type: none"> • Will it help to conserve and enhance existing features of the historic built environment and their settings, including archaeological assets? • Will it tackle heritage assets identified as being ‘at risk’? • Will it promote sustainable repair and reuse of heritage assets? • Will it protect or enhance the significance of designated heritage assets? • Will it protect or enhance the significance of non-designated heritage assets? • Will it promote local cultural distinctiveness, recognising the diversity of Chelmsford’s population? • Will it help to conserve historic buildings, places and spaces that enhance local distinctiveness, character and appearance through sensitive adaptation and re-use? • Will it improve and promote access to buildings and landscapes of historic/cultural value? 	Cultural Heritage Landscape
14. Landscape and Townscape: To conserve and enhance landscape character and townscapes.	<ul style="list-style-type: none"> • Will it conserve and enhance landscape character and townscapes? • Will it promote high quality design in context with its urban and rural landscape? • Will it avoid inappropriate development in the Green Belt and maintain its extent? • Will it help to conserve and enhance the Marine Conservation Zone? • Will it avoid inappropriate erosion of the Green Wedge? • Will it protect tranquil landscapes and areas? 	Landscape Cultural Heritage

4.1.3 **Table 4.2** shows the extent to which the Assessment Objectives encompass the range of issues identified in the SEA Regulations.

Table 4.2 Coverage of SEA Regulations Topics by the Assessment Objectives

SEA Regulations Topic	Assessment Objective(s)
Biodiversity, Fauna & Flora	1, 10
Population *	2, 3, 4, 5, 6
Human Health	1, 4, 5, 6, 10
Soil	7
Water	8, 9
Air	6, 10
Climatic Factors	6, 9, 11
Material Assets *	7, 12
Cultural Heritage including architectural and archaeological heritage	13, 14
Landscape	13, 14

* These terms are not clearly defined in the SEA Regulations.

4.2 METHODOLOGY

4.2.1 Based on the contents of the Pre-Submission Consultation Document detailed in **Section 1.4**, the Assessment Framework has been used to appraise the following key components of the document:

- Strategic Priorities;
- Housing and Employment Land Requirements; and
- Spatial Strategy.

4.2.2 The approach to the assessment of each of the elements listed above is set out in the sections that follow.

STRATEGIC PRIORITIES

4.2.3 The Strategic Priorities are intended to support and guide the Spatial Strategy for the Local Plan. It is therefore important that the Strategic Priorities are aligned with the Assessment Objectives. The Strategic Priorities contained in the Pre-Submission Consultation Document (see **Section 1.4**) have therefore been appraised for their compatibility with the objectives that comprise the Assessment Framework to help establish whether the proposed general approach to the Local Plan is in accordance with the principles of sustainability. A compatibility matrix has been used to record the assessment, as shown in **Table 4.3**.

Table 4.3 Compatibility Matrix

Assessment Objective	Strategic Priorities			
	Strategic Priority 1	Strategic Priority 2	Strategic Priority 3	Strategic Priority 4 ...etc
1. Biodiversity and Geodiversity	+	0	+	?
2. Housing	+	-	+	+
3. Etc...	+	0	+	?

Key

+	Compatible	?	Uncertain
0	Neutral	-	Incompatible

NB: where more than one symbol/colour is presented in a box it indicates that the assessment has identified both compatibilities and incompatibilities between the Spatial Principles and the Assessment Objectives. Where a box is coloured but also contains a '?', this indicates a degree of uncertainty regarding the relationship between the Spatial Principles and the Assessment Objectives although a professional judgement is expressed in the colour used.

4.2.4 The findings of the compatibility assessment of the Strategic Priorities and the Assessment Objectives are presented in **Section 5.2**.

HOUSING AND EMPLOYMENT LAND REQUIREMENT

4.2.5 The Pre-Submission Consultation Document sets out requirements relating to the quantum of housing and jobs to be delivered in the Chelmsford City Area over the plan period. These requirements have been appraised against each of the Assessment Objectives using an assessment matrix. The matrix includes:

- the Assessment Objectives;
- a score indicating the nature of the effect for projection on each Assessment Objectives;
- a commentary on significant effects (including consideration of the cumulative, synergistic and indirect effects as well as the geography, duration, temporary/permanence and likelihood of any effects) and on any assumptions or uncertainties; and
- recommendations, including any mitigation or enhancement measures.

4.2.6 The format of the matrix that has been used in the assessment is shown in **Table 4.4**. A qualitative scoring system has been adopted which is set out in **Table 4.5** and to guide the assessment, specific definitions have been developed for what constitutes a significant effect, a minor effect or a neutral effect for each of the 14 Assessment Objectives; these can be found in **Appendix E**.

Table 4.4 Assessment Matrix – Housing and Employment Land Requirements

Assessment Objective	Assessment
<p>1. Biodiversity and Geodiversity: To conserve and enhance biodiversity and geodiversity and promote improvements to the green infrastructure network.</p>	<p>Likely Significant Effects A description of the likely effects of each approach on the Objective has been provided here.</p> <p>Mitigation</p> <ul style="list-style-type: none"> Mitigation and enhancement measures are outlined here. <p>Assumptions</p> <ul style="list-style-type: none"> Any assumptions made in undertaking the assessment are listed here. <p>Uncertainties</p> <ul style="list-style-type: none"> Any uncertainties encountered during the assessment are listed here.

Table 4.5 Scoring System

Score	Description	Symbol
Significant Positive Effect	The approach contributes significantly to the achievement of the objective.	++
Minor Positive Effect	The approach contributes to the achievement of the objective but not significantly.	+
Neutral	The approach does not have any effect on the achievement of the objective	0
Minor Negative Effect	The approach detracts from the achievement of the objective but not significantly.	-
Significant Negative Effect	The approach detracts significantly from the achievement of the objective.	--
No Relationship	There is no clear relationship between the approach and the achievement of the objective or the relationship is negligible.	~
Uncertain	The approach has an uncertain relationship to the objective or the relationship is dependent on the way in which the aspect is managed. In addition, insufficient information may be available to enable an assessment to be made.	?

NB: where more than one symbol/colour is presented in a box it indicates that the assessment has identified both positive and negative effects. Where a box is coloured but also contains a '?', this indicates uncertainty over whether the effect could be a minor or significant effect although a professional judgement is expressed in the colour used. A conclusion of uncertainty arises where there is insufficient evidence for expert judgement to conclude an effect.

4.2.7 The completed assessment matrices are presented at **Appendix F, Appendix G** and **Appendix H**. Summaries of the results of the assessments are provided in **Section 5.3** and **Section 5.4** of this report.

SITE OPTIONS

4.2.8 As of June 2024, a total of 385 sites were submitted and assessed through the SHELAA. To ensure a robust and consistent approach to the consideration of individual site options every site assessed through the SHELAA was considered through the IIA process. The findings of the assessment are presented in **Appendix M**, along with the methodology used.

REASONABLE ALTERNATIVES

- 4.2.9 Chapter 6 sets out an assessment of six reasonable alternatives to securing development requirements the Assessment Framework and definitions of significance with the findings presented in a matrix similar to that shown in **Table 4.4** but which permits a comparison of the approaches.
- 4.2.10 The completed assessment matrices are contained in Chapter 6, with individual assessments of sites within the SHELAA set out at **Appendix M**. The findings of the assessment of the proposed spatial approach are set out in **Chapter 5** of this report.

SECONDARY, CUMULATIVE AND SYNERGISTIC EFFECTS

- 4.2.11 The SEA Regulations require that the secondary, cumulative and synergistic effects of the Local Plan are assessed. In particular, it will be important to consider the combined sustainability effects of the policies and proposals of the Local Plan both alone and in combination with other plans and programmes.

4.3 WHEN THE ASSESSMENT WAS UNDERTAKEN AND BY WHOM

- 4.3.1 This IIA of the Pre-Submission Consultation Document was undertaken by WSP UK Limited in November 2024.

4.4 DIFFICULTIES ENCOUNTERED IN UNDERTAKING THE ASSESSMENT

- 4.4.1 The SEA Regulations require the identification of any difficulties (such as technical deficiencies or lack of knowledge) encountered during the assessment process. These uncertainties and assumptions are detailed in the assessment matrices. Those uncertainties and assumptions common across the assessment are outlined below.

UNCERTAINTIES

- The design and layout of the proposed allocations is not known at this stage.
- The extent to which job creation is locally significant will depend on the type of jobs created (in the context of the local labour market) and the recruitment policies of prospective employers.
- The level of investment in community facilities and services that may be stimulated by new development is uncertain at this stage and will in part be dependent on the policies of the Local Plan, site specific proposals and viability.
- The exact scale of greenhouse gas emissions associated with Local Plan approaches will be dependent on a number of factors including: the exact design of new development; future travel patterns and trends; technological changes; individual energy consumption behaviour; and the extent to which energy supply has been decarbonised over the plan period.
- The exact scale of waste generated will be dependent on a number of factors including: the design of new development; waste collection and disposal regimes; and individual behaviour with regard to recycling and reuse.

- The speed, scale and behavioural implications (such as patterns of work and commuting) associated with the recovery from the Covid-19 pandemic.

ASSUMPTIONS

- It is assumed that greenfield land will be required to accommodate some of the future growth over the plan period.
- It is assumed that new development would not be located on land designated for nature conservation.
- It is assumed that the Council will liaise with Essex and Suffolk Water with regard to infrastructure requirements for future development.
- Measures contained in the Essex and Suffolk Water's Water Resources Management Plan would be expected to help ensure that future water resource demands are met.
- There will be no development that will require diversion or modification of existing watercourses. However, if such measures are required, this could affect local water quality.
- It is assumed that, where appropriate, development proposals would be accompanied by a Flood Risk Assessment (FRA) and that suitable flood alleviation measures would be incorporated into the design of new development where necessary to minimise flood risk.
- It is assumed that the Essex Waste Local Plan will make provision to accommodate additional waste associated with growth in the Chelmsford City Area.

5. ASSESSMENT OF THE PRE-SUBMISSION LOCAL PLAN

5.1 INTRODUCTION

- 5.1.1 This section presents the findings of the assessment of effects of the Pre-Submission Consultation Document against the Objectives that comprise the Assessment Framework. It assesses the compatibility of the Local Plan Strategic Priorities with the Assessment Objectives (Section 5.2) before presenting a summary of the assessments of the housing requirement (Section 5.3), employment land requirement (Section 5.4) and spatial approaches (Section 5.5). A range of potential mitigation and enhancement measures are also identified and which could be considered by the Council during the development of the Local Plan to help enhance positive effects and reduce negative effects (Section 5.6).

5.2 STRATEGIC PRIORITIES

- 5.2.1 The Pre-Submission Consultation Document sets out Strategic Priorities that are intended to support and guide the Spatial Approaches for the Local Plan. These are reproduced below:

Priorities for climate
<p>1. Addressing the Climate and Ecological Emergency</p> <ul style="list-style-type: none"> • Mitigate the impacts of climate change and adapt to its consequences • Ensure new development moves towards delivering net-zero carbon emissions (energy efficiency, sustainable construction, renewable energy, infrastructure for active and sustainable travel) • Ensure development adapts to minimise adverse impacts that create climate and ecological change, including managing flood risk and reducing carbon emissions • Encourage tree planting and an increase in woodland expansion • Ensure sustainable drainage systems in developments
<p>2. Promoting smart, active travel and sustainable transport</p> <ul style="list-style-type: none"> • Promote/prioritise active travel and sustainable transport, for example in new developments creating walkable neighbourhoods, where everyday facilities such as schools, shops, workplaces, community and sports facilities, and open spaces are easily accessible by foot or cycle in 15-20 minutes • Reduce reliance on fossil fuelled vehicles • Support the provision of strategic and local transport infrastructure to enable a future for alternatives to fossil fuelled vehicles • Create the conditions for active and sustainable travel locally, such as electric charging points for all new houses, accessible cycle and footpaths, multi-functional greenways, secure cycle parking, and provision of or subscription to car clubs • Promote innovations in transport including smart technology
<p>3. Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks</p> <ul style="list-style-type: none"> • Plan positively for biodiversity net gain and green infrastructure including high quality green spaces • protect and enhance local distinctiveness and plan positively for the creation, protection, enhancement and management of multi-functional green/blue infrastructure networks and habitats to ensure a net gain for biodiversity and green infrastructure in line with the Council's Green Infrastructure Strategic Plan

<ul style="list-style-type: none"> • Minimise the loss of the best and most versatile agricultural land to ensure future food production • Protect/enhance the River Valleys and increase opportunities for sustainable travel • Use high quality green infrastructure to protect, enhance and create wildlife corridors to maintain ecological connectivity when greenfield land will be lost
<p>Priorities for growth</p>
<p>4. Ensuring sustainable patterns of development and protecting the Green Belt</p> <ul style="list-style-type: none"> • Plan positively to meet identified development needs and ensure that new development takes place in a sustainable way by balancing the key economic, social and environmental dimensions • Promote development of previously developed land in Chelmsford's Urban Area • Use the Settlement Hierarchy to identify most sustainable existing locations • Locate development in locations that are close to existing or proposed local facilities so people can walk/cycle and be less reliant on the car • Protect the Green Belt from inappropriate development • Ensure accordance with the Minerals Local Plan, Waste Local Plan and South East Inshore Marine Plan
<p>5. Meeting the needs for new homes</p> <ul style="list-style-type: none"> • Provide high quality new homes that meet people's needs (market, affordable, starter, supported, specialist, Gypsies and Travellers) • Address the imbalance between the supply and need for affordable housing for rent • Meet identified targets/needs for numbers and types of homes required to be built each year • Maintain a good supply of homes throughout the Local Plan period
<p>6. Fostering growth and investment and providing new jobs</p> <ul style="list-style-type: none"> • Ensure Chelmsford's businesses thrive, continue to innovate and can be even more productive and resilient • Foster new economic growth and new jobs to meet forecast local needs generated by the growing population. • Ensure a flexible rolling supply of employment land over the Local Plan period • Support the retention of existing designated employment and rural employment areas to maintain supply and choice of employment floorspace and rural employment development opportunities, and support the growing green economy and creative sector • Promotion of a circular economy
<p>Priorities for place</p>
<p>7. Creating well designed and attractive places, and promoting the health and social well-being of communities</p> <ul style="list-style-type: none"> • Promote the health and wellbeing of communities • Encourage healthy lifestyles and living environments for all residents for example by requiring development to contribute to creating an inclusive built and natural environment, to provide new green spaces including high quality green infrastructure and access to the countryside, sport and recreation facilities and to promote active and healthy lifestyles through the enhancement of sustainable and active travel routes • Ensure that the integrity of communities is maintained, and social cohesion is promoted in new development • Ensure that all new development meets the highest standards of design • Require the use of masterplans and encourage design codes where appropriate for strategic scale developments • Ensure new development helps provide new primary health services • Promote community involvement in the long-term management and stewardship of new strategic residential development

<ul style="list-style-type: none"> • Encourage development to be future-proofed and as sustainable and energy efficient as possible
<p>8. Delivering new and improved strategic and local infrastructure</p> <ul style="list-style-type: none"> • Address city-wide infrastructure needs • Maximise the efficient use of existing infrastructure capacities • Explore opportunities for new sustainable infrastructure • Ensure that necessary new or upgraded local infrastructure is provided alongside new development when it is needed • Ensure appropriate and timely strategic infrastructure to support new development
<p>9. Encouraging resilience in retail, leisure, commercial and cultural development</p> <ul style="list-style-type: none"> • Promote the vitality and viability of Chelmsford City Centre, South Woodham Ferrers Town Centre and Principal Neighbourhood Centres • Promote a range of functions which contribute to the vibrancy of Chelmsford City Centre and maintain its position as a leading destination. • Enhance the retail, leisure, commercial and cultural development offer of South Woodham Ferrers Town Centre • Protect existing and support new/enhanced leisure, sports, arts, cultural and recreation facilities to ensure that all parts of the City Council area are vibrant and successful • Implementation of the Plan for Improving Rivers and Waterways in and around Chelmsford, to improve the appearance, attractiveness and recreational use of Chelmsford's rivers and waterways, and some of its ambitions have been translated into policy

- 5.2.2 A matrix has been completed to assess the compatibility of the Strategic Priorities contained in the Pre-Submission Consultation Document against the Assessment Objectives. **Table 5.1** presents the results of this Compatibility Assessment.
- 5.2.3 The Strategic Priorities are broadly supportive of the Assessment Objectives with very few incompatibilities identified. All of the Assessment Objectives are supported by one or more of the Strategic Priorities whilst conversely, none of the Strategic Priorities have been assessed as being incompatible with all of the Assessment Objectives.
- 5.2.4 Assessment Objective 4 (Sustainable Living and Revitalisation) is particularly well supported by the Strategic Priorities. This reflects their emphasis on supporting urban renewal and delivering development in accessible locations and which has also been assessed as being compatible with those Assessment Objectives relating to housing (Objective 2), the economy (Objective 3) and transport (Objective 6). Reflecting the desire to focus development towards urban areas, and allied with the intent to protect the Green Belt, Green Wedge and landscape character, the Strategic Priorities are also considered to be supportive of those Assessment Objectives relating to biodiversity (Objective 1), health and wellbeing (Objective 5), land use (Objective 7), cultural heritage (Objective 13) and landscape (Objective 14).
- 5.2.5 The assessment presented in **Table 5.1** highlights that in some instances, conflicts may exist between the Strategic Priorities and the Assessment Objectives, or their relationship is uncertain. Where conflicts or uncertainties have been identified, this generally relates to, on the one hand, the aspiration for growth, and on the other, the need to protect and enhance environmental assets and minimise resource use, waste and greenhouse gas emissions. In this regard, the Spatial Priority relating to the renewal of the City Centre is likely to lead to increased resource use (including water), waste generation and emissions associated with new development whilst effects on Chelmsford City Area's environmental assets are likely to be uncertain until the exact quantum and location of development has been determined. Conversely, those

Strategic Priorities that seek to protect the City Area's environmental assets could restrict growth and which may result in conflicts in respect of housing delivery (Objective 2) and the economy (Objective 3) in particular.

- 5.2.6 Where possible incompatibilities or uncertainties have been identified, these can be resolved if development takes place in accordance with all of the Strategic Priorities. As such, an incompatibility or uncertainty are not necessarily insurmountable issues but may need to be considered in the development of policies that comprise the Local Plan.

Table 5.1 Compatibility Matrix

Assessment Objective	Strategic Priorities								
	1. Addressing the Climate and Ecological Emergency	2. Promoting smart, active travel and sustainable transport	3. Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks	4. Ensuring sustainable patterns of development and protecting the Green Belt	5. Meeting the needs for new homes	6. Fostering growth and investment and providing new jobs	7. Creating well designed and attractive places, and promoting the health and social well-being of communities	8. Delivering new and improved strategic and local infrastructure	9. Encouraging resilience in retail, leisure, commercial and cultural development
1. Biodiversity and Geodiversity: To conserve and enhance biodiversity and geodiversity and promote improvements to the multifunctional green infrastructure network.	+	+	+	+	?	?	+	?	0
2. Housing: To meet the housing needs of the Chelmsford City Area and deliver decent homes.	-	0	-	?	+	+	?	+	0
3. Economy, Skills and Employment: To achieve a strong and stable economy which offers rewarding and well located employment opportunities to everyone.	-	0	-	?	0	+	?	+	+
4. Sustainable Living and Revitalisation: To promote urban renaissance and support the vitality of rural centres, tackle deprivation and promote sustainable living.	0	+	0	+	+	+	+	+	+

Assessment Objective	Strategic Priorities								
	1. Addressing the Climate and Ecological Emergency	2. Promoting smart, active travel and sustainable transport	3. Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks	4. Ensuring sustainable patterns of development and protecting the Green Belt	5. Meeting the needs for new homes	6. Fostering growth and investment and providing new jobs	7. Creating well designed and attractive places, and promoting the health and social well-being of communities	8. Delivering new and improved strategic and local infrastructure	9. Encouraging resilience in retail, leisure, commercial and cultural development
5. Health and Wellbeing: To improve the health and well being of those living and working in the Chelmsford City area.	+	+	+	0	+	+	+	+	+
6. Transport: To reduce the need to travel, promote more sustainable modes of transport and align investment in infrastructure with growth.	+	+	0	?	0	?	0	+	+
7. Land Use and Soils: To encourage the efficient use of land and conserve and enhance soils.	+	0	+	+	-	-	+	?	0
8. Water: To conserve and enhance water quality and resources.	+	0	+	+	?	0	+	?	0
9. Flood Risk: To reduce the risk of flooding to people and property, taking into account the effects of climate change.	+	0	+	+	?	0	+	?	0
10. Air: To improve air quality.	+	+	+	+	?	0	?	-	0

Assessment Objective	Strategic Priorities								
	1. Addressing the Climate and Ecological Emergency	2. Promoting smart, active travel and sustainable transport	3. Protecting and enhancing the Natural and Historic Environment, and support an increase in biodiversity and ecological networks	4. ---	------------	---	-----------	---	---------	---	--------------

5.3 HOUSING REQUIREMENT 2022-2041

- 5.3.1 In order to meet the transitional arrangements for assessed housing need, provision is made for a minimum of 22,990 net new homes at an average annual rate of 1,210 net new homes per year. This is 83% of the revised Standard Method calculation of 1,454 new homes per year (December 2024).
- 5.3.2 The Gypsy and Traveller and Travelling Showpeople Accommodation Assessment (GTAA) identifies a need to provide 40 new permanent pitches for Gypsies and Travellers, and 38 new permanent plots for Travelling Showpeople. Sites to accommodate a total of 30 permanent pitches for Gypsies and Travellers, and 28 permanent plots for Travelling Showpeople, will be allocated across suitable large strategic development allocations. The small shortfall will be met through appropriate windfall delivery.

ASSESSMENT

- 5.3.3 The Housing Requirement has been assessed against the Assessment Objectives, using the qualitative scoring system in **Table 1.2**. The emerging findings of the assessment are summarised in **Table 5.2**.

Table 5.2 Assessment of Indicative Housing Requirement

Assessment Objective	1. Biodiversity	2. Housing	3. Economy	4. Sustainable Living and Revitalisation	5. Health and Wellbeing	6. Transport	7. Land Use	8. Water	9. Flood Risk	10. Air Quality	11. Climate Change	12. Waste and Natural Resources	13. Cultural Heritage	14. Landscape and Townscape
Approach														
Housing Requirement	+/-	++	++	+/-	+/-	+/-/?	+/-	-/?	-/?	-/?	-/?	-/?	+/-	+/-

- 5.3.4 The likely significant positive sustainability effects associated with the Housing Requirement relate to:
 - **Housing (Objective 2):** the approach would meet in full, and exceed, the assessed housing requirement for the Chelmsford City Area over the plan period. This is in accordance with the objective of the NPPF to boost housing supply.
 - **Economy (Objective 3):** the approach would help to stimulate economic growth through the provision of a workforce as well as consumers, as long as development proposals deliver homes, jobs and infrastructure are delivered in a co-ordinated fashion to help limit excess in- or out-commuting and ensure a degree of self-containment.
- 5.3.5 The likely significant negative sustainability effects associated with the Housing Requirement relate to:
 - **Land Use (Objective 7):** whilst brownfield land will be used through windfall sites, a significant area of greenfield land will be required.

- 5.3.6 Mixed (and uncertain) effects are identified across a range of the Assessment Objectives (sustainable living and revitalisation, health and well-being and transport) which reflects the potential for housing growth to result in positive and adverse environmental impacts. These potential effects will require further consideration in the identification of site allocations and development of policies for the Local Plan and in this regard, there is the potential for new housing to deliver benefits in respect of, for example, sustainable travel, health and enhancements to townscapes.
- 5.3.7 Minor negative and uncertain effects have been identified against biodiversity, water, flood risk, air quality, climate change and waste and natural resources reflecting the demands placed on the use of natural resources by housing growth, notwithstanding advances in building technologies and the mitigation of negative effects through building and site design. Uncertainty exists in the extent and speed of these sustainable interventions. More generally, residential development requirements and the more limited number of brownfield sites that have not already been earmarked for future development in the Chelmsford City Area will mean that greenfield land is required for development.

5.4 EMPLOYMENT LAND REQUIREMENT

- 5.4.1 Whilst the adopted Local Plan employment policies are still relevant and site allocations for new employment development are also progressing in line with projections, some policies will require updating and additional policies may be required in the light of changes to national planning policy and new legislation. Changes are also required to ensure that the Local Plan continues to meet future employment needs to 2041.
- 5.4.2 The Pre-Submission Consultation Document proposes development sites to accommodate a minimum of 162,646 sqm of new employment business floorspace.

ASSESSMENT

- 5.4.3 The proposed approach to the Employment Land Requirement has been assessed against the Assessment Objectives using the qualitative scoring system in **Table 1.2**. The emerging findings of the assessment are summarised in **Table 5.3**.

Table 5.3 Assessment of Employment Land Requirement

Assessment Objective	1. Biodiversity	2. Housing	3. Economy	4. Sustainable Living and Revitalisation	5. Health and Wellbeing	6. Transport	7. Land Use	8. Water	9. Flood Risk	10. Air Quality	11. Climate Change	12. Waste and Natural Resources	13. Cultural Heritage	14. Landscape and Townscape
Proposed allocation (162,646 sqm)	-/?	0	++/?	+	+/?	+/-/?	+/-	-/?	-/?	+/-/?	+/-/?	-	+/-/?	+/-/?

- 5.4.4 The key likely significant positive effects associated with the Employment Land Requirement relate to:

- Economy (Objective 3): The provision of employment land will support economic growth across Chelmsford, delivering deliver jobs and supporting regeneration and investment.

- 5.4.5 No significant negative effects have been identified in the assessment. However, negative (and uncertain) effects have been identified across a range of the Assessment Objectives associated with biodiversity, transport, air quality, climate change and waste and natural resources, reflecting increases in trends such as commuting, new infrastructure requirements and emissions associated with HGVs. As with housing, these potential effects will require further consideration in the development of policies for the Local Plan and will require particular attention in the identification of site location, design and mitigation measures. There is the potential for new employment uses to deliver benefits in respect of, for example, sustainable travel, health and enhancements to townscapes.
- 5.4.6 A minor positive effect has been identified in respect of Sustainable Living (Objective 4) and Health and Well-Being (Objective 5) reflecting the opportunities for the provision of local employment opportunities associated with the revitalisation of urban areas.
- 5.4.7 Mixed effects relate to land use (Objective 7), cultural heritage (Objective 13) and landscape/townscape (Objective 14) reflecting potential compromises to be made in allocating development, but also opportunities for the protection and enhancement of these resources.

5.5 ASSESSMENT OF THE PROPOSED SPATIAL STRATEGY

DEVELOPMENT REQUIREMENTS AND THE SPATIAL STRATEGY

- 5.5.1 The Pre-Submission Consultation Document makes provision for a minimum of 22,990 net new homes at an average annual rate of 1,210 net new homes per year; 30 permanent pitches for Gypsies and Travellers and 28 permanent plots for Travelling Showpeople, and 162,646 sqm of employment floorspace over the plan period.

Table 5.4 Spatial Strategy – Development Locations and Allocations

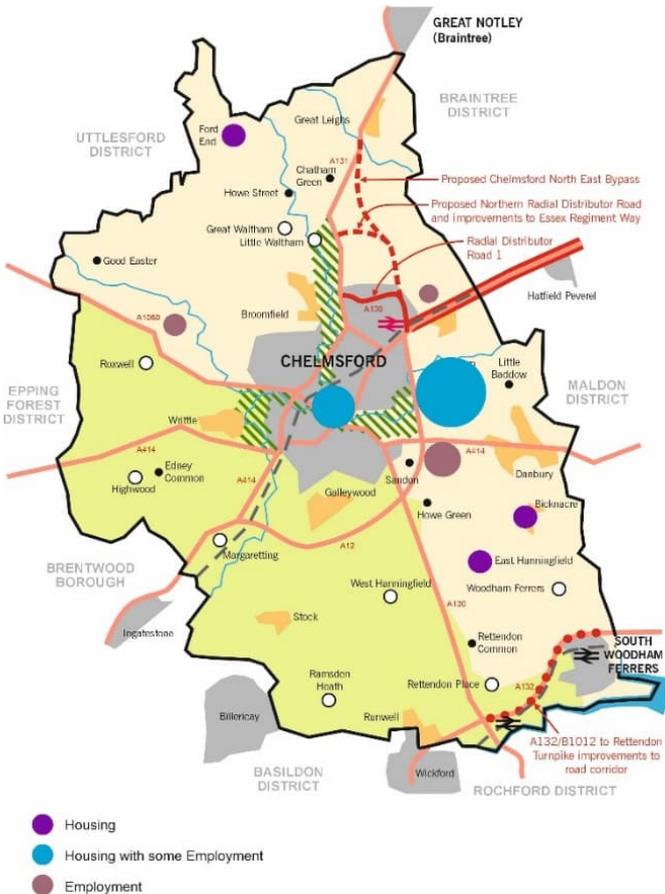

Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Growth Area 1 – Central and Urban Chelmsford					
Site/Location					
1	Previously developed sites in Chelmsford Urban Area	3,013			4,000sqm Use Class Eg(i-iii)
2	West Chelmsford	880		5	
3a	East of Chelmsford - Manor Farm	360			
3b	East of Chelmsford - Land North of Maldon Road				5,000sqm Office/Business Park
3c	East of Chelmsford - Land North of Maldon Road	109			
3d	East of Chelmsford - Land North of Maldon Road	65			

Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
4	Land North of Galleywood Reservoir	24			
5	Land surrounding Telephone Exchange, Ongar Road, Writtle	25			
Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Area Total		4,476		5	9,000sqm
Growth Area 2 – North Chelmsford					
Site/Location					
6	North East Chelmsford (Chelmsford Garden Community)	5,569	10		59,946sqm Office/Business Park
7a	Great Leighs - Land at Moulsham Hall	750		5	
7b	Great Leighs - Land East of London Road	250			
7c	Great Leighs - Land North and South of BanTERS Lane	100			
8	North of Broomfield	512			
9a	Waltham Road Employment Area				3,500sqm B2/B8
14b	Land south of Ford End Primary School, Ford End	20			
15	Little Boyton Hall Farm Rural Employment Area				6,000sqm B2/B8
Area Total		7,201	10	5	66,446sqm
Development Allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
Growth Area 3 – South and East Chelmsford					
Site/Location					
16a	East Chelmsford Garden Community (Hammonds Farm)	3,000	20	13	43,000sqm Business Space
16b	Land adjacent to A12 Junction 18				43,000sqm Business Space
10	North of South Woodham Ferrers	1,220		5	1,200sqm Business Space,
11b	Land at Kingsgate, Bicknacre	20			
11c	Land west of Barbrook Way, Bicknacre	20			
12	St Giles, Bicknacre	32			
13	Danbury	100			

Development allocations to 2041		New Homes	Traveller Pitches	Travelling Showpeople Plots	Net New Employment Floorspace
17a	Land North of Abbey Fields, East Hanningfield	11			
17b	Land east of Highfields Mead, East Hanningfield	20			
Area Total;		4,423	20	18	87,200 sqm
Total Local Plan Allocations		16,100	30	28	162,646 sqm
Windfall Allowance 2026-2041		2,373			
TOTAL		18,473	30	28	162,646 sqm

5.5.2 For the majority of the development requirement, the Proposed Spatial Strategy takes forward the spatial strategy within the Adopted Local Plan. For clarity, within the total development requirement set out in **Table 5.4** above, the new locations for development to meet the residual housing requirement are set out in **Figure 5.1**.

Figure 5.1 Summary of the additional locations for growth (compared to the Adopted Local Plan) in the Proposed Spatial Strategy

Location	Homes	Employment
Central and Urban Chelmsford	857	
East Chelmsford Garden Community (Hammonds Farm)	3,000	43,000 sqm mixed
Bicknacre	40	-
Ford End	20	-
East Hanningfield	31	-
J18 of A12	-	43,000 sqm mixed
Little Boyton Hall Farm Rural Employment Area	-	6,000 sqm B2/B8
Waltham Road Employment Area	-	3,500 sqm B2/B8

and Spatial Strategy have been appraised with the approach set out above. The findings of the appraisal are presented in **Appendix F. Table 5.5** summarises the findings of this appraisal and identifies the cumulative likely significant effects of the proposed options.

Table 5.5 Summary of the Appraisal of the Proposed Development Requirements and Spatial Strategy

Proposed Option	1. Biodiversity	2. Housing	3. Economy	4. Urban Renaissance	5. Health and Wellbeing	6. Transport	7. Land Use	8. Water	9. Flood Risk	10. Air Quality	11. Climate Change	12. Waste and Natural Resources	13. Cultural Heritage	14. Landscape and Townscape
Proposed Housing/Gypsy Traveller and Travelling Showpeople Requirement	+/-	++	++	+/-	+/-	+/-/?	+/-	-/?	-/?	-/?	-/?	-/?	+/-	+/-
Proposed Employment Land Requirement	-/?	0	++/?	+	+/?	+/-/?	+/-	-/?	-/?	+/-/?	+/-/?	-	+/-/?	+/-/?
Proposed Spatial Strategy	+/-/?	++	++	+/-	+/-	+/-/?	-/?	-/?	0	0/?	0/?	+/-	+/-/?	+/-/?
Cumulative Effect	+/-?	++	++	++/-	++/-	++/-	+/-	+/-	+/-	+/-	+/-	-	+/-/?	+/-/?

5.5.4 The provision of a total of 23,326 dwellings (including 16,100 allocations and 2,373 windfalls) over the plan period would meet and exceed the City Area’s Housing Requirement of 1,210 net new homes per-year, as set out in the Local Plan Strategic Policy S6, as follows:

In order to meet the proposed transitional arrangements for assessed housing need calculated using the revised Standard Method, provision is made for a minimum of 22,990 net new homes at an average annual rate of 1,210 net new homes per year.

In order to meet identified need, a total of 30 permanent pitches for Gypsies and Travellers as defined by national planning policy for the period 2022-2041 will be provided.

In order to meet identified need, a total of 28 permanent plots will be provided for Travelling Showpeople as defined by national planning policy in the period 2022-2041.

5.5.5 Notwithstanding the caveat in para. 5.5.4 above, overall, the development requirements set out in the Pre-Submission Consultation Document are expected to have a significant positive effect on housing (IIA Objective 2).

5.5.6 The provision of 162,646 sqm of employment floorspace has been appraised as having a significant positive effect in respect of the economy (IIA Objective 3). The Council’s

Economic Strategy (2017)¹¹⁸ provides an overview of the economy of the Chelmsford City Area. It highlights that Chelmsford has been a major driver of growth within the Heart of Essex sub-region, which comprises the local authority areas of Chelmsford, Brentwood and Maldon. The City contributes over £4.5 billion per year to the Essex economy through some 103,000 jobs and 9,335 businesses, with particular strengths in the financial and business services sectors, research and development, and advanced manufacturing. The Council's Employment Land Review¹¹⁹ provides an overview of the economy of the Chelmsford City Area. The report highlights the size of the office market and the prominence of Chelmsford City Centre, connections to Central London but a lack of good quality office accommodation coupled with a lack of recent office development and the need for flexibility as a result of new hybrid working patterns. The report identifies that the industrial market has remained buoyant and active, with demand currently outperforming the existing supply of available industrial space. The demand seen for industrial premises in Chelmsford is primarily for small to medium sized units (up to 5,000 sqm) that aim to fulfil indigenous industrial needs, as opposed to larger scale distribution floorspace.

- 5.5.7 In this context, the provision of 162,646 sqm of employment floorspace over the plan period would be expected to help maintain and enhance Chelmsford's strategic economic role in the Heart of Essex sub-region, supporting existing businesses and attracting inward investment. Jobs growth would, in-turn, increase the amount of money spent in the local economy and there may also be supply chain benefits associated with new businesses.
- 5.5.8 Focusing the majority of growth in and adjacent to Chelmsford Urban Area, to the north of South Woodham Ferrers, within new garden communities, and at Key Service Settlements should ensure that prospective residents and workers have good access to key services, facilities and employment opportunities by virtue of the wide range of services, facilities and jobs these settlements provide and their good transport links. It is also anticipated that growth will promote investment in additional facilities, services and infrastructure, stimulating urban regeneration, minimising the need to travel by car and promoting walking and cycling.
- 5.5.9 In this regard, the Proposed Spatial Strategy includes a number of proposed transport infrastructure improvements including the A131 corridor, the Chelmsford North-East Bypass (CNEB) and two potential park and ride schemes (one located to the south west of Chelmsford around the A414 and the other located to the north east of Chelmsford around the A12 and A138) as well as existing planned infrastructure including the new Beaulieu Park Rail Station. The Proposed Spatial Strategy also defines Special Policy Areas within and around existing facilities and institutions including Broomfield Hospital and ARU Writtle which is expected to support the continued growth and expansion of these institutions, generating benefits in terms of continued access to services and facilities.
- 5.5.10 Overall significant positive effects have therefore been identified in respect of urban renaissance (IIA Objective 4), health and wellbeing (IIA Objective 5) and transport (IIA Objective 6). However, it is recognised that growth (if unmitigated) could place pressure

¹¹⁸ Chelmsford City Council (2017) *Chelmsford Economic Strategy*. Available at: [A3 Chelmsford Economic Strategy](#)

¹¹⁹ Chelmsford City Council (December 2023) Employment Land Review available at: [econ002-chelmsford-city-council-employment-land-review-2023.pdf](#)

on existing facilities and services as well as on the strategic highways network and in consequence, minor negative effects have also been identified in respect of these objectives.

- 5.5.11 No further cumulative significant positive effects have been identified during the appraisal of the development requirements and Proposed Spatial Strategy.
- 5.5.12 The Proposed Spatial Strategy is proposing to deliver development on brownfield and greenfield sites. Opportunities for brownfield development take priority (notably recycling of land in the urban area) which generates a positive effect on land use (IIA Objective 7). However, the scale of development requirements and the limited number of suitable brownfield sites that have not already been earmarked for future development in the City Area mean that greenfield land adjacent to the urban areas of Chelmsford (including East of Great Baddow / North of Sandon, West Chelmsford and North of Broomfield) and South Woodham Ferrers and at, North East Chelmsford, East Chelmsford, Great Leighs, Danbury, Ford End, East Hanningfield and Bicknacre would be required to deliver circa 80% of new development (greenfield/mixed greenfield and brownfield sites). It is estimated that a total area of approximately 1,108ha of greenfield land will be required (864 ha of Grade 3 land and 244ha of Grade 2 land, equating to 4.3% of Grade 3 land and 2.4% of Grade 2 land). In consequence, a significant negative effect has also been identified in respect of IIA Objective 7.
- 5.5.13 No further cumulative significant negative effects have been identified during the appraisal of the development requirements and Proposed Spatial Strategy.
- 5.5.14 New development will result in increased resource use and the generation of waste and in consequence, a cumulative negative effect is expected in respect of IIA Objective 13.
- 5.5.15 The development requirements and Proposed Spatial Strategy have been assessed as having cumulative mixed positive and negative effects on the remaining IIA objectives. Sustainable, well-located development will present an opportunity to enhance the natural and built environment of the City Area. In particular, the redevelopment of brownfield sites, protection the Green Wedge within the City Area allied with the delivery of strategic scale sustainable urban extensions which follow Garden Community principles, could help to both minimise the adverse effects of development and deliver environmental enhancement by extending the City Area's green infrastructure networks. Green infrastructure provision may also present opportunities for recreation and climate change adaptation (including flood risk management). However, growth in the City Area is likely to have a range of adverse environmental and social effects during both the construction and operation of new development and arising from, for example, land take, disturbance (e.g. noise), recreational pressure (in respect of nature conservation sites), increased vehicle movements and associated emissions to air, the use of energy and resources, and impacts on landscape and townscape character. These adverse effects are likely to be minimised through the implementation of Local Plan policies and mitigation at the site level and are therefore not considered likely to be significant. Nonetheless, some uncertainty remains, particularly in respect of biodiversity (IIA Objective 1), cultural heritage (IIA Objective 13) and landscape and townscape (IIA Objective 13) as the likelihood of positive and negative effects on these objectives will be dependent on the exact type, location and design of new development as well as the proximity and sensitivity of nearby receptors.

Reasons for the Selection of the Proposed Spatial Strategy

- 5.5.16 The Proposed Spatial Strategy will focus new housing and employment growth to the most sustainable locations by making the best use of previously developed land in Chelmsford Urban Area; new garden communities to the north east and east of

Chelmsford; sustainable urban extensions around Chelmsford; expansion of existing employment sites; and development around Key Service and Service Settlements outside the Green Belt in accordance with the Settlement Hierarchy.

5.5.17 Development will be focused in three broad growth areas:

- **Growth Area 1** - Central and Urban Chelmsford;
- **Growth Area 2** - North Chelmsford;
- **Growth Area 3** - South and East Chelmsford.

5.5.18 There will also be opportunities for small-scale exception sites providing affordable homes to meet identified local needs in locations where there are policies of constraint. Windfall sites are further expected to be a reliable source of supply.

5.5.19 Large and established mainly institutional uses within the countryside are identified as Special Policy Areas in order to support their necessary functional and operational requirements over the Plan period. The Special Policy Areas are defined on the Proposals Map at Chelmsford City Racecourse, Broomfield Hospital, Hanningfield Reservoir Treatment Works, RHS Hyde Hall Gardens, Sandford Mill and ARU Writtle.

5.5.20 The objective for development in the Central and Urban Chelmsford Growth Area is to focus on the regeneration of brownfield sites to continue the urban renewal and renaissance of the City. In addition to brownfield sites, sustainable new neighbourhoods on the edge of Urban Chelmsford linked to the City Centre by public transport, cycling and walking form part of the strategy for this Growth Area. These new neighbourhoods are located close to the Green Wedge in order to maximise opportunities for cycling and walking into the City Centre.

5.5.21 Sustainable new development in the North Chelmsford Growth Area will be based around urban extensions which follow Garden Community principles (e.g. comprehensively planned, enhance natural environment and provide high quality homes) and can help to deliver strategic infrastructure including the Chelmsford North East Bypass. Development in North East Chelmsford will accommodate a substantial amount of new employment development during the Plan period.

5.5.22 Growth in the South and East Chelmsford Growth Area includes a new garden community at Hammonds Farm which will complement the approach adopted in North East Chelmsford.

5.5.23 Overall, the IIA found broadly positive effects associated with the delivery of homes, services and employment opportunities, summarised in **Table 5.6** below, detailed in **Appendix F**. Detailed appraisals of proposed allocations are presented in **Appendix G**.

Table 5.6 Summary of the sustainability effects of the Proposed Spatial Strategy

Assessment Objective	1. Biodiversity	2. Housing	3. Economy	4. Sustainable Living and Revitalisation	5. Health and Wellbeing	6. Transport	7. Land Use	8. Water	9. Flood Risk	10. Air Quality	11. Climate Change	12. Waste and Natural Resources	13. Cultural Heritage	14. Landscape and Townscape
Proposed Spatial Strategy	+/- /?	++	++	+/-	+/-	+/- /?	-/?	-/?	0	0/?	0/?	+/-	+/- /?	+/- /?

5.5.24 The likely significant sustainability effects associated with the Proposed Spatial Strategy relate to:

- **Housing (Objective 2):** Realising the delivery of homes to help meet local and sub-regional needs, including affordable housing.
- **Economy (Objective 3):** The provision of employment land will support economic growth across Chelmsford, delivering deliver jobs and supporting regeneration and investment.
- **Health and Well-Being (Objective 5):** The provision of more and a wider range of services associated with population growth.
- Significant negative effects associated with **Land Use (Objective 7)** and **Landscape (Objective 14)**, reflecting the permanent loss of these resources to urban development.

5.5.25 The negative (and uncertain) effects identified across a range of IIA objectives reflects the potential for development to result in adverse environmental impacts. These potential effects will require further consideration in the development of policies for the Review of the Adopted Local Plan and will require particular attention in the identification of site location, design and mitigation measures. There is the potential for new development to deliver benefits in respect of, for example, sustainable travel, health and enhancements to townscapes.

5.5.26 The Proposed Spatial Strategy is capable of delivering housing and employment land requirements over the plan period, resulting in positive sustainability effects. There are mixed positive and negative effects in respect of biodiversity, cultural heritage, flood risk, land use and resource use, with potential uncertainty in respect of sustainable living and revitalisation, air quality and climate change water resource use is an issue, reflecting regional local supply deficits.

5.5.27 The uncertainties and negative effects recorded emphasise the importance of the monitoring of the performance of sustainability indicators to help implement mitigation measures which would help improve the performance of all approaches, notably in respect of air quality, biodiversity, climate change and health and well-being.

5.5.28 In addition, small allocations in Key Service and Service Settlements will help to support the villages’ services and facilities.

5.5.29 Overall, the Proposed Spatial Strategy draws on elements of the five spatial approaches

previously presented and in so doing meets the housing and employment needs of the City Area. The limitations and opportunities associated with all five approaches are acknowledged in the suite of policies supporting the Proposed Spatial Strategy and attendant allocations, based on experience in bringing forward strategic site allocations such as the North East Chelmsford Garden Community.

What has informed the Spatial Strategy

- 5.5.30 The Proposed Spatial Strategy (as set out in Strategic Policy S7) is based on a number of key considerations including national planning policy, an analysis of the Issues and Options and Preferred Options consultation responses, the Issues and Options and Preferred Options IIA Reports, the Local Plan Vision and Spatial Principles, Settlement Hierarchy, environmental constraints, the availability and viability of land for development and discussions with key stakeholders.
- 5.5.31 The Issues and Options IIA Report indicated that the performance of the five spatial approaches against the IIA objectives were broadly similar although Approach A (Grow the Existing Strategy) and Approach B (Growth in Urban Areas) were considered to have the best balance between positive and negative effects. Although the Proposed Spatial Strategy is a hybrid of Spatial Approaches A to E, it most resembles Spatial Approaches A and B by focusing development in and close to the Urban Areas and Key Service Settlements outside of the Green Belt, whilst providing for continued housing and employment land provision through the proposed allocation of a new garden community and sites directly related to the A12, and sites in the Chelmsford Urban Area, which contain significant areas of previously developed land.
- 5.5.32 The main issues raised in the consultation responses to the Issues and Options Consultation Document are summarised in an IIA Feedback Report published in February 2023. The main issues raised by respondents with regard to the IIA Report concern:
- Support for the range and content of the IIA Objectives.
 - The need for the HIA and EqIA to ensure that the Local Plan Review is developed in a way that enhances the knowledge, skills and wellbeing of existing and new communities.
 - An apparent presumption that providing land for business creates additional jobs for the region and that a garden community such as in Spatial Approach E would create jobs that would all be filled by residents of that community.
 - The identification of possible negative effects but no policies provided to mitigate these effects.
 - Lack of differentiation between spatial approaches.
 - The need for clarification of key sustainability issues and the definitions of significance.
 - The relationship between housing growth and water resources.
 - Disagreement with elements of the scoring of the spatial approaches.
 - The need for additional detail on specific sites.
 - Support for a particular spatial approach, based on site qualities.
- 5.5.33 Responses to the Issues and Options Consultation Document included the following issues in respect of types of location for growth and Spatial Strategy Approaches for

accommodating additional future growth to 2041:

- Respondents commented on the types of location, with many focused on one of the five Spatial Approaches – with a mixed reception overall.
- Growth in urban areas is supported as a sustainable approach.
- Expanding allocated sites raised concerns about the ability of infrastructure to cope, although is supported for sustainability.
- Growth along transport corridors received a mixed response: the A12 should be included, it can provide good access, but it may direct growth away from the city.
- Development at larger villages is not supported due to impact on Danbury and South Woodham Ferrers, although sustainability is seen as more important than village size.
- Development at smaller villages is not supported due to impact on small community character, access and services, although it could support local vitality.
- A new large settlement is generally opposed for a wide number of reasons including landscape, environment, loss of agricultural land, impact on services and roads, lack of flexibility, potential delays in delivery; although limited support shown for a sensitive approach.

5.5.34 Responses to the Preferred Spatial Strategy included the following issues in respect of types of location for growth and Spatial Strategy Approaches for accommodating additional future growth to 2041:

- Support for the IIA and its analysis.
- Objections to specific proposed strategic site allocations in respect of key sustainability criteria.
- Lack of justification for the proposed allocations, particularly in respect of the use of evidence.
- Specific site-related constraints which invalidate the choice of a specific site.
- Questioning the scoring by the IIA for specific indicators and how mitigation measures will be applied.
- The presence of alternative spatial options which are deemed more sustainable, consequently invalidating the choice of preferred allocations.
- Lack of a comprehensive Green Belt review undermining the IIA because a full range of alternative strategic options have not been presented.
- Lack of consideration of the availability and capacity of community infrastructure.
- Uncertainties recorded by the IIA undermining the overall analysis and conclusions on site sustainability.
- Failure to present and appraise a sufficient range of reasonable alternatives and/or specific alternative sites and site options not considered.
- The need to ensure that appropriate green infrastructure standards are applied as part of site development.
- The need for HRA-related matters to be fully reflected in plan policies.

- The need to include an Executive Summary in the HRA.
- No specific comments were made on either the HIA or the EqIA.

5.5.35 The Proposed Spatial Strategy has also been prepared following ongoing work, involving many other parties, such as Essex County Council and Highways England, to identify the key evidence base data and trends that are necessary to underpin the Local Plan. Notably, it follows further evidence base studies including an updated SHELAA, Strategic Housing Needs Assessment, Landscape Capacity and Sensitivity Assessment Update, Employment Land Review, Retail Capacity Study Update and Water Cycle Study. A summary of the main findings of key evidence base studies is set out below.

- **SHELAA 2023** - This indicates that the proposed housing and employment development sites identified within the Proposed Spatial Strategy are suitable, available and achievable.
- **Strategic Housing Needs Assessment June 2023** - This report focusses on overall housing need, including consideration of the Standard Method, as well as looking at affordable housing and the needs of specific groups. The Assessment supports the policies and housing requirements in the Pre-Submission Consultation Document
- **Landscape Sensitivity and Capacity Assessment 2024 Update** - This assesses the sensitivity and capacity for development of land within the Council's area informed by the Local Plan Review Issues and Options Spatial Approaches. The 2024 update assessment results have been used to inform the proposed new residential and employment site allocations within the Pre-Submission Consultation Document.
- **Employment Land Review (Focused Update) 2024** - This study considers current economic trends and future requirements for new employment floorspace up to 2041. It also assesses existing employment areas. The review has helped to inform the Proposed Spatial Strategy and changes to plan employment policies.
- **Retail Capacity Study Update, 2024** – This study provides an up-to-date, objective assessment of retail and leisure development needs in the Council area over the plan period to 2041. Its update has informed changes to Local Plan retail policies and to address prevalent and emerging retail issues. No new sites for convenience or comparison retailing are proposed within the Pre-Submission Consultation Document in line with the findings of the update.
- **Water Cycle Study 2024** - The potential impact of the current development proposals has been analysed in terms of water resources, the current water and wastewater infrastructure, and the water environment. It is considered that the capacity of the Water Recycling Centres (WRCs) at Great Leighs, South Woodham Ferrers and Wickford and the associated impact on the water environment are the greatest potential issues in relation to the currently proposed development aspirations within Chelmsford. The current Dry Weather Flows at these WRCs are already exceeding their existing DWF consents creating an existing restriction to any growth which is exacerbated by the additional growth. The Anglian Water Services Drainage and Wastewater Management Plan (DWMP) 2023 and consultations with AWS have identified some solutions to increase compliance at the failing WRCs to possibly support additional development:

5.5.36 The evidence base is available to view on the Council's website.

5.5.37 Work has also been undertaken under the Duty to Co-operate to inform the preferred Spatial Strategy. Meetings have been held with Essex County Council, other local

authorities in Essex, NHS Mid and South Essex Integrated Care Board and with other key partners such as Highways England. These meetings have been valuable in enabling issues affecting the future growth of Chelmsford to be identified at an early stage, and for officers to establish partnerships with those bodies to take forward the preparation of the Pre-Submission Consultation Document and selection of the Proposed Spatial Strategy.

- 5.5.38 Overall, the Proposed Spatial Strategy draws on elements of the five spatial approaches previously presented and in so doing meets the housing and employment needs of the City Area. The limitations and opportunities associated with all five approaches are acknowledged in the suite of policies supporting the Proposed Spatial Strategy and attendant allocations, based on experience in bringing forward strategic site allocations such as the North East Chelmsford Garden Community.
- 5.5.39 The negative (and uncertain) effects identified across a range of IIA Objectives reflects the potential for development to result in adverse environmental impacts. These potential effects have required further consideration in the development of policies for the Review of the Adopted Local Plan, with particular attention in the identification of site location, design and mitigation measures. There is the potential for new development to deliver benefits in respect of, for example, sustainable travel, health and enhancements to townscapes.
- 5.5.40 The Proposed Spatial Strategy is capable of delivering housing and employment land requirements over the plan period, resulting in positive sustainability effects. There are mixed positive and negative effects in respect of biodiversity, cultural heritage, flood risk, land use and resource use, with potential uncertainty in respect of sustainable living and revitalisation, air quality and climate change water resource use is an issue, reflecting regional local supply deficits.
- 5.5.41 The uncertainties and negative effects recorded emphasise the importance of the monitoring of the performance of sustainability indicators to help implement mitigation measures which would help improve the performance of all approaches, notably in respect of air quality, biodiversity, climate change and health and well-being. In addition, small allocations in Key Service and Service Settlements will help to support the villages' services and facilities.

Conclusion

- 5.5.42 In conclusion, the Proposed Spatial Strategy has been informed by a wide range of considerations which indicate that overall it performs well in terms of sustainability and is supported by the findings of the evidence base as discussed above.

5.6 GROWTH AREAS AND ASSOCIATED PROPOSED SITE ALLOCATIONS

- 5.6.1 To deliver the Spatial Strategy, the Pre-Submission Consultation Document directs growth to sustainable locations within the following three Growth Areas:
- Growth Area 1 - Central and Urban Chelmsford.
 - Growth Area 2 - North Chelmsford.
 - Growth Area 3 - South and East Chelmsford.
- 5.6.2 The site allocations identified in each Growth Area include Strategic Growth Sites and Growth Sites depending on scale (Special Policy Areas relating to particular existing establishments in the countryside are also designated and are assessed separately in

Section 5.7). All of the proposed site allocations contained within the Growth Areas have been subject to IIA as part of the preparation of this report using the tailored appraisal criteria and associated thresholds of significance contained in **Appendix E**. Additionally, reasonable alternatives considered by the Council in developing the Pre-Submission Consultation document have also been subject to appraisal using the same criteria.
